Much of what we know about Paleo-Indian lifeways comes from their stone tools and hunting methods. The presence of tools made from stone originating over 1,000 kilometers away indicates that Paleo-Indians were highly nomadic. They lived in small bands comprised of several families, although they periodically formed larger social groups. They were highly skilled hunter-gatherers able to adapt quickly to new environments (Anderson and Gillam, 2000). Their main hunting technology was the spear and atlatl (spear thrower), which was tipped by specialized projectile points. We know little of their religion and beliefs, although there is some evidence for possible religious activity (Storck, 1991).

Pipes, Sacred

Probably the most commonly used ceremonial object throughout Native North America, both historically

and contemporaneously, the sacred pipe was and is used during prayer and healing and to make binding agreements. It is this last function, smoking to unite those present and in the spiritual realm in harmony regarding peace, war, or confederacy, that gave rise to the popular term "peace pipe," though its history and use are far more varied. The French termed the sacred pipe *calumet*, their word for reed pipe, and it is sometimes listed by this term in texts.

Archaeological evidence shows that pipes have been in use in the Americas for at least four thousand years and have been made in various forms from several different materials. Constructed from the leg bones of animals such as deer or antelope, tubular pipes are the oldest known form, varying in length from several inches to over a foot. The mouth

Taos man seated, holding peace pipe. (Library of Congress)

end of a tubular pipe is slightly smaller than the open end in which tobacco was placed. Later stone pipes, known as monitor or platform pipes, had a central bowl and evolved among eastern Woodlands tribes into effigy pipes with bowls in the shapes of animals, humans, and spirits. Keel pipes and disc pipes were also used, and one-piece elbow pipes were used by some California tribes and by Iroquoian peoples.

Two-piece elbow pipes with separate bowls and stems, the stem carved of wood and the bowl usually of catlinite, are the most commonly used today. Catlinite, or pipestone, comes exclusively from one site in Minnesota on Pipestone Creek, which flows from the Big Sioux River. Under the maintenance today of the National Park Service, this site has been used for quarrying since around 1600 and can still be accessed by Native peoples for this purpose. Pipes are “carried,” or owned, by ceremonially qualified people who follow specific tribal traditions regarding their use and origins. Stems and bowls are typically kept separately wrapped in a buckskin or cloth pipe bag. The male stem and female bowl are brought together only in preparation for smoking and prayer. Often, a series of rituals precedes smoking, usually involving the offering of tobacco to the Spirits in the Sacred Directions as well as to the Creator and Mother Earth.

Tobacco blends vary among Native peoples, incorporating such various ingredients as sumac, red willow, bearberry leaves, kinnikinnick (hence the Algonquian word *kinnikinnick* for a smoking mixture), sage, mullein, mint, or osha. Despite the misconception in mainstream culture, no pipe mixture used in sacred pipes throughout Native America is hallucinogenic or mind altering. According to the eldest living Cheyenne Sun Dance Priest, Eugene Blackbear, Sr., the smoke from the pipe carries the prayers and thoughts of those smoking to the Creator, Mother Earth, and the Spirits. Mr. Blackbear suggests that those breaking agreements made during the smoking of a pipe, such as Custer did after smoking with the Cheyenne, are visited by difficulty and sometimes death. For the southern Cheyenne, or Tsis-tsis-tas, pipes are used ceremoniously by Sun Dance and fasting supplicants, qualifying the supplicant after the completion of his or her vow to keep and use a pipe.

Several pipes, pipe ceremonies, and pipe bundles are particularly well-known. The Sacred Calf Pipe of the Lakota was brought to them by White Buffalo Calf Woman. All pipes used by the Lakota

today, known as *chanupa*, have had their power transferred to them through contact with this pipe, held today by bundle keeper Arvol Looking Horse. The Pawnee have a tradition of a complex pipe ceremony known as the Hako. The Arapaho have a sacred flat pipe, the Săeicho, which is also part of a sacred bundle kept and opened according to ritual regulations. In recent times, Christians, such as Catholic priest Father Paul Steimetz, have attempted to fuse the use of the pipe with Christian theology. However they are used, pipes are held in respect as sacred and living beings throughout Native America.

Potlatch

The peoples of the Northwest Coast of North America have proved themselves to be exceptional on several counts, one of which was their ceremonial potlatch. The potlatch, which included the ritual squandering of goods (including slaves in some cases), illustrated the wealth of their societies.

The Northwest Coast peoples produced a genuinely high culture (ranking with that of the Pueblos of the Southwest or the temple-mound people of the Southeast) without benefit of agriculture, a very rare event in the history of humankind. Instead of pottery and agriculture, the Northwest Coast peoples, extending along the coast from the Alaskan Panhandle to coastal Oregon and northern California, created exquisite baskets and wood bowls that they filled with the bounty of the forests and the sea. The Saskatoon berry, which they harvest, for example, contains three times as much iron as prunes and raisins. The bounty of the ocean and forests was so abundant and so skillfully exploited by the Northwest Coast peoples that most were able, during the summer, to lay up enough food (much of it dried) to

Indian dancers during a potlatch at Chilkat, Alaska in 1895. (Library of Congress)

last the winter. The major sources of protein for the Northwest Coast peoples were fish and sea mammals. Among the Makah, the word for fish is the same as the word for food.

The social and economic lifeways of Northwest Coast peoples evolved very differently compared to those of Native peoples across the rest of North America. While many other American Indian peoples were democratic in their political orientation, the Northwest Coast peoples maintained a very strict caste system. They also maintained an economy that was not communal, like those of many other Native peoples in North America. In a Northwest Coast village, everyone had a class, and everything had an owner.

Because the chiefs controlled access to food, shelter, and even spiritual sustenance, the societies of the Northwest Coast peoples were more hierarchical than even that of the Aztecs or the monarchical societies of Europe during the period of first contacts with Native America. No councils of chiefs existed to exercise restraint on them. Customs did exercise restraint on unbridled power, however. A good chief gathered power by being generous to those “under the arm.” The ceremonial potlatch was an expression of this ethic: On one level, it was a display of wealth by the chief or chiefs hosting it; on

another level, the intricate gift giving of the ritual bespoke an inherent desire to distribute the bounteous wealth of Northwest Coast Native American societies. The potlatch thus consolidated the power and authority of its hosts by reminding lesser nobles and commoners that the high chiefs controlled every aspect of village life.

The mild, rainy winters of the Northwest Coast are a time of elaborate socializing and ceremonies. The potlatch often became a festival of wealth squandering between rival chiefs. Everything about the potlatch bespoke ostentation. Guests arrived in ornately carved canoes, flanked by assistants, all dressed in their best clothes. Once at the potlatch, which might have been planned for years, guests were expected to feast until they became ill from overindulgence. Competing chiefs wore headgear topped with special rings that indicated the number of potlatches they had held. In a social and economic context, the potlatch indicated the value the Northwest Coast peoples placed on status. The ostentation of the ritual also bespoke a society of surplus—one so successful at adapting to its environment that its members virtually had resources to burn or otherwise consume with reckless disregard for necessity.

Northwest Coast ceremonies, including the potlatch, were not usually concerned so much with

the economic motives of getting and giving as with enhancing social status, honoring ancestors, and sealing personal relationships. According to Duane Champagne, the potlatch “should be understood from within its own cultural and institutional framework, and not be too easily compared with self-interested materialism” (1989, 110). Similarly, the emphasis on rank in Northwest Coast societies was not simply an imitation of Western hierarchical societies. Instead, the Tlingit concept of rank was integrated into that people’s belief that proper behavior in the present (such as contributing to potlatches, fulfilling one’s clan obligations, and submitting to the collective will of the house group) could cause a person to be reborn into a more aristocratic lineage.

The word “potlatch” is anglicized from *patshatl*, meaning “giving.” Such giving could take many forms. At a grease feast, for example, precious oil sometimes was splashed on fires until erupting flames burned members of competing households. Sometimes the spattering oil set their cedar clothing aflame. As a potlatch continued, the value of gifts usually rose steadily. After the rival chiefs had given away valuable cedar boxes and other expensive items, one chief might up the ante by sacrificing a slave with a special club called a slave killer. The “giving” chief might then hurl the scalp of the slain slave at his rival. Slaves also could be freed at potlatches. Another act of potlatch oneupmanship was the giving and destruction of large copper plates that served as currency of very high denomination, in the thousands of dollars if converted into U.S. currency.

Like most other aspects of life among Northwest Coast peoples, the potlatch was carried out with rigid, time-honored formality. Parts of the ritual were rehearsed insults, in which one chief often dared the other to give away ever more precious objects, such as large canoes that were carved out of huge tree trunks and used to hunt whales. Some of the insults were very personal. The Kwakiutl may have been adopting a European custom from the Hudson’s Bay Company when they complicated the potlatch by demanding 100 percent interest on gifts, a postcontact wrinkle in the ritual in which the act of giving now incurred a debt at twice the value of the original gift.

The Northwest Coast peoples hosted a number of other ceremonies and rituals in addition to the potlatch. Some of these rituals were associated with secret societies (exclusive groups of genetically unre-

lated individuals, sometimes called sodalities by anthropologists). Perhaps the most important such ritual among the Kwakiutl-speaking peoples of the British Columbia coast was the cannibal dance, in which an individual, seized by an emotional frenzy, pretended to consume the flesh of another person. Illusions and fakery enjoyed a high degree of prestige among the Northwest Coast peoples, and a small bear might be cooked in such a way that it resembled a human being, to be consumed during the cannibal dance. The person doing the cannibal dance might enliven the atmosphere by seizing bits of skin and flesh from members of the audience.

Pottery

The term “pottery” refers to jars, bowls, and other items that are made out of clay. Native Americans in most of the United States have made pottery for over 2,500 years. Historically, pottery was a part of everyday life because it was utilized for cooking and storing. Also, pottery was important in ceremonies and rituals because many effigy, or religious, figures

were made out of clay. Archaeologists trace back pottery shards, or the broken pieces from a once complete pot, to about 2300 BCE in the southeastern United States, 1000 BCE in the Northeast, and 600 BCE in the Southwest (Wirt, 1984, 13). A shift in the use of pottery occurred in the 1880s, when potters started manufacturing souvenirs for tourism. Many collectors and travelers recognized women potters as artists. Today many potters use historical patterns and techniques along with their own expressions to create pottery for exhibits and galleries. They have also come to see their pottery as artwork and as an expression of their experiences and identities.

The historical process of preparing the clay for sculpting was similar across North America, and it is still practiced by many contemporary potters. First, clay has to be gathered. Potters find clay in rivers and streambeds and by other bodies of water. In arid regions, the clay can be found in soil deposits (Wirt, 1984, 15). Once the potters or their families collect the clay deposits, they have to remove any impurities, such as pebbles or twigs. If the clay is already moist, these impurities can be pulled out. If the clay is dry the process takes a lot longer. The clay has to be made into a texture similar to coarse flour. The potter does this first by pounding it with a larger hammer or stick (or by stomping on it) and then grinding it with a mortar and pestle (Peterson, 1997, 44). Then the potter sifts it, allowing the clay to fall or blow upwind into a blanket while the impurities stay in the basket or screen (Peterson, 1997, 43; Wirt, 1984, 16). Once the potter deems the clay free of impurities, she adds water to it and starts kneading the clay into a putty or dough consistency. While working the clay, the potter adds bits of temper, or material used to strengthen the clay and keep it from cracking during the firing process. Depending on location, temper materials usually consist of finely ground volcanic rock, quartzite, sandstone, sand, vegetable matter, and sometimes old pottery shards (Wirt, 1984, 16). The potter has to be careful to add just the right amount because too little or too much could ruin the pot during firing.

Once the potter finishes preparing the clay, she turns her attention to creating the jars, bowls, water jugs, or whatever else she plans on making. Two techniques of creating pottery obtain in North America. One technique, coiling, consists of creating long, round strips of clay that are layered on top of each other while the potter pitches and smoothes the new layer with the ones below (Peterson, 1997, 45; Wirt, 1984, 17). For larger pots, the maker starts

with a flat clay base, allowing it to dry and then adding the coils. Potters sometimes also place these bases into a shallow bowl or basket for support during the coiling process (Peterson, 1997, 45). A second technique for pottery making is called the paddle and anvil (Penney, 2004, 81), or sometimes modeling and paddling (Whiteford, 1983, 13). Potters again make coils, but, instead of having the coils build from each other, the makers press the clay with an anvil or other tool into the side of a container to create the shape of the pot (Penney, 2004, 81; Whiteford, 1983, 13). The clay stays inside the container until it dries, at which time the potter carefully removes it for firing. This latter technique is mainly practiced by some Southeastern tribes and by the Tohono O'odham and Yuma in the Southwest (Whiteford, 1983, 13).

For both techniques, the dried pot goes through a series of steps before it is fired. First, the potter smoothes the sides of the pot with a knife or another scraping tool (Whiteford, 1983, 14). If the potter wants to decorate the pottery, instead of just letting the gray color of the clay be the surface, she or a member of her family will then add layers of slip to the outside of the pot. Slip is a thick, paint-like mixture of clay and water that gives the pot an evenly colored surface (Whiteford, 1983, 14). If the potter does not intend on painting the pot after firing, it is polished at this point.

After this process, the pot is ready for firing. This has to be done carefully, because a balance needs to be struck between too much heat and not enough from the fire. Potters usually place multiple pots onto a grill and place firewood underneath. They then cover the entire structure with dried cakes of animal dung, which burn at a hotter and more consistent rate than wood (Whiteford, 1983, 15). The pots are usually fired for between forty-five minutes and three hours, depending on the size of the pottery and the intensity of the fire. Upon their removal from the fire, the pots are polished again to ensure an even finish (Peterson, 1997, 59; Whiteford, 1983, 15). Once the pot is cooled, the potter or a member of her family paints the design on it.

While pottery was once made over much of the United States, today some of the most famous potters live in the Southwest and the Southeast. One of the major factors behind this is the rise of Southwestern tourism in the 1880s with the creation of the Santa Fe Railroad. Potters would go up to the windows of the trains and sell to the passengers during stops, and the railroad also had a line of track that

went directly to the Laguna Pueblo in New Mexico (Penney, 2004, 101). Furthermore, the Fred Harvey Company did much to market Native American products, and many potters found a way to provide incomes for themselves through their skills (Peterson, 1997, 17).

The first potter to gain individual recognition was Nampeyo of Hano in Hopi First Mesa, Arizona (Peterson, 1997, 54). Nampeyo is credited with revitalizing a historical pattern called Sikytaki, which has designs painted in black, orange, and white (Penney, 2004, 102; Whiteford, 1983, 31). Tourists were extremely interested in buying this Sikytaki decorated pottery, and traders recruited Hopi women to make pottery. By the late nineteenth century, almost half of all Hopi women created pottery for tourist markets (Penney, 2004, 102). Maria Martinez of San Ildefonso Pueblo in New Mexico was also instrumental in the revival or popularization of Native American pottery. Martinez and her husband, Julian, are credited with rediscovering how to make another style of pottery decoration (Penney, 2004, 103; Peterson, 1997, 62; Whiteford, 1983, 29). This style is called black-on-black, and the name derives from the look of the finished pot. The pot is turned black during the firing process, and then a matte, black design is painted onto the shiny black surface after it is polished and cooled (Penney, 2004, 103). The pot blackens during firing when the potter places moist manure directly on the fire, causing it to create a dense smoke that surrounds the pottery with carbon (Whiteford, 1983, 15). Maria and Julian Martinez also demonstrate how Pueblo families worked together to make the pottery. It was common for wives to make the pots, while the husbands decorated them (Penney, 2004, 102–103). In the case of the black-on-black pottery, Maria would make the pots and fire them, while Julian painted the matte designs. After Julian's death, Maria's daughter-in-law, Santana, stepped into the position as painter (Peterson, 1997, 121).

Nampeyo and Martinez were not the only potters who were influential in the early twentieth century. Many women can be credited with taking historical patterns and adding their own creativity to them, such as Lucy Martin Lewis, Margaret Tafoya, Helen Cordero, and Blue Corn (Peterson, 1997, 74–106). It was from these women that many contemporary potters gained their first training and education. Like their teachers, these potters are also taking the older designs and building on them. For instance, Barbara Gonzales, the great-grandchild of

Maria and Julian Martinez, has taken her great-grandparents' shiny black finish and altered it so that red hues are also present. Gonzales also places turquoise and coral beads on the surfaces of her pottery (Peterson, 1997, 126). Other contemporary potters have risen out of their own training and ingenuity as well. One such artist is Anita Fields, who is of Osage descent. Influenced by clothing that her grandmother gave her, Fields creates pottery that captures the designs and patterns of historical Osage and other Native American societies' clothing and textile traditions.

Sacred Sites

Sacred sites, according to many American Indians, are places from which spiritual power emanates and at which traditional ceremonies and important rituals occur. In contrast to Western religions, which teach that land is a resource that produces commodities, American Indians conceive of land as sacred and living. Characterizing themselves as caretakers of the earth, many Native peoples believe that all of nature is comprised of conscious beings who must be treated with respect and care. To Indians, each plant, stream, and mountain has its own spirit and life.

Numerous sacred sites are located throughout North America; unfortunately, most are threatened with tourism, recreation, resource extraction, and development. For instance, the Zunis' Salt Lake in New Mexico (home to *Ma'l Oyattsik'I*, an Indian deity) and Bear Lodge (Mato Tipi, also known as Devil's Tower, a sacred butte in the Black Hills),

Devil's Tower National Monument in Wyoming, also called the Bear Lodge, is a sacred site to several Native American tribes, including the Lakota Sioux, Cheyenne, and Kiowa. (Corel)

both are places where different tribes come together to perform traditional ceremonies and rituals. However, in 1996, Salt Lake became threatened with a coal-mining project. Similarly, Bear Lodge plays host to rock climbers searching for the preeminent climbing experience. Such religious intolerance and cultural disrespect leaves many American Indians searching for various ways to protect their sacred sites. Congressional legislation, the courts, and international law, which are increasingly favoring American Indian claims, are finding ways to protect and preserve these culturally significant properties.

Currently, several legislative acts provide some protection for sacred sites. For instance, the Antiquities Act of 1909 allows sacred properties to be protected from human destruction through presidential declaration. Similarly, the Historic Sites, Buildings, and Antiquities Act of 1935 enables the Secretary of the Interior to protect, preserve, and maintain historic sites by establishing historic preservation programs and contracting with states to protect such properties.

Likewise, the Federal Lands Policy Management Act and the National Forest Management Act of 1976 require public and forest lands to be managed in a manner that protects the quality of historical, archaeological, and cultural values of such lands. Accordingly, the Acts mandate that management programs minimize damage to any cultural values and grant the secretary authority to take necessary action to prevent undue degradation of lands.

Similarly, in recognition of the impact of private destruction to Indian lands, Congress passed the Archaeological Resources Protection Act of 1979, which requires federal land managers to notify and consult with affected Indian tribes, prior to the issuance of a permit that may result in harm to, or destruction of, any religious or cultural site.

Perhaps the foremost legislation utilized for the protection of sacred sites is the National Historic Preservation Act, which was enacted in 1966 to preserve historical and cultural properties. According to the Act, once the secretary identifies a property as significant in American history, archaeology, or

culture, then all federal undertakings affecting such property must take into account their effect on the site and recommend to an advisory council any measures to avoid, minimize, or mitigate adverse effects on it.

However, despite congressional intent to afford protection to tribal sacred sites, American Indians remain unable to adequately protect the integrity of such properties, including tribal access. Consequently, American Indians have judicially attempted to preserve and protect their traditional cultural properties by asserting constitutional religious violations.

Religious free exercise claims have consistently been rejected. Specifically, despite American Indian complaints that any proposed federal undertaking on, adjacent to, or near a sacred site would make it difficult to practice religious ceremonies, because there is no governmental threat of fines, incarceration, or the loss of governmental benefits, the courts have determined that no religious constitutional burden exists and have therefore rejected the Indians' free exercise claims.

American Indians have succeeded in protecting sacred sites under the Establishment Clause (First Amendment) of the U.S. Constitution. Specifically, the courts have determined that federal agency plans, which remove barriers to Indian religious worship and are noncoercive and secular in purpose, do not advance or inhibit religion. Consequently, agency decisions to deny oil and gas leasing, limit timber sales, and issue climbing management plans for religious accommodations at sacred sites do not violate the Establishment Clause.

Nevertheless, American Indians continue to struggle to protect sacred sites, and lobbying Congress to enact legislation that specifically addresses sacred site protection may be a viable solution. In recent years, Congress has favored protecting Indian religious practices. For instance, Congress enacted the American Indian and Religious Freedom Act to protect and preserve the inherent right of American Indians to believe, express, and exercise their traditional religions including access to sites and the freedom to worship through ceremonies and traditional rites. In addition, Congress passed the Native American Graves Protection and Repatriation Act to protect Indian graves and repatriate cultural items to tribes. Furthermore, Congress exempted Native American Church practitioners from federal laws criminalizing the possession of peyote.

Similarly, the executive branch has recognized the importance of American Indian religious practices and access to sacred sites. For instance, President Clinton issued Executive Order 13007, which requires all federal agencies, in the management of federal lands, to "accommodate access to and ceremonial use of Indian sacred sites by Indian religious practitioners" and avoid adverse effects to the physical integrity of such sites. Likewise, the Department of Interior recently promulgated secretarial orders that require agencies to identify the potential effects of governmental activities on Indian trust lands and to consult with tribes when such activities affect tribal resources.

In accordance with such agency directives, federal land management agencies have developed programs preserving American Indian access to sacred sites. Specifically, in 1994, the Fish and Wildlife Service issued a policy requiring the agency to respect American Indian cultural values when planning and implementing programs. Similarly, the National Park Service developed a climbing management plan for Bear Lodge in 1995, which requests rock climbers to refrain from climbing the butte during the month of June so that American Indians may peacefully perform sacred religious ceremonies.

However, if legislation and executive policies fail, an international appeal may be a more workable solution. The economic development of sacred and cultural sites of American Indians and of other indigenous peoples throughout the world has prompted an international debate concerning the destruction of such properties. Accordingly, the United Nations drafted the Declaration on the Rights of Indigenous Peoples, which requires nation-states to preserve and allow a right of access to the properties and sites of religious and cultural significance for indigenous peoples. Although the declaration mandates that states should "take effective measures, in conjunction with the indigenous peoples concerned, to ensure that indigenous sacred places, including burial sites, be preserved, respected, and protected," the document lacks enforcement provisions. Nevertheless, the United Nations has brought indigenous sacred site claims to the forefront of international policy that may lead to stronger protection of such sites in the near future.

In this manner, American Indians may protect sacred sites under international cultural property law, which would provide international protections for properties of significant cultural value. Because sacred sites define a group's culture, assist in the

members' understanding of the past, and reflect the group's visualization of themselves, such properties necessarily fall within the definition of cultural property. Thus, inclusion of sacred sites in cultural property theories would allow for their protection in the international arena.

Current sacred site legislation is limited and judicial support of agency decisions can adversely affect sacred sites and access to them. However, because recent U.S. congressional, executive, and agency policies favor the protection of American Indian religious practices, national and international enforcements specifically protecting sacred sites from desecration and destruction may be in the near future.

Salmon, Economic and Spiritual Significance of

For the peoples of the Pacific Northwest, which includes the western slope of the Rocky Mountains, as well as northern California, Oregon, Washington, Idaho, western British Columbia, and Alaska, the salmon has played a significant role in defining their culture. In pre-contact times salmon contributed to the organization of the peoples of this region into political groups.

The people of this region spoke many languages that in some cases were the common factor that bound them together, but often there were other ties such as family and relationships based on shared labor, including fishing, the basis of their diets. These two features held in common were key elements in determining political relationships at the village level. The village consisted of a group of people with a shared desire to follow a particular headman while performing specific tasks essential to survival. Salmon fishing was such an important activity to the survival of these people that their sociopolitical organization was often based upon task grouping. This was a method of forming their communities based on specific tasks and the skills necessary to perform the tasks (Miller, 2003, 10, 11).

Usually village residents were related by bloodlines, to some extent, but also were interrelated with residents of other villages. The villagers usually remained with their village while it suited them—politically, socially, or economically—but were free to move from village to village at will. For example, if a village fell on hard times due to a shortage of roots or berries in a specific area, many of the villagers might find fault with the local headman and migrate to a more prosperous village. One might also move to be nearer a close friend or relative. The size and makeup of the village were generally determined by the needs of cooperative labor to perform a specific task. The interaction of a number of

A Hupa Indian fishes for salmon with a spear. (Library of Congress)

villages made up a tribe, and tribes often allied themselves for survival. The larger units were more loosely arranged and less permanent (Miller, 2003, 10, 11).

As a staple food, salmon were so important to the Native peoples of this region that the fish was held in high spiritual esteem. As a way of guaranteeing that the fish would return in abundance, the First Fish ceremony was performed throughout the Northwest by the peoples who depended on the return of the annual salmon runs. Daniel Boxberger, an anthropologist who has done extensive studies on the Lummi of northern Puget Sound offered this description:

The first salmon was treated as a special guest in the village. After it had been honored and every member of the village had partaken of a small portion of its flesh, its bones would be returned to the water, where it would resume its previous form and go tell the other salmon how well it had been treated. The salmon

would then allow the Lummis to capture them (Boxberger, 1989, 18).

Andy Fernando describes the First Fish ceremony of the Skagit Indians of northwestern Washington State in detail, explaining the role of the villagers who participated and the First Fish as having "... fulfilled their duty, prescribed by the great spirit. The salmon had returned to the appointed time and place, the villagers had faithfully honored the salmon in sharing and ceremony. The people thereby assured themselves of a good season, and the harvest could begin" (Hurtado, 1994, 529–530).

Social status and social interaction were linked to salmon fishing as a method of exhibiting skill and of generosity by providing the food for social and religious gatherings. In Fernando's description of the First Fish ceremony, he explains that "[t]he entire village would gather together and appoint fishermen to each catch one salmon—no more [for the purpose of the ceremony]." Prior to the ceremony being performed and the salmon being honored, no one was allowed to participate in any fishing activities purely for the sake of catching fish (Fernando, 1998, 529).

In his discussion of the receiving of a *guardian spirit* by a member of a task group, Miller gives an example of the importance of that member's ability to catch fish and how that individuals' contribution affected the band in the task-group system:

... if a band had a large number of people who were granted strong fishing powers, this would be its predominant activity in the task group system ... [T]hus, [that group was] most likely to play a leading role in economic and social life. Even such social activities as gift giving played a part in identifying the economic role of the host group. Not only did the giving of gifts indicate that a host band was capable of generating a surplus; the nature of the gifts (baskets, dried fish, etc.) identified the group's particular economic strengths (Miller, 2003, 20).

Most of the technology of the Indians of the Pacific Northwest was based on a need to catch fish—mainly salmon. Salmon were undoubtedly the most important food staple and economic resource of the Straits Salish, who inhabited the Puget Sound area. One estimate of the pre-contact, per-capita consumption of salmon is as high as 600 pounds annually among the Lummis (Boxberger, 1989, 13). This level of fish consumption required very efficient fish-

ing technology, intense cooperation of labor, and private property boundaries. Boxberger explained this system:

The precapitalist fishing economy of the Straits Salish was a complex interaction between free-access resources and locations held in trust by individuals for a larger kin group. A man was guaranteed access to fishing locations as far as his (and his wife's) kinship networks extended. . . . The two most productive forms of traditional Straits Salish salmon fishing, reef netting and weir fishing, both required a great deal of labor and organization. Both reef net and weir sites were owned and controlled by individuals on behalf of a larger kin group . . . [A]lthough a weir might be owned by a kin group, everyone had a right to take fish from it (Boxberger, 1989, 13).

Boxberger uses the Lummis to illustrate the economic dilemma of most Native peoples when it comes to commercial salmon fishing:

In the western Washington fishery the massive capital outlays and subsequent technological advances displaced the small operations and increasingly restricted Indian access to the resource. Though the tribal resources were developed, the Lummi tribe became underdeveloped. As fisherfolk, the Lummis were incorporated into the capitalist system to provide raw materials for the processors and labor for the processing sector. Once they entered the dominant economy there was no turning back, for when their labor and resources were no longer needed they were still dependent on the dominant economy though no longer able to participate (Boxberger, 1989, 6).

In modern times, many Indians of the Pacific Northwest fish with modern fishing gear and, after decades of court battles having finally won rulings in their favor, fish in the "usual and accustomed" fishing areas guaranteed them by the treaties of the 1850s. The Lummis, for example, now fish Puget Sound and its tributary streams using modern gill nets and purse seine boats requiring a high capital investment on a commercial basis, as well as using traditional methods of fishing for subsistence use (Boxberger, 1989, 167). Either way, salmon has

retained its social, economic, and spiritual significance for most Indians in the Pacific Northwest.

Scalping in the Colonial Period

The removal of all or a portion of the scalp was a custom practiced by various Native American groups and later by European settlers. The current consensus is that the practice of scalping was an indigenous creation. The males of many Native American groups wore their hair in a certain manner that lent itself to this practice. Both groups utilized this practice, which was often fatal, as a component of warfare. The scalp could be removed in several ways. Likewise, scalping held a number of symbolic meanings, both positive and negative.

Many Native American tribespeople wore their hair in a specific fashion, with a lock of hair braided and hanging. This distinct lock of hair came to be known as the scalplock. For many Iroquois and Algonquian speaking tribes, the warrior's soul was believed to reside in the scalplock. Though Europeans did not wear their hair in the same fashion, once hostilities arose between the two groups, they too could become victims of the process.

Misunderstanding the significance of scalping to Native Americans, the Europeans perceived the practice as simply an atrocity and responded to it

Drawing of an American Indian holding a scalp. Although Native Americans were thought to have created the practice indigenously, Europeans also took part in scalping. (Library of Congress)

accordingly. As time passed, both the French and British took scalps of Native Americans. These Europeans saw the taking of scalps as a means of gaining proof that Native Americans had been killed on an expedition. By the same token, Europeans sometimes paid money for scalps collected by Indians, the payment being known as a scalp bounty. The most infamous figure known in connection with this practice was the Lieutenant Governor of Canada during the American War of Independence, Henry “the Hair Buyer” Hamilton.

Among some Native Americans, scalping served a number of significant, symbolic purposes. It added to the prestige of a young warrior to gain the scalp of another in battle. It transmitted tangible evidence of a warrior’s ability. Likewise, it was often believed that it transferred the masculinity or even

the warrior prowess of one Native American to another. By the same token, taking a warrior’s scalp after death served as a tribute to the martial ability of the fallen. It acknowledged that the slain had been a worthy opponent. If captured, a warrior could sometimes expect gruesome torture to the death (that within eastern Indian cultures was regarded as a sacrifice to restore balance to the world). Part of this torture might include the removal of the scalplock as a sign of the removal of masculinity or the soul prior to death.

As time passed and traditions eroded, especially among the Iroquois due to the practice of mourning war, scalping became a tactic employed against all of their victims, regardless of gender. Most historians link the degeneration of the practice to the frequency and intensity of the wars in the late seventeenth and early eighteenth centuries, the period encompassing the conflicts over the fur trade. These conflicts, along with disease epidemics, ravaged the elders of the various tribes, especially in the Northeast. These were the members of the tribe who served as the transmitters of their people’s culture.

While scalping among American Indians served a number of purposes, all of these were vital in the creation of a young warrior’s identity. Primarily, the acquisition of an enemy’s scalplock in battle presented a concrete testament to the young man’s martial prowess. At the same time that the captured lock of hair gave evidence of increased status, it simultaneously provided a means to salute the abilities of the vanquished. Thus the removal of the scalplock from the head of a dead warrior did honor to both contestants in the engagement.

Seven Drums Religion

The Seven Drums Religion has many names. Called *wáashat* (Washat, meaning "dance") or *waasani* (Washani, "dancers" or "worship") in the Sahaptin language of the Columbia Plateau, it is also known as the Sacred Dance Religion, the Longhouse Religion, or simply the Indian religion. The latter label reflects the contemporary view that Washat is the most "traditional" of the various faiths practiced in Plateau Indian communities, even though it exhibits some Christian parallels. Many practitioners avoid the term "religion" altogether because of its narrow, compartmentalized connotation. "To non-Indians, the longhouse represents religion," explained Lewis Malatare, the leader of a Washat congregation on the Yakama reservation. "To Yakamas, we prefer not to use the word religion but more a way of life—a life that was dictated to us by the natural surroundings of our environment." Wilson Wewa, a drummer from the Warm Springs reservation, suggested "spirituality" as a better way to describe Washat "because it's about honoring the Creator in everything we do." Whatever it is called, the Seven Drums Religion has long provided a central venue for the expression of Indian culture and identity among Plateau peoples. Washat's close association with tribal traditionalism also made it a target of government repression until the 1930s, but today more than a dozen longhouse congregations carry on the traditions of their ancestors.

Like most modern religions, Washat has changed significantly over time as Plateau Indians interacted with outsiders and adapted to shifting circumstances. Its spiritual roots extend nearly 10,000 years into the aboriginal past, when the native inhabitants of the Columbia Basin developed the seasonal round of fishing, gathering, and hunting that characterized their culture at the time of European contact. Their subsistence cycle led to the identification of five sacred foods—salmon, roots, berries, deer, and water—which Plateau Indians propitiated through an annual series of first food feasts conducted to show respect for the resources and

ensure abundant harvests. Catholic and Protestant missionaries first observed these ceremonies in the 1830s, and their efforts to convert the Indians set in motion a process of religious borrowing and blending that continued into the late nineteenth century. The bells obtained from fur traders and Jesuit priests quickly made their way into Washat rituals, where the sound of the bell came to represent the heartbeat of all life. Similarly, Indians adopted Sunday as a regular day of worship and attached spiritual meaning to the numbers three and seven. While five retained its ritual importance, appearing frequently in Washat songs and dances, seven became the standard number of drummers for most ceremonies (though fewer often serve now if enough are not available).

The popularity and power of the Seven Drums Religion peaked during the latter half of the nineteenth century, the era of the so-called Dreamer Cult. Riding a wave of Indian anxiety over the effects of American colonization, the Dreamers temporarily infused Washani with a strong millenarian and nativistic message. Their greatest prophet, Smohalla, promised his followers divine deliverance from their oppressors if the Indians would cast off white ways and return to their own traditions. Because this creed interfered with federal assimilation policies and encouraged the retention of "savage" customs, the Office of Indian Affairs tried to suppress Washat services using the Indian police and the courts of Indian offenses on each reservation. Agency authorities banned traditional dancing, spied on tribal meetings, arrested religious leaders, confiscated or destroyed drums, and directed Indians to attend Christian churches. Such measures persisted into the early 1930s, long after the prophets and their visions had faded away, but the faithful kept Washat alive by holding their ceremonies in secret, moving them off reservation, or cloaking them in approved holidays such as the Fourth of July.

The Seven Drums Religion remains active today, although its membership has declined significantly due to Indian acculturation and competition from various Christian denominations as well as the Indian Shaker Church. Washat is not an exclusive sect, however, so many people who participate in it also attend other churches. Currently, there are fifteen permanent longhouses located on five reservations and in several off-reservation communities across the Columbia Plateau. Besides holding Sunday services and seasonal first food feasts, they provide gathering places for naming ceremonies,

weddings, funerals, and other community events that define “traditionalism” for contemporary Plateau Indians. Some longhouses are thought to be especially powerful for certain purposes, such as the first salmon feast held at Celilo, and ritual practices vary from congregation to congregation. “Everybody does different things in different longhouses, just like Protestants and Catholics,” noted elder Ella Jim, “but we’re all worshipping the same Creator.”

Slavery and Native Americans

Generalizations about the history of slavery in the New World are becoming increasingly difficult to accept as more complete and complex information is revealed. Still, it is well-known that Columbus encountered Caribbean Natives when his first voyage reached the shores of Hispaniola, but it was during his second arrival that he ordered every Indian over the age of fourteen to be placed into bondage. Columbus was well within legal parameters, as nearly fifty years earlier Pope Nicholas V had legitimized slavery by authorizing Catholic nations to sell into servitude heathens and “foes of Christ.” Later, this concept was expanded to include all captives taken in religious wars, including everyone who was “unconverted,” and the Native islanders met that definition. Within a few decades, however, the numbers of indigenes in the circum-Caribbean region were greatly reduced due to forced labor, imported diseases, and harsh treatment by religious and military European-American immigrants. This catastrophe would be repeated many times. Centuries later in the United States, poor white Europeans of any religious affiliation became indentured servants in some of the thirteen original colonies; others, such as Massachusetts, outlawed servitude in 1712. Virginia colonists, on the other hand, had tried

enslaving Indians but a deadly retaliation occurred and the effort was abandoned. Ultimately, the disastrous effect of communicable diseases prevented Indian slavery from becoming a major institution in the colonies because many Natives would die from imported ailments within fifty years after contact with the Puritans. Years later in the American South, the Seminoles also owned African slaves who, when they escaped, took refuge among the occupying Spaniards in Florida. Cherokees too held slaves and were themselves enslaved by mixed-blood plantation owners. Half-Indian proprietors of vast estates forcibly brought Chickasaw Indians from Mississippi to Indian Territory to work for free. The Creeks were both slaves and slave owners. The best example of continuous Indian slavery occurred on the Spanish colonial frontier of northern Mexico. Conquistadors, heirs to a long history of forcing work and other forms of tribute from conquered peoples in Europe, brought the tradition to Mexico in 1521. For example, explorer Hernan Cortes took a fourteen-year-old girl as his slave and concubine shortly after arriving (Brooks, 2002, 25). Soon, Spanish ships were docked at Mexican West Coast ports like Guaymas, awaiting hunters who tracked, caught, and transported Indians into slavery in the central area of the country. “Throughout the entire seventeenth century [Spaniards] paid fifty to one hundred pesos to go out into the wilds and enslave groups of Indians on the pretext of bringing them into Hispanic society” (Cuello, 1988, 688). Male captives, worth over one hundred pesos in 1575 when sold privately or at public auctions, were expected to serve their purchasers for twenty years. Women and older children, in high demand as house servants, received a sentence of ten to fifteen years. Younger children were “deposited” with Spanish masters for indefinite periods (Cuello, 1988, 687).

In the late 1500s and well into the following centuries, northern Mexico fell under the authority of Jesuit and Franciscan missionaries. These religious pioneers’ dual task was to introduce Christianity to the Indians, convert them, and prepare the new Christians to become tax-paying citizens of the empire; enslaving the indigenes was the result. To meet the goals, priests relied on a policy of *reducción-congregación*, procedures that reduced populations in Indian villages, through violence if necessary, and then congregated the natives in strictly controlled settings where their labor was forced and their culture nearly obliterated through punishment, reeducation, involuntary religious instructions, and renaming

Native Americans working in salt mines under Spanish rule. (Bettmann/Corbis)

(Stockel, 2004, 58–59). The Indians' initial obligation in the mission environment was to construct the entire compound, beginning with the center of the community: the church. To build the long, rectangular adobe foundation, workers were forced to cut timber and haul the heavy tree limbs to a designated area at the future mission's home. Under armed guard and at the direction of a priest, the laborers created square wooden frames, cut from the tree limbs as molds for adobe bricks. They dug out the rocky caliche soil, so characteristic of the region, mixed it with water, small stones, and slivers of wood, and poured it into the shells. Days later, when the sun had thoroughly dried and baked the mud, the Indians lifted each weighty brick and carried it to the proposed sacred site. They piled one brick on top of the other or two beside each other, sometimes to a width of thirty-six inches, to raise the church's walls. Roof construction began by boiling and then peeling bark from other tree limbs, lifting them, and setting them across the open width between the walls from one side to the other. Next, skinny wooden braces

of willow, saguaro cactus ribs, or similar materials were also boiled and peeled and placed at right angles atop the beams. Mud, cow manure, grass, and other natural flora sealed the roof. To prevent deterioration, the slaves hauled, pushed, and pulled tons of limestone boulders to a pit they dug, heated them in roaring fires until they exploded, and then pulverized and blended the residue with water. Other Indians stood ready to smear the mixture by hand onto church walls, frequently standing on shaky scaffolds that could collapse and plunge the men to earth. If the workers hesitated or sat down to rest without permission, soldiers were ordered to discipline them on the spot.

Daily regimentation controlled the field workers. Each day began with religious services followed by a small breakfast after which the slaves walked under guard to the field to work all day at planting, tending, and raising crops. At sunset each day the tired Indians returned to the mission complex and were required to stop at the church to say the doctrina and pray before eating supper. Collecting

tribute was the responsibility of crown-appointed trustees called *encomenderos*. Beginning in 1562, these few privileged individuals, having exhibited impressive loyalty to the crown, held a specified number of Indians in trust, or in *encomienda*, a remnant of a feudal institution through which loyal subjects to the king were rewarded. Tribute consisted of gifts of goods, crops, hides, blankets, and anything the *encomendero* requested from his Indian slaves. Even after the crown prohibited the practice, taxes in the forms of direct labor or personal service persisted, with officials looking the other way and justifying *encomienda* as necessary because a scarcity of non-Indian agricultural workers existed (Weber, 1992, 124). *Repartimiento* (Weber, 1992, 126) replaced *encomienda* and became another legalized form of slavery even though it has been defined as a “time honored institution by which Spanish officials distributed native men to work on a rotating basis at tasks deemed to be for the public good” (Weber, 1992, 126). Participation was compulsory, but in contrast with the common understanding of slavery, the Indians were supposed to receive wages. Although the length of their servitude was controlled by laws, as was the type of labor they were expected to do, Indians were “unpaid, underpaid, paid in overvalued merchandise, unfed, underfed, and kept for longer periods of time than regulations permitted” (Weber, 1992, 126).

Control through a well-defined hierarchical structure and disciplinary actions for disobedience were essential both in *encomienda* and *repartimiento*, religious and political officials rationalized, if managing a large group of Indian slaves was to be even moderately successful in creating a stable community. They thus gave themselves permission to disregard the laws. Simultaneously, soldiers and settlers also wanted free slave labor to tend herds, till fields, cut firewood, serve in Hispanic households, and haul cargo as pack animals. Competing needs eventually caused a conflict between the religious and secular frontier Spaniards. Civil authorities charged that the missionaries forced the Indians to work for free. The missionaries responded that appointees demanded that the indigenes work for them purely for individual profit. Importantly, allegations also involved the priests’ severe disciplinary methods for misbehavior, countered by the missionaries’ similar allegations against their accusers. The continuing enslavement of Indians by Europeans was interrupted by a series of external events beginning in 1810 when stirrings of independence from Spain

altered funding and supplies to northern Mexico. Later, the successful war further disrupted the frontier, as did war with America in 1846. In the final analysis the occupation and subjugation of Mexico’s indigenous populations cast the conquerors, especially the missionaries, into the role of aggressors, demanding and imposing cultural and religious changes through violence when necessary. That this massive colonial endeavor was successful is apparent today in the Spanish surnames and Christian affiliations of Native peoples in northern Mexico and the American Southwest. That the attempt was unsuccessful is evident in the Indians’ continuous public and private practice of ancestral ceremonies and traditional celebrations (Stockel, 2004, 268).

State Names, Native American Derivations

Roughly half the states in the United States of America have names that derive, in some way, from Native American languages. Most are English or French adaptations of the original Native American words. Sometimes, more than one meaning has been attributed to a name, in which case both are listed.

Alabama: From *alipama* or *alibamu*, a Muskogee tribal name meaning “Those who clear the land.”

Alaska: From the Aleut word for their homeland on the Alaska peninsula, *Alakhshakh*; also Aleut for "great land."

Arizona: A Pagago word, *airzonac*, probably meaning "small springs."

Arkansas: From the Illinois name for the Quapaw, *akansea*. The same word has been said to mean "downstream people."

Connecticut: Mohegan or Pequot for "long tidal river" or "wind-driven river."

Dakota (North and South): A Dakota Sioux term for themselves (*dahkota*), meaning "friends" or "allies." It is interesting that the immigrants expropriated the Sioux's own name for themselves, with its friendly connotations, meanwhile assigning the Dakota a corruption of an old French word *Sioux*, meaning "snake" or "enemy."

Idaho: The Native language from which this state name is derived is unknown; it is said to have meant "gem of the mountains"; some say it means "The sun is coming up."

Illinois: The name of an Algonquian confederation, meaning "original people" or "superior men," after a term that the Illinois Indians used for themselves. The name originated with the Algonquian *iliniwak*, modified by French traders as Illinois.

Iowa: For the Ioway Indians, modified through French, from the Fox language, as *aayahoo-weewa* (possibly from the Sioux *ayuhba*). Both words mean "sleepy ones."

Kansas: Kansa for "people of the south wind."

Kentucky: From *kenta*, possibly an Iroquois word for "planted field." Some say the word is Cherokee for "meadowland."

Massachusetts: Meaning "people of the big hill," this name was used to describe an Algonquian people who lived near a steep hill near Boston.

Michigan: Meaning "great water" (*michigamea*) or "big lake," the name is probably derived from the Algonquian or Ottawa language.

Minnesota: From *minisota*, a Dakota word meaning "sky-tinted water."

Mississippi: A combination of two Algonquian or Ojibway words: *misi*, meaning "great" or "large" and *sipi*, meaning "water," usually taken to mean "big river."

Missouri: A French adaptation of an Illinois (*iliniwak*) word meaning "people with dugout canoes." This is also the name of a tribe that lived near

the river and also may be taken to mean "big muddy river," after the Missouri Indians' name for it, *Pokitanou*, which carries that meaning. To this day, inhabitants of cities along the river customarily call it The Big Muddy.

Nebraska: From the Omaha name *Nibdathka*, meaning "flat river" or "flat water," named for the shallow but wide Platte River. Some sources say the word is from the Oto language; it may be from both.

New Mexico: As a province of New Spain, New Mexico's name was derived from *Mexica*, the Aztecs' name for themselves.

Ohio: Derived from a Seneca word meaning "beautiful river."

Oklahoma: "Red men" in Choctaw, a translation of "Indian Territory" into the Choctaw language.

Tennessee: From *Tanasi*, a Cherokee name for the Little Tennessee River, as well as a principal Cherokee town by the same name. It is said to mean "area of traveling waters."

Texas: First a Spanish (*Tejas*), then an English derivation from *taysa*, a word used among members of the Caddo tribal confederacy meaning (like "Dakota") "friends or allies."

Utah: From the tribal name Ute, anglicized from *yuuttaa*, the Utes' name for their homeland, "the land of the sun."

Wisconsin: The name of a tribal confederacy living near the Wisconsin River, the English name is probably derived from the Ojibway *Wees-kon-san*, "gathering of the waters" and "grassy place."

Wyoming: This name, meaning "big meadows" or "big river flats," originated with the Delaware (Leni Lenápe) of present-day Pennsylvania and New Jersey, and was carried by non-Indian migrants to the state that now bears the name. "Wyoming" is anglicized rather liberally from the Leni Lenápe *maughwauwame*, a name given first to the Wyoming valley of Pennsylvania.

Sun Dance

The Sun Dance is the central ceremony of the year for many of the Plains tribes. It is held among the Arapahos, Arikaras, Assiniboines, Blackfoot (Blackfeet), Comanches, Crows, Eastern Dakotas, Gros Ventres, Hidastas, Kiowas, Lakotas, Mandans, plains Crees, plains Ojibwas, Sarsis, Shoshones, Sisetons, Suhtais (northern Cheyenne), Tsis-tsis-tas (southern Cheyenne), and Utes. Recently, some Navajos have put on the Sun Dance as well. Moreover, because of the questionable practice of selling Sun Dances, splinter groups of intertribal Indians, unaffiliated mixed-bloods, and whites have been putting on Sun Dances in places such as Colorado and Texas. This practice is highly controversial.

From 1881 to 1934, Sun Dances were held secretly because they had been banned in both Canada and the United States. The Canadian Indian Act made it illegal in that country, and in the United States it was proscribed under the Court of Indian Offenses after 1883. Even prior to government prohibition, Sun Dances had been discouraged by other means. The agent among the Blood band of the Blackfoot withheld rations and rendered other food ceremonially useless as well as preventing a traditional leader from getting employment to discourage the ceremony. Sun Dances without piercing began to be held more openly after the Indian Reorganization Act of 1934 with its Circular No. 2970 on American Indian religious freedom, and those including piercing became less secret in the late 1950s. The tribal council at Pine Ridge even advertised a Sun Dance to tourists for a Fourth of July Fair.

The Sun Dance has been practiced the longest by the Arapahos, Cheyennes, Crows, and Sioux, having come later to the others who practice it. For the Lakotas, the Sun Dance was brought by White Buffalo Calf Woman; for the Suhtai, by Erect Horns. For the Tsis-tsis-tas, Sweet Medicine brought the dance from the teachings given to him by the spirits inside Bear Butte. Sun Dances are traditionally held among these peoples in the summer, usually either around the end of June or beginning of July or around the end of July and beginning of August. This is the time of year when berries ripen or chokecherries darken to fullness, the time the buffalo was traditionally hunted and preserved.

The Sun Dance arbor is constructed each year anew around a central pole, the Tree of Life, often ritually hunted and brought in by one of the warrior societies. Shades made of tarps or other cloth cover the

Cheyenne Sun Dance pledgers. (Library of Congress)

beams that fan out around the center pole, creating the sacred circle in which the dancers will make their sacrifice. Around and on the central pole are highly sacred objects and sometimes prayer cloths. Buffalo, the lifeblood of the Plains, are essential to the ceremony for most participating tribes, at least in some way. The Blackfoot include the use of Sacred Tongues in the food blessed in the ceremony. Buffalo skulls are used both for prayer and for a piercing weight.

Some peoples who hold the Sun Dance do not pierce for various reasons. The Tsis-tsis-tas, who once engaged in this Sun Dance practice, no longer do so because, as Eugene Blackbear, Sr., oldest living Tsis-tsis-tas Sun Dance leader, says, "Once a way has been lost, we cannot bring it back without someone who is qualified to do it," to act as an instructor who has engaged in the practice as a dancer. For the Kiowa, piercing would violate a prohibition against shedding blood during the time of the ceremony. Among peoples who pierce, skewers are put under the flesh and either tied to the central pole, to scaffolds, or to the buffalo skulls some supplicants drag behind them. Dancers who pierce often have to ultimately remove

the piercing through a flesh offering, by dancing up to and away from the pole until the skin rips and the skewer flies free. During the ritual, dancers often do without food and water for up to four days. Led by their instructors, they dance intermittently for days on end, blowing sacred eagle bone whistles at times. They may not leave the arbor except when given permission by their instructors for a break to urinate or for ceremonial purposes. In some tribes, only men dance. In others, dancing is done by both male and female supplicants. Among the southern Cheyenne, women may fast but do not dance.

The dance's central purpose is for the renewal of life for the next year for the people, so that they might overcome the obstacles to their survival and have plentiful food for the next year; it is a thanksgiving, a giving back to the Creator for the blessings of the past year. The ceremony commemorates the creation of the world and acts to recreate it and the relationships within it annually. However, preparation for an individual Sun Dance supplicant begins with a vow to undertake the ceremony. Often, a vow is taken so that a relative might be healed from an ailment or safely returned from war or other separations. This vow might vary from one year to four years of Sun Dancing. The dancer, or faster, in the case of a female, must find an instructor qualified to lead him or her in the ceremony. The instructor gives up some of the medicine given to him or her in their years as a dancer or faster.

According to Blackbear, Cheyenne instructors keep back "one paint" or transfer for themselves. Because of the notion of reciprocity in ceremony and in life that is an ideal in many tribes, those taking vows offer gifts to the instructors, both upon taking the vow and in the ritual itself. Often, the entire extended family of the dancer spends nearly a year gathering and making the gifts; these include blankets, shawls, guns, horses, moccasins, and enamelware dishes and pots, among other items. A dancer often has to find someone to cook during the ceremony for him as well, often several female relatives. Elaborate meals are given to the instructor and his or her family several times a day during the ceremony itself, and a larger feast is held after the dance ends, including both the dancer's and the instructor's families. In other tribes, cooking for those encamped and the instructors is done on the community level, with women from various families chosen or volunteering to prepare food for all who attend.

Dancers often abstain from sexual activity for a period of time before the ritual; in some tribes,

celibacy is practiced for a month to four months. In traditional Tsis-tsis-tas ways, the period at one time was four years. Moreover, some peoples acquire a pipe for praying and observe taboos that they must follow for the rest of their lives that accompany the medicine they are given through the dance. Often, dancers and instructors pray prior to the dance in a sweat lodge for the purpose of purification. Another sweat follows in some tribes at the dance's conclusion. In some nations and tribes, the Sun Dance is preceded by other bundle ceremonies, such as Arrow Worship among the Tsis-tsis-tas, a men's ritual that women know nothing about. In others, such as the Lakota, individual supplicants go out on the hill seeking a vision prior to dancing.

For many who take part in the ceremony, the Sun Dance is a homecoming, just as it was a gathering of the bands in the prereservation era. The camp life of the ceremony provided time for traditional games, council meetings, and the passing of information to those one seldom saw. Young people traditionally and today see the Sun Dance as an opportunity for courtship. Tents and recreational vehicles today help form the outer circle along with the teepees and bough-covered cooking shades that once formed it alone. Those about the camp who support dancers, visit old friends and relatives, and engage in various preparatory activities often must observe taboos as well, such as not wasting water or tossing it out carelessly. Drug and alcohol use is strictly prohibited and constitutes a major violation of the ceremonial space and the camp.

Menstruating women might be sent to a "moon lodge" in some ceremonies, while in others they should avoid the campground entirely as their power can interfere with that of the instructors. In some tribes, the Sun Dance is a time to bring those born during the year into tribal life formally, some piercing children's ears and others conducting formal naming ceremonies. Despite the changes brought by time and colonization, the Sun Dance religion remains vitally important to all aspects of life for the tribes that practice it. It perpetuates life and ideals such as generosity, bravery, and honesty, weaving the tribe together as a people and sustaining them.

Sweat Lodges

Used both by itself as a ceremony and as a purification ritual in preparation for and/or following other ceremonies, the sweat lodge is known throughout Native America and has or had variants from tribes

as geographically diverse as the Aztecs and Mayans to the Inuit. Today, it is most common among the Plains peoples, but it is practiced both in urban and reservation Native communities, often using the Lakota model of Inipi, one of the seven Lakota sacred rites. Sweats are also used by traditional healers in “doctoring” (Blackbear, 2004).

Sweat lodges are most often constructed using a rounded framework of bent willow saplings tied together and covered prior to using the sweat with blankets, tarps, or carpets, replacing the animal hides used historically, leaving a small area covered with a flap for a doorway. Most lodges, or sweats, as they are commonly called, are between six and twelve feet in diameter, though a six-foot sweat would be unusually small and some are even larger than twelve feet. A pit is dug in the center of the sweat, lined in some traditions with stones and in

Three Native American men pose outside a Crow village sweat lodge in Montana. (Bettmann/Corbis)

others left as bare earth. Lakota tradition incorporates the use of prayer or tobacco ties, small bundles left tied to the underside of the central portion. Some lodges have east and west doorways, while others have only east doorways.

In some traditions, only men sweat. In others, men and women sweat separately. In some contemporary circumstances, men and women sweat in the same lodge, often with men to one side and women to another, with the sweat lodge leader seated either in the honor seat, or hot seat directly across the way from the door or in the seat next to the door. Attire varies, with some tribes such as the Crow sweating only in segregated groups because of the lack of it, and others allowing shorts for men and T-shirts and shorts for women. In some tribes, such as the Blackfoot and Lakota, women wear long cloth dresses for sweats, whether they are integrated with the men or not.

Prior to the sweat, rocks, varying in number greatly from tribe to tribe and from one sweat lodge leader to another, are heated in a large pit outside the lodge near the door. After the lodge has been covered to ensure no light can enter once the door has been closed, participants line up, sometimes cedarizing, also known as brushing off or smudging, with sage, sweetgrass, cedar, or a combination thereof prior to crawling into the lodge. Other sweat lodge leaders will have participants cedar once the rocks are brought in during all or the first of the four rounds of which a ceremony typically consists. Once the door is closed, water is poured on the hot rocks, creating steam and temperatures that can reach 200 degrees Fahrenheit. Prayers and songs are offered, and they help many to reach the state of mind necessary for withstanding these temperatures. The process is repeated for each round, between which the door is usually opened to allow the participants to recover briefly. Sweats are often followed by a meal and socializing. Before socializing and/or meals, some nations' sweats are followed by a dip in a cold stream or lake.

Though much scholarship has been done on sweats, particularly in regard to the details of the Lakota tradition, only those qualified to run a sweat through their ceremonial experiences should lead a ceremony. Eugene Blackbear, Sr., a highly regarded and experienced southern Cheyenne ceremonial leader, points out that several deaths have been inadvertently caused by unqualified and untrained Native and non-Native people running sweats in Texas and California. Run correctly by qualified

sweat lodge priests, however, sweats have been one of the ceremonies most accessible to Natives isolated from their communities through urbanization, and they have proven helpful to those incarcerated and those in alcohol and drug rehabilitation. Though the sweat and other ceremonies were prohibited by the U.S. government for a time, the ceremony has persisted and offers what Mr. Blackbear considers to be one of the most accessible ways for young people to return to their traditions and seek help.

Thanksgiving Holiday, Origins

Ceremonies of thanksgiving for the bounty of nature are a common element in many Native American cultures. Feasts of gratitude and giving thanks have been a part of these cultures for several thousand years. In Lakota culture, a feast of thanksgiving is called a *Wopila*; in Navajo, it's *Hozhoni*; in Cherokee, it's *Selu i-tse-i*; and in Ho Chunk (Winnebago), it's *Wicawas warocu sto waroc*. Thanksgiving in many cases is a yearlong event, celebrated, for example, after the safe birth of a baby, a safe journey, or the construction of a new home.

Native peoples introduced their thanksgiving celebrations to English colonists near Plymouth Rock in 1621. A fall thanksgiving holiday, usually accompanied by feasting on traditional Native American foods (turkey, corn, yams, squashes, cranberry sauce, etc.) has been widely practiced since about 1800 by most non-Native people in the United States and Canada. President Abraham Lincoln's 1863 Thanksgiving Proclamation led directly to Thanksgiving being declared a national holiday in the United States. Canada declared an official Thanksgiving holiday in 1879, which is celebrated six weeks before its counterpart in the United States.

In this painting of the first Thanksgiving feast, members of the Wampanoag tribe are treated as honored guests by the Pilgrims of Plymouth Colony as they celebrate their survival in 1621. Though the image depicts a commonly held perception, the reality of the relationship between the Pilgrims and the Wampanoag was more complex and less congenial. (Library of Congress)

Thanksgiving is part of an annual cycle. Many Native American peoples celebrate a number of seasonal thanksgivings each year, of which general American culture has adopted only one. At each season, thanks are given for nature's provision of an economic base, whether it is corn, buffalo, or salmon. According to José Barreiro, editor of *Native Americas*, "The Thanksgiving tradition requires that human beings place themselves in a humble position relative to the natural, plant, and animal elements and to consider, in one mind, the contributions of these other species to our well-being and survival . . . Among the Iroquois and other traditionalists, the 'wish to be appreciated' is the fundamental shared perception—the first principle—of existence (Barreiro, 1992, 28).

Mohawk Nation Council Subchief Tom Porter offered a traditional thanksgiving prayer, "Words before all else," that is used for all of the Iroquois' nine thanksgiving celebrations:

[Before] our great-great grandfathers were first born and given the breath of life, our Creator at that time said the Earth will be your mother. And the Creator said to the deer, and the animals and the birds, the Earth will be your mother, too. And I have instructed the earth to give food and nourishment and medicine and quenching of thirst to all life. . . . We, the people, humbly thank you today, mother earth.

Our Creator spoke to the rivers and our creator made the rivers not just as water, but he made the rivers a living entity . . . You must have a reverence and great respect for your mother the earth. . . . You must each day say "thank you" [for] every gift that contributes to your life. If you follow this pattern, it will be like a circle with no end. Your life will be as everlasting as your children will carry on your flesh, your blood, and your heartbeat (Grinde and Johansen, 1995, 34–35).

A tribute to the Creator and a reverence for the natural world are reflected in many Native greetings throughout the North American continent. More than 2,500 miles from the homeland of the Mohawks, the Lummis of the Pacific Northwest Coast begin public meetings this way: “To the Creator, Great Spirit, Holy Father: may the words that we share here today give the people and [generations] to come the understanding of the sacredness of all life and creation” (Grinde and Johansen, 1995, 34–35).

The domesticated fowl that would come to be called turkey in English was first eaten by Native Americans in the Valley of Mexico; the Aztecs introduced it to invading Spaniards. By the time the Pilgrims reached Plymouth Rock in 1620, turkey had been bred in Spain and exported to England for almost a century. The passengers of the Mayflower had some turkeys on board their ship, so when they prepared for the first Thanksgiving, the English immigrants were familiar with the wild turkeys that were hunted by Native peoples in eastern North America. Wild American turkeys seemed larger and better tasting to many colonists than their European-bred brethren. They were also easy to hunt. Thomas Morton said that a hunter in early seventeenth-century New England could shoot one turkey while others nearby looked on, “The one being killed, the other sit fast everthelesse . . .”

(Cronon, 1983, 23). By the late twentieth century, wild turkeys were scarce in much of New England.

Native Americans gathered the seeds of corn when it was a wild grass, and selected yields for the most productive, hardiest varieties. By the time European immigrants made landfall in North America, corn was more productive per acre than any cereal crop in the Old World. Corn, along with squashes, beans, fish, venison (deer meat), and various “fowls” (probably turkeys, ducks, and geese) were consumed during the first Anglo-American Thanksgiving. The abundance was welcomed by the Pilgrims, who had arrived in the New World with English seeds, most of which did not sprout in American soil. They nearly starved during their first winter. William Bradford, governor of the small colony, wrote in his diary that Squanto, who was able to teach the immigrants in their own language how to survive, was “a special instrument sent of God for [our] good” (Case, 2002).

Totem Poles

The totem pole has always been associated with Native Americans, even though other indigenous peoples make totem poles as well, such as the Maori of New Zealand, the Ainu of Japan, and many African tribes, particularly in Madagascar. Although the reasons and educational context of different cultures contrast greatly in their development, the totem poles of the Native American people of the Northwest Pacific Coast, where many historians believe the first totem pole originated (before those in Alaska, British Columbia, Canada, and the United States), have very specific traditions related to the creation and use of totem poles, including the deeply institutional meanings behind each symbol presented. Commonly, totem poles are like a coat of arms or a great seal, a way that the pole's owner says, "This is who I am."

The use of totem poles in the Northwest predate European-Americans' arrival in the early eighteenth century. The antiquity of totem pole construction is not known because they were made of wood and decayed easily in the rain forest environment of the Northwest Coast. Thus, examples of totem poles carved before 1800 do not exist today.

To be authentic, a totem pole needs to be sanctioned, that is, it must pass certain tests. First, it must be made by a trained Northwest Pacific Native person or, in rare cases, by a non-Native apprentice who has been approved by a Northwest Pacific Coast band from Coastal British Columbia or Alaska. Second, it must be raised and blessed by Northwest Natives or elders who are part of the totem pole tradition.

House and totem pole of Tlingit Chief Sou-i-hat in Alaska. (Library of Congress)

Only after a meeting of elders, sponsors, and a master carver, is a totem pole carved, usually from a clear, red, mature cedar tree with few knots and imperfections. The master carver sculpts a small model of the design, after which the tree is debarked and tested for blemishes, and the wood is smoothed. The master carver begins at the bottom and works toward the top. Traditionally, as carvers work, they sing a variety of ceremonial songs, as the figures begin to emerge. The bottom is carefully detailed because the most important figures are at the bottom and observers see these figures close up. The story or theme of the totem pole is at the top.

Most totem poles range in size between three and seven feet in height, although, some much larger poles have been found. As the master carver cuts out the rough forms, he discusses the overall concept of the pole with each apprentice carver. Small poles usually take two to three months to complete, and large poles require eight to nine months.

The decision to paint the pole comes last. The carver chooses whether to paint it. Usually, the pole

is painted with a series of family or clan crests or with figures representing mythic beings and then erected, usually outside a dwelling. The colors are usually bright and customarily made from animal oils, blood, salmon eggs, charcoal, graphite, and other natural and mineral dyes. The brushes were traditionally made from animal fur, and, according to history, the colors also help to tell a story associated with the various faces carved in the wood.

Many symbols and legends have been incorporated into the making of totem poles. Animals have been carved into totem poles because of Native peoples' belief that animals have spirits, as well as special talents. In many instances, Native Americans grew up hearing stories and fables about animals. The Raven, for example, is identified by its straight beak and is generally alleged to be a power trickster, curious and defiant, but likable. The Eagle has a downward, curved beak and is part of the Sky Realm. The Bear is often portrayed with large paws and sometimes a protruding tongue and as an animal that can transform into human forms. The Copper Woman, a god from Native American mythology, grants wealth to her favorites and is the friend of the Frog.

A totem pole can be very difficult to decode by outsiders, because each symbol has many stories and legends associated with it. The true and deep meaning of a pole may be known only to the family, the carver, and others familiar with its history. In addition, the totem pole has been surrounded by popular myths, such as that they were the objects of worship, they were used to ward off evil spirits and thus heeded the remains of dead ancestors, and they were always "serious" in nature. The poles were also sometimes used for public ridicule and called shame poles, erected to shame individuals or groups for unpaid debts. Shame poles today are rarely discussed, and their meanings have in many places been forgotten.

Totem poles of all types share a common graphic style with carved and painted containers, house fronts, canoes, masks, ceremonial dress, weapons, and armor. Most figures are two- or three-dimensional. This artistic system was developed by Northwest Coast Native peoples over many thousand of years, as evidenced by stone and bone artifacts uncovered in archaeological studies, which display clear examples of the same design.

The craft of making totem poles is slowly disappearing, and old totem poles are becoming scarce. Almost no nineteenth-century or early twentieth-

century totem poles remain in their Native settings or in Native American ownership. Most have disappeared, and only a few have been preserved in museums or for international exhibits.

Totem poles have been called the most "iconic" of Native American arts and crafts, and the symbols presented on a given pole say a great deal about the family who owned it, a person, or the reason for creating it. These columns were once used as a form of communication and to relate narratives about Native American history, but they came to symbolize the belief of various Native American groups that forces of nature were their spiritual brethren. Fundamentally, totem poles were raised to represent the Native kinship systems, rights, prestige, accomplishments, sense of dignity, adventures, major events, and clan histories. A totem pole could be raised to honor a deceased elder, to show the name of an important person, to record an encounter with a spiritual being, or to symbolize generosity. Scholars have acknowledged that the meanings of the designs on totem poles are as varied as the cultures that produce them.

The popularity of carving poles increased with the growth of trade with non-Natives. As such, carvers began using the stronger, easier-to-use iron tools brought from overseas to increase their productivity. The art of totem pole carving almost died out between the 1880s and the 1950s because the potlatch was forbidden.

At one time, potlatch ceremonies celebrated important events, with guests coming from afar to feast and to be a part of communal rituals. The ceremonies included the celebration of a marriage or an accession at which the host distributed gifts according to each guest's rank or status. Over time the potlatch evolved to the representation of a family and clan in its place in the First Nation hierarchy. When the potlatch was again allowed, tribes resumed carving totem poles. Freshly carved totem poles are being erected up and down the Northwest Coast to create a renewed interest in their artistic production.

In later periods, totem poles were also raised to keep a record of the privileges of a person acquired within the society over a lifetime or to record an encounter with a supernatural being. Some poles embodied one-of-a-kind stories or unusual symbols. These stories or symbols are known in entirety only to the pole's owner and to the carver of the totem pole. The unusual meanings became known only if the pole's owner or carvers gave an account to a rela-

tive, granted interviews to academics, or left a written record. Otherwise, the hidden or special meanings were lost.

Today, totem poles are carved for both Natives and non-Natives. They have come to represent Northwest Pacific Natives and their traditions and pride, but also they are being made for “big money.” Authentic, full-sized totem poles cost \$25,000 to \$100,000 each. Outsiders usually commission them to commemorate a great event or a coming of age, to symbolize a pact between nations, or to illustrate some sort of bond between Native people and a corporation or government entity that has commissioned the pole. The selling of totem poles is not new, nor is it a part of the old totem tradition. The practice has become a part of the modern tradition and is usually considered legitimate.

In recent years, Northwest Coast carvers have been commissioned to carve full-sized poles for many museums, corporations, and private collectors worldwide. Today, Native Americans throughout the Northwest Coast are carrying on their traditions by raising new poles to honor their deceased relatives, to celebrate their family histories, and to make totem poles for anyone who can afford them.

Wakashan Languages

The Wakashan language family consists of seven languages that are spoken on the Northwest Pacific Coast. Specifically, the Wakashan languages are spoken in Canada on Vancouver Island and on the coastal mainland of the British Columbia coast, east and north of Vancouver Island. One language in the family, Makah, is spoken in the United States, on the Olympic Peninsula. Most of the languages in the Wakashan family are endangered.

The Wakashan language family is divided into northern and southern groups, which are quite different from each other. Languages within the two branches, however, are very closely related. The

Northern Wakashan branch includes Haisla-Henaksiala, Heiltsuk (or Bella Bella), Oowekyala (or Oowekeeno), and Kwakw’ala (formerly called Kwakiutl). Southern Wakashan includes the languages Nuuchalnulth (formerly known as Nootka), Ditidaht (or Nitinaht), and the Makah language (or Qwiqwidicciat). The Southern Wakashan group is sometimes referred to as the Nootkan branch, and the Northern Wakashan is sometimes referred to as the Kwakiutlan branch.

“Kwakuitl” is the name of a particular village in Fort Rupert, British Columbia, whose name has long been used as a reference for all the distinct groups of Kwakw’ala-speaking people. Collectively, those who come from Kwakw’ala-speaking people refer to themselves as Kwakwaka’wakw. Anthropologist and linguist Franz Boas wrote extensively on the Kwakwaka’wakw people, their language and their potlatch ceremonies.

The most northern of the Northern Wakaskan languages is Haisla, which is traditionally spoken at the head of Douglas Inlet, near Kitimat. The Heiltsuk language, spoken around Bella Bella, is closely related to the Oowekyala language, which is traditionally spoken around Rivers Inlet. The Kwakwaka’wakw traditional territories include the northern half of Vancouver Island and extend east and north on the mainland of British Columbia. There are two main dialects recognized within the Kwakwaka’wakw group, one along the outer coast of the traditional territories, from Cape Cook to Smith Sound, and the other inner dialect within the Queen Charlotte and Johnson Straits.

The most prominent language in the southern branch is the Nuuchalnulth, which encompasses many different groups and dialects, extending along the northwestern coast of Vancouver Island from Quatsino Sound to Barkely Sound. Dialect groups include the Kyuquot, Ehattisaht, Nuchatlaht, Mowachaht, Hesquiat, Ahousaht, and Tla.o.qui.aht. Nuuchalnulth is the best documented of the southern group as well. The languages of Ditidaht and Makah are distinct, but closely related to Nuuchalnulth. In the past, reference was made to the West Coast Language, which included Nuuchalnulth, Ditidaht, and Makah, but the three languages are not mutually intelligible. Ditidaht territory is near the southern tip of Vancouver Island and surrounds Nitinaht Lake. The Makah language is traditionally spoken across the Strait of Juan de Fuca in Washington State, at the northwest tip of the Olympic Peninsula.

Some of this language family's distinctive features include extensive suffixing, infixing, and reduplication. Wakashan languages also are known for their large number of consonants, many of which do not exist in English. The languages are considered polysynthetic, and there is debate over whether a difference exists between noun and verb roots in the language, apart from their use and inflection. Some of the languages in this family also are notable for specific ceremonial styles and baby language.

Makah and Ditidaht are distinct within the family due to a specific sound change. Like neighboring but unrelated languages, and unlike the rest of the Wakashan languages, they have no nasal consonants. This characteristic is extremely rare cross-linguistically. This current lack of nasal consonants explains why Ditidaht is called Nitinaht by other groups on Vancouver Island.

It is thought that Vancouver Island is the homeland of the Wakashan-speaking peoples and that their presence precedes that of Salish-speaking peoples on the island.

Wampum

Contrary to general interpretations, wampum was not money, but rather a means of remembering solemn agreements and treaties. The first wampum—cylindrical shell beads—was made over

a thousand years ago. Iroquois elders in upstate New York still recite stories and sing songs of the Great Peacemaker who first created wampum to heal a grieving man. Today, the Condolence Ceremony survives as an essential part of Iroquois cultural tradition and religion. The old wampum belts have been judged objects of cultural patrimony, national treasures so important they cannot be separated from their society. Several wampum belts have been returned in compliance with the Native American Grave Protection and Repatriation Act (NAG-PRA, 1999).

The origins of wampum are woven into the life story of the Great Peacemaker, who inspired the unification of the Iroquois Confederacy long before the coming of Europeans. Although the young Peacemaker exhibited remarkable talents, he was born with one handicap: He struggled with a speech impediment. When he departed on his mission in life, he encountered a man who was sobbing beside a lake. He stopped and inquired into the source of the man's grief. He said that his name was Hiawenthe (not the Hiawatha of Longfellow's famous poem). He was mourning the death of his wife and seven daughters. An evil wizard, he said, had tried "to have his way" with Hiawenthe's wife and daughters. As each of them refused, the wizard murdered them one by one (Shenandoah, 1979).

To heal Hiawenthe's broken heart, the Great Peacemaker created a Condolence Ceremony. He gathered clam shells along the water's edge and formed seven strings of cylindrical tubes called wampum beads. He designed patterns by stringing different sequences of white and purple beads from the purplish-blue base of quahoag clam shells. The Great Peacemaker raised the first string and said, "Now, Hiawenthe, with this string I take the softest skin of the fawn and wipe the tears from your eyes. With this next string, I take the lightest feather that falls from the heavens and open your ears, so that you may hear clearly once again" (Swamp, 1981).

After four more verses, the Peacemaker said on the seventh string, "Now I take those medicine waters, those soothing cool medicine waters, and I open your throat, so that you might speak clearly once again" (Swamp, 1981). Hiawenthe was healed, and he became the spokesperson of the Great Peacemaker. They inspired the formation of the Iroquois Confederacy by uniting the original five nations: the Onondagas, Mohawks, Senecas, Oneidas, and Cayugas (later joined by a sixth nation, the Tuscaroras).

So that they might never forget the Great Law of Peace, the Iroquois wove a special wampum sash called the Hiawatha Belt. Woven into the center of the design is the Tree of Peace, a great white pine planted atop the weapons of war. This act has been recognized in the United Nations as the “oldest effort for disarmament in world history.” The Great Tree also symbolizes the center of their council fire, the Onondaga nation. Four squares flank the Tree of Peace symbol, and the tree and the squares together represent the original five nations. The Great Peacemaker explained, “Each nation is like an arrow. Alone it is easily broken. But if five arrows, like the confederation of five nations, are bound together, they cannot be broken. There is strength in unity.” The Hiawatha Belt exists today (Swamp, 1981).

With the coming of Europeans, early colonial records are filled with entries related to wampum diplomacy. Strings and belts of wampum were exchanged at meetings between the Europeans and the Iroquois, as well as among other Iroquoian- and Algonquian-speaking nations along the Atlantic seaboard and inland to the Ohio River Valley. Indian orators were observed breathing their solemn commitments into strings and belts of wampum “so our promises might never be forgotten.”

One of the first agreements between the Iroquois and the Euro-American settlers was called the Kahswenhtha, or Two Row Wampum. The design features two parallel horizontal bands with purple backgrounds stretching the length of the belt. An Iroquois chief explained the symbolism: “The white

Wampum (shell beads) were used as currency, jewelry, and as bonds between nations by Native Americans. (National Archives and Records Administration)

bands represent our agreement never to try to convert one another, but rather to accept a promise that our two cultures will go together into the future side-by-side as equals" (Shenandoah, Swamp, Thomas, and Lyons 1977–1981).

A contemporary Mohawk chief further explained, "Imagine that the two white bands are like two canoes flowing down the river of life. In the Indian canoe we have placed our languages, cultures, and ways of life. The European canoe holds their languages, cultures, and ways of life. No man can go down the river of life with one foot in two canoes. The result would be disaster." This is why the Iroquois resisted assimilation policies. When government officials attempted to force Iroquois children to attend boarding schools, to stop speaking their languages, and to stop practicing their religious ceremonies, Iroquois chiefs were quick to point out that such policies were a violation of the Two Row Wampum Belt (Swamp, 1981).

A wampum belt dated 1610 has been preserved at the Vatican archives in Italy. It represents a "Concordat between the Holy See and the Mi'kmaq Nation" of Nova Scotia, Canada. By this wampum belt, diplomatic relations were established and maintained. In 2010, the Mi'kmaq nation and the Vatican will celebrate the 400th anniversary of their agreement, which remains in effect to this day.

A 1710 wampum belt was depicted in a painting of Tyanoga, whom the English called King Hendrick, a Wolf Clan leader of the Mohawk nation. The belt displays thirteen crosses that may relate to the Iroquois alliance with the English in the French and Indian War. Hendrick was one of four chiefs who traveled to London on a diplomatic mission. Queen Anne arranged to have their portraits painted, and Hendrick is portrayed holding the thirteen-cross wampum belt.

Just seventy-six days before the signing of the Declaration of Independence, John Hancock and the Continental Congress instructed Indian agent George Morgan to take a great wampum Peace Belt to the "warriors and sachems of the Western Indian nations." With the birth of the United States in 1776, this wampum belt, featuring a thirteen-diamond design symbolizing the thirteen original states, represented the original promises made by U.S. officials to Indian nations. The first promise was that the United States would never force Indian people to get involved in the "white man's wars." The second was that Indian tribes would be recognized as nations and their national lands

would be respected. Many other promises were made "for as long as the sun shines and the waters flow." Congress ratified over three hundred and fifty Indian treaties, many of them sanctified with wampum belts. While many of the wampum belts survived, most of the treaties were broken in violation of Article 4 in the U.S. Constitution that states, "Treaties are to be judged the supreme law of the land" (Schaaf, 1990, 161).

In 1787, Thomas Jefferson penned the Northwest Ordinance and stated in part: "The utmost good faith shall always be observed toward the Indians; their land and property shall never be taken from them without their consent; and in their property rights and liberty they never shall be invaded or disturbed . . ." (Jefferson, 1787).

Seven years later in 1794, the famous Covenant Chain Wampum Belt was made to remember the Canandaigua (or Pickering) Treaty between the United States and the Iroquois Confederacy. The design on this wampum belt portrays thirteen men representing the thirteen United States. In the center stands the Grand Council, a phrase borrowed from the Iroquois to describe the U.S. Congress (Jemison, Schein, and Powless, 2000).

During the bicentennial of the Constitution in 1987, the U.S. Senate unanimously passed Senate Concurrent Resolution 76 that essentially renewed the Covenant Chain wampum belt. The Senators acknowledged in part:

Whereas, the Confederation of the original thirteen colonies into one Republic was explicitly modeled upon the Iroquois Confederacy as were many of the democratic principles which were incorporated into the Constitution itself; and,

Whereas, since the formation of the United States, the Congress has recognized the sovereign status of Indian Tribes . . .

The Congress also hereby reaffirms the constitutionally recognized government-to-government relationship with Indian Tribes which has historically been the cornerstone of this nation's official Indian policy . . .

(*Congressional Record-Senate*, 1987).

Warfare, Intertribal

Intertribal warfare consists of the conflicts between various Native American groups, as opposed to warfare between Native Americans and Europeans. With the notable exception of rich oral historical accounts, a good deal of the information on this topic remains conjectural, due primarily to the dearth of evidence left by indigenous sources in

many instances and by the fact that the arrival of non-Natives in any region altered the manner and the purpose of intertribal conflicts. Native groups fought for many reasons. Moreover, while there was not one overarching form of warfare among all American aboriginal cultures, there were certain commonalities. These encompassed, but were not limited to, the tactics employed and the desired ends of most conflicts. A full treatment is beyond the scope of the present article, so all that will be presented here is a general overview.

Among the reasons various Native American tribes fought against one another were security, revenge, honor, pride, and the capture of booty. Making war for security's sake could be either defensive or preemptive. Revenge entailed the counterattack of the aggrieved tribe and could spawn a whole cycle of violence as in the case of the Mourning War among the Iroquois. In this type of warfare, attacks and reprisals were made to fill the gap made by losses in the community. Likewise, captives taken in raids could be adopted into the tribe as a means to fill the gap as well. Numerous Native American groups made war on one another as a means for their younger warriors to gain honor and to prove their abilities as leaders. The acquisition of honor worked to complement the gain of pride. Warriors might take the scalps of those they had killed in battle, both for spiritual purposes and as a token of their martial abilities. Likewise, booty, captured on a raid, both provided material support for the tribe and demonstrated the prowess of the warrior who had taken it. Wars could also be fought over territory and resources, as was the case in the Beaver Wars. Tokens of martial ability stand as one of the commonalities of intertribal warfare.

Tactics were an area in which there was a great deal of commonality among Native American societies. The basic tactical unit in intertribal warfare was the raiding party or war party, although there is evidence of massed armies as well. The main differentiating factor is size. Raiding parties were small groups that went out to settle petty issues between individuals of different tribes. War parties comprised at least the entire force of a single tribe and often its allies.

A raiding party often, but not always, consisted of the members of a tribe who voluntarily chose to follow a warrior when he sent out the call to go to war. The call to arms could be issued in many ways, including striking the war post with a war club or tomahawk. The warrior initiating the call could do

Painting of battle between Sioux and Blackfeet. (Library of Congress)

so simply by placing his weapons at a prominent space in the village, facing in the direction of the chosen enemy. If the call was sent out to a number of tribes, such as in the Iroquois Confederacy and its affiliated tribes, war belts were used to transmit the appropriate message.

Actual membership in a raiding party could range anywhere from ten to 100 warriors. The leader was sometimes referred to as a war chief, though not all raiding parties required the leadership of such a prominent figure. Once the party assembled, it moved with as much stealth as possible, traveling only at night, resting during the daylight hours, with guards posted, and avoiding the use of fire in camp. The members marched single file to avoid disclosing numbers. Likewise, the last men in line would try to cover the tracks of the group.

Once in the neighborhood of their designated target, the members of the attacking force usually attempted to bring on hostilities at dawn. The party chose this time in the hope that the target could be taken unawares and would therefore be more vulnerable. Weather conditions, such as fog, that could conceal and disorient were advantageous to attackers for many of the same reasons. Some historians have suggested that catching opponents off guard and cutting

them off from the support of the rest of their community were important as well. In achieving surprise in this manner, the attackers demonstrated their ability as cunning warriors, which added a definite morale component to their physical aggression. Surprise held a concrete value because many Native American groups utilized some form of fortification, and thus it was important to catch opponents before they could reach the safety of their defensive works. Ambush and guerilla warfare comprised other common tactics of raiding parties. Direct, head-on combat was something various groups sought to avoid, because it lacked the psychological advantage of stealth and therefore was seen as actually denigrating the capabilities of the aggressors.

For the Iroquois and other groups, the goal was to kill the other warriors and take their scalps. Women and children were taken captive and sometimes adopted in accordance with their culture's practice of mourning war. Still, warfare between different Native American groups could be quite lethal. In some cases, the goal stood as the complete destruction of an opponent, to such a degree that it could be considered akin to an act of genocide. Such was the case between the Creeks and the Tuscaroras, as well as between the Sioux and the Illini.

By the same token, if the element of surprise were lost, or if an attack met with stiffer resistance than expected, retreat, either in stages or by headlong flight, stood as an acceptable practice. In a staged retreat, some members would break off their attack, fall back, and take up a new position in the rear. They would then put down a covering fire as their brethren to the front followed suit.

The preferred weapons utilized in intertribal warfare included the war club, the bow and arrow, and the spear. Projectile weapons were favored in the initial attack. Once foes joined combat at close range, warriors often preferred clubs and axes. While guns were not part of intertribal warfare originally, as they became available to the different tribes through the growing trade in firearms, they were utilized as well.

Intertribal warfare both embraced a complex web of motivations and possessed certain commonalities. The motivations varied from the acquisition of honor and resources to the fulfillment of a blood debt incurred by one group on another. Tactically, the aggressor placed a great deal of stock in achieving some form of surprise. These tactics were later adapted, to varying degrees, by the various Europeans who made contact with the Native Americans of North America. A hybrid form of warfare thus evolved. This evolution is exemplified by the incorporation of firearms into intertribal warfare as well as the Europeans' adopting the practice of scalping and guerilla warfare. Intertribal warfare could inflict proportionally very high casualties, even to the point of destroying an opponent's ability to live as an independent people.

Weaving

The textile arts of Native American weaving include blankets, rugs, clothing, bags, and other similar art forms. Weaving involves the manipulation of strands of fibers to create a smooth surface. The purposes of weaving include warmth, dress, and other utilitarian functions. The finest weavings are appreciated and collected as fine art. The world auction record for a single textile weaving is \$535,000, the price paid at Sotheby's for a midnineteenth-century Navajo First Phase Chief's Blanket.

According to the Navajo, the world was woven into existence by a female deity named Spider Woman. Many traditional weavers pray to this female spirit. Because the weavers put their whole soul or spirit into the textile, some weave a little line to the edge of the textile called a Spirit Release Line. A vast literature exists on their legends and stories that span the centuries.

Archaeologists have found fragments of weavings that have been scientifically dated as many thousands of years old. The exact date of the earliest known weavings in the western hemisphere is still being debated, but may be over 10,000 years ago. Weavings were made long before the advent of looms.

Native weaving materials included plant and animal fibers. Some materials were collected and used in their natural forms, but most were made stronger by spinning multiple fibers together like yarn. Designs were created by dyeing the yarns different colors or by using two or more different fibers to make patterns. Relief designs also were created by mathematically calculating the sequences of fibers to go over or under, as in twill plaiting. Some very sophisticated ancient weavings preserved in caves have survived nearly intact. After the advent of pottery, some weavings were kept sealed and found in nearly perfect condition.

The longest, continuous weaving traditions have survived in certain cultures throughout the western hemisphere. In North America, the Hopi, Zuni, and Rio Grande pueblos maintain a 2,000-year-old

This photograph shows a Navajo rug weaver. Navajos are well-known for their weaving skills. (National Archives and Records Administration)

weaving tradition. Before the coming of the Spanish conquistadors, Pueblo weavers clothed hundreds of thousands of people in the American Southwest. Their favorite fiber was cotton grown from seeds developed in southern Mexico. Traditional ceremonies accompanied the planting, tending, harvesting, processing, and weaving of cotton.

One type of ceremonial sash belt, woven in a technique called float warp, is created from Taos Pueblo in the north, through Mexico and Central America, to the tip of South America. Ancient weaving traditions have survived, especially among the Zapotec in Mexico, the Mayans in Guatemala, and the Andean weavers of Peru and Bolivia, where some of the most sophisticated hand weavings in the world were developed. The thread count on the finest wearing blankets tops 200 stitches per inch. Their pictorial designs are narrative scenes from legends and tribal traditions that help illustrate rich and varied cultural histories.

Great textiles sometimes emerged even during times of great turmoil or revolution. In the 1680s, when the Pueblo Indians of the American Southwest were fighting for their freedom and independence from the Spanish, a group of Navajo women married Pueblo men, who taught their wives to weave. Thus the Navajo textile tradition was given a tremendous boost, because the ancient techniques spread quickly through matrilineal family lines. Eventually over 10,000 Navajo weavers, mostly women, developed dynamic weavings on a vertical loom using wool from Spanish Churro or Moreno sheep.

During the nineteenth and twentieth centuries, perhaps no other tribe promoted textiles as fine art more than the Navajo. From the 1850s, a First Phase Chief's Blanket was one of the most highly valued items. Woven so fine it would repel water, this Navajo wearing blanket became increasingly more complex in color and design. Eye-dazzling serrated diamonds

and zigzag patterns became popular. Their yarns were dyed of indigo blue, and reds of cochineal.

From 1880 to 1920, the so-called Transitional Period of Navajo textiles reflected the changing times for Indians, from freedom to reservation life. The weaves became looser, except for tapestries woven of fine Germantown yarn. During the first half of the twentieth century, regional styles developed named after the local trading posts. Today, Two Grey Hills tapestries are woven over eighty stitches per inch, as fine as the best contemporary weavings in Central and South America.

Worldviews and Values

American Indians enjoy a rich diversity of worldviews, values, philosophies, spiritual concepts, mythologies, and ceremonies, both as individuals and as nations. However, American Indian cultures had and have certain characteristic ideas in common. Indeed, the recognition of an indigenous worldview as a philosophical system is gaining momentum in academic circles, though still in its infancy as a field outside the boundaries of traditional anthropology or New Age literature. Such generalized values and ways of experiencing the world offer positive alternatives to contemporary Western assumptions. Unlike the myth of the noble savage, the following concepts deserve serious study as an opportunity to restore the health and balance in all living systems.

Perhaps the most obvious consideration that runs through all or most indigenous worldviews is a strong sense of relatedness. The idea of interconnect-edness between animals, rocks, rivers, people, and all things informs many of the values and ways of thinking and being in the world that are typical to American Indian people. This sense of relatedness naturally leads to avoiding dualistic thinking, that is, looking at the world as a detached observer. It emphasizes cooperative engagement over competi-

tion. It focuses on living in harmony with nature rather than attempting to conquer it. It underlies the basic American Indian regard for reciprocity as a cornerstone for decision making and relationships of all sorts.

Dovetailing also with the concept of relatedness are four other typically American Indian values: the acceptance of mystery, the honoring of alternative paths, an authentic sense of humility, and a belief that the highest form of courage is in the expression of generosity. These four concepts underscore American Indian spirituality, which might be defined as a life that gives sacred significance to all things. Perhaps an understanding that everything is related and significant, coupled with a learning style that emphasizes keen observation, has led to cultures that maintained a close relationship with the earth toward realizing that humans cannot possibly have all of the answers to the complex mysteries regarding life.

Although indigenous cultures are unique in their widespread adherence to such realizations about life, philosophers from all cultures have expressed similar ideas and values throughout time. Interestingly, however, many of these seem to refer to their own indigenous traditions.

A prime example is found in the worldview of the father of India's independence, Mahatma Gandhi, which parallels American Indian thinking. Gandhi often referred to the "primordial traditions" of India in describing the worldview that he called *swaraj* and that might be interpreted as fearless action and selfless suffering. *Swaraj* included selfless action in behalf of community welfare; complete individual freedom to seek truth in light of a deep understanding of relatedness with others; a nonanthropocentric understanding of self in relation to nature; sustainable lifestyles; shared wealth; fearlessness in pursuit of truth; and an understanding of pain and suffering in terms of a healing, integrative force for social welfare.

When such ideas are organic manifestations of the lived life of an entire community, rather than idealism advocated or practiced by a few individuals, a number of perspectives tend to emerge as behaviors in a culture that seem to oppose Western assumptions and behaviors. For example, taking care of others (not just one's self) guides all action. Recognizing the present becomes more important than preparing for the future, as long as actions do not create harm for "the seventh generation." Place becomes more important than time. Age is honored for its wisdom,

and, balanced with the virtues of youth and beauty, patience is more easily accommodated than aggression. Listening becomes more prevalent than speaking up. Giving and sharing are a priority over taking and saving. Intuition is trusted as much or more than logic. Humility and modesty overshadow arrogance and ego. Aesthetics and creativity outshine the idea of a work ethic. And women are seen as equal to or even superior in their ability to contribute to society than are men.

Finally, the indigenous worldview includes an approach to conflict resolution that may explain why American Indian people were and are less warlike than those with more Indo-European worldviews. Peace making is rooted in transformative theory rather than in retributive, hierarchical, adversarial,

punitive, or codified assumptions. Responsibility is emphasized over rights, and, when parties reach consensus for restoration and accountability, opposing parties are seen as being back in good relationship with one another, seeing the world more with their hearts than with their heads.

Governments and American Indian History

Alaska Native Claims Settlement Act

Alaska Natives, including the Aleut, Athabaskan, Inupiat, and Yup'ik Eskimos and the Tlingit and Haida Indians, settled their aboriginal land claims with the United States in 1971 under the Alaska Native Claims Settlement Act (ANCSA) Public Law 92-203. Unlike the Native American tribes of the lower forty-eight states, who entered into treaties with the federal government and whose lands are held under trust by the federal government, Alaska Natives pursued a legislative settlement that required them to establish profit-making corporations and to hold their land under fee simple title. Congress and the Richard M. Nixon Administration saw ANCSA, with its major features of land, money, and corporations, as a means to assimilate Alaska Natives into the larger society. Natives, on the other hand, largely viewed ANCSA as a vehicle of economic self-determination.

The 1867 Treaty of Cession, under which Russia sold Alaska to the United States, held that “uncivilized tribes” were to be subject to the same laws as other American Indians. In subsequent legislation, the federal government recognized the use and occupancy land rights of Alaska Natives first in the Organic Act of 1884 and then in the Alaska Statehood Act of 1958, which allowed the state to select 103 million acres of land. Although the statehood act stipulated that Native lands were exempt from selection, the state began to select lands used and occupied by Native villages and to claim royalties from federal oil and gas leases on Native lands. Alaska Natives began to organize regional associations to protect their land ownership. As Natives protested the actions of the state, Secretary of the Interior Stewart Udall ordered the suspension of federal oil and gas lease sales and adopted a “land freeze” on the disposition of all federal lands in Alaska. The freeze served to protect Native land rights and to block the construction of the 800-mile oil pipeline from Prudhoe Bay in the north to Prince William Sound.

With political pressure mounting to settle the land claims and to develop the oil resources of Alaska, Natives seized the opportunity to lobby Congress for a land claims settlement. Led by the Alaska Federation of Natives (AFN), they were successful in securing legislation that has been heralded as the largest aboriginal land settlement. It also diverged dramatically from earlier historic land models with Indian tribes. However, in the haste to secure a settlement and with the focus on the size of the land settlement, structural issues that should have been analyzed were overlooked and ignored in the legislation.

Under ANCSA, Alaska Natives received a total of 44 million acres of land including surface and subsurface rights. These lands were to be conveyed to twelve regional corporations and 203 village corporations that were organized under the laws of the state of Alaska. ANCSA also authorized the payment of \$962 million for the extinguishment of all aboriginal claims.

Village corporations were entitled to receive 22 million acres of land, which were divided on a population basis. The regional corporations received full title to 16 million acres of land and the subsurface estate in the 22 million acres patented to the villages. The regional corporation land was divided among the twelve regional corporations on the basis of the total acreage in each region rather than population. The southeast Alaska Indian communities were allowed to receive only a single township or 23,040 acres. They had received a \$7.5 million award in 1968 under the Tlingit and Haida judicial settlement for the federal withdrawals of 20 million acres of lands in southeast Alaska.

Two million acres were set aside for other purposes, including cemeteries and historical sites. Four Native urban corporations, which had formerly been historic Native communities but were predominantly non-Native cities in the 1970s, were allowed to select land from the 2 million acres. Native communities with populations less than twenty-five residents received land from this acreage. The total acreage for allotments, which had been filed before the passage of the Act, was also deducted from this entitlement.

Four million acres, which had been held by five reserves as trust lands by the federal government, were revoked by ANCSA. The Natives of these reserves formed corporations to hold their lands, including both surface and subsurface lands under fee simple title, but they were not entitled to the

monetary benefits under ANCSA. Ironically, the only remaining reservation in Alaska was for the Tsimshian Indians, who had emigrated from Canada. They were granted the Annette Island reservation in southeast Alaska by Congress in 1891.

Natives who were not permanent residents of Alaska organized a thirteenth regional corporation. It received its pro rata share of the financial settlement, but it did not receive land, nor was it entitled to receive revenues from mineral or timber development of the regional corporations.

The Secretary of the Interior was authorized to prepare a roll of all Natives who were of one-quarter or more Alaska Native, who were born on or before the date of enactment of ANCSA, and who were living on or before December 18, 1971. The secretary's roll was to also include the village and region of each enrollee. Both regional and village corporations issued one hundred shares of stock to each Native enrolled in their region and village. Some Natives were enrolled as at-large shareholders, that is, shareholders only in regional corporations because their permanent homes were away from villages that were certified to participate in ANCSA. The number of shareholding Alaska Natives enrolled to Native corporations totaled more than 78,000.

The hunting and fishing rights of Alaska Natives were extinguished under ANCSA. However, Congress adopted a subsistence priority for rural Alaskans in 1980 within the Alaska National Interest Land Conservation Act.

ANCSA is unique in many aspects and one provision is the antithesis of profit-making corporations. Under Section 7(i), regional corporations are required to distribute 70 percent of their profits from mineral and timber development to other regional corporations. A minimum of 50 percent of 7(i) revenues must be distributed to village corporations and at-large shareholders. The intent of Congress was to equalize the resource revenues between regions that were resource rich and those that were resource poor.

Initially, Natives had assumed that their tribes, clans, or communities would be the recipient of lands, but by 1968 corporations were proposed as the vehicle to implement the land settlement. Many Natives had had experience with the ineptness of the Bureau of Indian Affairs and did not want to have their land held under trust and subject to the control of the federal government. The idea of Native control of their lands had gained prominence. Acceptance of the corporate model was

clearly evident by the 1971 AFN Convention theme, "In the White Man's Society, We Need White Man's Tools."

Congress wanted to avoid creating any reservations or "racially defined" organizations and supported corporations as the vehicle to implement ANCSA. With this objective in mind, Congress limited the restrictions on the transferability of ANCSA stock for twenty years, or until 1991. Congress also rejected any possibility of keeping the enrollment open for those children born after 1971.

The conflict between for-profit corporations and Native values emerged as 1991 approached. Natives became alarmed that the expiration of the restrictions on the sale of stock could lead to non-Native control and ownership of Native lands. At the 1982 AFN Convention, Natives voted to make the "1991" issue its top priority and to seek amendments to ANCSA to protect Native land.

AFN was successful in securing the amendments that provided the legal authority to protect ANCSA land and control of their corporations. The 1991 amendments provided automatic protections for land and Native corporation stock. The stock would remain restricted unless shareholders voted to remove the restrictions. Undeveloped land was also automatically protected. The law also allowed for the issuance of stock to Natives born after 1971 and to those who missed the initial enrollment upon approval of a shareholder vote. In recognition of the cultural value of caring for elders, the amendments also allowed for special benefits to elders or those shareholders who were sixty-five years or older.

AFN was not successful in securing a tribal option, which would have allowed for the transfer of ANCSA lands to tribal governments. ANCSA did not extinguish the two hundred tribal governments in Alaska, but those governments effectively lost their land base. A few village corporations transferred their land to tribes, but concern that the lands would not be treated as trust lands and protected by the federal government deterred the movement.

ANCSA corporations are different from other profit-making corporations. They pursue both economic and social goals seeking to protect their Native way of life and traditions. They have been variously successful; some corporations have expanded into the national and international markets, while others teeter on the brink of bankruptcy. They are also unique in that Congress recognizes Native corporations as federally recognized tribes for special statutory purposes in over a hundred fed-

eral legislative statutes that offer special benefits and protections.

Albany Congress, Native Precedents

On the eve of the 1754 Albany Conference, Benjamin Franklin was already persuaded that the Haudenosaunee leader Canassatego's advice advocating colonial unity was good counsel, and he was not alone in these sentiments. James DeLancey, acting governor of New York, sent a special invitation to Hendrick (Tiyanoga) to attend the Albany Conference, where the Mohawk sachem provided insights into the structure of the League of the Iroquois for the assembled colonial delegates. In letters convening the conference from the various colonies, instructions of the delegates were phrased in Iroquois diplomatic idiom. From colonist to colonist, the letters spoke of "burying the hatchet," a phrase that entered idiomatic English from the Iroquois Great Law. DeLancey also spoke of "renewing the covenant chain," another Haudenosaunee diplomatic idiom.

The Albany Congress convened June 19, 1754, five days after its scheduled opening, because many of the Iroquois and some of the colonial commissioners arrived late. Roughly 150 to 200 Iroquois and about twenty-five colonists attended the meeting, according to official accounts. Most of the sessions of the congress took place at the Albany Courthouse; many of the speeches to the Indians (and their replies) occurred in front of the governor's residence. Albany at the time straddled the border between colonial settlement and Iroquois country at the "eastern door" of the Six Nations' symbolic longhouse. The town was still dominated by the architecture of the Dutch, who had founded the town before the English replaced them in 1675.

On June 28, 1754, the day after Hendrick arrived with the Mohawks, James DeLancey met with him. The two hundred Indians in attendance sat on ten rows of benches in front of the governor's residence, with colonial delegates facing them in a row of chairs, their backs to the building. According to Theodore Atkinson's account of the conference, this gathering was held on a warm day, after a morning rain. Governor Delancey read a speech approved by the delegates paragraph by paragraph, as New York's interpreter relayed his words to the Indians. The speechmaking also stopped briefly for the presentation of belts to the Indians, following Iroquois diplomatic custom.

DeLancey's speech began with a condolence using Iroquois diplomatic language. ("I wipe away your tears, and take sorrow from your hearts, that you may open your minds and speak freely.") Then the governor gave "A String of Wampum" in a fashion similar to what Franklin had observed a year earlier at the Carlisle Treaty Council. As the governor proceeded, the assembled Indians "Signified [sic] their understanding of each paragraph by a kind of Universal Huzzah" (O'Callaghan, 1853, 6: 567). And "When the great Chain belt was Dill[i]vered [sic] on this occasion, they Signified [sic] their understanding or Consent by Such a Huzzah repeated Seven Times over for every Tribe" (McAnear, 1953, 736). Holding the chain belt given him by the colonial delegates, Hendrick made the belt a metaphor of political union, as he advised DeLancey that the colonists should strengthen themselves and "In the mean time we desire, that you will strengthen yourselves, and bring as many into this Covenant Chain as you possibly can" (O'Callaghan, 1849, 869). It is likely that Hendrick remarked on this subject several days later, when

the Indians and delegates assembled again in front of the governor's residence.

Hendrick was openly critical of the British at the Albany Congress. He hinted that the Iroquois would not ally with the English colonies unless a suitable form of unity was established among them. In talking of the proposed union of the colonies and the Six Nations on July 9, 1754, Hendrick stated, "We wish this Tree of Friendship may grow up to a great height and then we shall be a powerful people" (*Colonial Records*, 1851, 6: 98). In effect, Hendrick was repeating the advice Canassatego had given colonial delegates at Lancaster a decade earlier, this time at a conference devoted not only to diplomacy, but also to drawing up a plan for the type of colonial union the Iroquois had been requesting. The same day, at the Courthouse, the colonial delegates were in the early stages of debate over the plan of union.

Hendrick followed that admonition with an analysis of Iroquois and colonial unity, when he said, "We the United Nations shall rejoice of our strength" as we will "have now made so strong a Confederacy." In reply to Hendrick's speech on Native American and colonial unity, DeLancey said: "I hope that by this present Union, we shall grow up to a great height and be as powerful and famous as you were of old" (*Colonial Records*, 1851, 6: 98). These words of Hendrick and DeLancey are significant in that they go beyond Covenant Chain rhetoric and talk of the symbol of the Great Law (the Great Tree). Franklin was commissioned to draw up the final draft of the Albany Plan the same day, two months to the day after his *Pennsylvania Gazette* had published the "Join or Die" cartoon.

On July 10, 1754, Franklin formally proposed his Plan of Union before the congress. Franklin wrote that the debates on the Albany Plan "went on daily, hand in hand with the Indian business" (Bigelow, 1868, 295). In drawing up his final draft, Franklin was meeting several diplomatic demands: the Crown's for control; the colonies' desires for autonomy in a loose confederation; and the Iroquois' stated advocacy for a colonial union similar (but not identical) to their own in form and function. For the Crown, the plan provided administration by a president-general, to be appointed by England. The individual colonies were to be allowed to retain their own constitutions, except as the plan circumscribed them. The retention of internal sovereignty within the individual colonies closely resembled the Iroquois system and had no existing precedent in Europe.

Franklin chose the name “Grand Council” for the plan’s deliberative body, the same name generally applied to the Iroquois central council. The number of delegates, forty-eight, was close to the Iroquois council’s fifty, and each colony had a different number of delegates, just as each Haudenosaunee nation sent a different number of sachems to Onondaga. The Albany Plan was based in rough proportion to tax revenues, however, while the Iroquois system was based on tradition.

The Albany Plan of Union called for a government under which each colony could retain its present constitution (Bigelow, 1868). Basically, the plan provided that Parliament was to establish a general government in America, including all the thirteen colonies, each of which was to retain its present constitution except for certain powers (mainly mutual defense) that were to be given to the general government. The king was to appoint a president-general for the government. Each colonial assembly would elect representatives to the Grand Council.

The president-general would exercise certain powers with the advice of the Grand Council, such as handling Indian relations, making treaties, deciding upon peace or war, raising troops, building forts, providing warships, and finally to make such laws and levy such taxes as would be needed for its purposes. Through this plan colonial leaders embraced a plan for union that Indian leaders such as Canassatego and Hendrick had urged upon them for a decade or more. Thus, the roots of intercolonial unity are in the Indian-white relations of the early eighteenth century. During this time, men such as Benjamin Franklin saw in the Iroquois Confederacy a model on which to build.

American Indian Religious Freedom Act

The American Indian Religious Freedom Act (AIRFA, Public Law 95-341), was signed into law by President Jimmy Carter on August 12, 1978. President Carter defined the intention of AIRFA well when he stated at the signing ceremony

It is the fundamental right of every American, as guaranteed by the first amendment of the Constitution, to worship as he or she pleases. . . . This legislation sets forth the policy of the United States to protect and preserve the inherent right of American Indian, Eskimo, Aleut, and Native Hawaiian people to believe, express, and exercise their traditional religions.

The Act was introduced in the Senate on December 15, 1977, by Senator James Abourezk (Democrat, South Dakota) and later in the House of Representatives by Representative James Udall (Democrat, New Mexico). The Senate held hearings on AIRFA but the House did not. Testimony in the Senate hearings came primarily from Native Americans and representatives of various government entities. AIRFA was considered and passed in the

Senate on April 3, 1978, and in the House on July 18, 1978.

President Carter and Secretary of Agriculture Bob Berglund were enthusiastic supporters of AIRFA, as were several senators and congresspersons. The Department of Justice expressed concerns about the effect of AIRFA on existing state and federal laws but was reassured by Representative Udall, who stated that it had “no teeth in it” and was not intended to override existing state laws. President Carter echoed this sentiment and stated that the “act is in no way intended to alter . . . or override existing laws.” With those concerns addressed, AIRFA passed with very little resistance in the House or Senate. Congress passed AIRFA with the intent of eliminating federal interference with the exercise of Native American religious traditions and to compel government agencies to consider AIRFA in the institution and administration of policies and procedures.

AIRFA is divided into two sections. The first section addresses the right of Native Americans to practice their traditional religions. The relevant language states:

Whereas, the freedom of religion for all people is an inherent right, fundamental to the democratic structure of the United States and is guaranteed by the First Amendment of the United States Constitution . . . Whereas traditional American Indian ceremonies have been intruded upon, interfered with, and in a few instances banned: Now therefore, be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, that henceforth it shall be the policy of the United States to preserve for American Indians their inherent right of freedom to believe, express, and exercise the traditional religions . . . including but not limited to access to sites, use and possession of sacred objects, and the freedom to worship through ceremonial and traditional rites.

This section of AIRFA is important because it was the first federal legislation specifically addressing Native Americans’ inherent right to freedom of religion.

Section 2 requires that the president direct federal departments and agencies responsible for administering relevant laws to evaluate their policies and procedures in consultation with traditional

Native religious leaders and report back to Congress with any recommended changes in one year’s time.

The AIRFA Report

The report committee formed to satisfy Section 2 of AIRFA was chaired by Secretary of the Interior Cecil B. Andrus. The report was submitted to Congress in August of 1979 and detailed the government’s overall failure to protect Native Americans’ religious freedoms. It stated that the failure had primarily stemmed from the “ignorance and misunderstanding on the part of the non-Indian” of Native American religions. The report called for the need for improvements in several areas, including access to sacred objects such as eagle feathers and peyote, access to sacred sites, protection of sacred sites, and the overall double standard in terms of the treatment of European-American versus Native American human remains. The response of government agencies and departments was sporadic and generally dismal. Because AIRFA lacked a clear interpretation of Congress’s intent, primarily due to the use of convoluted language on the lack of penalties for non-compliance, there was little incentive for government response.

The Suppression of Native American Religious Traditions

Native Americans have had their free practice of religion suppressed by every Western nation that sought to colonize the New World. Throughout history, suppressing Native religious practices has been a common practice of those seeking to subjugate a people. It was thought that through the denial of a people’s own culture, they would be easily assimilated into their suppressor’s culture. France, Britain, Spain, and the United States all suppressed Native Americans’ free practice of religion and supported, and often funded, efforts to convert Native Americans to Christianity. Freedom of religion has been the law of the land since the birth of the United States as a nation; however, this basic right, guaranteed to all by the Constitution, has repeatedly been denied to Native Americans.

It is ironic that the first Europeans who would become known as Americans settled here because they were fleeing religious persecution. The United States continued the policy of the earlier colonial governments by actively promoting Christianity to Native Americans. Christian missionaries were hired

as Indian agents, tribal administrative control was often placed in the hands of religious denominations, and tribal-held land was repeatedly given away to organizations that promised to build religious schools or churches on it. In 1869, the Board of Indian Commissioners was established with the intended purpose of educating Native Americans in the principles of Christianity. In 1879, the Carlisle Indian Industrial School was established in Carlisle, Pennsylvania, by the U.S. government for the education of Native American children. The school's director, Richard Pratt, stated that his goal was to "[k]ill the Indian and save the man." The school punished children for wearing Native dress or speaking their own languages and forbade any practice of their Native religious traditions.

Interior Secretary Henry M. Teller holds the distinction of being the first U.S. government representative to order official restrictions on the practice of Native American religious customs. In an 1882 directive Teller ordered an end to all "heathenish dances and ceremonies" on reservations due to their "great hindrance to civilization." In 1883, Commissioner of Indian Affairs Hiram Price codified the practice of officially restricting Native American religious freedom by creating the Indian Religious Crimes Code. In his 1883 annual report to the secretary of the interior, Price stated

there is no good reason why an Indian should be permitted to indulge in practices which are alike repugnant to common decency and morality; and the preservation of good order on the reservations demands that some active measures should be taken to discourage and, if possible, put a stop to the demoralizing influence of heathenish rites.

In 1892, Commissioner of Indian Affairs Thomas J. Morgan sought to further suppress Native religions by ordering penalties of up to six months in prison for those who repeatedly participated in religious dances or acted as medicine men.

The government's attempts to suppress and in many instances outright ban Native American religious practices led to one of the bloodiest events in the history of the United States: the Massacre at Wounded Knee. To enforce the ban on the Ghost Dance in accordance with the Indian Religious Crimes Code, the Seventh Cavalry was sent into the Lakota Sioux's Pine Ridge and Rosebud Reservations to stop the dance and arrest the participants.

General Armstrong Custer's former unit, in response to a dispute over a firearm, attacked and killed approximately 150 Native American men, women, and children on December 29, 1890. Charges of killing innocents were brought against members of the Seventh Cavalry, but all were later exonerated. The massacre marked the effective end of the Ghost Dance movement and, according to many historians, signified the end of the Indian Wars.

The Start of a Change in U.S. Policy

The shift toward acknowledging Native American religions, the government's obligations to the tribes, and their rites as citizens of the United States began in 1933 when President Franklin D. Roosevelt appointed John Collier as commissioner of Indian Affairs. Collier issued Bureau of Indian Affairs Circular 2970, "Indian Religious Freedom and Indian Culture," on January 3, 1934. The circular was sent to all federal agencies and read in part "no interference with Indian religious life or ceremonial expression will hereafter be tolerated." Collier also guided, with the support of President Roosevelt, the Indian Reorganization Act, commonly known as the Indian New Deal, through Congress. This act dramatically changed U.S. policy by allowing tribal self-government and consolidating individual land allotments back into tribal hands.

In the 1960s, partly in response to a nationwide wave of discontent and a trend toward active protesting of government policies, a renewed movement of Native American activism resulted in the passage of several acts, including AIRFA. Native Americans began to cooperate and organize a pan-Indian movement to push for change through political channels. While there is a long history of pan-Indian movements, many feel that this one had its roots in the forced boarding school programs and the Bureau of Indian Affairs relocation programs. Both programs brought Native Americans from several tribes together in situations in which their common hardships and interests led to increased inter-tribal communication and cooperation.

One of the first politically active Native American groups to form was the National Indian Youth Council (NIYC), created in 1961. NIYC participated in a series of protests calling for the recognition of treaty-granted fishing rights in the state of Washington. The American Indian Movement (AIM), the most vocal and well-known of the Native American

activist groups, was formed in 1968 by George Mitchell and Dennis Banks in Minneapolis. AIM participated in the 1969 occupation of Alcatraz, the November 1972 occupation of the Bureau of Indian Affairs building in Washington, D.C., and the 1973 occupation of Wounded Knee.

Largely in response to Native Americans' well publicized calls for change, a large number of acts were passed by Congress in the late 1960s and 1970s: the Indian Civil Rights Act (PL90-284) in 1968; the Alaska Native Claims Act (PL92-208) in 1971; the Indian Education Act (PL92-318) in 1972; the Indian Self-Determination and Education Assistance Act (PL93-638) in 1974; the Indian Health Care Improvement Act (PL94-437) in 1976; and the Indian Child Welfare Act (PL95-608) in 1978. The Archaeological Resources Protection Act (PL96-95) was passed in 1979 and prohibited the excavation, removal, defacing, or sale of human remains or burial items unless done in accordance with the law.

The increased public awareness of the Native American's plight led to the creation of the American Indian Policy Review Commission in 1975. Consisting of three senators, three representatives, and five Indian commissioners, the commission oversaw thirty-three task forces reviewing Native American grievances and conditions. The final report was issued in May 1977 and concluded that the government had often interfered in and obstructed the efforts of Native Americans to practice their traditional religious customs. The report was instrumental in the struggle to convince Congress of the need for AIRFA.

Legislation Following AIRFA and AIRFA Amendments

Since 1978, a relatively steady progression of executive orders, memorandums, and legislation has addressed problems with AIRFA and clarified Congress's intent to the courts. Issues such as access to sacred sites, the ceremonial use of peyote, the rights of Native American prisoners to practice their religions, and the repatriation of human remains and ceremonial objects have all been specifically addressed. The efforts made in addressing the issue of Native Americans' free practice of religion have not satisfied all, but most would concur that there has been a significant amount of progress made in the nearly three decades since the passage of AIRFA.

President George H. W. Bush signed MAIA, the Museum of the American Indian Act (PL101-185) in 1989 and NAGPRA, the Native American Graves Protection and Repatriation Act (PL101-601) in 1990. MAIA called for the creation of the Museum of the American Indian and the repatriation of 18,500 Native American remains held by the Smithsonian. NAGPRA calls for museums and federal agencies to return Native American human remains, funerary objects, sacred objects, and objects of cultural importance to lineal descendants, affiliated tribes, and Native Hawaiian organizations.

In 1993, the Religious Freedom Restoration Act (PL103-141) was passed and signed into law by President William Jefferson Clinton. On signing the Act, President Clinton stated that it "reestablishes a standard that better protects all Americans of all faiths . . . in a way that I am convinced is far more consistent with the intent of the Founders of this nation." In 1994, President Clinton issued a memorandum to every executive department and agency of the government, titled "Policy Concerning Distribution of Eagle Feathers for Native American Religious Purposes." In his remarks to Native American and Native Alaskan tribal leaders, he said that the memorandum directed the agencies and departments to "cooperate with tribal governments to accommodate whenever possible the need for eagle feathers in the practice of Native American religions."

The AIRFA amendments (PL103-344) were passed in 1994 to correct the inadequacies of the original Act. The 1978 version of AIRFA was seen by the courts as a policy for executive agencies and as such was not given extensive weight in court decisions. The courts have always distinguished between religious beliefs and religious practices. People are free to choose their religious beliefs, but practices have been repeatedly prohibited by the courts. Polygamy, human sacrifice, and religious customs such as those allowing rape as a penalty for a violation of religious code are all illegal based on the overriding good of the public and existing state and federal laws. In *Employment Division, Department of Human Resources of Oregon v. Smith* (1990), the Supreme Court ruled that Oregon was within its legal right to fire a Native American employee for the use of peyote in a religious ceremony. The court failed to recognize the religious significance of the peyote use and instead viewed it as an illegal substance not protected under the First Amendment or AIRFA.

Many Native American groups and individuals pushed for amendments to AIRFA, which clarified the legality of peyote use for religious purposes and the distinction between its traditional use and use as a recreational drug. In the hearings held by the Senate Select Committee on Indian Affairs, the late Professor Vine Deloria testified that "We need to make clear that peyote is a sacramental plant used by American Indians in a sacramental way, going back long before the memory of man. Once that clarification is made, there is no possible way to link it to those other drugs."

The amendments were considered and passed in the House of Representatives on August 8, 1994, and in the Senate on September 26, 1994. The amendments state that "Non-withstanding any other provision of law, the use, possession, or transportation of peyote by an Indian for bona fide traditional ceremonial purposes in connection with the practice of a traditional Indian religion is lawful, and shall not be prohibited by the United States or any state." The amendment includes a list of several common sense exceptions and a section prohibiting discrimination based on a Native American's use of peyote in a religious context.

On May 24, 1996, President Clinton issued Executive Order 13007, "Protection and Accommodation of Access to Indian Sacred Sites." The order states that executive agencies and departments should "accommodate access to and ceremonial use of Indian sacred sites by Indian religious practitioners and avoid adversely affecting the physical integrity of such sacred sites. Where appropriate, agencies shall maintain the confidentiality of sacred sites." It was issued largely in response to the Supreme Court ruling in the *Lyng v. Northwest Indian Cemetery Protective Association*. The case resulted from the U.S. Forest Service's desire to build a road near a Native American religious site. Several tribes were joined by various parties, including the state of California, in seeking a court order to bar the project under AIRFA. The Supreme Court, as stated by Justice Sandra Day O'Connor, decided that "Whatever rights the Indians may have to use of the area those rights do not divest the Government of its right to use what is, after all, its land."

The Religious Land Use and Institutionalized Persons Act (PL106-274) was signed into law in 2000 by President Clinton. The legislation guarantees access for Native Americans to religious sites located on government property. Section 2 regards the right of Native American prisoners to practice traditional

religions. It states, "No government shall impose a substantial burden on the religious exercise of a person residing in or confined to an institution, . . . even if the burden results from a rule of general applicability, unless the government demonstrates that imposition of the burden on that person is in furtherance of a compelling governmental interest; and is the least restrictive means of furthering that compelling governmental interest."

Bureau of American Ethnology

The Bureau of American Ethnology (BAE), established in 1879 by Congress, is the sponsoring body that supported the most extensive early research program on North American cultures. It performed

that task as a semiautonomous unit under the secretary of the Smithsonian between that year and 1965, when it merged with the Department of Anthropology at the Smithsonian. Though the activities of the BAE are varied, its most recognizable contributions are its *Annual Reports*, the *Contributions to North American Ethnology* series, and particularly the *Bulletins*, easily identified by the original large, green and gold trim volumes, with the imprint of the BAE logo—a “cliff dwelling” complete with rock art figures in the foreground—on the frontispiece. Published by the Government Printing Office (GPO), these were free and widely distributed and are still readily accessible today in many libraries that are government depositories.

The history of the BAE is intertwined with that of the development of American anthropology, its relationship with American Indians, and issues of the role of government in sponsoring research activity. The earliest ethnologists were not trained as such, but were in the service of the U.S. Geological Survey and found themselves in intimate contact with American Indians in their regions of activity. Among them was John Wesley Powell, who had worked extensively in the Southwest. Powell was responsible for lobbying for the establishment of the Bureau of Ethnology; he was made its first director in 1879. Under Powell, the BAE grew to become one of the most significant archival collections of ethnological information about Native Americans through the activity of its staff ethnologists. As a training ground for the field of anthropology, it supported the work of some of the most well-known early field anthropologists: Frank Hamilton Cushing, Franz Boas, Otis T. Mason, James Mooney, among others, were all contributors to the bureau's collections.

Classic monographs, such as Boas's *Tsimshian Mythology*, Mooney's *Myths of the Cherokee* and *The Ghost-Dance Religion*, and Cushing's *Zuni Fetishes*, were all, in their original form, contributions made with BAE support for the *Annual Reports* or the *Bulletins* series. These are surviving relics of an era sometimes called “salvage ethnography,” after the apparent motivation of Congress and anthropological scholars to document Native American life in its perceived twilight, and they were notable for a division that was not conceived as a permanent institution. Nevertheless, the ethnologists involved with the BAE were increasingly well-trained figures, producing narratives with intensive ethnographic detail, which are still valued for the material they preserved.

As it evolved, the bureau engaged itself in shaping public awareness of anthropology through exhibitions and at international expositions. With this increasing notoriety, it became a repository of varied material from additional nonstaff sources (including military personnel, missionaries, and amateur scholars), drawing an extensive manuscript, map, and document archive, as well as an illustrative and photographic collection. Other major endeavors of the bureau included, under the direction of ethnologist-in-charge W. Frederick Hodge (1910–1918), the first *Handbook of American Indians*, published as *Bulletin 30* in 1907 as two volumes. Still widely valued for reference today, John Swanton's compendia, *The Indians of the Southeastern United States*, was published as *Bulletin 137* and *The Indian Tribes of North America* as *Bulletin 1945*. Also a major BAE project was the *Handbook of South American Indians*, edited by Julian Steward under his Institute for Social Anthropology and published as *Bulletin 143*, between 1946 and 1959.

In 1965, the BAE catalogue and materials were incorporated into the National Anthropological Archives, where they are housed today. In 1970, the last bulletin under the bureau name was issued, an index to authors and titles of all preceding BAE publications. Two current trends are also notable with respect to the history and significance of the BAE. Of late, the National Museum of Natural History has been sequentially closing the old Halls of Ethnology, remembered by many as hallmarks of the Smithsonian experience. Thus, the era of public exhibits that were shaped and informed by the long tradition of ethnological work at the Institution has come to a close. With respect to American Indian cultures and peoples, that mantle has passed to the National Museum of the American Indian. However, lest the collection become valued only by researchers and archivists, the NAA and the Smithsonian Institution Libraries have endeavored to begin the digitization of the publications of the BAE.

Bureau of Indian Affairs: Establishing the Existence of an Indian Tribe

The Bureau of Indian Affairs (BIA) is the branch of the federal government charged with organizing and carrying out governmental policy relating to American Indians. While the original purpose of the BIA was to liquidate Indian lands, over the course of its history, the BIA has become an institution that attempts to manage Indian affairs and to act as the federal government's liaison with American Indian peoples on and off the reservations. Originally called the Office of Indian Affairs (OIA), the bureau was established by President James Monroe in 1824 as part of the Department of War for the purpose of supporting and, it was hoped, eventually assimilating American Indians.

In the beginning, the Office of Indian Affairs was dominated by the individual Indian agents, most often apolitical appointees placed on reservations. The Indian agents directed the distribution of food, goods, and other treaty annuities, oversaw education and missionary work, and policed various activities such as the prohibition of liquor as well as controlling the payroll of tribal police. The lack of direct supervision of Indian agents opened the door for corruption and mistreatment.

The Office of Indian Affairs was run by the Secretary of War until July 1832, when Congress established the position of the commissioner of Indian Affairs and appointed Elbert Herring to the post. The OIA was conceived as a temporary institution that would manage Indian affairs until the Native peoples were settled enough on the reservations to create new governments or had assimilated into mainstream society. On May 20, 1834, the House Committee on Indian Affairs reported that the activities of the OIA were being carried on in violation of law and without any legally recognized authority. The committee advised that the OIA be shut down

and its work passed on to the Native peoples. After the committee's initial admonishment, they passed a bill on June 30, 1834, that effectively gave the Office of Indian Affairs branch status and legal status. In 1849, the renamed Bureau of Indian Affairs was transferred to the new Interior Department where it would more efficiently be able to liquidate Indian lands. The BIA was not a part of any treaty plan, but, as the federal government began to tighten its hold on reservation life, due to increased Western migration and demands for Indian lands, the bureau gained power and became unwieldy, often resulting in actions that reflected the government's rather than the Indian's interests.

After the Civil War, the BIA began to focus on breaking up traditional forms of tribal governments on reservations in order to harness political and decision-making powers. The BIA also began to search for a more effective means of eradicating Indian cultural practices. The General Allotment Act of 1887 changed the relationship between the BIA and Indian tribes. With the Allotment Act and the introduction of individual ownership of reservation property, the government found it easier to acquire more Indian lands as well as to exploit those lands for their natural resources. Indian agents were encouraged to force their charges to give up their property and traditional ways. The BIA policy toward American Indians was that of assimilation, the preferred method of assimilation was through education, and the preferred method of education was the boarding school, which separated children from their families and traditional culture. From 1900 through the 1970s, at least half of the BIA budget went toward schooling. And in 1908, Commissioner Francis E. Leupp eradicated the post of Indian agent and passed the administrative powers of the BIA onto the school teachers and educators on the reservations. After years of assimilation policies, the Bureau of Indian Affairs endured a public setback in 1928 with the publication of the Meriam Report. This report chastised the BIA for the poor reservation conditions American Indians suffered under and for the lack of programs for their economic, educational, and political development. The report also proposed that the BIA become an agency that worked to protect and encourage American Indian traditions. Beginning with Commissioner Charles Rhoads in 1929, policies began to turn more toward Indian self-determination.

In 1934, during the Great Depression, Commissioner John Collier took government policy

The twenty-fourth commissioner of Indian Affairs, Thomas J. Morgan, with a Sioux delegation. Morgan enunciated a clear program of education for Native American children and was a principal force in the effort to assimilate Native Americans into U.S. society. (Library of Congress)

significantly closer to self-determination, at least when compared with the past. Collier is, perhaps, the best-known commissioner of the Bureau of Indian Affairs. He believed that the purpose of the BIA was to protect Indian rights and lands and to bring greater cultural understanding of American Indians to the larger American population. He worked to preserve Indian traditions and to bring power back to Native polities with the Indian Reorganization Act of 1934. The so-called Indian New Deal attempted to create tribal governments with administrative power and democratic elections, but it failed to provide these governments with enough control due to the continued veto authority of the Secretary of the Interior over reservation laws. The Indian Reorganization Act has also been viewed as contributing to the destruction of traditional forms of power on reservations due to its enforcement of a uniform system of governance.

By 1950, the relationship between the BIA and American Indians had become increasingly strained due to the federal policy calling for the Termination of tribal status. Dillon S. Meyer, a supporter of termination, was appointed Indian commissioner in 1950 and began to install a policy of scattering Indian peoples in order to reduce their ties to the land. The

launching of termination came with the passage of House Concurrent Resolution 108 and aimed to remove all federal services to American Indian tribes. Through strong agitation and protest, however, the termination policy was disbanded in 1960. The BIA also derived the relocation program from its Termination predecessor with the intent of moving Indians off poverty-stricken reservations and into cities where they could find work and a place to live. However, due to lack of funding and services for the new urban migrants, the program fell short of its goals.

The 1960s and 1970s saw an increase in non-BIA-controlled programs for American Indians and the weakening of BIA power. President Lyndon B. Johnson's Great Society included a place for independent autonomous reservations and began to flow money into housing programs, health care, education, and work training. The successes of these programs led President Richard M. Nixon to declare a policy of self-determination for Indian tribes and nations in which the Bureau of Indian Affairs would play a reduced role on reservations, and tribes would eventually host their own administrative governments. In 1975, the Indian Self-Determination and Education Act called for more Indian control

over the BIA by giving tribes the ability to gain the contracts for reservation programs in order to manage the programs themselves. In addition, the 1960s saw the appointments of Indian commissioners to the BIA like Robert Bennett (Oneida) and Louis Bruce (Mohawk-Sioux.) These new commissioners were willing to challenge the bureaucracy of the BIA and refashion it into a governmental agency that would work for American Indians. Hiring practices also changed and by 1980, 78 percent of BIA employees were of American Indian descent.

From approximately 1908 to 1949, the BIA consisted of a central office, located in Washington, D.C., and field offices located on various reservations. In 1949, the BIA was reorganized in an attempt to increase communication and to reduce bureaucratic red tape. New area offices were added to coordinate between central and field offices. For the most part, this three-tiered BIA structure is still in place today. Currently the BIA is under the direction of the assistant secretary of the interior and is a suborganization of the Department of the Interior. Under the secretary of the interior is the commissioner of Indian affairs who is responsible for the execution of congressional laws, as well as Department of the Interior orders, rules, and regulations.

Today the BIA attempts to promote self-determination, and American Indian tribes and nations administer over 50 percent of all BIA programs. However, the BIA still retains power over many of the educational and management opportunities on reservations through financial control. In September 2000, Assistant Secretary for Indian Affairs Kevin Gover (Pawnee) issued an official apology on behalf of the Bureau of Indian Affairs for the policies of land theft and assimilation that had been practiced by the agency. His statement is an effort to reconcile the past with the present and to lead the BIA in a firmly Indian direction.

Canada, Indian Policies of

Policy is multidimensional and multifaceted. As J. W. Cell has noted it “as being something rather less fixed, something rather more historical,” saying that, at any moment in time, there is “not so much policy as policy formation, an unsettled and changing set of responses by government to the continual interaction among men [and women], forces, ideas, and institutions.” As such, the Indian policies of Canada as a nation-state have their origin in the history of the treaty-making process of Canada as a place. Canadian Indian policies as they developed in the eighteenth century owe their development to a mistaken European view and representation of how Europeans came to view and represent aboriginal peoples, including First Nations, Métis, and Inuit peoples. However, First Nations have no need for such policies and do not have any regard for them, except insofar as they impinge upon First Nations’ sovereignty and self-determination.

The Covenant Chain of Silver literally means “to link one’s arms together” and signifies a nation-to-nation relationship. Yet the nation-state of Canada misinterpreted the First Nations and the meaning of the Covenant Chain and especially the Two Row Wampum that symbolized the Covenant. As a result it misconstrued what the relationship should have been between the Dutch, English, and the French imperial governments on the one hand and the

aboriginal nations on the other: namely, peace, mutual respect, and trust.

Initially given by the English to the Haudenosaunee to cement the treaty entered into at Albany in 1664, the Covenant Chain's components were known as least by the early seventeenth century, when the very first treaties of peace and friendship were entered into between the French and the Mi'kmaq nations in Acadia (present-day Atlantic Canada). The significance of the Covenant Chain of Silver as a basis for the treaty-making process and Indian policies cannot be underestimated in terms of land and sovereignty. Sir William Johnson, the English Crown's Imperial appointee to the Indian Department in 1755, highlighted its magnitude in 1764 when he wrote that

Tis [It is] true that when a Nation find themselves pushed, their Alliances broken, and themselves tired of a War, they are very

[very] apt to say many civil things, and make any Submissions which are not agreeable [agreeable] to their intentions, but are said meerly [merely] to please those with whom they transact Affairs as they know they cannot enforce the observance of them. But you may be assured that none of the Six nations, Western Nations [including the Western Confederacy] &ca. ever declared themselves to be Subjects, or will ever consider themselves in that light whilst they have any Men, or an Open Country to retire to, the very Idea of subjection would fill them with horror.

This statement by Johnson links the basis of this process with one of the early views also integral to Canada's Indian policies: the notion that aboriginal peoples were subject to the nation-state. This notion of subjects rather than First Nations was a direct result of the ideology of European empires, notably

King George VI and Queen Elizabeth visit a Native American encampment in Canada. (Hulton-Deutsch Collection/Corbis)

the French and the British empires, which sought to control and dominate the natural world of North America and the peoples who resided there. However, initially outnumbered and without sufficient technology to dominate aboriginal peoples (the canoe was one of the primary modes of resistance), the French and then the British empires recognized aboriginal peoples as nations and sought out and entered into treaties of peace and friendship.

One of the first statements of imperial policy toward the First Nations was the promulgation of the Royal Proclamation of 1763, partly in response to the Anishinabe and Seneca resistance movements earlier that year. Owing much to the treaty-making process, the Royal Proclamation was an English imperial document, among other things, that recognized and reaffirmed the "Indian territory" to be their "absolute property," established English imperial rules regarding the treaty-making process under the Covenant Chain, and recognized the significance of the sovereignty of aboriginal trade and trading. It would be reaffirmed one year later in a Grand Council of Nations at Niagara in 1764 and in subsequent treaties, indicated by the following First Nations' perspective:

While the treaties are like stones marking a spot in time, the relationship between the Nations is like two equals, respecting each of their differences but supporting each other for a common position on peace, order and justice for all. The brotherhood created by the Twenty Four Nations Belt represents a relationship of both sharing and respect. The sharing is reciprocal: as the First Nations shared land and the knowledge in the past, now that situation is reversed, the generosity of spirit and action is expected to continue. The respect is also reciprocal: respect for each other's rights, existence, laws and vision of the future.

By the late eighteenth century, the balance of power was beginning to shift and increasingly the treaties came to be seen as land surrenders by the aboriginal peoples as subjects of the imperial crowns. These promises were not inconsequential at a time when the English imperial foothold on the North American continent was, at best, precarious. After Sir William Johnson died in 1774, things began to fall apart. By the 1790s, the solemn promises of the crown were forgotten by the Indian Department.

After the American Revolution, the new colony of Upper Canada became important to the English

imperial government for a strategic reason: to protect the English colony from the United States as an aboriginal buffer state. The land was also seen to be, in the long term, of great value as a place for the second British empire to promote commercial agricultural settlement and colonization. Lieutenant John Graves Simcoe's plan for Upper Canada (1791) outlined this plan:

There are but a very few Indians who inhabit within it, the greater part of the soil has been purchased & the whole ought to be before it will become of value, as the Indians will not want for suggestions to enhance [enhance] its price. I consider the Country to be of immense value, whether it be regarded to its immediate advantages, the future prospect of Advantage, or the probable grounds for supposing it will remain the most important foreign possession of Great Britain.

Based on the Royal Proclamation of 1763, a misconstruction of the treaty-making process, and Simcoe's land policy, a number of land surrenders in Upper Canada occurred from the 1790s to the Confederation of Canada (1867) and in the west and north by means of the numbered treaties.

These treaties were not entered into without resistance by First Nations' citizens. Despite the spirit of the Two Row Wampum and, later, the ostensible promise of protection of subject peoples, the treaty-making process became a landgrab filled with corruption and land speculation, as was the case in the United States. Conflict, rooted in imperial and colonial aspirations as well as in cultural disparateness of the First Nations and the White Settlers, grew apace as a part of Canadian aboriginal policies within regional frameworks. There were treaties of peace and friendship in Atlantic Canada, no treaties in Quebec, and land loss treaties in Upper Canada that became a model of the subsequent numbered treaties (1871–1930) in the west and north. The principle of protection gave way to assimilation, and with it came European scientific racism as part and parcel of Canada's Indian policies.

The War of 1812–1814 fought in the British North American colonies and in the United States was a "turntable" for Canadian Indian policies. Although they fought for the British in that war, the First Nations were no longer needed militarily when it was over. The result was that the United States and Britain agreed on a boundary that split the First

Nations' territories, literally carving it up along the survey of the international boundary and, more seriously, effectively taking away jurisdiction and governance (but not sovereignty) from the First Nations.

Relocation and attempted extinguishment of aboriginal title and reserve lands in Upper Canada occurred after the War of 1812–1814. Gradually, a full-blown British imperial policy of civilization was established and in effect by the 1820s. Many more requests came for land surrenders from the English crown, but the land surrenders were not followed. Most of the monies were not deposited to trust fund accounts, and more lands were taken than outlined in the written treaty documents. Even without the overt use of force, the British government sometimes used another process—one based on nonconsultation with aboriginal peoples and lacking their consent, all in violation of the spirit and intent of the Royal Proclamation and the treaties—to achieve the end of extinguishment.

Beginning in the 1820s, with increasing British immigration to Upper Canada, agricultural settlement by white settlers on a large scale began. Requests came for more land surrenders. In the 1820s under Lieutenant Governors Sir Charles Henry Darling, John Colborne (Baron Seaton), and then Sir Francis Bond Head, the British imperial government embarked on its policy of "civilization" in Upper Canada since it had already been deemed a success by English imperial officials in Lower Canada. While this policy was primarily designed with a hard edge to purposefully assimilate aboriginal people, it also promised monies for education and training and economic opportunities, for example, commercial agricultural opportunities, for the citizens of the First Nations. Another less desirable approach of the policy was a conscious plan of removal, developed by Head in the mid-1830s. The idea was to remove and to centralize aboriginal people into two geographical areas: primarily Manitoulin Island and Walpole Island. Once centralized, they could better be, according to the government view, "civilized" and then assimilated. This was strenuously resisted by the First Nations. The only group that became enfranchised as "white people" by the 1880s under this policy were the Wyandots of Anderdon.

The so-called civilization policy was not predicated on the surrender of Indian lands, at least initially, to pay for the policy. Rather, the monies for it would come from a general parliamentary grant from the crown. Subsequently, the policy became

one of assimilation, which was financed crudely by selling Indian lands and using the funds raised to pay for their own assimilation. This policy was anathema to the First Nations. By 1840, the policy had already failed at Coldwater and other places. Yet the Indian Department, confronted by wholesale squatting and trespassing on First Nation lands, continued to implement it by taking land surrenders. This policy was codified in the late 1850s in the first Indian Act of 1857. The import of this new approach to civilization was not lost on the First Nations' leadership, who rejected it and bluntly stated that it was an attempt "to break them to pieces."

Partially responding to the attempted encroachments and the alienation of the Indian Territory, the English imperial government took action, flowing from the Royal Proclamation, to protect parts of it. In 1839 it passed legislation to protect crown lands, especially the Indian Territory, which had been the subject of considerable concern because of trespassing, squatting by nonaboriginal people, illegal land use (such as the taking of timber from Indian lands), and outright fraud. However, this legislation proved not to be strong enough in the decade following its passage, and the thefts or other depredations on aboriginal lands continued. On August 10, 1850, the government of the Province of Canada passed further legislation, an act for the "protection" of the "property occupied or enjoyed" by aboriginal people in Upper Canada "from Trespass and Injury." This legislation strengthened the provisions of the 1839 Act but the legislation still appears not to have been effective since the squatting and the process of dispossession continued unabated.

In 1861 Herman Merivale (1806–1874), an astute British imperial commentator and a consummate bureaucrat, observed that British imperial aboriginal policy had been a failure. His commentary could well be a description of Canada's aboriginal policy more than 144 years later:

The subject, in short, is one which has been dealt with by perpetual compromises between principle and immediate exigency. Such compromises are incidental to constitutional government. We are accustomed to them: there is something in them congenial to our national character, as well as accommodated to our institutions; and on the whole, we may reasonably doubt whether the world is not better managed by means of them than through the severe application of principles.

But, unfortunately, in the special subject before us, the uncertainty created by such compromises is a greater evil than errors of principle.

Merivale's description of the vacillating nature of Canada's perpetual compromises between principle and immediate exigency is a significant observation about the failure of Canada's aboriginal policies. The policies only created great uncertainty and extreme frustration with the failure of the crown to uphold the Covenant Chain of Silver and the concomitant solemn treaty promises. This situation goes far to explain its failure of Canada's Indian policies.

One of the primary events of Canada's racist and colonial Indian policies was the Confederation of Canada. In 1867 the British North America Act was passed by the British imperial government, thereby establishing the Dominion of Canada. The First Nations effectively lost recognition and respect for their rights of aboriginal governance over their lands and waters. The new federal government assumed responsibility for "Indians, and Lands reserved for the Indians" by Section 91 (24), subject to any liabilities, which the government of the Province of Canada had, to the First Nations. This legislation allowed the federal government to pass the first consolidated Indian Act, thereby establishing a colonial relationship of the federal government to the First Nations. It also stated that the provinces had control over all other lands within the boundaries of each province (Section 109). Although this imperial statute was subject to any outstanding interests, including reserve lands as well as the aboriginal territory, much of which was still unceded, neither the interests nor the lands were specified. If the lands were not referred to, then the assumption was that the First Nations' land rights did not exist.

Originally, the Confederation of Canada was conceived of and was supposed to have been a treaty among the founding nations of Canada, including all of the First Nations based on the Two Row Wampum. But it soon became a means of carrying forward the policy of extinguishment, including the surrender or relinquishment of the Indian Territory as well as the implementation in the late nineteenth century of the residential school system with its horrific cultural and sexual abuses, which lasted well into the 1980s.

The negotiation of the so-called numbered treaties was a clear example not only of the divergence in thinking of the treaty makers in the 1870s

but also of the weaknesses of Canada's regional Indian policies at that time and thereafter. Mawedopenais, a Mide chief of the Ojibwa, spoke to the crown's commissioner and chief negotiator, Alexander Morris (1826–1889), at the third treaty negotiations in October of 1873. As a spokesperson for the Rainy Lake and Rainy River people in this treaty-making process, he was clear on the position of aboriginal nations and the title to their lands: "I lay before you our opinions. Our hands are poor but our heads are rich, and it is riches that we ask so that we may be able to support our families as long as the sun rises and the water runs." Morris replied, disingenuously, indicating that he did not understand what aboriginal title and the treaty-making process meant for the aboriginal nations: "I am very sorry; you know it takes two to make a bargain; you are agreed on the one side, and I for the Queen's Government on the other. I have to go away and report that I have to go without making terms with you. I doubt if the Commissioners will be sent again to assemble this nation." This threat, implying the government approach of divide and conquer was not, as may be expected, well received by the Ojibwa nation. Treaty 3 was eventually negotiated and signed, but not on the basis of the spirit and the terms of the treaty as understood by the Ojibwa Nation. He did not believe, as many people do to this day, that the aboriginal nations were ready to share in the treaty-making process with the riches in their heads. There was no balance in the "bargain" before or after the treaty was signed. Morris and the federal government took too much away from the life of the Ojibwa. It has continued to do so here and elsewhere in Canada.

This nonconsultative treaty-making approach became central and pivotal to the development of the top-down policy approach of the federal government inherent in the Indian Act of 1876 and its successors, making the government both colonial and racist. Under this Act, the federal government alone, in a process that is neither consultative nor community-based, decides who is an aboriginal person and who is not under the registration process. Nonstatus and Métis persons are not recognized as aboriginal, and they cannot be registered under the Act, notwithstanding that they are recognized in Canada's Constitution as aboriginal peoples. In fact, it was not until the 1930s that the Inuit of Canada's north were recognized through a court ruling as having equal status as "Indians." Yet there is no Inuit Act today. Moreover, except for one substantial

revision to that legislation in 1951, essentially the Indian Act remains a cornerstone of Canada's aboriginal policies. Canadian Indian policies have been and still are in complete disarray.

There remains a wide cultural gulf in the treaty-making process that has become intensified and that has led to the abrogation of aboriginal title and treaty rights and to the events of the summer of 1990 at the Oka and nearby Mohawk reserves. But the events at Oka were broader than those at Kahnésatake and Kahnawake. Similar situations also occurred in Ontario and in British Columbia, all involving unresolved land claims, a problem across Canada and one that resurfaced in 2006 with the conflict at Caledonia, Ontario.

What accounts for these Canadian Indian policies and the reality of Indian existence in Canada? The answer lies in the disparate histories of aboriginal and nonaboriginal people in Canada. The European, so-called scientific Western tradition of history has seen, sometimes in its crudest forms, the relationship between people and the land and its uses as a separate category and process. From the viewpoint of aboriginal traditions, these categories are wholly artificial and do not really exist. The aborigine has a holistic view, seeing land and man and nature and the uses that one makes of the lands and waters as one within a circle of time. They come from a single source—from a Creator who made all living things and nature. It is not enough to analyze each separately. The sum of the parts does not, in this instance, comprise the whole. The aboriginal way of seeing the world is simple, yet profound. Aboriginal people have protected and conserved their homelands—their territories—since time immemorial. This is understood and told by their elders, from the perspective of the First Nations. They tell who they are and, in spiritual terms, what their lands and waters mean to them. They have used the land and have shared in the harvesting of the fruits of the land for thousands of years.

The primary objective of aboriginal people is spiritual: to protect the land—Mother Earth—and the waters of Turtle Island. This is a sacred trust, a trust to protect the land. The continuity and integrity of the lands are important to the survival of indigenous people. Generations of First Nations members have used the land and have shared in its bounty and its uses. Moreover, they will continue to use this land and teach their children about the Creator and the land. So this relationship is all-important. They owe their very survival to it. It is both simple and

profound. The events of the summer of 1990 at Oka and elsewhere across Canada occurred in our time at the initiative of aboriginal people to protect their lands and waters. To do this, they had no choice but to resist those who wished to destroy the land and themselves. Not to do this meant their destruction as well as the destruction of their children and grandchildren. It would have meant the end of their cultures and of their survival as aboriginal people. They will continue to protect their lands and waters.

In the twenty-first century we are witnessing profound structural changes in the history of the world. The world of nineteenth-century European imperialism is over. Decolonization is continuing apace. This process has been characterized by the forces of both construction and destruction. In Canada, as one example, aboriginal peoples are reaffirming their inherent right to governance through diverse approaches and a variety of means. Their lands are ever so slowly being recovered, if not always respected. Aboriginal title is beginning to be understood and recognized. One watershed in the twentieth century was the *Calder v. Attorney General of British Columbia* case of 1973. This decision of the Supreme Court of Canada found that aboriginal title and rights did exist in the white justice system of Canada. It opened the legal doors for the prosecution of aboriginal title and rights cases in Canada. *Calder* was followed by many constructive Supreme Court decisions that affirmed aboriginal title and land rights and treaties, including *Guerin*, *Simon*, *Sioui*, and *Sparrow* in the late 1980s and 1990s, and most recently, *Delgamuukw* (1997), to name but a few.

Calder opened the door to new land claims policies of the federal government in 1974, only one year after the case was decided by Canada's Supreme Court. It has brought about an undermining of Canada's historic Indian policies and their replacement with various forms of aboriginal governance that has led to the creation of the territory of Nunavut in 1999 and then the first modern treaty: the Nishga Treaty in British Columbia in 2003. This new Indian policy is not based on land claims processes, because there are no aboriginal land claims, only land rights. There are only aboriginal title and treaty rights to the land, and these must be protected. Among the land grievances flowing from the treaty-making process is that—unrecognized by the Euro-Canadian land tenure system or by government legislation, such as the Indian Act—the spiritual foundation is lost. And it is lost not only in the reserves, places of special and specific protection,

but also in any of the strategic areas of land that aborigines used. Such lands were a major consideration for both the crown and the aboriginal people, but the antithetical concepts regarding land ownership and use still intensify conflicts over treaty areas and reserves.

For example, the people of the Bkejwanong First Nation submitted a small land claim regarding three hundred acres to the Specific Claims Branch of Indian Affairs in 1977, thirty years ago. After years of review and analysis, it was rejected in 1986, and now its rejection is being reviewed by the Indian Specific Claims Commission, which was established by the Mulroney Tories as a partial response to Oka in 1991. The hearings on the rejection of this claim were scheduled to take place in April of 1994, seventeen years after the claim was submitted. To date, federal officials are still reviewing the claim. Land claims exhibit too much process, very little substance, and too few settlements. This example is not at all unusual, because the Indian Specific Claims Commission, established after the events of the summer of 1990 at Oka and elsewhere, can only publish its findings and recommendations to the federal cabinet, but the government does not have to implement its recommendations.

Likely due to differing views between the government and aboriginal nations over land rights, the government's procedure for handling what it regards as land claims seems to be aimed at delaying resolution for as long as possible. From the aboriginal nation's point of view, a land claim is a statement of the land rights in reference to a specific geographical area. It is a claim based on whether the aboriginal users of the land and its resources ever entered into a treaty for it under the rules set out in the Royal Proclamation of 1763. A claim is not a court action; it is not litigation. It is a policy (actually two—one for comprehensive claims and the other for specific ones) and a program of the federal government administered by the Department of Indian and Northern Affairs. The federal government, in other words, forces First Nations into a policy that does not reflect the nation-to-nation treaty-making process. If a First Nation disagrees with this policy, its only recourse is to begin an expensive, decades-long litigation process on each of its claims.

From the government's policy and program point of view, the purpose is to extinguish "claims." When a claimant decides on litigation, the file wends its way slowly through the federal bureaucracy to

the Department of Justice, where, in time, the claimant is seen to have withdrawn the claim. First, an application for a claim must be accompanied by a statement of facts that includes a summary statement of the historical research findings on the aboriginal people and their lands. It includes events that have been recorded either by oral traditions or by the written record since time immemorial. Legal argument and conclusions are often present as well. Lastly, copies of the historical documents are included. The government, or more correctly governments, since in Canada provincial governments have constitutional jurisdiction over lands and natural resources, while the federal government has responsibility for Indian land and people, begins to assess the claim based on its perception of its validity, its (often limited) understanding of the interpretation of the history of the aboriginal people, and pure political considerations.

The actions of previous governments are also taken into account from the time of the British empire in the eighteenth century through to the successive colonial governments, the provinces, and Ottawa. Also significant in any bureaucratic and political judgment is the role of legal and legislative precedents with similar claims. For example, a previous Supreme Court of Canada decision in a claimant's favor has an enormous impact on a claim with a similar fact situation because it likely has the same legal issues at stake. The difficulty is that there are still relatively few legal precedents. Thus, decisions on validity are often determined by the Department of Justice's lawyers whose job entails a conflict of interest. This system of deciding the claims by having a federal lawyer be the judge, jury, and executioner is not at all fair, and, moreover, it has failed. Only a truly independent claims commission, such as an independent tribunal, can protect the claims process and the federal government from disrepute.

Land claims are significant only if they can add to the land and the economic base of First Nation communities. Indian reserves were initially strategic economic areas that were excepted from the treaty-making process. Later they were transformed and designed by British imperial policy makers as special areas of "civilization" with the specific objective of assimilating the First Nations. Soon they became mere "half-way houses" that were to be appropriated whenever they were needed for the purposes of the crown or for nonaboriginal uses. Thus, the federal government held

the First Nations' land in a kind of British imperial trusteeship, which gave way on a path leading to gradual and then, it was hoped, complete assimilation. This is a vestige of a pure colonial relationship. Even this misguided basis for aboriginal "claims," distorted as it is by twentieth-century lenses, has been rendered illegitimate through time by the alienation of the land and labor of aboriginal people. First Nations' land and labor were effectively or formally expropriated by the federal or provincial governments. Land surrenders, as well as the loss of the commons (their non-Reserve areas) for natural resource usage by governments and by private interests, assisted the process. What was seen to be legitimate was rendered both unlawful and unfair from an aboriginal perspective. The Temagami case, in particular the building of the Red Squirrel Road extension in 1988–1989, is a prime, but not a solitary, illustration. Only on October 2, 1990, at a conference on aboriginal sovereignty and self-determination in Toronto, as a result of many years of aboriginal resistance movements, has there been a recognition in Canada of the inherent right of aboriginal self-governance.

Fifteen years of constitution making since 1982 have collapsed into disunity, separatism, and regional antagonisms among the white visitors to Canada. The former Meech Lake Accord, the epitome of the old British imperial centralist model of confederation, stylishly referred to as "executive federalism," was defeated in 1990 and never ratified as part of Canada's constitution. The same was true for the second attempt with the Charlottetown Accord of 1992. This was a clear constitutional victory for aboriginal people: They are in the Canadian Constitution. Although the Charlottetown Accord of 1992 was also a failure, the inherent right of aboriginal people to self-governance, as well as their title and land rights, has since been reaffirmed. Gradually, Canada is becoming similar in structure to what it was in preconfederation days. At that time, British North America was a series of communities located along the Great Lakes and adjacent waterway systems. It comprised Euro-American and aboriginal communities in an alliance of nations within both aboriginal and British imperial confederacies. It was a true meeting ground of diverse languages, cultures, and communities. This is an illustration of how the past is an integral part of the present. Aboriginal title, time, and resistance movements may well be common themes in Canada's disparate histories of its founding nations.

The foundation exists now for a constructive approach to the making of Canada by means of treaty making. The Constitution of Canada recognizes aboriginal people as "Indian, Inuit and Métis." It also shows grudging respect for "existing Aboriginal and treaty rights." Why, then, did aboriginal people oppose the Meech Lake Accord, contributing dramatically to its failure in June 1990? Why did we have, some few weeks later, the violence and the blockades at Kahnésatake, Oka, and Kahnawake in Quebec, or the blockades of roads and railway lines in Ontario and British Columbia?

The answer lies in the First Nations' disparate histories and cultures. To put it simply, aboriginal people and the rest of Canada speak to one another from differing historical and cultural assumptions and experiences, including those regarding languages, customs, governance, lands, and waters, as well as time and progress. This also helps to explain the repeated failures of Canada's aboriginal policy or policies.

This reversal of English imperial policy was only altered in 1982 when Canada's Constitution was brought home from England in written form. Hitherto, it had been an unwritten document, essentially an embodiment of British imperialist legislation in 1867. With this act, "existing Aboriginal and treaty rights" (but not self-governance or sovereignty) were admitted as part of the Charter of Rights and Freedoms under that Constitution. Today the larger business of the treaty-making process and various land claims policies remains incomplete and unfulfilled. The land claims issues are currently being defined by Canada's Constitution on an issue-by-issue basis by the Supreme Court of Canada.

The validity of aboriginal oral history and traditions was reaffirmed in 1996 by the Royal Commission on Aboriginal Peoples and again in 1997 by the Supreme Court of Canada in its ruling in the case of *Delgamuukw v. British Columbia*, also known as the Gitksan and Wet'suwet'en comprehensive claim. That legal ruling stated that oral traditions are "not simply a detached recounting of factual events but, rather, are 'facts enmeshed in the stories of a lifetime.'" Moreover, they are "rooted in particular locations, making reference to particular families and communities." As a result, aboriginal oral history is in fact "many histories, each characterized in part by how a people see themselves, how they define their identity in relation to their environment, and how they express their uniqueness as a people." The Supreme Court stated that the laws of evidence in

the Canadian justice system must accommodate aboriginal oral history and tradition such that it “be placed on an equal footing with the types of historical evidence that courts are familiar with, which largely consists of historical documents. This is a long-standing practice in the interpretation of treaties between the Crown and aboriginal peoples.” Not to recognize and accept this history as an equally valid way of viewing the past is to invalidate aboriginal people and their land rights.

Without pen or ink, the First Nations remember and understand, through their stories, their internal and external landscapes of being and becoming. There are no boundaries and no beginning or end points. In short, there is no periodization of history. Their history is both separate and parallel to the history of Canada, as understood by nonaboriginal people—the history of the newcomers. In this way, aboriginal oral traditions also evoke and speak to the European past and have much to teach us about ourselves. They provide a necessary corrective, a balance as well as a deeper understanding of what we know today as Canada. For aboriginal people, circles of time are part of the natural world and nature, of life and living. Every living thing has a relationship to every other, and the events that occur in one’s lifetime have an immediate impact on one’s children and grandchildren. The seventh generation is immediate and close. We are, then, within circles of time.

Yet much of Canada’s modern aboriginal land policy is still viewed one-dimensionally as primarily assimilative, as a form of directed cultural change. This has been seen as originating in the nineteenth century and culminating in the federal government’s White Paper of 1969. Canadian historians have concentrated more on the origins and development of that policy and less on the resistance to it by the First Nations, especially on aspects of it in the twentieth century. Aboriginal policies must also be viewed from the perspective of the First Nations’ citizens and their governments. It must not be forgotten that nonaboriginal people and their governmental institutions have been visitors to aboriginal homelands.

Canada’s aboriginal policies have developed gradually and consist of two primary components that are diametrically opposed to each other. Thus they become built-in obstacles. The first is that the federal government has been largely indifferent to aboriginal title and land rights, taking a legalistic approach overall, acting only when it is forced to do so by Canada’s courts. The second component is that the provinces continue to use their hegemony,

through legislation and regulations, over lands and natural resources in self-serving ways. Canada’s aboriginal policies since 1867 have been an artificial creation, both negative and destructive, for aboriginal people and their relationship to the rest of the country. Federal policies have always been driven by other more prominent national agenda items—western settlement, protective tariffs, free trade, and the Constitution. Witness, for example, the failure of the Meech Lake and the Charlottetown Accords in the early 1990s. Canada’s aboriginal policy, through a long process of denial, has created institutional racism and corresponding resistance movements that culminated in violence and death. The events of the summer of 1990 at Oka have not been erased. The initiative for change in aboriginal history has always come from the First Nations. Government policy has always been characterized by reaction, crisis management, and denial. Encountering policy words with no substance and a benign, passive policy, the First Nations have always chosen to act; they had no choice but to resist these policies if they wished to survive.

Canandaigua (Pickering) Treaty

United States Secretary of War Timothy Pickering negotiated the Canandaigua Treaty with the Haudenosaunee, represented mainly by the Seneca, in

Timothy Pickering, while U.S. secretary of war, negotiated the Canandaigua treaty with the Haudenosaunee, represented mainly by the Seneca, in 1794. (Library of Congress)

1794. The treaty called for peace, as well as noninterference in the affairs of the Six Nations by the United States, quitclaims for lands already ceded, and an annuity of \$4,500 a year. Hardly had the ink dried on the guarantee of noninterference, however, when the United States commissioners, hearing of General “Mad Anthony” Wayne’s victory at Fallen Timbers (near Maumee and Toledo, Ohio), demanded portage rights at Niagara.

The Canandaigua Treaty is important today because it defines Seneca sovereignty specifically and Haudenosaunee sovereignty by implication. Specifically, the treaty says that the United States would “never claim the same [Seneca territory], nor disturb the Seneca nation . . . in the free use or enjoyment thereof; but it shall remain theirs until they choose to sell the same to the people of the United States” (Foster, 1984, 117).

To the Haudenosaunee, the important issues at Canandaigua were familiar: Several frontier murderers of Indians by whites were going unpunished.

Jurisdiction over major crimes was a common issue in treaty negotiations. The Iroquois also main-

tained that land cessions required by the Fort Stanwix treaty, negotiated in 1784, had been unfairly extensive, encroaching on their hunting grounds. The proposed settlement at Presque Isle was at issue as well. The Seneca insisted that the warrior chiefs who had negotiated the peace at Fort Stanwix had failed to submit the treaty to the Grand Council for ratification. Pickering proposed that the Seneca relinquish a strip of land four miles wide along the south of the Niagara River from Cayuga Creek to Buffalo Creek. Red Jacket replied that this was not acceptable because it would constitute a threat to Seneca fisheries and their settlement at Buffalo Creek. Pickering dropped the issue and settled for construction of a road, to be owned by the Seneca, from Fort Schlosser to Buffalo (Fenton, 1998, 695).

The negotiations continued until the parties achieved a general consensus that they had achieved all they could. On November 9, however, the Seneca Chief Cornplanter complained of past dealings with the United States and offered that the sachems alone, and not the warriors, should sign the treaty. Pickering was unwilling to do this. He felt that if the warriors did not sign, divisions would rise among the Indians that would undo the treaty (Fenton, 1998, 699).

Cornplanter’s behavior significantly diminished his reputation as a friend of the United States in Pickering’s eyes. The treaty was signed on November 11, 1794, and went into effect under U.S. law on January 21, 1795. The primary objectives of the United States were to settle the question of the Six Nations’ claims to lands in Ohio and the Erie Triangle and to embark on a policy of sincere negotiations and fair payment in land transactions.

Today, the people of the Six Nations believe the U.S. government has not kept several promises made in this treaty. The Six Nations believe the United States recognized that the lands of the Six Nations belong to them, not to the United States. The U.S. and New York State governments have since acted contrarily to any reasonable interpretation of the promise not to claim the land or disturb the Six Nations in any way. And they do so despite the fact that the United States and New York State do not collect taxes or enforce a variety of laws and regulations on lands they have acknowledged as having status as a sovereign domain distinct from their own.

Finally, many Iroquois believe that the treaty recognizes parallel legal jurisdictions to a much greater degree than those that have evolved since 1794. The treaty states, for example, that in the event of a crime, the two parties will pursue prudent measures involv-

ing the president or the superintendent until some other “equitable” provision shall be made. Some U.S. representatives assert that transferring jurisdiction to New York State fulfilled the requirement for equitable or equal provision, involving both parties in resolution of problems. However, many Iroquois, most notably the traditional chiefs, have long complained that there was nothing equitable in either the spirit or practice of the U.S. legal system as it relates to this treaty.

The treaty, signed by George Washington on January 21, 1795, remains a seminal document in Iroquois–U.S. relations. Following the construction of the Kinzua Dam, the Senecas whom it displaced were compensated with \$18 million because the eviction violated the Canandaigua Treaty. The Canandaigua Treaty was being used in the late twentieth century to prod federal government bodies, such as the Environmental Protection Agency, to act on environmental problems that damage Haudenosaunee living conditions from sources in the United States. Pollution from off-reservation sources is most serious at Akwesasne, which has been ranked as the most expensive toxic cleanup in the United States by the U.S. Environmental Protection Agency. The Senecas’ Tonawanda reservation near Niagara Falls is close to Love Canal, one of North America’s best publicized toxic sites. The Onondagas also invoked sovereignty guaranteed under the Canandaigua Treaty in 1983 when they granted sanctuary to American Indian Movement leader Dennis Banks and his family as he was being pursued by federal law enforcement authorities.

Carlisle Treaty Council

The Carlisle Treaty Council between the Pennsylvania colony and the representatives of various Indian

groups met at Carlisle, Pennsylvania, for one week beginning October 1, 1753. Ever the entrepreneur, Benjamin Franklin printed an account of the negotiation in his newspaper.

The chief reason for calling the conference lay in the growing tensions between the French and British and their respective Indian allies. Realizing that a war loomed on the horizon, the Pennsylvania Assembly called the conference and sent a delegation to negotiate for the renewal of alliances with various Ohio and Iroquois groups. The Pennsylvania delegation was composed of Franklin, in his first appearance as an Indian negotiator; Richard Peters, the secretary of the Provincial Council; and Isaac Peters, the secretary of the Pennsylvania Assembly. These three were the chief diplomats sent to the conference. Conrad Weiser, a local Indian trader who acted as interpreter, assisted the three delegates in their negotiations. George Croghan assisted Weiser in these activities.

Native American groups present included the Delawares, the Twightwees, the Shawnees, and the Wyandots. These last three were Ohio Indians. The Twightwees in particular were mentioned in Governor James Hamilton of Pennsylvania’s announcement calling for the conference since the French attacked them in 1752. Also present were the Iroquois, who claimed suzerainty over the Delawares. The negotiator for the Iroquois was Scarrooyady.

Many of the normal issues of the colonial–Indian relations arose in the discussions at the conference. The various Indian groups sought restrictions on the increasing numbers of white settlers coming across their borders illegally and squatting on their lands. They therefore sought assurances that the Pennsylvanians would guarantee their lands. A paramount issue for the Indians—and one Scarrooyady became very outspoken on—was the use of rum in the fur trade. The chiefs called for a stop to this practice, and Franklin agreed. His conviction on the matter was reinforced when he witnessed the effects of alcohol on the Native Americans on the night following the conclusion of the conference.

For their part, the Pennsylvanians sought clear assurances that, should another conflict between Great Britain and France erupt in the backcountry, the Indians would at least remain neutral and at best join on the British side.

At one point during the conference proceedings, the Delawares attempted to assert their independence from the Iroquois Confederacy. This

nearly brought an end to the conference when Scarrooyady flatly rejected the claim.

In the end, Franklin signed a treaty whereby the Pennsylvania colony pledged to respect the boundaries with the various Indian groups and to hold back the flow of settlers. Likewise, he pledged to raise the matter of regulating the Indian trade, and more specifically removing liquor from the trade, with the Pennsylvania Assembly. The Indians likewise pledged their neutrality should a conflict break out with the French. In the long run, both sides failed to live up to their pledges when the French and Indian War broke out.

It is quite clear that a number of the issues that arose at the Carlisle Conference influenced Franklin's thinking as he prepared to attend the Albany Congress the following year. Among the concerns of Native Americans that certainly affected Franklin's thinking were the desires of the chiefs that white settlement be restricted and that alcohol be removed from the fur trade. Likewise, it is clear that Franklin was already thinking along the lines of mutual colonial defense as he prepared for the meeting in Albany in 1754 and that ideas along these lines developed as he negotiated with the chiefs at Carlisle. Finally, the successful conclusion of the Carlisle conference and treaty marked the beginning of nearly three decades of diplomacy on the part of Franklin with Native Americans, among the colonies, and with various European states.

Cherokee Nation v. Georgia

Following the discovery of gold there in 1829, Georgia attempted to assert authority over the Cherokee Nation, which comprised several economically self-sufficient towns with their own farms, mills, animal herds, and government. Cherokees also used a written language, devised by Sequoyah. The assertion of political authority by the state of Georgia set the stage for a key test of federal–state relations in the decades before the Civil War, as the Cherokees resisted removal to Indian Territory, in *Cherokee Nation v. Georgia* (1831) and *Worcester v. Georgia* (1832).

The term "Marshall Trilogy" is used to describe the group of Chief Justice John Marshall's rulings in *Johnson v. McIntosh* (1823), *Cherokee Nation v. Georgia*, and *Worcester v. Georgia*. In these three cases, Marshall developed legal doctrines that defined the relationships among the United States, the individual states, and Native American nations. In these opinions, according to legal scholar Charles F. Wilkinson, "Marshall conceived a model that can be described broadly as calling for largely autonomous tribal governments subject to an overriding federal authority but essentially free of state control" (1987, 24).

The Marshall Trilogy is so important in American Indian law because the key precepts of Marshall's three opinions have been interpreted by lawyers, judges, legal scholars, and government officials in many different ways. The Bureau of Indian Affairs, for example, used the phrases "dependent," "pupilage," and "ward" to construct a cradle-to-grave social and political control system in which even adult Indians were regarded legally as incompetents, much like children.

President Jackson's adamant support of Indian removal placed him on a direct constitutional collision course with Chief Justice John Marshall, who was in the process of evolving legal doctrines vis-à-vis Native American land rights on which he had been working before Jackson was elected. The Cherokee cases, which came before Chief Justice Marshall's U.S. Supreme Court between 1823 and 1832, would display, in broad and emphatic relief, how closely much of early nineteenth-century American life was connected to the land speculation machine that helped propel westward movement.

In *Cherokee v. Georgia*, the Cherokees sued in federal court under a clause in the Constitution (Article III, section 2) that allows foreign citizens or states to seek legal redress against states in the union. In this case, the Cherokees were suing as an independent

An 1866 map of the state of Georgia shows county boundaries, roads, settlements, and topographical features. Also depicted is a large reservation for the Cherokee Indians. (Michael Maslan Historic Photographs/Corbis)

nation seeking redress because the state of Georgia had extended its power over Cherokee territory, extinguished the authority of the Cherokee government, and executed one of its citizens. Chief Justice Marshall skirted the issue by deciding that the Cherokees were not an independent country, but instead a “domestic dependent nation.” Marshall thus threw the case out of court, deciding that the Cherokees had no grounds on which to sue under the Constitution.

Georgia replied, citing a clause in the Constitution that prohibits the establishment of a state within the borders of another state. Marshall found, however, that the Cherokees had a legal relationship with the federal government through treaties; Georgia’s assertion of unilateral control was said by Marshall to be “repugnant to the said treaties, and . . . therefore unconstitutional and void” (Baker, 1974, 743). Writing for the majority in *Cherokee Nation v. Georgia*, Marshall said that the Cherokees possessed a limited sovereignty: “They may, more correctly, perhaps be denominated domestic depen-

dent nations . . . Their relation to the United States resembles that of a ward to his guardian.” These phrases, as interpreted by the Bureau of Indian Affairs, became the legal justification for the colonial system that was being imposed on Indians as Anglo-American settlement exploded across North America in the nineteenth century. Whether he intended it or not, the government used Marshall’s conception of the relationship to justify placing Indians in state of “wardship” in which their lives were placed under control by government agents. More than a century later, the “self-determination” movement aimed to dismantle this system.

The doctrine of wardship (as it has been applied to Native Americans) often is said to have grown out of Marshall’s rulings, although he may not have intended such an application. As the legal scholar Felix Cohen wrote:

. . . [T]he doctrine of Indian wardship arose out of a misunderstanding of Chief Justice Marshall’s holding, in 1831, that an Indian tribe was not a foreign nation but was rather a “domestic dependent nation,” and that its position toward the United States *resembles* that of a ward toward a guardian. This did not mean that an Indian tribe is a ward; even less did it mean that an individual Indian is a ward. But the opinion and several later opinions popularized the term wardship (Cohen, 1960, 331).

Under the reign of these magic words [“wardship” and “trust”] nothing Indian was safe. The Indian’s hair was cut, his dances forbidden, his oil lands, timber lands, and grazing lands were disposed of by Indian agents and Indian commissioners for whom the magic word “wardship” always made up for lack of statutory authority . . . (Cohen, 1960, 131–132).

In *Cherokee v. Georgia*, the justices of the Supreme Court took a variety of positions on the issue of Native American sovereignty that reflected societal attitudes toward the issue. While Justices Marshall and John McLean held that Indians lived in domestic dependent nations, Justices Smith Thompson and Joseph Story held that the Cherokees were a sovereign nation. Justice Henry Baldwin wrote that they had no sovereignty at all, and Justice William Johnson believed that the Cherokees had no sovereignty in his time but that they

possessed an inherent political power that might “mature” into more complete independence in the future.

Removal of the Cherokees and several other Native nations during the 1830s allowed the expansion of Anglo-American populations south and west through parts of Georgia, Alabama, Mississippi, and neighboring states. At roughly the same time, the industrial application of Eli Whitney’s cotton gin created a mass market in moderately priced cotton clothing. Within a decade after their removals, the Indians’ homelands were replaced, in large part, by King Cotton and a revival of slavery.

The removal of the “civilized tribes” from their homelands is one of the most notable chapters in the history of American land relations. Jackson’s repudiation of John Marshall’s rulings, which supported the Cherokees’ rights to their homelands, was contempt of the Supreme Court (an impeachable offense under the Constitution). The subject of impeachment was not seriously raised, however. During the incendiary years before the Civil War, the removals became intertwined with the issue of states’ rights vis-à-vis the federal government. Had Jackson followed Justice Marshall’s rulings, the Civil War might have started during the 1830s.

Jackson did not seek the removal of the Cherokees and other civilized tribes—the Cherokees, Choctaws, Chickasaws, Creeks, and Seminoles—because they did not productively use the land. On the contrary, the civilized tribes were making exactly the kind of progress that the Great White Father desired of them: becoming farmers, educating their children, constituting governments modeled on the United States. Immigrants, many of them Scots and Irish, had married into Native families. Some of them owned plantations and slaves.

The issue was not the Indians’ degree of civilization. It was ownership of the best agricultural land in the area. Land was the largest type of wealth in the United States during Andrew Jackson’s lifetime. Slaves who worked the land of the South—human capital—were the second most widely held type of financial asset. The entire financial superstructure of stocks, bonds, and various forms of fungible cash so familiar in the late twentieth century lay largely in the future.

Michael Paul Rogin wrote of the period: “Land in America was not only a symbol of national identity, but also—in a more thoroughgoing fashion than anywhere else in the world—a commodity. . . . Land was the nation’s most sought-after commodity in the

first half-century of the republic, and the effort of men to acquire it was one of the dominant forces of the period” (1975, 79). Rogin quoted a contemporary source: “Were I to characterize the United States, it would be by the appellation of the land of speculators” (1975, 80). Land, once ownership had been wrested from Native owners, became the largest “futures market” available at the time, its value determined by its hoped-for future use in a newly evolving non-Indian society. As a general, and later as president, Jackson represented the values and interests of the land speculation industry.

Removal as an idea was not Jackson’s creation. Nearly three decades before Jackson executed it, in 1802, the state of Georgia signed an agreement with the U.S. government (the Cherokees were not consulted), stating its intent to work toward extinguishment of all Cherokee land titles within state borders as early as the land could be “peaceably obtained, and on reasonable terms” (Moulton, 1978, 24). By the time the Removal Act was passed by Congress in 1830, most white Georgians regarded the United States to be “seriously delinquent in the bargain” (Moulton, 1978, 24).

As President Jackson ignored Chief Justice Marshall’s opinion in *Worcester v. Georgia*, he also showed his frontier constituencies that he supported a belief popular among states’ rights advocates of the time: that the Supreme Court should be stripped of its power to review the rulings of state courts. Marshall repudiated the states’ rights advocates’ belief that Section 25 of the Judiciary Act of 1789 prohibited the Supreme Court from hearing the case. A bill that would have repealed that section (which gives the U.S. Supreme Court the power to rule on appeals from state courts) was debated on the floor of the House of Representatives, voted on, and defeated January 29, 1831.

The purported limits on the Supreme Court’s authority based on states’ rights stirred substantial controversy during the 1830s; when *Worcester v. Georgia* was heard before the Court on February 20, 1832, fifty members of the House of Representatives (about a quarter of the body) were in attendance. Marshall stepped into the maw of the states’ rights firestorm by turning aside a ruling of the Georgia Superior Court. Jackson, in turn, all but created his own law by ignoring Marshall’s ruling.

As a result of Jackson’s action, Georgia proceeded with its plan to evict Indians living within its borders and transfer the Indians’ land to non-Natives. Between one-third and one-fourth of the

sixteen thousand Cherokee people who were removed during 1838 died on the march to Indian Territory (now Oklahoma) or shortly thereafter. The Cherokees' name for the march (*nuna-daa-ut-sun'y*, "the trail where they cried") provided its English name, the Trail of Tears.

Columbia River Inter-Tribal Fish Commission

The Columbia River Inter-Tribal Fish Commission (CRITFC) is a cooperative resource management organization composed of the Confederated Tribes of the Umatilla Indian Reservation, the Confederated Tribes of Warm Springs, the Confederated Tribes and Bands of the Yakama Nation, and the Nez Percé tribe. Founded in 1977, following a string of tribal court victories, its stated mission is "to ensure a unified voice in the overall management of the fishery resources, and as managers, to protect reserved treaty rights through the exercise of the inherent sovereign powers of the tribes." CRITFC operates on the principles of consensus and collaboration, working through the fish and wildlife committees of its constituent tribes and in consultation with various state and federal agencies to harmonize indigenous traditions with the best modern science and the realities of the modern river. Together with the Northwest Indian Fisheries Commission, its counterpart among the tribes of Puget Sound, CRITFC has become an important player in the

ongoing effort to protect and restore the endangered salmon runs of the Pacific Northwest.

The indigenous communities of the Columbia Basin struggled for more than a century to have their voices heard by the Euro-American interests and institutions that dominate the river. By treaties signed in 1855, the tribes reserved "the right of taking fish at all usual and accustomed places, in common with the citizens of the Territory." Starting in the 1860s, however, the commercialization of salmon and other forms of economic development (especially dam construction) began to decimate fish populations, destroy spawning habitat, and obstruct Indian access to the river. Declining salmon runs and increasing competition for fishing sites at Celilo Falls compelled the Umatilla, Warm Springs, and Yakama tribes to establish the Celilo Fish Committee (CFC) in 1936. This organization, which also included representatives from local Columbia River Indian communities, constituted the first intertribal effort to settle disputes and prevent outside interference. The CFC tried for twenty years to resolve conflicts and regulate harvests, but internal strife and limited authority hindered its effectiveness until the backwaters of The Dalles Dam flooded Celilo Falls in 1957. The tribes continued to assert their sovereignty, however, and federal court rulings in *U.S. v. Oregon* (1968) and *U.S. v. Washington* (1974) finally established their right to participate in fisheries management.

CRITFC emerged from a 1976 Memorandum of Understanding among the four treaty tribes with the help of the Bonneville Power Administration, which agreed to fund tribal participation as part of its legal obligation to mitigate the effects of federal dams. The tribes then passed resolutions authorizing the commission, and by March 1977 they had adopted its constitution and bylaws. CRITFC's structure reflects the determination of its founders to overcome tribal differences and practice cooperative management. The four tribal fish and wildlife committees comprise the commission's governing body, and they must reach consensus before it can act on their behalf. Each tribal committee appoints several commissioners, who annually select three officers (vice chair, secretary, and treasurer) and a chairperson from among their ranks, with each tribe holding the chair on a rotating basis. The position of executive director also rotates among the tribes to avoid charges of bias. Although disagreements occasionally arise within the commission, it remains committed to "unity of action in service of the salmon."

CRITFC has expanded greatly in size and expertise since the late 1970s. At first, it employed only two fish biologists and depended heavily on state and federal fishery agencies for advice and support. Over the years, as the tribes gained confidence and clout, CRITFC's staff grew to include additional biologists, fish passage specialists, policy analysts, attorneys, public relations officials, and law enforcement personnel. Some tribal fishers initially resented the imposition of another layer of management, but most now view the enforcement program as essential to their own safety and protection as well as to the preservation of the salmon. CRITFC has also earned the respect (if not always the affection) of state and federal agencies, which soon discovered that the tribes had their own management objectives. Commission staffers are active in gathering scientific data, setting fishery seasons and harvest quotas, carrying out habitat restoration projects, offering technical support to tribal hatcheries, conducting legal research, and lobbying policy makers. In the late 1990s, CRITFC developed its own management plan, called *Wy-Kan-Ush-Mi Wa-Kish-Wit* ("Spirit of the Salmon"). Much bolder than the measures favored by state, federal, and private interests, the tribal plan seeks quite simply "to put fish back in the rivers and protect the watersheds where fish live." "We have to take care of them so that they can take care of us," explained former executive director Ted Strong (Yakama). "Entwined together inextricably, no less now than ever before, are the fates of both the salmon and the Indian people."

Constitution Act

In 1980, then Canadian Prime Minister Pierre Trudeau announced his intention to repatriate the Canadian Constitution from Britain, complete with a Charter of Rights and an amending formula. Two years of intensive negotiations between the federal government and the provinces followed. One contentious issue threatened to stall the negotiations a number of times: the inclusion of Section 35. This section and its four subsections provided for the recognition of existing aboriginal and treaty rights, defined who the aboriginal people of Canada were, and recognized existing treaty rights and those that may in the future be obtained vis-à-vis land claims, while indicating that treaty rights were guaranteed equally to both sexes.

Originally, the British North America Act of 1867 listed Indians under Section 91 (federal responsibility), subsection 24, "Indians and lands reserved for Indians." Section 91(24) did not define what "Indian" meant or what the federal responsibilities to Indians were. The term "Indian" took on legal significance under the auspices of the Indian Act of 1876, which legally defined who an Indian was and, in particular, how to gradually do away with that status until Indians no longer existed, legislatively, in Canada. The Indian Act, which is still the prevailing piece of legislation guiding the federal government in its day-to-day interactions with Indians, did not legally reconcile the unique cultural status of Canada's Métis and Inuit populations, nor did it accept nations such as the Anishinaabes, the Haudenosaunees, or the Niitsitapis, to name a few, as distinct cultural groups. This failure to accept the unique political statuses of different groups of Indians resulted in the government's ignoring the Inuit or Métis and therefore renouncing any responsibility for their well-being. This changed in 1939 with a Supreme Court decision that interpreted the federal government's power to make laws affecting "Indians, and Lands reserved for the Indians" as extending to the Inuit. The Métis did not achieve similar recognition.

Prior to the Constitutional discussions of the late 1970s, the aboriginal population in Canada began aggressively to object to the continued use of the term "Indian." Historically utilized by Europeans and the British to identify North American indigenous populations, many "Indian" organizations of the late 1970s changed their names to include the word "Native" or the phrase "First

Nation.” Many aboriginal leaders also began to describe their ancestors as founding members of Canada, perhaps a “third tier” of confederation. The political influence of aboriginal leaders of the 1970s led federal officials in 1978 to invite the National Indian Brotherhood, the Native Council of Canada, and the Inuit Committee on National Issues to participate in the constitutional discussions. Not satisfied to watch from the periphery, eleven additional aboriginal organizations initiated an influential lobbying effort, the goal being to secure, among other things, the constitutional recognition of aboriginal people and their rights.

Aboriginal leaders sought distinct status for these groups within the proposed Canadian Constitution. Section 35 was the product of bilateral discussions between the federal government and the aboriginal leaders that excluded provincial involvement. Section 35 contains four subsections. Section 35(1) recognizes and affirms existing aboriginal rights arising from both common law and treaties. Thus this section grants constitutional protection of aboriginal rights. Section 35(2) recognizes aboriginal people as consisting of the “Indians, Inuit, and Métis” peoples of Canada. Section 35(3) specifically includes modern land claim agreements in treaty rights. Section 35(4) guarantees that the aboriginal and treaty rights referred to in subsection (1) are guaranteed equally to male and female persons. In theory, Section 35(2) provides the description of Canada’s aboriginal people, permitting a greater definition and understanding of subsections (1), (2), and (4). However, the ambiguous nature of the definition often means that the Canadian court system is employed to provide clarification, an expensive and time-consuming process.

For instance, in 1993, a Métis father and his son, Steve and Roddy Powley, were charged with hunting moose without a license and unlawful possession of moose meat, contrary to Ontario’s *Game and Fish Act*. A two-week trial in 1998 resulted in the judge’s determining that the Métis community at Sault Ste. Marie had an existing aboriginal right to hunt, a decision that was upheld by the Supreme Court of Canada. The case took nearly one decade to complete. In the end, Métis people were recognized as aboriginal people according to Section 35(2) and as possessing aboriginal rights according to Section 35(1).

Cree-Naskapi Act

The Cree-Naskapi Act, signed in 1984, is a constitutionally protected treaty that represents the first aboriginal self-government legislation in Canada. The Act is a direct result of the James Bay and Northern Quebec Agreement (JBNQA, 1975) and the Northeastern Quebec Agreement (NQA, 1978), which enabled the province of Quebec to carry on with its construction of the James Bay Hydroelectric Project. Under the James Bay and Northern Quebec Agreement, the Crees and the Inuits ended their northern Quebec land claims in return for \$225 million, special dispensation for Native hunting and fishing rights over 45,000 square miles of land, and greater prospects for self-government (Niezen, 1998, 71). The Northeastern Quebec Agreement followed a similar format, with the Naskapis of Quebec receiving \$9 million and land rights similar to those outlined in the James Bay and Northern Quebec Agreement. In return, the Crees surrendered all their claims, rights, titles, and interest in the land.

The JBNQA forced on federal Parliament responsibility for enacting legislation enabling local government for the Crees and subsequently for the Naskapi. Pursuant to this commitment, the Canadian government enacted the Cree-Naskapi Act on July 3, 1984. The JBNQA and the NQA involved the government of Canada, the government of Quebec, three provincial crown corporations, and the Crees, Inuits, and Naskapis of Quebec. The two agreements resolved the outstanding land claims of the aboriginal people inhabiting their traditional territories, as outlined in the Quebec Boundaries Extension Act of 1912. The two agreements were sanctioned and legislatively enabled at both the federal and provincial levels of government. Consequently, the Cree, Naskapi, and Inuit people halted the progress of their claims in exchange for rights and benefits specified in the two agreements. These agreements changed the social, political, and cultural lives of

these peoples, while inevitably altering their relationship with the rest of Canada.

The Cree-Naskapi Act applies to Kobac Naskapi-aeyouch (the Naskapi band) and to eight Cree bands. The Act replaces the Indian Act, in return adopting a bilateral approach through consultation in determining relationships between the federal government and the Crees and Naskapis. The Minister of Indian and Northern Affairs Canada (INAC), by virtue of this act, has been stripped of his ability to exercise control over the Crees and Naskapis. This authority instead was assigned to the bands. The Cree-Naskapi Act established new legal and political regimes in the form of local governments accountable to the Cree and Naskapi people. According to the Act, the Crees and Naskapis were recognized as having differing titles and interests in addition to descending degrees of access to and control over resources, as well as varied powers of self-government. These powers include, but are not limited to, the administration of band affairs and internal management, public order, taxation for local purposes, and responsibility for local services, including fire protection.

The major weakness of the Cree-Naskapi Act is in its failure to confer legislative authority on the Cree and Naskapi bands, even though they possess local government-type powers that are inextricably tied to a constitutionally protected treaty. Further concerns include the facts that the Crees and Naskapis do not have the power to create their own constitution and that the Minister of Indian Affairs possesses the power to disallow or create bylaws relating to local taxation, hunting and trapping, elections, special band meetings, land registry system, long-term borrowing, band expropriation, and fines and penalties for breaking band bylaws. In addition, the Cree-Naskapi bands do not retain title to their traditional lands. They are ultimately subservient to Parliament and to the Quebec National Assembly. The Crees or Naskapis may, however, choose to challenge Canadian authority and further strengthen local sovereignty through the courts.

Nevertheless, the Cree-Naskapi Act was the first aboriginal self-government legislation that provided for a level of self-determination previously unattainable under the Indian Act and INAC structure. It has also provided the Cree-Naskapi bands with influence over land use that requires the federal and provincial governments to confer with community leaders and elders prior to enacting policies or legislation that could negatively influence the people.

Department of Indian Affairs and Northern Development

The Department of Indian Affairs and Northern Development (DIAND) was established in 1966 with the intent of administering to the varying needs of Native people in Canada, a culturally, economically, and geographically diverse clientele to be sure. DIAND's responsibility for administering Indian Affairs in Canada involved reconciling the socioeconomic interests of an increasingly suspicious and militant Indian leadership with a myriad of legislation and the agendas of federal, provincial, and territorial bodies.

Responsibility for colonial Indian affairs in British North America was originally vested with the British imperial parliament. In 1755, Sir William Johnson and John Stuart were appointed the first two superintendents of the British Indian Department in British North America. The department was established to maintain peaceful relations between settlers and Indian populations of the Ohio Valley. This relationship was codified in the Royal Proclamation of 1763, an edict passed by King George III that also reserved the lands west of the Appalachian Mountain chain as Indian hunting territory. American colonists intent on opening up western settlement were prohibited from entering this territory and from engaging Native leaders in land negotiations due in part to the history of "great Frauds and Abuses" that had been perpetrated against Indians. The new Indian bureaucracy for all intents and pur-

poses remained in operation until Canada's birth in 1867.

The Fathers of Confederation accepted responsibility for "Indians and lands reserved for Indians" according to Section 91(24) of the Constitution Act (1867). They also effectively dovetailed the British colonial model with the new federal bureaucracy by establishing the Indian Affairs Branch in 1868, one of the four branches under the jurisdiction of the Department of the Secretary of State for the Provinces. This would not be the home of Indian affairs for long, however. In 1873, responsibility for Indian Affairs was transferred to the Minister of the Department of the Interior, when the department was created that year. This commenced a long history in which the responsibility for Indian affairs was shunted from one department to another.

The Indian Act of 1876 created the legislative framework enabling Indian Affairs to promote its Indian policy (read "civilization" policy) uniformly across the country. The Indian Act granted considerable powers to the Superintendent General of Indian Affairs and his Indian agents. It also ensured that Indians in Canada were increasingly subject to the Indian Affairs regime. An amendment to the Indian Act in 1880 elevated the branch to departmental status, albeit still under the direction of the Minister of the Interior, who now held the secondary title of Superintendent General of Indian Affairs. An 1881 amendment to the Indian Act amplified the Indian agents' powers, making them justices of the peace while permitting them to prosecute and deliver sentences for violations of the Indian Act's provisions.

During the next five decades, the department was restructured numerous times, as federal officials attempted to facilitate the assimilation of Indians into mainstream Canadian society. Promoted as a cost-cutting measure, the departmental restructuring resulted in the creation of several distinct branches, reflecting the expanded nature of the department's activities. Then, in 1936, the department was dissolved as a cost-cutting measure, and responsibility for Indian Affairs transferred to the Department of Mines and Resources, where a subdepartment was established: the Indian Affairs Branch (IAB). The branch included the following components: field administration, medical welfare and training service, reserves and trust service, and the records service. During the next three decades, responsibility for Indian affairs was transferred a number of times, including its relocation to the Department of Immigration and Citizenship in 1949, where it remained

until an independent Department of Indian Affairs and Northern Development was established in 1966.

In 1964, R. F. Battle was appointed the Assistant Deputy Minister of Indian Affairs in the Department of Citizenship and Immigration, and he immediately spearheaded a significant reorganization of the Indian Affairs Branch followed by the formation of three new directorates: the Development Directorate, responsible for establishing and coordinating social, industrial, and resource development; the Education Directorate, responsible for establishing and carrying out educational policy; and the Administration Directorate, responsible for dealing with Indian lands and estates, membership, records management, field administration and the provision of a secretariat and support services.

The complexity of Indian affairs led to the decision once again to elevate the Branch to departmental status. On June 16, 1966, the Department of Indian Affairs and Northern Development (DIAND) was established by the Government Organization Act. DIAND was assigned responsibility for the development of the national parks, the administration of Indian and Eskimo affairs, and the management of Canada's wildlife resources. Arthur Laing (Progressive Conservative) was appointed minister, while E. A. Cote was appointed deputy minister to oversee the five DIAND branches. Legislation made the minister also responsible for Indians and Inuits, the residents of the Yukon and Northwest Territories, and their resources. In an attempt to improve accountability to their clientele, nine regional Indian affairs offices were established across Canada. Two years later, DIAND's announcement that it was again restructuring operations was followed by the creation of the Indian-Eskimo Bureau to provide advisory services for and to liaise with field staff responsible for departmental programs. Within the DIAND, four directorates were created: policy and planning, administration, development, and education.

By 1970, the Economic Development Branch was created to assist Indians in achieving economic self-sufficiency, and the Indian Economic Development Fund was established. That year, the Membership Division began transferring local administration of membership functions to Indian bands, and the federal government began funding Indian groups and associations specifically for research into treaties and Indian rights. In 1972, spurred on by the National Indian Brotherhood's (NIB) demands for greater autonomy to deliver education programs, DIAND initiated its devolution program by transferring

responsibility for education to Native communities. The devolution program became central to the DIAND, a program that, with minor modifications during the last three decades, is still officially responsible for aboriginal people in Canada.

Commonly known today as Indian and Northern Affairs Canada (INAC), the department is responsible for two separate mandates: Indian and Inuit affairs and Northern affairs. Primarily responsible for meeting the federal government's constitutional, treaty, political, and legal responsibilities to the First Nations, Inuit, and Northerners, INAC's mandate is all-encompassing and derived from the Indian Act, territorial acts, and legal obligations arising from Section 91(24) of the Constitution Act (1867). This comprehensive approach results in a significant level of responsibility that encompasses a wide range of services and in turn requires that INAC officials work closely with the First Nations, the Inuit and the Northerners, the Métis, and other federal departments and agencies, provinces, and territories that are responsible for issues affecting Indians.

INAC delivers basic services such as education, social assistance, housing, and community infrastructure to status (officially recognized) Indian and Inuit communities. The department also administers Indian reserve lands, oversees elections of First Nation councils, registers entitlement to Indian status and First Nation membership, and administers First Nation trust funds and the estates of certain individual Indians, in addition to negotiating the settlement of accepted land claims. According to the INAC Web site, some of the department's priorities include the recognition of greater program and political authority of First Nations and territorial governments by establishing a framework for the effective implementation of the inherent right of self-government; specific initiatives to implement self-government; continued devolution to territories of program administration; and assisting First Nations and Inuit peoples in strengthening their communities.

In many respects, the current INAC mandate reflects the basic Indian policy of the late 1860s when the first federal political branch was assigned responsibility to facilitate the physical and cultural absorption of status Indians, Inuits, and Métis into mainstream Canadian society. Paternalism remains the operating philosophy. INAC, for example, still oversees band council elections while guiding program delivery at the community level. Using the

Indian Act as its guide, INAC has significant control over Canada's First Nations. For instance, Section 6 of the Indian Act enables INAC to determine who is or is not to be considered an Indian in Canada, which has the impact of alienating a number of Native people from government programs. Through Section 81 of the Indian Act, INAC is able to limit the powers of band councils. In all, despite INAC's self-professed interest in seeing self-government develop, its control over most aspects of First Nations life in Canada continues.

Domestic Dependent Nation

This term refers to the status of Indian tribes in U.S. federal law, recognizing a government-to-government relationship with the United States and based on an inherent, though limited, sovereignty. The term was coined by Supreme Court Chief Justice John Marshall in *Cherokee Nation v. Georgia* (1831), the second case in the seminal Marshall Trilogy. These cases provided foundational principles for determining the federal-tribal relationship and tribal sover-

eignty and guided future debate about Native American treaties.

After the discovery of gold there, Georgia began extending its own laws to Cherokee land, annulling Cherokee laws in the process. In *Cherokee Nation*, the Cherokee sought to prevent the state of Georgia from appropriating land guaranteed under the Treaty of Hopewell (signed with the federal government in 1785) and subsequent treaties. While the Court split evenly in the case, the decisive opinion was provided by Chief Justice Marshall, who dismissed the case on jurisdictional grounds. He found the matter could not be heard because the Cherokee were not a foreign nation; therefore their action did not fall under the grant to the federal authority to hear disputes between the states and foreign states. In a new formulation, Marshall found that while the Cherokee had an “unquestionable” right to the land they occupied unless it was ceded voluntarily to the federal government, “yet it may well be doubted, whether those tribes which reside within the acknowledged boundaries of the United States can, with strict accuracy, be denominated foreign nations. They may, more correctly, perhaps, be denominated domestic dependent nations. They occupy a territory to which we assert a title independent of their will, which must take effect in point of possession, when their right of possession ceases. Meanwhile they are in a state of pupillage. Their relation to the United States resembles that of a ward to his guardian” (*Cherokee Nation v. Georgia*, at 17).

In his decision, Marshall achieved a compromise that reaffirmed the independent nature of Indian tribes while avoiding a constitutional confrontation between the state and the Supreme Court. The decision recognized the Cherokee Nation as “a distinct political society separated from others, capable of managing its own affairs and governing itself.” While they were not “foreign,” they were “a state.” Their independence was limited in only two matters: the alienation of land and the ability to treat with foreign powers.

The decision’s guardian/ward language underpins the doctrine of the federal trust responsibility for Indians. The ambiguity of a status at once “independent” and resembling a “ward” has allowed the Supreme Court in later cases to restrict Indian sovereignty with the trust relationship seen as a source of congressional power over Indians. In declining to view the Cherokee as a “foreign” nation, Marshall originally relied on the U.S. Constitution’s Indian

Commerce clause (Article I, 8, clause 3), in which Congress is recognized to have the power “to regulate commerce with foreign Nations and among the several states and with the Indian tribes.” In fact Congress has legislated well beyond the bounds of “commerce” into all aspects of Indian life.

While some scholars recognize conflicts with internal law, others see no legal (as opposed to political) barriers on Congress’s limiting tribal sovereignty (or treaties), so long as it makes that intent clear. Fifty years after *Cherokee*, the Supreme Court stressed that “[t]hese Indian tribes are the wards of the nation. They are communities dependent on the United States . . .” (*United States v. Kagama*). The view of Congress’s plenary power over Indians was reinforced in *Lone Wolf v. Hitchcock*. In that case, a number of tribal members challenged the distribution and sale of tribal lands as inconsistent with a prior treaty. The Court found that to agree with that contention would be to ignore “the status of the contracting Indians and the relation of dependency they bore and continue to bear towards the government of the United States.” The treaty was found in no way to qualify the “controlling authority of Congress” (*Lone Wolf v. Hitchcock*, 564–565). This authority still includes the power to modify or repeal Indian treaties.

Whereas Marshall’s reasoning implied an assumption of sovereignty in the absence of statutes or treaties that negate this presumption, more recent interpretations of the phrase “domestic dependant nation” status have seen inherent tribal sovereignty diminished. The focus has been on the “domestic dependant” rather than the “nation” aspect of Marshall’s term. Nonetheless, this status continues to underpin important protections for tribal governments, particularly against intrusions on their power by states.

Elk v. Wilkins

The U.S. Supreme Court held in *Elk v. Wilkins* (112 U.S. 94 [1884]) that the Fourteenth Amendment to the U.S. Constitution does not confer citizenship on Indian people. This position held even if the individual lives in an urban area, apart from his or her nation or band. The court also ruled that acts of Congress do not generally apply to Indians unless they are specifically mentioned. Ironically, this ruling was handed down three years before the Allotment Act (1887) bestowed U.S. citizenship on Native Americans who gave up their title to communal lands in exchange for individual plots.

At issue was the constitutional status of American Indians for purposes of citizenship and voting. The Fourteenth Amendment granted citizenship to “all persons born or naturalized in the United States, and subject to the jurisdiction of the United States.” Did American Indians fall under this definition? A federal district court ruled that it did not apply to Indians who had not been “born subject to its jurisdiction—that is, in its power and obedience” (*McKay v. Campbell* 16 Fed. Cas. 161 [1871] [No. 8840]).

John Elk had been born on a reservation outside U.S. jurisdiction, but moved to Omaha as an adult and lived what the court described as a “civilized” life. He sought to become a citizen and exercise the right to vote in Omaha elections during 1880.

The Supreme Court ruled that the Fifteenth Amendment (which grants the right to vote to all persons regardless of race) did not apply in Elk’s case, because he was not born in an area under U.S. jurisdiction. Therefore, Elk was not a citizen within the meaning of the Fourteenth Amendment. The fact that Elk had abandoned his Indian relatives and life-ways did not matter to the court. Elk’s citizenship and voting rights were denied because the court held that an affirmative act was required of the United States before an Indian could become a citizen. The Supreme Court’s opinion cited a dozen treaties, four court rulings, four laws, and eight opinions of the U.S. Attorney General requiring “proof of fitness for civilization” as a precondition of granting Indians citizenship and voting rights.

Six years after John Elk’s request for citizenship was denied, Congress passed the Indian Territory Naturalization Act (26 Stat. 81, 99-100), which allowed any Indian living in Indian Territory to apply for citizenship through the federal courts. The aim of this Act was to break down communal loyal-

ties among Native Americans in Indian Territory as it moved toward statehood as Oklahoma.

The Standing Rock Sioux scholar Vine Deloria, Jr., commenting on *Elk v. Wilkins*, noted that, while federal courts were busy maintaining the plenary power of Congress over Indians and classifying Indian tribes as wards of the federal government, as well as denying an international dimension to Indian political existence, individual Indians seeking to exercise their constitutional rights were being told that they were, in effect, no more than the children of (foreign) subjects.

The ruling is notable more for historical irony than for having any substantial effect as a legal precedent. In addition to contradicting the Allotment Act’s selective award of citizenship later in the same decade, this ruling was effectively annulled by the general grant of U.S. citizenship to Native Americans by an act of Congress in 1924.

Factory System

Through legislation beginning in 1796 and renewed every three years thereafter, the United States of America established the factory system (1796–1822), which was to construct trading houses mainly on the unsettled U.S. frontier where a factor, appointed by the president, could trade goods for furs with the members of given Native nations or tribes located in the district of the factory. The factory system was a forerunner to the trust relationship between Indian tribes and the federal government as established by the commerce clause in the U.S. Constitution.

The Secretary of War, through the Superintendents of Indian Affairs, oversaw the day-to-day operations of purchasing goods and transporting them to the factories as well as overseeing the selling of furs. The sites for the factory trading houses were located in the westward territories and the south. The United States’ intention was to control who traded with the Indians and to build and maintain

friendly relations, while making them dependent on American goods instead of British goods.

Dating back to the first white presence on the North American continent, the colonial powers recognized the necessity of establishing ground rules for trading with the Indians. Not until after the French and Indian War ended did the control shift completely to Great Britain and in particular to London. After the American Revolution, the newly formed American government issued acts to regulate the intercourse of trade with the Indians under their jurisdiction. British traders continued to trade with Indians in what was considered American lands. Following the end of the Northwest Territory Frontier Wars in 1795, the Jay Treaty required all British traders to cease operations in the United States and its territories.

In most cases, the U.S. Army established a garrison on or near the site of a factory trade house. The construction of the factory buildings, as well as the garrison, was often done by the soldiers, though sometimes workers such as sawyers and carpenters had to be brought in. Factory trade houses were built of local materials, mostly logs, and included a trade room; it was similar to a store whose shelves were filled with trade goods. Often the factory building was also a residence for the factor, though sometimes another house would be built for him and his family, if he had one. In addition to the trade house, other buildings were constructed to store the overstock of goods, a residence for the interpreter, and storage for the traded furs. In the outbuildings, the furs would have to undergo further cleaning, and, depending on the climate or time of the year, they would have to be frequently turned and beaten to get rid of worms.

The trade goods often were manufactured not only in the United States, but also in Great Britain, Germany, France, India, and China, and other nations. They were sold or traded to Indians at a small percentage over cost to keep the prices low. Some of the goods were clearly items that were of no interest to the Indians, things such as china teapots, Queensware dishes, and ladies' parasols. Regulations stipulated that whites were not allowed to purchase goods from the factory, but they often did. In this middle ground where the two cultures met, soldiers and their wives charged against the promise of future pay just as individual Indians did in the hope of successful trapping. Often, the absence of sutlers located in or near the peace establishment army posts necessitated members of the garrison to charge

at the factory or trade furs from hunting. Soldiers often racked up more credit than Indians.

At first, issuing credit to Indians was forbidden, but soon it became a necessity before the winter hunting and trapping seasons. Furthermore, it was learned that, if they could not pay or failed to pay with furs, the government could then take the money from other sources such as annuities or force the tribe as a whole to sell land to pay off the debts. This appears to have been an aim of Thomas Jefferson in February 1803 when he informed William Henry Harrison, governor of Indiana Territory, that the government would "push" their trading houses, enjoy getting the more important leaders heavily into debt, and then trade the debt for ceding land (Esarey, 1922, 71). By selling the trade goods so low, Jefferson assumed the Indians would not want to go to anyone else, especially private traders who could not afford to sell goods so low.

The Indians trapped from the late fall through the winter, and in the spring they brought in their dressed furs to be traded. The types of furs ranged from bear, mountain lion, deerskin, beaver, and muskrat. The goods offered in trade to the Indians ran the lot of cloth like woolens (baize, blanket, and shroud), cottons (calico and homespun), linen, and silk ribbons. Other goods included fishing equipment; knives, tomahawks, guns, gun powder, and shot; brass, copper, and even sheet iron kettles; sewing implements; snuff boxes, bridles, saddles, looking glasses, silk stockings, hats; and much more. At least once a year, the factor shipped furs to the East to be auctioned to manufacturers. These manufactures would make sundry articles of the furs, including hats from beaver, breeches from deerskins, and hat coverings from bear fur for the U.S. Army. Some furs were shipped to other parts of the world, including Europe and China.

One of the projects of the factory system was to encourage agriculture and education among the Indians. Religious organizations, like the Moravians and Quakers, became the agents of the government to work among the tribes to teach them farming, animal husbandry, and domestic sewing arts as well as to convert them to Christianity. The U.S. government factories issued the farming implements, payment coming out of annuities and presents to the tribes, and often paid the salaries of religious men and women working among the tribes. At first, many Indians did not take to the concept of their males farming because, culturally, it was female work. Fines could be levied against annuities if an Indian

was found to be trading or selling government-issued farm implements to other Indians or whites. After the War of 1812, Baptists and Presbyterians were offered government funds to commence Indian schools in Kentucky, Missouri, and Kansas. At these schools, Indians were taught reading, writing, arithmetic, and gender-specific occupations; females learned to spin, weave, and sew while the males learned carpentry and farming. They were also instructed in the Christian religion. In the beginning, permission of the parents was sought and no one was forced to attend. However, after the closure of the factory system, this would change.

Criticism of the factory system was most intense from private fur-trading companies. In particular, John Jacob Astor of the American Fur Company lobbied congresspeople, presidents, and others with influential connections to close down the factory system. By 1820, with Lewis Cass, the governor of Michigan Territory and Chouteaus, a prominent fur trade family from St. Louis, Astor pressured Congress to see that the government had no business regulating the trade with Indians. First, it failed to build and keep friendly relations with the Indians, resulting in the outbreak of the War of 1812; second, the trade goods were inferior; next, factors did not go out to tribal villages to trade with the Indians, rather they were required to stay at their factories; and lastly, despite the best efforts of the factories, the illegal selling of alcohol by small private traders continued to increase. Despite all the efforts of the factory system officials, the private traders won out and the system was closed down in 1822.

Fletcher v. Peck

The decisions of Chief Justice John Marshall in the U.S. Supreme Court cases of *Cherokee Nation v. Georgia* and *Worcester v. Georgia* have been basic to subsequent arguments advanced both to support and to suppress the autonomy of indigenous peoples. These cases refined a Euro-centric doctrine regarding aboriginal rights following two earlier cases, *Fletcher v. Peck* and *Johnson v. McIntosh*. Unlike the Cherokee Nation cases, which actually involved a controversy between an indigenous nation and an American state, in *Fletcher v. Peck* aboriginal rights issues were litigated in the absence of any conflict between indigenous people and Euro-Americans. Tried in 1810, *Fletcher v. Peck* is important because of the part it played in establishing a legal doctrine used to limit the rights of indigenous peoples.

The question of aboriginal title was brought before the U.S. Supreme Court under the feigned controversy of *Fletcher v. Peck* to force the federal judiciary to address specific issues presented by land speculators who claimed a patent by virtue of a 1795 legislative act to appropriate land for the purpose of payment to state troops. It was argued that Georgia possessed the right to convey property rights to the Georgia Land Company even though the land in question was still claimed by an indigenous nation. This case represented the first time that the Court was called to deliberate on the question of absolute title to soil existing apart from the rights of "Indian ownership" in the land.

In addressing what would become a very crucial issue, arguments in this case exhibited distortion and error. When examining the question of ownership, John Quincy Adams and Robert Goodloe, representing the majority opinion, noted that aboriginal concepts did not resemble European concepts of land tenure and advised the Court to not hold any regard for the intrinsic values of indigenous culture. Presenting arguments that reflected an overriding belief that the values of Euro-American culture were superior to those of Indian cultures, the defense stated that Indians had "no idea of a title to the soil itself. It [the land] is overrun by them, rather than inhabited . . ." and thus any claim of Indian title to the land could not represent a true and legal possession. This opinion, however, overlooked the facts. When European settlers first landed in America, they encountered innumerable stretches of cultivated fields, some of which were reported to reach

almost two hundred acres. Because the majority of settlers coming over from Europe were merchants, tradespeople, and seekers of fortune, possessing little or no knowledge of an agrarian lifestyle, many colonists had to rely on the knowledge and skills of the indigenous people for instruction in the manner of planting, culling out the best seed, observing “the fittest season, keeping distance for hoes and fit measure for hills, to worm . . . and weed . . . and prune . . . and dress . . .” as the occasion required.

The defense further argued that the United States possessed “a right not in the individual, but national. This is the right gained by conquest . . . Europeans always claimed and exercised this right of conquest.” The defense also erroneously asserted that all “treaties with the Indians were the effect of conquest, all the extensive grants have been forced from them by successful war. The conquerors permitted the conquered tribes to occupy part of the land, until it should be wanted for the use of the conquerors.” The defense even credited William Penn with having obtained Quaker land under the right of conquest.

In delivering the opinion of the Court, Justice Marshall affirmed that Georgia did indeed possess the power of disposing of land within the limits of its borders in whatever manner it saw fit. Marshall’s comments regarding Indian title came at the very end:

The majority of the court is of the opinion that the nature of the Indian title, which is certainly to be respected by the court, until it be legitimately extinguished, is not such as to be absolutely repugnant to . . . on the part of the State.

Dissenting Justice William Johnson delivered the most straightforward statements pertaining to Indian title that the case offered, arguing that the correctness of his opinion relied on a just and unbiased view of the state of the Indian nation. Pointing out that innumerable treaties formed with North American Indians acknowledged them to be an independent people, Johnson was persuaded by evidence he believed clearly indicated that the Indians held an absolute right to the soil for themselves and their heirs.

In fact, if the Indian nations were the absolute proprietors of the soil, no other nation can be said to have the same interest in it. What, then

. . . is the interest of the states in the soil of the Indians within their boundaries? Unaffected by particular treaties, it is nothing more than what it was assumed at the first settlement of the country . . . a right of conquest or of purchase, exclusive of all competitors, within certain defined limits. All the restrictions upon the right of soil in the Indians, amount only to an exclusion of all competitors from their markets . . .

The Court’s reluctance to clearly articulate a legal definition of aboriginal title most likely stemmed from a realization that, if aboriginal nations were legally acknowledged to possess an absolute title to the land, the United States would be hindered by additional obstacles as it pursued a course toward national expansion.

Although the Court ruled that Georgia was empowered with a fee simple (i.e., unencumbered) title in the land, the soundness of the decision was challenged by the dissenting opinion of Justice Johnson. In Johnson’s opinion “the interests of Georgia . . . amounted to nothing more than a mere possibility. . . .”

If the interest in Georgia was nothing more than a preemptive right, how could that be called a fee simple, which was nothing more than a power to acquire a fee simple by purchase, when the proprietors should be pleased to sell. And if this ever was anything more than a mere possibility, it certainly was reduced . . . when the state of Georgia ceded to the United States, by constitution, both the power of pre-emption and of conquest . . .

For all the rhetoric regarding American absolute sovereignty, when the Court delivered its opinion in *Fletcher v. Peck*, there still existed numerous groups of indigenous peoples who, having never signed a treaty with the American government, continued to exist in absolute sovereignty on their ancestral lands. That notwithstanding, during the preceding thirty-three years of the United States’ dealing with indigenous North Americans, the treaty had proved to represent a most effective method of acquiring Native land. After *Fletcher v. Peck*, however, the Court emerged as the new medium for a foreign settler government to acquire indigenous peoples’ lands

Forced Marches

As the U.S. government and its citizens took possession of indigenous lands and resources, forced marches were used to remove indigenous peoples and open their lands for European-American settlement. Though a practice originating from the earliest years of contact, forced marches reached their zenith in the nineteenth century when dozens of such “removals” occurred, affecting tens of thousands of indigenous people and the transfer of millions of acres of land to nonindigenous ownership.

In this context, forced marches are connected to broader U.S. policies, such as removal and relocation, that were used as a means to control and confine indigenous populations by concentrating them into small geographic areas. The death toll among those who were force marched to new locations was sometimes as high as 50 percent, but the most devastating consequences of forced marches were long term. Removal required the dispossession of indigenous peoples from their lands and the subsequent loss of the ways of life associated with their attachment to a particular land base. The repercussions of this tremendous sense of loss have reached into the twenty-first century as indigenous populations generally continue to suffer high mortality rates and a poor quality of life.

The best-known forced march is the 1838 Tsalagi (Cherokee) Trail of Tears in which seventeen thousand Tsalagi were removed from their southeastern homes to Indian Territory. After they were rounded up and placed in stockades, the population was removed in more than a dozen groups. Most traveled over land in small groups averaging 1,000 people, forming long refugee columns and suffering from starvation, disease, exposure, hardship, and

accidents. It is estimated that at least 4,000, and perhaps as many as 8,000 people died as a direct consequence of the forced removal and as many as half of the remaining population died within the first year after removal, largely due to disease. The extent of death and suffering as a consequence of the violent process of removal is not unusual, but is in fact characteristic of the forced marches experienced by indigenous peoples throughout American history.

The U.S. government carried out these brutal forced removals under the pretense of legality. After manipulating the Tsalagi population to obtain the signatures of a small, illegitimate faction, the United States ratified the Treaty of New Echota, which relinquished Tsalagi lands in the Southeast in exchange for lands in Indian Territory and \$15 million. This bare semblance of legitimacy in dealings with indigenous peoples is all that remained after the passing of the Indian Removal Act of 1830 under President Andrew Jackson’s administration. This Act authorized the president to exchange indigenous lands in the East for those in the West and to negotiate with tribes for their own removal. While the Act required indigenous agreement and support for removal, this aspect was ignored in practice. Furthermore, the U.S. government was indifferent to the fact that, in some cases, indigenous peoples already occupied lands in the West they were promising to others; this required taking land from some groups to make it available to others.

While Jackson has been associated most prominently with forced marches and acts of removal, he was not the first or last president to advocate indigenous removal. Early explorers such as Jacques Cartier, Martin Frobisher, and Henry Hudson practiced indigenous removal, as did early New England colonists who established “praying towns” and state reservations. Thomas Jefferson was a strong proponent of removal. He drafted a constitutional amendment, decades before Jackson, which would have allowed for the exchange of indigenous lands in the East for lands west of the Mississippi. In other contexts, he wrote that any Indians resisting American expansion should be met with the hatchet, concluding “if ever we are constrained to lift the hatchet against any tribe, we will never lay it down until that tribe is exterminated, or is driven beyond the Mississippi.” This sentiment became manifest in forced removals across the continent. If invading settlers could not exploit the indigenous labor for their own purposes, they pressured them to leave areas so that European-Americans could get on with immigration

and resource extraction. The complete subjugation through forced marches became a highly effective means of removal.

During the fall of 1862, Jefferson's sentiments were echoed by Minnesota Governor Alexander Ramsey, who stated, "The Sioux Indians of Minnesota must be exterminated or driven forever beyond the borders of the State." Unlike the Tsalagi, no segment of the Dakota population signed a treaty agreeing to its removal. Instead, the U.S. government considered the forced removal of Dakota people from their homeland to be a justifiable consequence of the U.S.–Dakota War of 1862. Rather than viewing warfare as a reasonable course of Dakota action in light of repeated U.S. violation of treaty obligations, the United States instead unilaterally abrogated Dakota–U.S. treaties and decided to take the remaining Dakota lands for European-American immigration.

The Dakota were removed from their Minnesota homeland in two successive waves. Women and children were force marched on a seven-day, 150-mile journey to Fort Snelling in St. Paul, where they spent the winter of 1862–1863. Forming a four-mile-long procession as they walked, an unknown number of the 1,700 women and children died along the way, many from the brutality of soldiers and citizenry who attacked them along the way as they were paraded through European-American towns. The following spring, the remaining thirteen hundred were sent down the Mississippi River on boats to St. Louis and then up the Missouri River to the Crow Creek Reservation in South Dakota. Three hundred and three Dakota men were tried and convicted of war crimes at the end of the war. While they awaited execution orders from Abraham Lincoln, they were shackled and placed in wagons that took them to a concentration camp at Mankato, Minnesota. After thirty-eight were hanged in the largest mass execution in U.S. history on December 26, 1862, the rest were sent down the Mississippi the following spring where they were imprisoned in Davenport, Iowa, for three years. After these forced removals were accomplished, Dakota lands were cleared for unimpeded immigration.

The Dine (Navajo) in the Southwest faced a similar forced march and removal in the 1864 Long Walk. As European-American immigration increased in the area and conflicts arose, Christopher Houston "Kit" Carson was sent to demonstrate that "wild Indians could be tamed." He implemented a brutal policy that included the destruction of crops and livestock, pillaging the land, and killing of the Dine. These

scorched-earth tactics were meant to hurt not just the warriors of the nation, but also the noncombatants, the women and children, by forcing them into starvation and submission. Once the Dine were gathered at Fort Defiance, Arizona, they were force marched three hundred miles to Fort Sumner in the Bosque Redondo (in New Mexico Territory). The Dine named their concentration camp Hweeldi, the Place of Despair. Suffering starvation, disease, and harsh weather conditions with grossly inadequate clothing and shelter, at Hweeldi the Dine lost approximately thirty-five hundred out of their population of nine thousand. Unlike most indigenous peoples, however, the Dine were allowed to return to their homeland in 1868, where they continue to maintain the largest indigenous land base in the United States.

Forced marches were simply a means to an end. They allowed for large numbers of indigenous peoples to be transferred from one location to another, usually from their homeland to sites farther west, while their homelands were opened for nonindigenous settlement. Few indigenous peoples have ever recovered from the trauma caused by the disconnection from homeland and the accompanying destruction of their way of life. While the initial and significant loss of life caused from forced marches was enough to wreak havoc with any population, the devastation is compounded for indigenous peoples because of the simultaneous loss of land and way of life. Stories of suffering, particularly of the women and children, remain painful episodes in indigenous American history.

Fort Laramie Treaty (1868)

The Fort Laramie Treaty of 1868 was the second of two important midnineteenth-century treaty documents signed by Native nations of the American Great Plains and the United States government.

The terms of the treaty guaranteed ownership of *Paha Sapa* ("Black Hills") to the Lakota, the removal of military forts along the Bozeman Trail in the Powder River Country, and the establishment—on Lakota land—of the Great Sioux Reservation, a 26-million acre reserve of land that ran from the north line of the state of Nebraska to the forty-sixth parallel, bordered on the east by the Missouri River, and running westward to the hundred and fourth degree of longitude. Moreover, the treaty closed the Powder River Country to military and settlement incursions. The treaty, however, also prophetically designated this same country as "unceded Indian Territory" and therefore left the land in a temporary relation of ownership to the Lakota and outside the official "reservation." Additionally, the treaty articles specified the intention of the U.S. government to pursue the stated long-term goals of forced assimilation with agriculture, education ("They [the Lakota] therefore pledge themselves to compel their children, male and female, between the ages of six and sixteen years, to attend school" (Art. 7), and the division of land held in common. The treaty document is lengthy and relies heavily on dense legal language that often contradicts its own provisions. Red Cloud himself would later claim that the only provisions of the treaty that he was able to understand were the continued tenure of the Lakota in their own land and the expulsion of the United States military from the Powder River Country.

The Fort Laramie Treaty of 1868 was signed by representatives of the Oceti Sakowins, Seven Council Fires of the Lakota, the Sincangus (Brûlés), Oglalas, Minniconjou, Hunkpapas, Sihasapas (Blackfeet), Pabaskas (Cuthead), Itazipacolas (Two Kettle), and Oohenupas (Sans Arc) of the Lakota nation; by the Yanktonais of the Nakota nation; by the Mdewakantonwans and Wahpekutes of the Dakota (Santee) nation; by members of the Inuna-ina (Arapaho) nation; and by members of a U.S. treaty commission. The treaty document itself, as well as a year-long process of negotiating for signatures, was the result of a successful war waged against the United States by the Lakota, led by Makhpyia-luta (Red Cloud). Red Cloud's War (also known as the Bozeman War) was fought in the Wyoming and Montana Territories from 1866 to 1868 for control over the important hunting grounds of the Powder River Country in north central Wyoming.

Signatories of the treaty documents included Makhpyia-luta (Red Cloud), Tasunka Kokipapi

(Young Man Afraid of His Horses), Lieutenant General William T. Sherman, General William S. Harney, and General Alfred H. Terry. The Fort Laramie Treaty was ratified by the U.S. Congress on February 16, 1869.

For the Lakota and their Native allies, as well as for Euro-American immigrants and the U.S. government, the Fort Laramie Treaty was important to the history of the late nineteenth century, from the Battle of the Greasy Grass/Little Bighorn (1876) to the Massacre at Wounded Knee in 1890. Discovery of gold in the sacred *Paha Sapa* ("Black Hills") by George Custer's governmentally sanctioned expedition resulted in the Black Hills Gold Rush, which only increased the pressure on Lakota land already under attack by settlement, by the decimation of the great buffalo herds, by the demands of the Northern Pacific Railroad, and by unstable and changing governmental and military policy.

In September of 1875, President Ulysses S. Grant sent a special commission to Lakota territory to negotiate for the sale of "unceded Indian Territory" of the 1868 Fort Laramie Treaty and the *Paha Sapa* themselves; the Lakota refused to sell. In November of 1875, the Indian Bureau ordered all Lakota who were in the "unceded" hunting lands to come into the reservation and submit to agency control by January 31, 1875. The government launched a military campaign against the Lakota who were unwilling and unable to comply with the order; the campaign began in the winter of 1876 and lasted into the spring of 1877. The Battle of Greasy Grass/Little Bighorn—a military engagement in which an allied Lakota–northern Cheyenne force and the Seventh Cavalry of the U.S. Army—was one battle in the so-called Indian Wars of 1876–1877, fought by the Lakota to maintain the ownership of the land they believed the Fort Laramie Treaty of 1868 guaranteed them. The Massacre at Wounded Knee, December 29, 1890, in which 150 Minniconjou Lakota were killed while surrendering to the Seventh Cavalry, was the result of the same complex of factors involving struggle over land tenure in Lakota country and the United States' attempt to confine the Lakota to a shrinking and reconfigured reservation space.

As it was in the nineteenth century, the Fort Laramie Treaty of 1868 remained an important document in the struggle over native rights and land claims in the twentieth century. Two important events in the history of the Indian Movement during the 1960s and 1970s were predicated on the language

General William T. Sherman and Sioux leaders sign the Fort Laramie Treaty at Fort Laramie, Wyoming, in 1868. The treaty's signing ended Red Cloud's War and called for the closure of the Bozeman Trail and three U.S. Army forts. The war, led by Lakota Sioux Chief Red Cloud, started in 1868 in response to white advancement and the building of three government forts in the Powder River country and is best known for the Fetterman Fight of December 21, 1866. (National Archives and Records Administration)

and history surrounding the 1868 Fort Laramie Treaty: the occupation of Alcatraz in 1964 and again in 1969; and the occupation of Wounded Knee in 1973. On March, 8, 1964, a group of about forty Native people from various tribes took possession of the unoccupied island of Alcatraz off the coast of California and its abandoned prison complex under the provisions of the 1868 Fort Laramie Treaty, which guaranteed surplus or federally abandoned property to the Lakota. The first occupation of Alcatraz paved the way for another longer and more spectacular occupation of the island starting in November of 1969 and lasting until a forcible eviction in June of 1971. The dramatization of land claims, issues of tribal sovereignty, racism, poverty, and other important issues that characterized the two occupations of Alcatraz under the provisions of the Fort Laramie Treaty of 1868 also defined the American Indian

Movement's occupation in 1973 of the site of the Wounded Knee Massacre. The statement of demands made by the occupiers of Wounded Knee and passed to the Justice Department opened with an appeal to the Fort Laramie Treaty of 1868: "Communicate this to whomever [sic] is in charge. We are operating under the Provisions of the 1868 Sioux Treaty."

In the twenty-first century, the Fort Laramie Treaty of 1868 continues to be an important aspect of the long-standing Black Hills Land Claim wherein the Lakota nation continues to press the U.S. government for the return of the *Paha Sapa* that were guaranteed to them by the 1868 treaty. The Supreme Court of the United States itself ruled in 1980 that the sacred land was indeed unlawfully seized by the government and ruled that the monies that were never paid to the Lakota, along with interest accrued

over time (over \$100 million dollars), be given to them. The Lakota refused the payment and continue to argue for the return of their land.

Hawai'i, Legal Status of Native Claims

In 1893, a cabal of American planters, supported by U.S. warships and a contingent of Marines, overthrew the Hawaiian monarchy by armed force. This "act of war," as even President Grover Cleveland admitted at the time, was invalid under international law. A century later, in 1993, the Kanaka Maoli (Native Hawaiians) secured an apology from the U.S. House of Representatives for this illegal act and are currently pressing a land claim that would return 1.8 million acres (of Hawai'i's 4.2-million acre land area) to the jurisdiction of a government to be elected at a Native Hawaiian constitutional convention.

Following the 1893 overthrow, the United States quickly recognized the "legitimacy" of what the insurgent planters called the Republic of Hawaii and in 1898 accepted a request by the resulting government that the islands be formally annexed as a "trust territory" of the United States. At no point in this process were the wishes of the Kanaka Maoli themselves taken into consideration. Instead, annexation occurred over the express opposition of Queen Lili'uokalani, the last of a long line of chiefs and constitutional monarchs ruling the Hawaiian kingdom (Budnick, 1992; Dougherty, 1992).

Over the next half century, as Hawai'i gained increasing importance as a strategic base for the U.S. military, as its land was increasingly converted for sugarcane production by a cluster of local corporations known as the Big Five (geared entirely to U.S. markets), and as the now rampant tourist industry began to take hold, the Kanaka Maoli were systematically dispossessed of what little property remained to them. By 1950, their destitution was endemic (Kent, 1993; Trask, 1999).

As a result of the dire poverty into which they were thrust, the Kanaka Maoli population underwent a steady decline throughout the first half of the twentieth century. Meanwhile, the number of whites moving to the islands from the continental United

States surged dramatically. Hence, when the holding of territories in perpetual trust was rendered illegal under the United Nations Charter, the United States was required to allow Hawai'i to determine for itself the nature of its political status. It circumvented this requirement simply by having the larger population of white settlers outvote the Kanaka Maoli on the matter. Consequently, although still not in accordance with international law, Hawai'i was made a U.S. state in 1959 (Churchill, 2003; Churchill and Venne, 2005).

Despite, or perhaps because of, this turn of events, a Hawaiian renaissance began in the 1970s. The native language, which had nearly died, began to flourish again; Hawaiians, all but homeless in their own land, began to recapture their heritage. Teams of seafarers built canoes capable of traveling to Tahiti to renew ties with indigenous people there. They sailed practicing ancient navigational skills that tied together the people of widely dispersed islands centuries ago.

At about the same time, Aloha Hawai'i, the first organization dedicated to asserting the legal and political rights of Native Hawaiians, was founded. Focusing first on the recovery of the sacred island of Kaho'olawe, used by the U.S. Navy as a bombing and artillery target range since World War II, the group had by the 1980s sparked a broad movement devoted to halting the increasingly widespread destruction of the islands' fragile environment through such military usage and ever more intensive commercial development (Churchill, 2003).

Over the next decade, the emphasis of such activism shifted steadily toward the recovery of a land base by the Kanaka Maoli themselves, and, with the decision to formally reestablish Kalahui Hawai'i (the Native Hawaiian nation) in 1987, the agenda was expanded to include the right to self-government as well. Both goals were pursued through a multipronged strategy combining demonstrations, litigation, and participation in the United Nations Working Group on Indigenous Populations (Churchill, 2003; Trask, 1999).

During the summer of 1993, pursuant to U.N. Resolution 1503 (XLVIII), an international tribunal convened in the islands to hear and receive evidence on U.S. violations of Native Hawaiian rights and the conditions suffered by the Kanaka Maoli as a result. Shortly thereafter, the House of Representatives issued its apology for abolishing the government of Queen Lili'uokalani 100 years earlier (Churchill and Venne, 2005).

The tribunal's findings strongly affirmed the rights of the Native Hawaiians to govern themselves within their own clearly defined territory. This was followed, in 1996, with a vote by some thirty thousand Kanaka Maoli—roughly 40 percent of the eligible electorate—who opted by a margin of three-to-one to resume a fully self-governing existence. An overwhelming majority also registered to participate in a referendum intended to resolve Kanaka Maoli land claims (Weinberg, 1996).

The land at issue includes all state and federal lands in the islands—about 1.6 million acres—but leaves private owners untouched. It has been proposed that another 200,000 acres presently occupied by U.S. military bases, a total acreage corresponding rather precisely to the quantity embodied in the so-called Hawaiian Home Lands the Kanaka Maoli were to have retained all along, might be leased to the Department of Defense at market value for some fixed period of time.

By the early years of the twenty-first century, no motion had been made in this direction, however, because the U.S. government asserts that only a government that it recognizes has the legal standing to resolve the claim to the so-called ceded lands. The Hawaiians as a group have no federal recognition of the type extended to many other Native peoples in the United States.

As of late 2005, a measure designed to accomplish such recognition remains stalled in the U.S. Congress. Only with the passage of the Akaka Bill, as the measure is known, would the Kanaka Maoli be in a position to engage in government-to-government negotiations with the United States and the state of Hawai'i regarding jurisdiction over and title to their lands (Meheula, 2005).

Such delays continue to exact an ugly toll. As long as the Kanaka Maoli continue to be "ruled by U.S. laws, not our own," as Native Hawaiian rights advocate Beadie Kanahele Dawson put it, they are all but certain to remain by far the islands' most "at risk people: seriously undereducated, overrepresented in prisons, overburdened with serious diseases and plagued with drug abuse and homelessness" (Dawson, 2005; McNarie, 2005).

Hudson's Bay Company

The Hudson's Bay Company exerted a powerful influence on the economic development of Canada since its formation as a commercial entity under an English royal charter dated May 2, 1670. The European desire and demand for fashionable animal pelts dates back to the Middle Ages, and the Company therefore originated in the fur trade. After the European intrusion into North America, competition sparked London merchants in the late seventeenth century to seek a charter for trading rights in the northern part of North America, in an area centered on Hudson and James Bays and extending south-

ward and westward. King Charles II gave the charter to eighteen adventurers of London, who called themselves the "Governor and Company of Adventurers of England trading into Hudson's Bay." Under their charter, the Company was granted the:

sole Trade and Commerce of all those Seas Streights Bayes Rivers Lakes Creekes and Sounds in whatsoever Latitude they shall bee that lye within the entrance of the Streights commonly called Hudsons Streights together with all the Landes and Territoryes upon the Countryes Coastes and confines of the Seas Bayes Lakes Rivers Creekes and Soundes aforesaid that are not actually possessed by or granted to any of our Subjectes or possessed by the Subjectes of any other Christian Prince or State.

It further stated that the Company was to be the "true and absolute Lordes and Proprietors" of this vast territory, which was to be known as Rupert's Land after Prince Rupert. The only responsibility of the Company was to pay two elks and two black beavers in the event that the English crown ever set foot in this territory. This nominal amount in kind, which was never paid by the Company, illustrates the character of the bargain between the Crown and the Company for land and trading rights held by the latter.

The charter was based on a false assumption. One of the basic principles of English common law is that you cannot give what you do not own, and England did not own Rupert's Land. The First Nations have continued to use, occupy, and retain it as the true proprietors, even though France also claimed and occupied the territory until the Peace of Paris at the end of the Seven Years' War in 1763. Although the Hudson's Bay Company may have had trading rights in the area, these soon expired when, after the Company's royal charter was finally confirmed by the English Parliament in 1690 and renewed for seven years, the charter was not renewed in 1697. The legal fiction of the Hudson's Bay Company grew apace and did not deter the Company from claiming not only the exclusive trading rights to the area but also all of the surface and subsurface property rights.

In the 1950s, E. E. Rich wrote the Company's official history. Sir Winston Churchill, who believed in Britain's imperial mission (although it appears he had Iroquoian ancestry), as Grand Seigneur of the

Gwich'in Indians, an Alaskan indigenous people, are seen outside the Hudson Bay Company trading post at Fort Yukon in this late nineteenth-century illustration. Indigenous peoples gained wealth from trading with the company. However, problems, such as disease and social fragmentation, also emerged. (Corbis)

Company, wrote a Foreword to it in September 1957. In it, he said: "Many great merchant expeditions set out in the last four centuries from the shores of these Islands and materially the history of the lands to which they sailed. Of these, none was more prominent than the Hudson's Bay Company." Churchill continued, "Its interests have swelled from the early trading posts, where furs were the principal article of trade, to the vast commercial undertakings of the 20th century, when the Company is active in so many spheres of exploration and development in every Province of Canada. It is most fitting that the story of this epic of British enterprise, interwoven with the growth of the great country that Canada has become, should now be written" (Rich, 1960). Thus the Company's history has been written until recently largely by British imperial historians who have relied on the Company's own defense of the major challenges to its charter since 1670 rather than on an indigenous perspective, much less on a critical analysis of its relationships and histories with indigenous peoples.

The Company's relationship with indigenous peoples in what became Canada's North has always been both curious and ambivalent, stemming from a mutual interest in the gathering and the hunting of furs. The Company's partners in the fur trade—the First Nations, the Métis and the Inuit—collaborated reciprocally with the largely Scottish traders who ran the trade on the ground in Rupert's Land. The Company and aboriginal peoples benefited from the relationship in very different ways, creating wealth for one another. The fur trade even led to the creation of the Métis, who were the offspring of the miscegenation of aboriginal and nonaboriginal peoples. However, eventually there were problems. With the trade came the disease and epidemics and the social fragmentation of indigenous peoples that are still being felt in communities in Canada to this day. Along with pathogens, in response to increased competition from the Montreal merchants in the late eighteenth century, came the use of alcohol as a trading item, which led directly to alcoholism and the

breakdown of many First Nation, Métis, and Inuit communities.

Aboriginal peoples who were not employed by the Company used their canoes and kayaks as well as their intimate knowledge of their lands and waters to resist its dominance. The alternatives to the company were twofold. First Nations and Métis people could refuse to trade with the Company and continue to trade within their own networks, or they could trade with the Northwest or other European companies instead of the Hudson's Bay Company. These options existed because of Canada's enormous geographical land mass as well as the fact that aboriginal people controlled the water routes into the interior of the country through the use of canoes. Even though the Company failed to win this economic war with the Montreal merchants, primarily the Northwest Company, British imperial legislation in 1821 joined the companies under the banner of the Hudson's Bay Company. Thereafter, and until 1870, the Company consolidated its trade in a ruthless manner under the manipulative, high-handed, and frequently racist tactics of Sir George Simpson, its governor, in its acquisition of new trading territories outside Rupert's Land into the Pacific Northwest and as far west as Hawaii.

Further challenges to the Company followed: The 1849 Sayer trial over free trade provided the Métis with a legal victory which allowed free trade in Rupert's Land and also effectively challenged the Company's charter. A select Parliamentary inquiry into the Company and its relationship with aboriginal peoples in the late 1850s challenged the Company's charter, which had been a legal fiction since 1697 and led eventually to the denial of the Company's license in 1859. Amid these challenges in the middle of the nineteenth century, two of the most prominent Métis leaders in London and Canada were almost singlehandedly fighting the Hudson's Bay Company's charter on the basis of aboriginal title and rights: William Kennedy (1814–1890) and his nephew, Alexander Kennedy Isbister (1822–1884). The Company gradually moved its trading posts northward and consolidated its efforts. The late nineteenth century saw the gradual decline of the Company's trading monopoly and its fortunes. Finally, the Company turned itself into an International Financial Society in 1863 and, on December 1, 1869, relinquished its trading rights and ostensibly its proprietary rights (which it did not possess) to Rupert's Land with its sale and deed of surrender to the new federal government of Canada.

Even after relinquishing its rights, the Hudson's Bay Company continued its ambivalent relationship with aboriginal peoples. Eventually its actions leading up to the sale of its trading rights of Rupert's Land provoked the Métis nation, led directly to the first of two armed resistance movements against the federal government in 1869–1870 and 1885, and perhaps were an unwitting cause of the Manitoba Treaty with the Métis under the 1870 Manitoba Act. In the years that followed, the Company, having retained its lands around its trading posts, operated as a commercial enterprise, still trading with aboriginal peoples, especially in the North.

Until recently, the Company survived commercially as a large department store with its headquarters in Toronto. Early in 2006, the American corporation, Target, took it over. Perhaps, fittingly, the Hudson's Bay Company, long the hunter, now became a "target" itself and was hunted down.

Indian Act

Legislation concerning American Indians dates back to the first European and British settlers in North America. The one discernable commonality in all of the legislation is that it was focused on promoting the assimilation of Indians into mainstream colonial and later U.S. and Canadian society. These laws also had the effect of helping colonial officials secure political hegemony and destabilizing local Indian governing structures and philosophies. Several centuries after the initial legislation, the Indian Act of 1876 consolidated and amended all earlier statutes regarding the rights of indigenous peoples in Canada. Described as a coercive form of social control, the Indian Act was and, as some First Nations leaders would argue, remains Canada's best means of assimilating Indians into mainstream society.

When Native people first came into contact with Europeans and the British, political interaction was confined to treaty relationships and military alliances in times of war, a process that persisted until 1755 and the establishment of the British Indian Department in British North America. Indian affairs were administered by the Indian Department, a branch of the military, until 1830, when responsibility for Indians was detached from the military. The main goal of the civilian Department of Indian Affairs was to purchase and sell Indian lands in Upper Canada. In 1844, responsibility for the administration of Indian affairs was once again transferred, this time to the Province of Canada and away from the imperial authorities in England.

Beginning in the 1830s, a long line of legislation was implemented that directly affected how the colonial government in Canada dealt with Indians. By 1850, colonial officials attempted to consolidate the myriad Indian laws into two parallel acts (passed by Upper and Lower Canada respectively) designed to

deal with the infiltration of settlers into Indian-held territories. These acts transferred control of and responsibility for leasing land and the collection of rents to the commissioner of Indian Lands. Canada's ostensible aim was to protect Indians and their lands from abuse until such time as they became “civilized.” This was made clear in the next attempt to consolidate Indian legislation. The 1857 Gradual Civilization Act overtly promoted assimilation as the central goal of Indian policy, while also declaring that Indians of advanced education who were capable of managing their own affairs were eligible for enfranchisement. This legislation also established a separate legal status for Indian populations from equals in need of protection and civilization to that of wards in need of a guardian. Legislative activity increased with the passage of the Civilization and Enfranchisement Act of 1859, which consolidated all previous legislation regarding Indians. By 1860, authority for Indians and Indian lands was formally transferred to the colonial legislature. The Management of Indian Lands and Property Act of 1867 declared the Commissioner of Crown Lands to be the Chief Superintendent of Indian Affairs, while the 1869 Act for the Gradual Enfranchisement of Indians and the Better Management of Indian Affairs introduced the concept of local government to the reserves. By the 1870s, Canadian officials were involved in time-consuming, costly treaty negotiations in addition to fostering the conversion of British Columbia and Manitoba into provinces. Consistently revisiting and amending existing Indian legislation was deemed ineffective, and too many acts were considered cumbersome.

The Indian Act of 1876 consolidated all past Indian legislation into one law that created the legislative framework for an Indian policy that was generally applied uniformly throughout Canada. The Act granted considerable powers to the Superintendent General and to Indian agents located throughout Canada, while guaranteeing that Indians were subject to the Indian Affairs bureaucratic regime. In 1880, Indian Affairs attained departmental status, although it remained under the direction of the Minister of the Interior. An 1881 Indian Act amendment augmented the Indian agents' influence by making them justices of the peace, thereby enabling their prosecution and sentencing of Indians for violations of any Indian Act provisions.

The Indian Act provided for the administration of three key areas: (1) allocation of reserve lands, (2) defining “Indian” status, and (3) granting powers of

enforcement to the Canadian government. The Act was (and remains) a comprehensive piece of legislation that regulated and controlled nearly every aspect of Indian life. Indian agents were in place to administer the Act directly in Indian communities. Provisions within it forced an end to traditional governing practices, which were replaced by municipal-style structures. The traditional and hereditary leadership selection processes were outlawed. Indian agents were empowered with extraordinary administrative and discretionary authority. From the beginning, the Indian Act was considered a temporary, stopgap measure that would outlive its usefulness following the absorption of Indians into Canadian society.

The Indian Act also structured an enfranchisement process, thereby permitting Indians to acquire full citizenship but only after relinquishing their ties to their community. In addition to giving up one's culture, enfranchisement required an individual to meet a number of standards that included obtaining higher education and being a person of strong moral character. In doing so, the Act distinguished between status and nonstatus Indians. Status Indians who were registered with the federal government according to the terms of the Act were eligible for minimal government services. Nonstatus Indians were not registered and were therefore not eligible for government programs. According to Section 12(1)b, an Indian woman who married a non-Indian man under the Act had her status taken away from her; her children would also lose their status. An 1880 amendment declared that an Indian person who obtained a university degree would automatically be enfranchised.

By the late nineteenth century, the Indian Act was constantly referred to in Department of Indian Affairs' dispatches to field agents when questions arose concerning issues of land ownership, land use, health regulations, tribal government elections, and justice issues. The Act was also open to amendment when a situation materialized that was not dealt with in the existing provisions. For instance, an 1881 amendment made it illegal for Indians to sell their agricultural produce. This provision was extended in 1941 to all Indians in Canada and to the sale of furs and wild animals. In 1884, the Act was again amended to outlaw the West Coast potlatch; a year later the Sun Dance on the prairies was also made illegal. A 1914 amendment banned Indians from wearing Native costumes in any dance, show, exhibition, stampede, or pageant without the

Department of Indian Affairs' official permission. A 1920 amendment made residential school attendance compulsory and set out penalties for parents who refused to part with their children; and a 1927 amendment made it illegal for Indians to raise money to hire a lawyer to pursue land claims against the government. This list represents but a handful of Indian Act amendments made from 1880 to 1951.

Despite the best efforts of Canadian officials, however, Native people held onto their native identity tenaciously. By the 1940s, Canadian officials were aware that their enfranchisement scheme had failed. The House of Commons special committee on reconstruction confirmed officials' fears while highlighting poor on-reserve living conditions. This resulted in the creation of the Special Joint Committee of the Senate and House of Commons (SJC) that sat from 1946 to 1948. The Indian Act was the catalyst for debate. The SJC held 128 sessions, heard 122 witnesses, including thirty-one Indian leaders, and published 411 written briefs (Belanger, forthcoming). The SJC called for the repeal or amendment of all the sections of the Indian Act to assist Indians in the gradual transition from wardship to citizenship, a strategy that would help Indians advance themselves. In 1951, the new Indian Act was unveiled and many of its more restrictive provisions were repealed, such as those concerning the potlatch and the Sun Dance. However, the new Act was a recycled version of the original, the main difference being that the 1951 Act increased the application of provincial laws to Indians.

Few changes to the Indian Act occurred during the next fifteen years. Then, in 1969, newly elected Prime Minister Pierre Trudeau (Liberal) proposed its repeal. Citing his just society mandate, he concluded in a White Paper that eliminating the Indian Act would abolish the existing chasm between Native and mainstream Canadians through the termination of Indian special status and federal responsibility for Indian affairs. However, opposition within the Native community was so strong that the White Paper was withdrawn in 1971. The next major change to the Indian Act occurred in 1985 with the passing of Bill C-31. This removed many of the discriminatory provisions of the Indian Act, especially those that discriminated against women. It also for the first time permitted the limited reinstatement of Indians who were denied or lost status and/or band membership in the past. Finally, it allowed bands to define their own mem-

bership rules. It is anticipated that the bill returned more than 22,000 men, women, and children to treaty status, giving them access to federal programs and services for off-reserve Indians. The next major attempt at change took place in April 2001, following Minister of Indian Affairs Robert Nault's announcement that he intended to alter the Indian Act by curtailing self-government in favor of mandated government structures. Given this proposed violation of their right to self-government, many Native people reacted negatively to Nault's plans, and in 2004 the bill died in Parliamentary process.

Indian Civil Rights Act (1968)

The Indian Civil Rights Act, enacted with the Omnibus Civil Rights Act of 1968, specifically delineated the civil rights of Indians as protected by the U.S. Constitution and as recognized by the federal government; in effect, it extended certain provisions of the Constitution to the Indian tribes. The crucial section of this Act, Title II, reads:

Sec. 201. For purposes of this title, the term (1) "Indian tribe" means any tribe, band, or other group of Indians subject to the jurisdiction of the United States and recognized as possessing powers of self-government; (2) "powers of self-government" means and includes all governmental powers possessed by an Indian tribe, executive, legislative, and judicial, and all offices, bodies, and tribunals by and through which they are executed, including courts of Indian offenses; and (3) "Indian court" means any Indian tribal court or court of Indian offense.

Sec. 202. No Indian tribe in exercising powers of self-government shall: (1) make or enforce any law prohibiting the free exercise of religion, or abridging the freedom of speech, or of the press, or the right of the people peaceably to assemble and to petition for a redress of grievances; (2) violate the right of the people to be secure in their persons, houses, papers, and effects against unreasonable search and seizures, nor issue warrants, but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched and the person or thing to be seized; (3) subject any person for the same offense to be twice put in jeopardy; (4) compel any person in any criminal case to be a witness against himself; (5) take any private property for a public use without just compensation; (6) deny to any person in a criminal proceeding the right to a speedy and public trial, to be informed of the nature and cause of the accusation, to be confronted with the witnesses against him, to have compulsory process for obtaining witnesses in his favor, and at his own expense to have the assistance of counsel for his defense; (7) require excessive bail, impose excessive fines, inflict cruel and unusual punishments, and in no event impose for conviction of any one offense any penalty or

punishment greater than imprisonment for a term of six months or a fine of \$5,000, or both; (8) deny to any person within its jurisdiction the equal protection of its laws or deprive any person of liberty or property without due process of law; (9) pass any bill of attainder or ex post facto law; or (10) deny to any person accused of an offense punishable by imprisonment the right, upon request, to a trial by jury of not less than six persons.

Sec. 203. The privilege of the writ of habeas corpus shall be available to any person, in a court of the United States, to test the legality of his detention by order of an Indian tribe.

President Lyndon B. Johnson signed the Civil Rights Act of 1968 in the East Room of the White House on April 11, 1968. Title II of the act confirmed the rights of Indians in the language of the U.S. Constitution and the Bill of Rights. A month earlier President Johnson delivered an address to Congress titled "The Forgotten American," in which he proposed a policy of "maximum choice for the American Indian: a policy expressed in programs of self-help, self-development, [and] self-determination."

Other portions of the law established a model code governing the courts of Indian offenses, asserted some state jurisdiction over criminal and civil actions involving Indians, amended an issue as to offenses within Indian country, allowed for the employment of legal counsel, called for the publication of materials relating to the constitutional rights of Indians, and set a policy regarding fair housing regulations for Indians. Further, the action ended Termination as a federal policy and expressly repealed the controversial Public Law 280 unless tribal councils specifically requested that states continued to oversee civil and criminal matters involving Indians. Senator Sam Ervin (Democrat, North Carolina) commented that the passage of this act "confer[red] upon the American Indians the fundamental constitutional rights which belong by right to all Americans."

Indian Civilization Fund Act

The Indian Civilization Fund Act authorized the federal government to allocate money to instruct Native Americans in agriculture, reading, writing, and arithmetic. The Act went into effect on March 3, 1819, and it provided \$10,000 per year to promote cultural assimilation among the nation's Indians.

Prior to the establishment of the Indian Civilization Fund, religious missionaries had long sought to teach Native Americans about Christianity and other elements of what they called "civilized" society. After the formation of the United States, and largely beginning with the Jefferson administration, the federal government took an active role in promoting the secular transformation of Natives. What became known as the Indian factory system began in 1795 to set standard rates and to control the behavior of traders and hunters. Indian agents, like Benjamin Hawkins, and other employees of the federal factory system, used their presence among the Indians to teach them to herd cattle, grow cotton, use written laws, adopt Western gender norms, and otherwise embrace elements of American "civilization." When Indian agents did not perform these functions, religious missionaries often did. A lack of steady funding for these efforts, however, frustrated many Americans who believed in the desirability of assimilating Native Americans.

In 1817, Thomas L. McKenney, the Superintendent of Indian Trade for the United States, began to lobby Congress to coordinate and fund a large-scale campaign to promote cultural change. He believed that such a program could be beneficial to both Indians and the United States. By expanding the federal factory system, McKenney believed that he could teach Indians to stop hunting and start practicing agriculture. He encouraged Indian agents to cooperate with religious missionaries, he provided agents with agricultural equipment and livestock to give to cooperating Indians, and he otherwise pursued policies that he believed would lead to acculturated Indians. These actions, McKenney hoped, would allow Indians to become citizens and at the same time bring Native lands under the control of the United States.

With the cooperation of Henry Southard, chairman of the House Committee on Indian Affairs, McKenney brought his plan for widespread schooling for Indians to Congress in 1818. After much internal haggling over who should be in charge of the education, whether profits from the factory sys-

tem could fund the program, and, if not, how the program would be funded, Congress passed the Indian Civilization Fund Act. It provided a \$10,000 annual allocation, far short of McKenney's \$100,000 request. In addition, it authorized the president to use his discretion on how to spend the money. Rather than expand the factory system, President James Monroe chose to fund groups who were already engaged in educating Indians to do the work.

Most of the groups who received money from the Indian Civilization Fund were religious missionaries from Protestant sects, primarily Methodists and Baptists. With this new funding, they were able to expand their presence in Indian Country and to create new schools to teach Indians how to become part of American culture. Other allocations went directly to Indian nations, who could choose for themselves which schools to support.

Even with this additional funding, missionary schools did not become a prominent presence in Indian Country. Still, the money allowed the schools to expand and it made the education of Native Americans a central component of U.S. Indian policy. In 1824, the Indian Civilization Fund subsidized thirty-two schools and contributed to the ostensible education of more than 900 Indians. Funds allocated from various Indian treaties helped augment the program, and, by 1830, the Indian Civilization Fund helped support fifty-two schools with 1,512 enrolled students.

The Choctaw Academy was the most well-known institution that received money from the fund. Created in 1825, the academy also received federal funds as a result of several treaties and land sales by the Choctaws. The school was built in Scott County, Kentucky, outside of the Choctaw nation, and it was run by the Baptist General Convention. Students studied basic subjects like English and mathematics while also learning the mechanical arts. Most of the students were Choctaws, but students from other Indian nations attended as well. In 1835, the all-male academy had 188 students.

Indian Claims Commission

The Indian Claims Commission (ICC) was a federal commission created in the 1940s to resolve the issue of awarding monetary compensation to Native Americans for the loss of their ancestral lands. More than six hundred claims were filed during its first five years. By the commission's expiration in 1978, over five hundred claims had been resolved, with over \$800 million awarded to Native Americans.

The expanding United States had long acquired native lands through the treaty process. By 1868 Indian tribes had ceded to the United States over 2 billion acres of land through almost four hundred treaties, leaving Native Americans only 140 million acres. In 1855, some tribes began to file claims against the federal government for treaty violations in the newly established Court of Claims. The government restricted this practice in 1863, and, after 1881, a jurisdictional act of Congress was required before tribes could petition the Court of Claims. By World War I, only thirty-one claims had been filed, with fourteen positive verdicts for the tribes. In the 1920s, however, with a change in public sentiment toward American Indians, tribes had greater success using the Court of Claims to redress their grievances. By 1946, almost 200 native claims were on the dockets of the Court of Claims, a surge that prompted a new procedure to deal with the immense volume of cases.

The ICC was first proposed in 1910 by Commissioner of Indian Affairs Francis E. Leupp. The 1928 Meriam Report also suggested a special commission be created to examine existing claims without the passage of individual jurisdictional acts. After World War II, additional hearings on this topic continued, until finally H.R. 4497 passed through Congress on October 25, 1945, to create the ICC. Concurrent with the passage of the ICC Act, the federal government was in the process of altering its policy toward Native Americans. Termination—the attempt to “desegregate Indian communities, and to integrate Indians into the rest of society” (Fixco, 1986)—was gaining momentum. Historian Donald Fixco, in *Termination and Relocation*, further says that termination was also intended as “the ultimate destruction of

Photographed after the signing of the Indian Claims Commission Act are President Truman, seated, and from left to right, Senator Joseph C. O'Mahoney of Wyoming; Reginald Curry of the Ute Tribe; Julius Murray of the Uintah Ute Tribe; and Oscar Chapman, acting Secretary of the Interior. tribal cultures and native life-styles." President Harry S. Truman ignored the issue that the federal government had a long history of unilateral appropriation of native lands. The ICC Act was passed to "absolve" the federal government from any obligation to honor treaties or to compensate Indians for these unilateral landgrabs in return for monetary compensation alone. The ICC Act did not mention the restoration of native lands to their original owners.

The ICC was officially created on August 13. The first cases came in gradually over the first few years, with only 200 claims filed by 1951. A remarkable increase in the quantity of cases occurred in that year, because Indian attorneys had previously refrained from filing until the earlier decisions had been determined. By the end of 1951 over 600 claims

had been filed, primarily concerning western lands. To develop a feasible system to accomplish their enormous charge, ICC commissioners decided to transform their organization into an official court. Since the majority of claims were land cases, they were heard in three stages: title, value-liability, and offsets. The long beginning of the ICC's early work troubled Congress, which desired a quick and speedy resolution of Indian claims. In addition to evidence that the petitioners supplied, outside expert witnesses, consisting of anthropologists, historians and land specialists, were required to present major portions of the testimony for these cases. These experts defined vital information concerning tribal boundaries, duration of tribal possession, and assessment of the land. This immense amount of data was presented at the ICC hearings. From the outset, the commission's work was full of unexpected complications. This was evident as the time involved in each step of the claims process lengthened. The challenge of presenting the historical, anthropological, and legal resources in the medium of a courtroom setting made progress sluggish in the early years of the ICC.

The legislation that enacted the ICC was based on the premise that the Indians would have "their day in court." The original conception of a court to hear these claims evolved into a commission format. Five broad categories of claims were permitted under the ICC Act:

- (1) claims in law or equity arising under the Constitution, laws, treaties of the United States, and Executive orders of the President;
- (2) all other claims in law or equity, including those sounding in tort . . . ;
- (3) claims which would result if the treaties, contracts, and agreements between the claimant and the United States were revised on the ground of fraud;
- (4) claims arising from the taking by the United States . . . of lands owned or occupied by the claimant without the payment for such lands of compensation . . . ; and
- (5) claims based upon fair and honorable dealings that are not recognized by any existing rule of law or equity (60 Stat. 1049).

The ICC sent out a notice to all eligible Native claimants, with an explanation of its function and procedure. The tribes could obtain any legal representative they desired, subject to the approval of the secretary of the interior. The attorney general and

his associates represented the United States' side of the case. When a claim was finally decided, a final report was forwarded to Congress, and tribal petitioners were forever barred from "any further claim or demand against the United States arising out of the matter involved in the controversy" (Indian Claims Commission Act of 1946, Section 22). All awards were transferred to the Treasury, and the Bureau of the Budget was to include the allocation in the next appropriations bill. The Act specifically precluded land restoration. Final payment remained in the Treasury until Congress directed its dispersal. Additional compensation was awarded if the ICC found a "grossly inadequate" difference between the adjudicated price and fair market value. Other types of claims involved government accountability; for instance, the government might be held responsible if the ICC determined that tribal funds had been misspent.

After granting the ICC several five-year extensions, Congress finally shut it down in 1978. Two main problems confronted the commission during their last active decade. The first was confusion over the denotation of "unconscionable consideration" for claims filed, since no established formula existed to measure disparity between the payments made to tribes and land value. For example, if the ICC decided that less than 50 percent of the land value had been offered to the tribes by the government, then a disparity was deemed to have existed. A second problem was the lack of progress in compromise settlements, since only the claims attorneys could promote this avenue of settlement. New commissioners joined the ICC during the 1960s, for a total of five by 1968, and their addition expedited the resolving of claims; by 1971 over half the cases had been settled. By 1978 the ICC had only sixty-eight remaining dockets, which were remanded to the Court of Claims.

The ICC awarded over \$800 million to Native groups. The claims took about two decades on average to reach their conclusion. The commission achieved other results as well. By hiring their own attorneys, Native people continued to guard their interests. The claims process also resulted in increased public awareness of Native land loss and the search for appropriate compensation. The ethnohistorical research gathered for these cases allowed for further study of Native American societies. The claims process and its difficulties united several Native groups as they strove toward a similar goal. Historians still differ on whether the ICC achieved

its goal of allowing Indian people to have "their day in court."

Indian Gaming Regulatory Act

Prior to the 1988 enactment of the Indian Gaming Regulatory Act (IGRA), a few tribes ran small-scale commercial gambling operations on their reservations. Consisting of poker games and bingo, these businesses were conducted with federal approval but were not subject to state law. Gaming revenues at this time were modest, generating only about \$212 million annually ("Indian Gaming," 2005, 858).

Because Native American tribes and nations have attributes of sovereignty, state law is inapplicable to tribal lands in some cases, absent express congressional intent to the contrary. For this reason, before IGRA, tribes were able to establish commercial gaming enterprises on tribal trust lands without regard for the law of the surrounding state. Yet conflicts arose between states and tribes as states tried to impose their laws on tribal gaming enterprises. An attempt by the state of California to enforce its laws on the Cabazon Reservation ended up as the Supreme Court case of *California v. Cabazon Band of Mission Indians*, 480 U.S. 202 (1987).

With Public Law (PL) 83-280, Congress had made state criminal laws applicable on tribal lands located in California. However, PL280 extended only state criminal laws to reservations—not civil and

Casino sign on the Morongo Indian Reservation, near Cabazon, California. (Bob Rowan; Progressive Image/Corbis)

regulatory laws. Thus, the primary issue in *Cabazon* became whether California's law limiting the conduct of bingo games to charitable organizations was criminal or regulatory in nature.

The state argued that, because the laws were enforced as misdemeanor criminal offenses, they should be considered criminal. However, the court found that, since California permitted gambling in some circumstances—a state lottery, parimutuel horse race betting, and charitable bingo and card games—gambling did not violate state public policy. Rather, the court found that California permitted gambling, although it was subject to regulation. As a result, the court concluded that the state's gaming laws were regulatory rather than criminal and therefore were not applicable to Indian reservations located in the state.

The general rule derived from *Cabazon* was that, if a state permitted any form of gambling, then tribes located in the state could conduct gaming operations. In contrast, tribes located in states that prohibited all forms of gambling were prohibited from operating gaming enterprises. By clearing up legal

ambiguities, this ruling encouraged tribes across the country to open gaming enterprises. The expansion of tribal gaming in turn led to an increasing number of conflicts among states, citizen groups, and tribes. To ease the conflicts, Congress quickly acted to develop a comprehensive federal regulatory scheme for tribal gaming. In 1988, Congress passed the Indian Gaming Regulatory Act, which superseded the ruling in *Cabazon* by completely controlling the field of Indian gaming regulation.

Central to IGRA is the Act's division of gambling activities into three separate categories: Class I, Class II, and Class III. Each class is regulated differently. Class I gaming includes games played socially or as part of traditional activities for prizes of low monetary value. Tribes have exclusive jurisdiction over Class I games. Class II games are bingo, games similar to bingo, and some nonbanking card games, such as poker. Class III is a catchall category that incorporates all other games, such as slot machines and casino table games. IGRA limits Class II and III gaming to states in which such games are permitted. In addition, Class II and III games require the enact-

ment of a tribal resolution, and Class III gaming requires the negotiation of a tribal–state gaming compact. (Additional regulations apply to tribal management and federal oversight of Class II and Class III gaming operations.)

Casinos and game designers are always at work developing new games to attract customers. Because Class II gaming can be conducted without a tribal–state agreement, determining whether a new game or machine fits into Class II or Class III is an important and sometimes contentious decision.

Tribes that wish to conduct full-scale casino gambling must negotiate a gaming compact with the state. A compact is a written agreement between the tribe and the state that sets out how the tribe will conduct its Class III gaming operations. IGRA sets out some suggestions for compact provisions, but the Act's parameters are quite broad and permit provisions regarding any "subjects that are directly related to the operation of gaming activities" (Indian Gaming Regulatory Act, fn 2 25 U.S.C. § 2710[d] [3][C][vii]). Existing compacts vary widely. Some common provisions relate to the waiver of the tribe's sovereign immunity related to gaming activities, state inspection of gaming facilities, licensing, enforcement of compact provisions, and casino security.

A key provision of IGRA is its waiver of state immunity from suit. States are generally immune from suit in federal court. However, to ensure that states will negotiate with tribes in good faith toward the adoption of a tribal–state gaming compact, Congress, under its Indian commerce clause authority, included in IGRA a provision giving tribes a cause of action in federal court against states that fail to negotiate a gaming compact in good faith. The U.S. Supreme Court invalidated this provision in a five-to-four decision in the 1996 case, *Seminole Tribe of Florida v. Florida*, holding that Congress does not have the authority to waive a state's sovereign immunity from suit. *Seminole Tribe*, which overturned earlier case law allowing Congress to waive a state's immunity from suit, has had repercussions stretching far beyond the field of Indian law. However, the immediate effect of the ruling was to preclude tribes from enforcing in federal court IGRA's requirement that a state negotiate a gaming compact in good faith. Although *Seminole* pulled some of the teeth out of IGRA, it left in place alternate remedies that have helped ensure the cooperation of states in the compact negotiation process.

IGRA represents a compromise between state and tribal interests. Similar to the ruling in *Cabazon*, the Act permits tribes to open gaming enterprises in states that allow some form of gambling. Yet the Act infringes on tribal sovereignty in several ways. First, it permits tribal gaming only in states where gambling is legal. In other words, the ability of a tribe to open a commercial gaming operation on tribal lands is dependent on state law. The Act also forces tribes to negotiate with states. In the course of these negotiations, states may demand that tribes allow state boards to license casino employees or permit state inspectors to inspect tribal facilities. In addition, although states cannot tax tribes directly, tribal–state gaming agreements often include a revenue-sharing provision that requires tribes to give a state a sizable percentage of tribal gaming revenues, often in exchange for the exclusive right to conduct casino gambling in the state. Tribes with gaming enterprises have been willing to accept these infringements on their sovereignty in exchange for the substantial economic benefits that gaming provides.

In the more than 200 years since the establishment of the first Indian reservations, gaming has been by far the most successful means of economic development. According to the National Indian Gaming Commission, the federal regulatory agency charged with oversight of Indian gaming, 2004 total revenue from the country's more than 300 tribal gaming enterprises was about \$19.4 billion. Tribes have used gaming revenues to fund health clinics, schools and scholarship programs, tribal government, and infrastructure improvements. Some tribes also distribute gaming revenues as per-capita payments to tribal members. Today, casino gambling is one of the fastest growing sectors of the U.S. economy. However, the future of the industry and of tribal gaming in particular is uncertain. As a buffer against future uncertainty, some tribes have begun to use their gaming revenues to create more diverse tribal economies by investing in other enterprises.

Many tribes see gaming as the best option for tribal economic development and some have received a large financial benefit from their gaming operations. However, not all tribes are able to operate financially successful casinos. The tribes that have been the most successful usually have land close to a major highway or urban area. Tribes with land in remote rural areas far from major roads have had little success attracting nonmember customers to their casinos. In addition, market saturation can

reduce revenues. Some tribes choose not to open casinos, for reasons of tradition, religion, or economics. Thus IGRA, while providing a boon to some, has caused a deep economic division and some political friction between successful gaming tribes and the many other tribes who are still struggling to develop viable economies.

Indian Mineral Leasing Act

Mining in Indian country is a matter of great significance both for the nation as a whole and for the tribes and Indian nations that contain mineral resources. Native nations constitute one of the largest owners of minerals in the country; only the federal government and the railroad companies have larger mineral holdings (Royster, 1994, 542–543). For many tribes, mining is the principal economic engine that brings revenues and employment to reservation communities (Royster, 1994, 544). Passed in 1938, the Indian Mineral Leasing Act (IMLA) has served as the principal piece of federal legislation that governs mineral leasing activities on Indian lands. The IMLA serves three primary purposes: (1) to obtain greater uniformity in the leasing of Indian lands for mining purposes, (2) to harmonize mineral leasing with the Indian Reorganization Act's policy of tribal self-determination by requiring tribal consent to mineral leasing on Indian lands, and (3) to foster greater tribal economic development by ensuring that Indians receive "the greatest

return from their property" (Senate Report, 1937, 2–3; House Report, 1938, 1–3)

Prior to the IMLA's enactment, mineral leasing on Indian lands was governed by several other federal statutes, including the Acts of 1891, 1909, 1919, 1924 and 1927 (Royster, 1994, 556). The multiple statutes governing Indian mineral leasing created a patchwork that varied with respect to types of Native lands subject to the statute, the kind of leasing permitted (oil and gas or non-oil and gas mineral leasing), whether tribal consent was required, and whether state taxation of the mineral leasing was permitted (Royster, 1994, 556). The IMLA introduced a much more uniform mineral leasing regime by imposing one set of rules governing nearly all mineral leasing on tribal lands.

The IMLA authorizes the leasing of unallotted lands and other tribal lands for mining purposes if a tribe and the Secretary of Interior both consent to the lease (25 U.S.C. § 396a). The terms of mineral leases entered into under the Act may extend up to ten years "and as long thereafter as minerals are produced in paying quantities" (25 U.S.C. § 396a). The statute provides for the public auctioning of oil and gas leases, with the right to set the terms of such auctions and the right to reject bids delegated to the Secretary of Interior, and requires that mineral lessees post surety bonds in amounts set by the Secretary of Interior (25 U.S.C. §§ 396b and 396c). Finally, the Act delegates authority to the Secretary to promulgate rules and regulations governing mineral leases (25 U.S.C. § 396d).

Congress's second major goal in enacting the IMLA was promotion of tribal self-government through a requirement that all mineral leases be tribally approved, coupled with a requirement that the Secretary of the Interior also approve mineral leases on Indian lands (Senate Report 1937, 2–3; House Report 1938, 1–3). Although the tribal consent requirement provides assurance that tribes have a critical role in the initial approval of mineral leases on their lands, the consent requirement does little to promote tribal self-government once mineral leasing is underway, since the Act does not include provisions that allow tribes to control mining exploration and development activities once commenced (Royster, 1994, 561). In 1982, Congress responded to the demand for greater tribal control of mineral development activities by enacting the Indian Mineral Development Act.

Congress's third purpose for enacting the IMLA was to ensure that tribes received the "greatest

return” possible for mineral leasing conducted on their lands (United States, 1937, 2–3; United States House of Representatives, 1938, 1–3). The Supreme Court has held that the reference to the “greatest return” in the Act’s legislative history is not intended to guarantee tribes the maximum profit available, but instead to provide tribes with a “profitable source of revenue” (*Cotton Petroleum v. New Mexico*, 1989, 179). The IMLA is designed to accomplish this objective through the surety bonds that the statute requires and through the system of bonuses, rents, and royalties that the IMLA’s regulations establish.

Mineral leasing conducted in accordance with the IMLA has given rise to several controversies that strike at the core issues of federal Indian law, including the federal government’s trust relationship with Indian tribes and tribal and state taxing authority in Indian country.

In *United States v. Navajo Nation*, the Supreme Court addressed whether the IMLA imposes a fiduciary duty on the federal government that, if breached, could mandate compensation for damages. The case involved a coal lease between Peabody Coal Company and the Navajo Nation. When the original lease was ripe for amendment, the Secretary of the Interior, after an ex parte meeting with a Peabody Coal representative, directed the Deputy Assistant Secretary for Indian Affairs to encourage the parties to renegotiate new royalty rates for the lease, rather than wait to accept an impending decision from the Deputy Assistant Secretary that was expected to affirm a substantial increase in the royalty rate to 20 percent of gross proceeds. In accordance with the new instruction, the parties resumed negotiations and agreed to a smaller adjustment, raising the original royalty rate to only 12 percent of gross proceeds.

The Navajo Nation sued the United States for \$600 million in damages, claiming that the secretary’s approval of the coal lease amendments constituted a breach of trust. The Supreme Court rejected the tribe’s claim, holding that the IMLA does not impose a duty on the federal government that is enforceable in a claim for money damages. The court found that the IMLA creates a lesser role for the secretary, one that is limited to approving mineral leases and promulgating rules and regulations governing mineral leasing. The court concluded that the IMLA was distinguishable from other statutes that served as the basis for money damages following a breach of fiduciary duty, as in the case of *United States v. Mitchell* (*Mitchell II*).

In *Merrion v. Jicarilla Apache Indian Tribe*, the Jicarilla Apaches assessed an oil and gas severance tax on the production activities of oil and gas lessees that operated on the tribe’s reservation, pursuant to mineral leases entered into under the IMLA. The Supreme Court affirmed the tribe’s power to tax the lessees, holding that “the power to tax is an essential attribute of Indian sovereignty because it is a necessary instrument of self-government and territorial management” that enables tribal governments to raise revenues for essential services (*Merrion v. Jicarilla Apache Tribe*, 1982, 137).

In *Montana v. Blackfeet Tribe of Indians*, the state of Montana assessed several taxes that were applied against the Blackfeet tribe’s oil and gas royalty payments under several oil and gas leases with non-Indian lessees. The state argued that the taxes were authorized because it claimed that the IMLA had incorporated a provision in an earlier mineral leasing statute, the Act of 1924, which had authorized state taxation of Indian mineral leases. The Supreme Court rejected Montana’s interpretation of the IMLA, holding that the court will find that the general rule of tribal exemption from state taxation is lifted only when Congress has made its intent “unmistakably clear” (*Montana v. Blackfeet Tribe of Indians*, 1985, 765).

In *Cotton Petroleum v. New Mexico*, the Supreme Court upheld various state oil and gas production taxes assessed against Cotton Petroleum Corporation, a non-Indian party to oil and gas leases entered into with the Jicarilla Apache tribe in New Mexico. The court considered whether the tax was preempted by federal law through either an express or an implied prohibition of the tax, and the court looked to the history of tribal sovereignty, including the broad policies furthered by the IMLA, as a backdrop to its analysis. The court concluded that, although the legislative history of the IMLA referred to tribes receiving the “greatest return” from their property, this did not mean that Congress intended “to remove all barriers to profit maximization,” with the effect of precluding all state taxation of non-Indian mineral lessees (*Cotton Petroleum v. New Mexico*, 1989, 180). The court also determined that tribes did not have a history of independence from the imposition of state taxes in the area of mineral leasing, since the Act of 1927 specifically authorized such taxes in the past. Furthermore, the court noted that the state had an interest in taxing Cotton Petroleum’s on-reservation oil and gas production because it provided services to both the company

and tribal members on and off the reservation. The court also held that states generally have the authority to tax the activities of non-Indians on the reservation unless Congress prohibited the tax.

The *Cotton Petroleum* court refrained from reexamining its prior rejection of a state tax imposed by Montana on a non-Indian mineral lessee on Crow tribal lands. In that case, *Montana v. Crow Tribe*, the state of Montana assessed extraordinarily high state taxes on coal mining activities that amounted to an effective rate of 32.9 percent. The Ninth Circuit Court held that the taxes were unlawful, and the Supreme Court summarily affirmed its holding. This case stands in stark contrast to *Cotton Petroleum*.

Indian Removal Act

Provisions for Indian "removal"—the relocation of entire Native nations from areas about to be annexed by non-Indians—were first laid down in an 1817 treaty between the United States and the Cherokee Nation (7 Stat. 156). By 1830, the federal government had passed general removal legislation aimed at the Five Civilized Tribes (the Cherokees, Choctaws, Chickasaws, Creeks, and Seminoles) after they had

adopted ways of life and political institutions resembling those of European-Americans. Many other Native American nations (such as the Osages and Poncas) also were removed to Indian Territory during the nineteenth century. By 1883, twenty-five Indian reservations occupied by a total of thirty-seven nations had been established in Indian Country.

The many trails of tears, mostly between the 1830s and 1860s, resulted in immense suffering among the estimated 50,000 to 100,000 Native people who were forced to move. Between one-third and one-fourth of those who were removed died either on the marches or shortly thereafter of exposure, disease, and starvation. Some Native nations, such as the Senecas, Seminoles, Navajos, and Poncas, resisted removal and won the right to remain (or return) home. Notable numbers of Native people, including many Cherokees, evaded removal, and they remain in their home territories to this day. Some, such as the Osages, found themselves forced to new lands that contained rich resources, such as oil.

Removals sometimes led to important legal conflicts that shaped U.S. law for centuries afterward. Such was the case with the Cherokees, on whose behalf Chief Justice John Marshall ruled in the early 1830s in *Cherokee Nation v. Georgia* and *Worcester v. Georgia*. The decision in the latter case did not keep President Andrew Jackson from illegally forcing the Cherokee from their lands, but it did define the relationship of Native Americans to the United States as one of "dependent domestic nations" that endures to this day. The removal of the Poncas led to the case of *Standing Bear v. Crook* (1879), which established Indians as human beings under U.S. law.

Mention "Andrew Jackson" to most Americans, and the phrase "Jacksonian Democracy" may spring to mind. To the descendants of Native Americans who survived the period, however, the first comparison may be to the Bataan Death March of World War II or to Joseph Stalin. There was very little that was democratic about Jackson's handling of relations with Native nations.

Andrew Jackson thought of Indian treaties as anachronisms. "An absurdity," he called them. "Not to be reconciled with the principles of our government" (Johansen, 2000, 88). As Jackson elaborated in a letter to President James Monroe (another advocate of Indian removal) in 1817, "The Indians are the subjects of the United States, inhabiting its territory and acknowledging its sovereignty. Then is it not absurd for the sovereign to negotiate by treaty with the sub-

ject? I have always thought, that Congress had as much right to regulate by acts of legislation, all Indian concerns as they had of territories, are citizens of the United States and entitled to all the rights thereof, the Indians are subjects and entitled to their protection and fostering care" (McNickle, 1949, 193).

Given the convoluted grammar, it is not easy to decipher what General Jackson is saying. Is he declaring the Indians to be citizens? Legally, that was not the case until a century later. Is he personally annulling the treaties, which had been signed by parties who regarded each other as diplomatic peers barely two generations earlier? Whatever the nature of his rhetoric, the ensuing decades made clear, especially for the Native peoples of the South, just what Jackson meant by "protection and fostering care."

The private rationale for removal was expressed by Henry Clay (like Jackson, a political product of the trans-Appalachian west). Clay's recitation, preserved in the *Memoirs* of John Quincy Adams, came at the end of a meeting of Adams' cabinet on December 22, 1825, during which the entire agenda was taken up by the conflict between the Creeks and Georgia. Clay was responding to a suggestion that the United States stop making treaties with the Indians and treat them as citizens. According to Adams, Clay said:

It is impossible to civilize Indians. . . . There never was a full-blooded Indian who took to civilization. It was not in their nature. He said they are destined to extinction and, although he would never use or countenance inhumanity towards them, he did not think them, as a race, worth preserving. He considered them as essentially inferior to the Anglo-Saxon race, which were now taking their place on this continent. They were not an improvable breed, and their disappearance from the human family will be no great harm to the world (Drinnon, 1990, 179–180).

Clay's point of view was popular among Anglo-Americans in need of a rationale for relieving Native Americans of their lands. The fact that the civilized tribes had become, in some respects, as Europeanized as the immigrants seemed not to matter. Removal was less an ideological statement than a convenient method to transfer land from one group of people to another. During the 1820s, before their forceful removal from their homelands, the Chero-

kees developed prosperous villages, a system of government modeled on that of the United States, a written language, and a newspaper. The Cherokees owned 22,000 cattle, 2,000 spinning wheels, 700 looms, thirty-one grist mills, ten saw mills, eight cotton gins, and 1,300 slaves.

Passage of the Removal Act of 1830 climaxed a years-long struggle. The Creeks, for example, had become concerned about non-Indian usurpation of their lands as early as 1818, when the Muscogee (Creek) nation passed a law against the sale of any Native American land without council approval, under penalty of death for the transgressing party. The edict was enforced. In 1825, federal treaty commissioners bribed William McIntosh, leader of the Creek Lower Towns, to sign a land cession agreement, the Treaty of Indian Springs, with a few of his close associates. The National Council declared McIntosh to be a traitor and, on May 1, 1825, sent a delegation to torch his house. When McIntosh appeared at the door of his burning home, his body was riddled with bullets.

Removals of specific Native nations usually were negotiated by treaties (frequently under duress), in which the nations surrendered what remained to them of their aboriginal homelands in exchange for lands west of the Mississippi River. Although some small bands (and a few members of larger nations) had been moving westward since the War of 1812, the Removal Act forced the wholesale removal of entire Native nations, notably the Five Civilized Tribes, in the various phases of the trails of tears.

As the federal government prepared to remove entire nations of Native people west of the Mississippi River, little thought was given to the fact that Indians, European-Americans, and Afro-Americans had been intermarrying among Native peoples for more than a century. Many of the families who were forced to abandon their homes were nearly as European-American, genetically, as their nonreservation neighbors. John Ross, for example, the Cherokee best-known as an opponent of removal, was only one-eighth Cherokee. He lived in a plantation house and owned slaves.

These complications meant little to President Jackson, who had earned his national reputation as a general in the U.S. Army, whose primary business was subjugating Indians. When he ran for president, Jackson sought frontier votes by favoring removal. Once in office, Jackson considered the Removal Act of 1830 to be the fulfillment of a campaign promise.

Others felt less sanguine; even with extensive lobbying from the White House, the House of Representatives passed the Removal Act by only six votes (103 to 97). Representative William Ellsworth of Connecticut opposed Removal in a passionate speech delivered on the House floor, as he said, in part: “We must be just and faithful to our treaties. There is no occasion for collision. We shall not stand justified before the world in taking any step which shall lead to oppression. The eyes of the world, as well as of this nation, are upon us. I conjure this House not to stain the page of our history with national shame, cruelty, and perfidy” (Johansen, 1998, 275).

President Jackson’s adamant support of Indian removal placed him on a direct constitutional collision course with Chief Justice John Marshall, who was evolving legal doctrines vis-à-vis Native American land rights on which he had been working before Jackson was elected. The Cherokee cases, which came before Marshall’s U.S. Supreme Court between 1823 and 1832 would display, in broad and emphatic relief, how closely much of early nineteenth-century American life was connected to the land speculation machine that helped propel westward movement.

The removal of the “civilized tribes” from their homelands is one of the most notable chapters in the history of American land relations. Jackson’s repudiation of John Marshall’s rulings, which supported the Cherokees’ rights to their homelands, constituted contempt of the Supreme Court (an impeachable offense under the Constitution). The subject of impeachment was not seriously raised, however. During the incendiary years before the Civil War, the removals became intertwined with the issue of state’s rights vis-à-vis the federal government. Had Jackson followed Justice Marshall’s rulings, the Civil War might have started in the 1830s.

The assertion of states’ rights vis-à-vis Native American territorial sovereignty (against the background of removal legislation) provided the legal grist for an 1832 Supreme Court decision written by Chief Justice Marshall that has defined the relationship between Native Americans’ sovereignty and state’s rights for more than a century and a half.

Marshall’s opinions outlining Native Americans’ status in the U.S. legal system occurred as he defined the Supreme Court’s place in U.S. politics. When Marshall became chief justice in 1801, the Supreme Court was little more than a clause in the Constitution. For the next thirty-five years, Marshall played a major role in defining the Court as an insti-

tution. According to author Jean Edward Smith, if George Washington founded the United States, John Marshall legally defined it.

Chief Justice Marshall had long-run political differences with President Jackson, and he agonized over the conflicts between states’ rights and Native sovereignty. In 1831, in *Cherokee Nation v. Georgia*, Marshall held that the Cherokees had no standing in court to appeal the state of Georgia’s seizure of their lands. This situation troubled Marshall so deeply that he said at one point that he thought of resigning from the Supreme Court because of it. A year later, in *Worcester v. Georgia*, Marshall held unconstitutional the imprisonment by Georgia of a missionary (Samuel Worcester) who had worked with the Cherokees. The specific issue was the refusal of Worcester, while a resident on Cherokee land, to swear loyalty to the state of Georgia in conformance with a state law.

The case began when three white missionaries living on Cherokee territory refused to swear an oath of allegiance to the state of Georgia. They were arrested, chained to a wagon, and forced to walk more than twenty miles to jail. Two Methodist preachers who objected to the cruelty that accompanied the arrests were also chained and taken to jail. The three missionaries were tried, convicted, and sentenced to four years of hard labor at the Georgia state penitentiary. Two of them later swore allegiance and were released; one (Worcester) did not. When the case reached the Supreme Court (as *Worcester v. Georgia*), Justice Marshall wrote that Native nations had a degree of sovereignty that denied Georgia the right to compel an oath of loyalty.

Historians disagree over whether President Jackson actually said, “John Marshall has made his decision, now let him enforce it.” Whether Jackson expressed himself in those words may be a moot point; his implementation of removal flew in the face of the law as interpreted by Marshall in *Worcester v. Georgia*. Marshall wrote that the Cherokees had “always been considered as distinct, independent political communities, retaining their original natural rights . . . and the settled doctrine of the law of nations, that a weaker power does not surrender its independence—its right to self-government—by associating with a stronger, and taking its protection. . . . The Cherokee nation, then, is a distinct community, occupying its own territory, with boundaries accurately described, in which the laws of Georgia can have no force, and which the citizens of Georgia have no right to enter, but with the

assent of the Cherokees, or in conformity with treaties, and with the acts of Congress" (Worcester, 1975).

Marshall reasoned in *Worcester v. Georgia* that the Constitution, by declaring treaties to be the supreme law of the land, had adopted and sanctified previous treaties with the Indian nations. The words "treaty" and "nation" are "words of our own language," wrote Marshall, "selected in our diplomatic and legislative proceedings, by ourselves, having each a definite and well-understood meaning. We have applied them to Indians, as we have applied them to the other nations of the earth; they are applied to all in the same sense" (Worcester, 1975). Marshall defined Indian nations neither as totally sovereign nor as colonies, but as "domestic dependent nations." The Congress, however, fearing that a confrontation over states' rights could provoke civil war, took no action against Jackson.

Although Ross continued to protest removal for several more years, the state of Georgia coerced Cherokees to sell lands for a fraction of their value. Marauding immigrants plundered Cherokee homes and possessions. They destroyed the *Cherokee Phoenix's* printing press because it had opposed removal. The U.S. Army forced Cherokee families into internment camps to prepare for the arduous trek westward. As a result of unhealthy and crowded conditions in these hastily constructed stockades, many Cherokees died even before their Trail of Tears began. While failing in his efforts to stop removal, Ross did manage to gain additional federal funds for his people.

After almost six years of delays, the Trail of Tears was initiated in 1838. Before they were exiled from their homelands by force of arms, the Cherokees released a "memorial" expressing their feelings:

The title of the Cherokee people to their lands is the most ancient, pure, and absolute known to man; its date is beyond the reach of human record; its validity confirmed by possession and enjoyment antecedent to all pretense of claim by any portion of the human race.

The free consent of the Cherokee people is indispensable to a valid transfer of the Cherokee title. The Cherokee people have neither by themselves nor their representatives given such consent. It follows that the original title and ownership of lands still rests with the Cherokee Nation,

unimpaired and absolute. The Cherokee people have existed as a distinct national community for a period extending into antiquity beyond the dates and records and memory of man. These attributes have never been relinquished by the Cherokee people, and cannot be dissolved by the expulsion of the Nation from its territory by the power of the United States Government (O'Brien, 1989, 57).

In preparation for the Cherokees' removal, John Ross was evicted from his mansion to a dirt-floored cabin. When John Howard Payne, author of the song "Home Sweet Home," came to visit him at the cabin, just across the Georgia state line in Tennessee, the Georgia State Guard crossed the state line and kidnapped both men. Realizing that the federal government did not intend to protect the Cherokees, Ross and others reluctantly signed the Treaty of New Echota in 1835 and prepared, with heavy hearts, to leave their homes.

During 1838 and 1839, the U.S. Army removed the Cherokees by force, except for a few hundred who escaped to the mountains.

The Cherokees' phrase for their long, brutal march (*nuna-daa-ut-sun'y*, "trail where they cried") gave the march its enduring name. At least one-fourth of the Cherokees who were removed died along the way. Ross's wife Quatie was among the victims of this forced emigration. James Mooney described how the Cherokees were forced from their homes: "Squads of troops were sent to search out with rifle and bayonet every small cabin hidden away in the coves or by the sides of mountain streams. . . . Families at dinner were startled by the sudden gleam of bayonets in the doorway and rose up to be driven with blows and oaths along the trail that led to the stockade. Men were seized in their fields or going along the road, women were taken from their wheels, and children from their play" (Van Every, 1966, 242). A U.S. Army private who witnessed the Cherokee removal wrote: "I saw the helpless Cherokee arrested and dragged from their homes, and driven by bayonet into the stockades. And in the chill of a drizzling rain on an October morning I saw them loaded like cattle or sheep into wagons and started toward the west. . . . Chief Ross led in prayer, and when the bugle sounded and wagons started rolling many of the children . . . waved their little hands goodbye to their mountain homes" (Worcester, 1975, 67).

Despite the cruelty of the marches they were forced to undertake, and the death and disease that dogged their every step, the surviving members of the peoples who were removed to Indian Territory quickly set about rebuilding their communities. Much as they had in the Southeast, the Creeks, Cherokees, and others built prosperous farms and towns, passed laws, and set about organizing societies once again. Within three generations, however, the land that in the 1830s had been set aside as Indian Territory was being sought by non-Indians. At the turn of the century, as a rush for “black gold” (oil) inundated Oklahoma, the Allotment Act (1887) broke up the Native estate much as Georgia’s state laws had done a little more than a half century earlier. There would be no Trail of Tears this time, however: There was no empty land left to occupy.

Indian Reorganization Act

It has been more than eighty years since the passage of the Indian Reorganization Act (IRA) in 1934. During that time, there have been many opportunities to examine the conventional wisdom that it is a signal example of federal administrative reforms favorable to American Indians, reversing decades of land alienation and cultural abuses caused by the 1887 General Allotment Act. John Collier was Indian commissioner from 1933 to 1945 during President Franklin D. Roosevelt’s Democratic administration, and the IRA was Collier’s brainchild and the centerpiece of his reforms. Collier, a radical social worker who became an anthropologist, was both a prolific writer and a skilled propagandist. His books, *Indians of the Americas* (1947) and *From Every Zenith* (1962), have been widely read, and they put the best possible interpretation on the Indian New Deal. Until recently, conventional wisdom has followed Collier’s interpretation. The question remains, however: Was the IRA truly an Indian agenda, and was it fairly and intelligently applied? In short, how should one evaluate the IRA legacy?

A twenty-year appraisal of the IRA took place in conjunction with the annual meeting of the American Anthropological Association in 1953. It included John Collier himself, along with several prominent Indians and anthropologists. When the fiftieth anniversary of the IRA occurred in 1984, scholars, Indian leaders, and political activists began another reevaluation. The Institute of the American West, for example, held a conference at Sun Valley entitled “Fifty Years Under the Indian Reorganization Act—Indian Self-Rule,” in which many notables participated in a series of panels. Both appraisals during these reevaluations were uniformly positive.

In the past few decades, however, scholars have taken yet another look at the IRA and Collier’s administrative reforms. Kenneth Philp’s biographical study, *John Collier’s Crusade for Indian Reform, 1920–1954*, came out in 1977, and Lawrence Kelly’s *The Assault on Assimilation: John Collier and the Origins of Indian Policy Reform* appeared in 1983. Philp generally follows Collier’s favorable view of the IRA. Kelly, on the other hand, emphasizes the failure of the IRA legislation to attain Collier’s idealistic reform goals. He also faults the Collier administration for its failure to extend the Act’s limited benefits to the majority of Indians. Two other scholars who have written major reevaluations are Graham Taylor and Lawrence Hauptman. They, too, are critical of

the Indian New Deal as not being all that it was purported to be. We should also mention Deloria and Lytle, who present an insightful analysis of the IRA in *The Nations Within: The Past and Future of American Indian Sovereignty*.

In 1977 the American Indian Policy Review Commission reported its findings to Congress on the economic, social, and political conditions of the Indian tribes and nations. Its findings, as Graham Taylor observes, seem to indicate that the twin goals of the IRA (Indian economic development and the restoration of Indian self-determination through a council system of government) have been notable failures of existing Indian policy. As a result, as the Meriam Report found in 1928, American Indians continued to rank at the bottom of virtually every social indicator fifty years later.

New criticism of the IRA incorporates the views of traditional Indians, many of whom opposed the IRA and the Indian New Deal from its very beginnings. The traditional Indian movement has historically struggled to achieve three goals: (1) a viable land base for economic self-sufficiency and nationhood, (2) political self-determination through sovereignty under the treaties, and (3) cultural rights (language, religion, and heritage). John Collier's two aims under the Indian New Deal, on the other hand, were (1) to preserve the Indian people as a "race" and as distinct cultures, which Collier termed "grouphood," and (2) to preserve and develop resources, including land. The means to achieve these goals for Collier were "tribal" organization and economic incorporation under the IRA. For traditional Indians, however, the means to their goals is for the United States to return to the treaty relationship (treaty federalism) and to recognize the Indian peoples as sovereign with the right to self-determination.

The 1920s: Protest from the Pueblos

The first two decades of the twentieth century were particularly onerous for American Indians within the borders of the United States. Not only had the 1887 General Allotment Act resulted in reservation land loss and impoverishment, but the government's policy of Americanization and cultural assimilation ushered in a virulent period of ethnocide. One of the worst manifestations was the federal crackdown on Indian religious ceremonies. The proassimilationist Indian Rights Association led an

attack on "indecent" ceremonies among the Indian Pueblos of the Southwest, and the Board of Indian Commissioners deplored the fact that tribal rituals were still being conducted on many Indian reservations. In its 1918 report, the Board described the Indian dances as evil and a reversion to paganism. On April 26, 1921, Indian Commissioner Charles H. Burke issued Circular 1665, which outlawed the Plains Sun Dance and other traditional religious ceremonies and made them punishable by fines or imprisonment. The Native American (peyote) Church also came under attack. This period of Indian policy also saw many other instances of religious abuse.

About the same time that the assault on Indian culture and religion was occurring, Secretary of the Interior Albert B. Fall led an attack on Indian rights through his sponsorship of the Bursum and Indian Omnibus bills in Congress. The former bill would have confirmed white encroachment on sixty thousand acres of Pueblo Indian land, while the Omnibus bill sought to individualize remaining tribal assets, including timber, coal, and other minerals, thereby ending federal trusteeship responsibility. Fall also attempted to create a national park out of part of the Mescalero Apache Reservation bordering on his Three Rivers ranch, which would have enhanced the value of his own property. When oil was discovered on the Navajo Reservation in 1922, he issued a ruling that opened all executive order reservations to exploration by oil companies under the 1920 General Leasing Act. These were the federal Indian policies that struck at Indian sovereignty, especially in New Mexico, and that led to the protest from the Pueblos and the entry of John Collier as an advocate for Indian rights.

Instead of destroying Native societies and cultures through forced assimilation, John Collier believed in a policy of cultural pluralism and Indian administration through indirect rather than direct U.S. rule. The controversy over the Pueblo land grants (part of a larger struggle against landlessness stemming from allotment) and religious dancing led to the formation of the American Indian Defense Association in May 1923. Facing criticism from Collier, the Pueblo Indians, New Mexico democrats, and the 2-million-member General Federation of Women's Clubs, Fall was forced to resign from the Harding administration. He was replaced in 1923 by Dr. Hubert Work, who was described as the last of the frontier commissioners. Secretary Work was under the influence of Christian missionaries and

opposed Indian dancing, but he had to back off from former Commissioner Burke's order prohibiting the theocratic Taos and Zuni Pueblos from withdrawing selected Indian youth from Bureau of Indian Affairs schools for traditional religious training.

Despite Collier's advocacy work, the Bureau continued its policy of suppressing Indian religious ceremonies. The issue came to a head during the summer of 1925 at Taos when the Pueblos' officials disciplined two members of the Native American Church for invading traditional religious ceremonies. Acting unilaterally to "establish order," the Indian Bureau thereupon arrested virtually the entire governing body of Taos Pueblo. Collier's Defense Association provided bail and lawyers, and the All-Pueblo Council swung into action, denouncing the Bureau's effort to destroy Indian self-government. Collier took Pueblo representatives on a tour of Utah and California in the cause of Indian religious freedom and to raise money for its defense. Secretary Work denounced these activities, saying that "propagandists are touring part of the country with a company of dancing and singing Pueblos in full Indian regalia in order to awaken people to the 'crime' in New Mexico. There is no crime in New Mexico." Congressman Scott Leavitt of Montana sponsored a bill drafted by the Bureau that would give Indian superintendents the power to throw any reservation Indian in jail for six months and levy a \$100 fine without trial. Because of the work by the Defense Committee the Leavitt bill did not get out of committee.

In 1928, on the eve of the Indian New Deal, a government commission issued a landmark report to Congress, "The Problem of Indian Administration." Collier declared that the Meriam Report, as it was popularly called, had "blasted apart the walls of the dungeon called the Indian affairs system" and constituted a major indictment of the Indian bureau. The report made it clear that allotment policy had not produced assimilation and was, in fact, an unmitigated disaster judging by any social or economic indicator. The Indian population had actually decreased since the passage of the 1887 General Allotment Act. There were more landless Indians than before; Indian trust lands had decreased in value; family income was as low as \$48 per year on some reservations; the annual death rate had increased; and the Indian land base had shrunk from 137 million acres to a mere 47 million. Collier saw horrible material and spiritual decline as a result of the allotment policy.

As the Depression deepened, the Bureau began a retreat from instituting reform, and Congress was less inclined to vote for Indian appropriations. In March 1932, representatives of forty-nine Indian tribes petitioned the U.S. Senate, alleging that the Hoover administration had reneged on its promises for Indian reform as recommended in the Meriam Report. After his election in 1932, President Roosevelt received a document signed by more than 600 educators, social workers, and other concerned citizens, drawing attention to the extreme situation of the American Indians. The signers asserted that "your administration represents almost a last chance for the Indians."

The Indian New Deal (1933–1937)

Harold Ickes, who became FDR's new Secretary of the Interior, was a Chicago Progressive reformer and former director of the American Indian Defense Association. Ickes appointed Collier to become commissioner of Indian affairs on April 2, 1933. A cultural pluralist, Collier sought to reverse the policy of forced assimilation and its detrimental economic exploitation and land dispossession. He still believed in eventual assimilation, but at a slower and more equitable pace and without the loss of community solidarity and Indian values. He proposed that government follow a colonial policy known as indirect administration.

Upon taking office, Collier immediately instituted recovery measures legislated under the New Deal FDR administration. He successfully established a separate Civilian Conservation Corps (CCC, a jobs program for the unemployed) for Indians known as Emergency Conservation Work (ECW). The conservation of reservation lands and the training of Indians to utilize their own lands and resources distinguished it from the regular CCC. Before its demise in 1943, the ECW had employed 85,349 enrollees from seventy-one different reservations with a total of \$72 million in appropriations. The ECW was perhaps the most successful of Collier's Indian New Deal reforms, and it was very popular at the grassroots level on the reservations.

Collier initiated many other reform measures as well, all of which became known as the Indian New Deal. The assimilationist-minded Board of Indian Commissioners was abolished in May 1933, and by the following August Collier persuaded Ickes to declare a temporary cessation of further Indian land allotments, of the sale of allotted lands, of the

issuance of certificates of competency, and of similar measures. Of equal importance was the cancellation of debts owed by Indian tribes to the federal government. Because of the debt cancellation and the appropriation of more than \$100 million in relief programs, American Indians were able to survive the worst years of the Great Depression and even enjoy a higher standard of living than they had a decade earlier. In some respects, the impact of the Depression in the wider society was already reversing the process of assimilation by driving Indians back to their reservation homelands for economic survival.

Other Indian New Deal reforms included the creation of an Indian Arts and Crafts Board, a reservation court system, and a directive ordering the Indian Service to observe "the fullest constitutional liberty in all matters affecting religion, conscience and culture." The ban against religious dances was lifted, and government repression of Indian languages in Bureau schools was ended. The major accomplishment of the Collier administration, however, was the passage of the Indian Reorganization Act.

Indian Reorganization Act

In a meeting held at the Cosmos Club in Washington, D.C., in January 1934, Collier laid out his ideas for a basic piece of legislation to correct the evils of forty-seven years of allotment policy. To this meeting he had invited representatives from organizations that formed the nucleus of Indian reform: the American Indian Defense Association, Indian Rights Association, National Association on Indian Affairs, American Civil Liberties Union, National Council on American Indians, and the General Federation of Women's Clubs. Later the same month, he tested the waters for his ideas in a circular to reservation superintendents, tribal council members, and individual Indians in a document entitled "Indian Self-Government." Despite the mostly negative replies, Collier nevertheless advanced plans to draft a bill for major Indian reorganization. The primary thrust of Collier's draft legislation was self-government, a policy that ran directly counter to the previous policy of assimilation. The completed Collier bill contained forty-eight pages and four major titles, each divided into a number of substantive sections. The final Indian Reorganization Act (IRA) as passed by Congress, on the other hand, omitted important parts of two of Collier's original titles and one title altogether, the one dealing with a proposed Court of

Indian Offenses. Although the three remaining titles (self-government, education, and Indian lands) were all substantively reduced in content, they at least made it into the new law.

The bill was signed into law June 18, 1934, as the Wheeler-Howard, or Indian Reorganization, Act, but it bore little resemblance to Collier's original bill. Opposition to the Collier bill came from Indians who favored assimilation, western congresspersons (many of whom were reflecting special interests in their home states containing Indian reservations), missionaries, and Bureau personnel. The powerful Indian Rights Association still favored the melting pot concept, but hoped that the legislation with its provision for educational training would promote assimilation. Only the section of Title II in the original bill that dealt with education came through relatively unscathed. The act in its final form eliminated four key features of Collier's draft bill: (1) The tribes were denied the right to take over heirship lands; (2) the section setting up a reservation court system was eliminated; (3) social units smaller than the tribe, such as local or community level groups, were not empowered, although Alaska Native villages were later included when the IRA was amended in 1936; (4) the section on promoting Indian culture and traditions was deleted.

Self-government

Title I of the IRA gave Indian tribes the right to organize for the purposes of local self-government and economic enterprise. Collier's bill would have conferred limited self-government on reservation Indian groups or communities, treating them as municipalities, but the final version of the IRA limited this provision to tribal units only. The first step in the process was for a tribal committee to draft a constitution. Then an election would be held to ratify the constitution, with a majority vote of reservation members necessary for adoption. Approval by the Secretary of the Interior was also required. Congress modified this section of Collier's bill by cutting the annual appropriation for the organization of tribal governments from \$500,000 to \$250,000.

Deloria and Lytle, in *The Nations Within*, point out that the self-government provision of the IRA helped to define important powers of Native political entities. With the support of Collier, after the Act was passed, a ruling by the Solicitor of the Interior Department found that the powers conferred under the Act's self-government provision were inherent in the tribes' and nations' status as domestic dependent

nations. These powers are a tribe's right to adopt its own form of self-government, to determine tribal membership, to regulate the disposition of tribal property, and to prescribe the rules of inheritance on real and personal property.

Tribal business corporations

An emphasis on economic development was an important feature of the IRA. Upon receiving a petition from at least one-third of the adult reservation Indians, the Secretary of the Interior could issue a charter of incorporation. When ratified by a majority of reservation members, a Native tribe or nation could then engage in business enterprises. The IRA also established a revolving loan fund of \$10 million for economic development. This was twice the amount that Collier had suggested in his original bill.

Education and employment

The education provisions of Title II were not controversial, and Congress raised the appropriation from Collier's \$50,000 to \$250,000. Congress, on the other hand, limited the amount to loans rather than outright grants, and training was primarily for vocational education. An important clause in Title I waved civil service requirement for employment in the Indian service, thus establishing the principle of Indian preference in hiring. Omitted from Title II was Collier's draft section declaring that it would be the policy of Congress "to promote the study of Indian civilization, including Indian arts, crafts, skills and traditions." This entire section was struck. Congress, it would seem, was not interested in promoting the Indian heritage.

Indian lands

A key part of Title III was the section abolishing the 1887 Indian Allotment (Dawes) Act. Title III also declared it the policy of the United States to undertake a constructive program of Indian land use and economic development, with a pledge to consolidate Indian land holdings into suitable economic units. Two million dollars was set aside annually for land acquisition.

The new law also extended indefinitely the trust period of allotted lands as a protection against loss of Indian lands to non-Natives. Under the previous system, allotted lands were held in trust for twenty-five years, after which they were vested in the ownership of the Indian allottee. At the same time, however, they became subject to state taxes. As a result,

the Indian landowner almost always lost his land because of nonpayment of taxes or was forced to sell to a non-Indian.

The lands provisions of the Collier bill were so controversial in the congressional debate that its original twenty-one sections were reduced to eight, thus negating many of Collier's plans for significant land reform. The Collier bill had addressed the land alienation and heirship problems with language ensuring that previously allotted lands would be returned to tribal ownership. In the Collier draft, the Secretary of the Interior was empowered to compel the sale or transfer of trust allotments to tribal governments, and trust allotments not immediately returned would revert to tribal status upon the death of the landowner. Congress modified this section by making it voluntary rather than compulsory. In addition, the land title would now pass to the heirs and not to the tribe upon the death of the Indian landowner. This dealt a deadly blow to Collier's efforts to consolidate fragmented Indian parcels and return them to the tribal estate.

Under the IRA as passed by Congress, the Bureau of Indian Affairs became a real estate entity for thousands of Indian heirs possessing an interest in ever smaller pieces of inherited land from an original allotment. Today, the number of heirs to an original 160-acre allotment distributed under the 1887 Allotment Act in many cases exceeds one hundred. Tens of millions of dollars are lost every year to Indian tribes through the Bureau's practice of renting or leasing these uneconomical interests in allotted or heirship lands to non-Indian farmers and ranchers at low rates, who then combine the parcels into viable economic units. The heirship problem has continued to become more unmanageable with each passing generation. Because of allotment, which the IRA stopped but did not reverse, twenty-five reservations have greater non-Indian than Indian populations and thirty-eight have lost at least half of their original reservation land base to non-Indians.

Indian law and order

Title IV of the Collier bill that would have created a Court of Indian Affairs was eliminated entirely from the Indian Reorganization Act. It also would have removed IRA tribes from state jurisdiction in Indian cases, heirship cases, and appeals from tribal courts. Title IV also stipulated that law and order must be consonant with Indian customs and traditions. Although the then existing tribal court system needed significant improvement and stability, and

the federal attempt to deal with Indian legal problems was woefully inadequate, Collier realized that it was politic to give up Title IV more or less as a sacrificial lamb to a not too friendly Congress.

Voting

Part of the congressional debate concerned the voting or ratification by the tribes and nations for self-government under the IRA provisions. An early version of the bill merely specified "three-fifths of the Indians on the reservation or territory covered by the charter." The House bill changed this to a simple majority vote. Finally, a supplementary act passed in 1935 resolved the question to "the vote of a majority of those voting."

Collier lost out to Senator Burton Wheeler, a sponsor of the legislation, with respect to the blood quantum legal definition of an American Indian under the IRA legislation. Collier wanted one-fourth "blood," but Wheeler insisted on one-half "blood."

Within a year after the passage of the IRA the Secretary of the Interior was to call for a referendum election on the reservations. Each tribe was to discuss the provisions of the act and then vote on whether to accept or reject it. Senator Wheeler favored a simple majority vote, but Collier managed to insert language that would make the IRA operative on a reservation *unless a majority of the tribal members voted to exclude themselves from the Act*. In other words, the adult Indians not voting could be counted as voting for the IRA. In this way, Collier's stratagem resulted in more tribes and nations coming under the IRA than would otherwise have been the case. No matter how small the number of eligible Indians voting in favor of the IRA, by counting the nonvotes as "yes," IRA acceptance was virtually assured. A case in point is the Santa Ysabel tribe in California that came under the Act because sixty-two eligible tribal members who did not vote were counted as being in favor of adoption. Another example is the vote manipulation that took place on the bitterly divided Hopi Reservation. A plurality of Hopi "progressives" voted for the referenda while a larger number of traditional Hopi "voted" by not voting. The Collier administration nonetheless ruled that the Hopi had voted to accept the IRA. As Kenneth Philp points out in his biography of Collier, at least seventeen Native polities that voted to reject the Act were considered as being in favor of it. Collier knew that on many of the reservations the more traditional, full-blood Indians would refuse to participate in the IRA elec-

tions, preferring instead to assert their tribal sovereignty under the treaties.

A related feature of the Act was the provision that allowed a tribe only one chance to either accept or reject the IRA. Any benefits of the new law would be lost forever if a tribe wanted to take a wait-and-see approach.

When administrative manipulation of the voting was exposed, Collier was forced to agree that Congress should amend the IRA. In June 1935, an amendment was passed that extended the deadline for referenda for another year. It also clarified the voting requirements by stipulating that a majority of those voting would determine whether a tribe accepted the IRA or not. At the same time, a distressing feature of the majority rule amendment was that it also contained a provision that 30 percent of the eligible adult Indian population had to participate in the referendum in order for a majority of no votes to reject the Act. If the number of voters did not amount to 30 percent, then even an overwhelming number of no votes could not result in the IRA being rejected. On the other hand, the same rule did not apply for a tribe voting to accept the IRA. Theoretically, even a 1 percent voter participation could effect acceptance of the IRA.

Extending and applying the IRA

Because a number of nations and tribes did not want to participate in certain provisions of the new law, and because of political pressure brought by special interest groups, a section of the IRA provided for exclusions and modifications.

Congress passed the Alaska Reorganization Act on June 1, 1936, which included Alaska Natives at the village level under the IRA provisions. The original IRA, on the other hand, had limited its provisions to tribes only. Ultimately, sixty-six Alaskan Native groups adopted constitutions and corporate charters under this law. The Oklahoma Indian Welfare Act was passed in the same month, which included the Indian tribes of that state.

According to the reorganization plan, after a tribe or nation voted to accept the IRA, it would draw up a constitution and bylaws, submit it to a referendum, have the Secretary of the Interior certify the results, and then start operating as a corporate tribal council. Of the 181 tribes accepting the Indian Reorganization Act between 1934 and 1945, only ninety-six adopted a tribal constitution, and only seventy-three tribes ever received corporate business charters. Seventy-seven tribes with a population of 86,365 members rejected

the Act outright. Several of these were large reservation groups, such as the Klamath Indians of Oregon and the Crows of Montana. An especially bitter blow to Collier was the rejection of the IRA by the Navajo Nation. With 98 percent of the eligible Navajo voting, the tribe rejected the Act by 419 votes. The Navajo had not forgiven the Collier administration for its drastic livestock reduction program on the reservation, carried out ostensibly to protect the land against overgrazing, that had reduced many of the small herding families to destitution.

Councils vs. communities

Graham Taylor stood alone as the only contemporary critic to raise the question of Native political organization and the nature of Indian communities at the time the IRA went into effect. He believed that the Indian responses to the Act differed because each Indian group was at a different point on the assimilation-traditional continuum. There were great differences among the reservations in terms of intermarriage, English literacy, Anglo-American education, and acceptance of Christianity. These differences provoked factional strife on most reservations at the time. Many of the monolingual, full-blooded, traditional Indians were unfamiliar with parliamentary procedures, their aboriginal political systems having been a council of elders and chiefs acting on the unanimity principle. Consequently, many of the traditionals boycotted the IRA proceedings altogether. For most reservation Indians, the "tribal governments" established under the IRA constitutions were a totally new and unfamiliar form of political organization. At Hopi it was primarily the more acculturated villages on the First Mesa that strongly supported the IRA and drew up the tribal constitution, while the villages on the other mesas, being more traditional, either vacillated or withheld their support.

The misreading by Congress and Collier on the question of Indian social organization defies explanation because many of Collier's closest advisers were anthropologists. Yet Collier and his Applied Anthropology Unit, in pressuring Native peoples to accept the IRA, neglected the existing social organization of Indian communities, the nature of which varied tremendously from reservation to reservation. Many of the Six Nations Iroquois were still committed to a confederacy based on the clan system; the Choctaws, Cherokees, Chickasaws, and Creeks had a history of secular Indian republics; the Shoshones and Paiutes of Nevada, Utah, and

Wyoming were organized only at the level of the extended family band; the Rio Grande Pueblo societies were settled, agricultural villages run as theocracies; and the full-bloods among the Plains Indians were organized into a complex of band councils under traditional chiefs. If the goals of the Indian reform were cultural preservation and economic self-sufficiency, then it would have made sense for reorganization to be tailored to each specific situation. Instead, the "tribal" governments established under the IRA constitutions were a totally new and unfamiliar level of sociopolitical organization for many Indian populations.

Evaluation

John Collier continually defended the IRA and the Indian New Deal programs during his tenure as commissioner of Indian affairs. He was forced to appear before Congress several times to justify the reforms, and there were two attempts by Congress to repeal the Act, although both were ultimately unsuccessful. The House Appropriations Committee underfunded IRA programs, and by 1944 the Senate Committee on Indian Affairs had also come to oppose the commissioner and his program of Indian reform. Among the most active Indian opponents of the IRA was the American Indian Federation, which joined forces with American pro-Nazi groups in labeling Collier a communist.

In hindsight one can conclude that the self-government provisions of the IRA, although important, had a problematic impact on Indian communities, but Collier's most lasting achievement was economic development. Much of the Indian New Deal involved bringing needed resources to economically depressed reservation communities. Collier's economic policies also helped Indians rebuild their badly depleted land base, if only modestly; Indian land holdings increased from 48 to 52 million acres, and almost 1 million acres of surplus land was returned to Native tribes and nations.

Following Collier's resignation in 1945, federal Indian policy became stridently regressive for the next two decades during the termination and relocation policy periods in which the limitations of Indian "self-government"—the relative powerlessness of the tribes under the IRA—became apparent. Federal policy did not improve until the federal War on Poverty in the early 1960s and the resurgence of American Indian activism.

Indian Self-Determination and Education Assistance Act

Congress passed the Indian Self-Determination and Education Assistance Act (ISDEAA) in 1975 to implement its tribal self-determination policy. The Act began to loosen the tight grip of the Bureau of Indian Affairs (BIA) and several other federal agencies, such as the Indian Health Service (IHS), on the daily life of Indians and their tribal governments. Prior to passage of this law, the BIA and other federal agencies minutely regulated the delivery of educational, health, and a myriad of other services to the Indian people. The BIA, for example, operated a number of boarding schools, some for many years, with little meaningful input from tribal members or the tribal governments themselves. Some of these schools are still in existence.

Although this law deals primarily with the delivery of educational services, nearly all other federal support to Native Americans is also within the

purview of the Act. Such services include agriculture, health care, law enforcement, and other programs in support of tribal government.

Essentially, the ISDEAA permits the tribes themselves or any group chartered by the tribe's governing body to assume the responsibility for delivering federal services to tribal members. Contracting organizations other than the tribe itself must meet certain requirements before they are eligible to enter into such agreements with the federal government. Elementary and high schools located on a reservation are among the most common organizations that have so-called 638 contracts (named after the number of the Indian Self-Determination and Education Assistance Act, Public Law 93–638). Where the BIA itself operates boarding or day schools for Indian students, it oversees every detail of their operation. Under the Act, the tribes and local tribally chartered schools contract with the BIA for it to take over school operations. The BIA or other agency allocates a fixed sum to the contractor, which must then furnish the services to the tribe.

This law also strengthens the Johnson-O'Malley (JOM) Act of 1934 by requiring all off-reservation schools that receive federal funding for the education of Indian children to involve Indian parents in decisions over how those funds shall be used. Local committees of Indian parents have considerable authority over how local schools may spend JOM monies.

The Act is not without its critics, however. Although tribes and allied organizations now deliver these services using their own employees, buildings, and equipment, the federal government retains significant oversight over the contracts. The government must approve each contract and must be provided with data regarding accounting practices, equipment, personnel, and other important details of the proposed contract. If the government is not satisfied with the agreement, it may reject it despite local community support. The contractor may, under the Administrative Procedures Act of 1946, appeal that rejection to the highest levels of the executive branch and ultimately to the federal courts. Such appeals, of course, are lengthy and expensive.

Some critics see the law as one step back toward the termination of federal responsibility for Indian services. They reason that the next step beyond turning over the running of federal programs to the tribes is eventually to end that assistance to the tribe entirely. Nonetheless, the current trend is to expand

the number of federal programs to be operated by Indian tribes.

Later amendments to the law established a pilot project for ten tribes to take over the activities previously conducted for them by the BIA and IHS. In addition to those already mentioned, these endeavors include resource conservation, land use planning and zoning, among others. Many tribes have only limited 638 contracts with the government. These agreements must be negotiated one at a time. These tribes chosen for the pilot program administer all federal services themselves. Additionally, unlike the usual 638 contracts, the tribes chosen for this program have much more latitude in designing or altering their programs to meet the needs of their people and in reallocating the funds among the different programs. These 638 contracts are similar to block grants, in which recipients may use the funds in nearly any way they wish, subject only to some very limited restrictions.

Individual Indian Monies

The Individual Indian Monies (IIM) scandal has become the stuff of political and legal legend since the *Cobell v. Norton* class action was first filed in 1996. With half a million plaintiffs, the case concerning the abuse of royalty accounts for Native Americans kept by the federal government has become the largest class action ever filed against the U.S. government. Employing more than 100 lawyers on the payrolls of the Interior and Treasury departments, *Cobell v. Norton* (after Elouise Cobell, lead plaintiff, and Gale Norton, Secretary of the Interior) has become the largest single employer of federal legal talent in the history of the United States.

How much money is at stake? In 1997, the commonly accepted figure was between \$2 and \$3 billion. By late 2002, lead prosecutor Dennis Gingold placed the figure at “far north of \$10 billion” (Kennedy, 2002). A report prepared for the Interior Department suggested that the federal government’s total liability might reach \$40 billion.

On December 21, 1999, Judge Royce C. Lamberth, who supervised the case from Washington, D.C. Federal District Court, issued his first (Phase

One) opinion (the case is divided into two phases). The 126-page opinion stated that the government had massively violated its trust responsibilities to Native Americans. He called the IIM mess the “most egregious misconduct by the federal government.” While *Cobell v. Norton* is certainly a high-stakes case, such a superlative overstated its historical scope. Perhaps it is the most egregious example of *financial* misconduct in a trust relationship by the U.S. government, which in its two-plus centuries has done worse to Native Americans than lose several billion dollars.

Judge Lamberth later ordered the government to file reports quarterly describing in detail its efforts to account for the monies. The judge also ordered the Interior and Treasury Departments to compile an audit of the Individual Indian Monies trust fund system reaching to its origins in 1887.

Judge Lamberth is a Republican appointee, a Texan with a taste for fancy boots and large cars, who seemed, on the surface, unlikely to take a serious interest in a Native American class action suit. However, he possessed a keen knowledge of bureaucratic politics and an ability to read and comprehend vast amounts of information. Like fishing rights judge George Hugo Boldt (also a Republican appointee), Lamberth also possesses a sharp sense of justice, regardless of vested interests. Like Boldt, he also has been hardworking and ruthlessly judicious.

The Education of an Indian Accountant

The IIM case produced evidence of what must have been the world’s sloppiest banking record keeping. Even Elouise Cobell, who initiated the suit, has been amazed at the sorry state of the BIA’s banking “system,” if it can be called that. Cobell, a member of the Blackfeet tribe and a banker by profession, filed the suit in 1996. Cobell, of Browning, Montana, founded (and still has a hand in operating) the first Native American-owned bank in the United States. She also served as treasurer of the Blackfeet from 1970 through 1983.

Cobell’s education in the BIA’s ways of banking began with a detailed examination of the Blackfeet’s trust accounts. After Cobell discovered a number of problematic transactions, she began asking questions. Her initial inquiries were rebuffed by the BIA. “They said, ‘Oh! You don’t know how to read the reports,’” Cobell recalled. “I think they were trying

to embarrass me, but it did the opposite—it made me mad” (Awehali, 2003).

Cobell has spent much of her life in and near the reservation town of Browning, Montana. She was one of eight children in a house with no electricity or running water. The major form of entertainment was old-fashioned: oral history, sometimes describing Baker’s Massacre, during which U.S. soldiers killed about two hundred Blackfeet, a majority of them women and children, following an ambush near the Marias River. She also sometimes heard stories from her parents and their neighbors about small government checks that bore no relationship to reality.

Cobell spends much of her time tutoring Blackfeet and other Native peoples in how to best start their own businesses. She also helps with chores on a ranch that she co-owns with her husband, Alvin. During a sojourn off the reservation in her twenties (she was nearly fifty in 2004), Elouise met Alvin, who is also Blackfeet, in Seattle. He was fishing off the Alaska coast, and she held a job as an accountant with a Seattle television station.

At the age of thirty, Cobell returned to Browning with Alvin, to resume a life on the family ranch. She also was offered a job as the reservation government’s accountant. At the time, Browning had practically no Native-owned businesses; unemployment rose to more than 70 percent in the winter (which can last into May), when construction employment ceased. She found the Blackfeet accounting system “in total chaos” (Kennedy, 2003). Some trust accounts were being charged negative interest. Checks were being posted against accounts without her knowledge, even though she was supposed to be the only valid signatory. In 1987, Cobell moved on to start the first Native-owned bank in the United States, mainly to help finance local business ventures. In a few years, she could point to several businesses that she had helped to finance: the Glacier Restaurant, Browning Video, the Dollar Store (Kennedy, 2003).

Years before the class action suit was filed, Cobell asked questions within the system. As she began to delve into the trust issue on a national basis, in Washington, D.C., Cobell was introduced to Gingold, the lead prosecuting attorney for the case, who was quoted in the *Los Angeles Times* as saying of his first meeting with her: “From my experience, American Indians were not involved in banking. I was looking for a bunch of people with turbans” (Kennedy, 2003). Gingold admitted that he had a

great deal to learn about how the government had separated Native Americans from their trust assets.

Cobell did not decide to file suit lightly, but only after several rebuffs by the government that displayed an unwillingness to take the trust accounts problem seriously. She realized that large legal actions were massively expensive. Her years of activism and her experience as the Blackfeet’s accountant had suggested some sources of support, however. She contacted the Arthur Bremer Foundation of St. Paul, Minnesota, and won a \$75,000 grant and a \$600,000 loan. In 1997, a year after she filed the class action suit, Cobell also received, quite unexpectedly, a \$300,000 genius grant from the John D. MacArthur Foundation, most of which went into the case. Shortly after that, J. Patrick Lannan of the Lannan Foundation read about Cobell’s MacArthur grant, and traveled to Browning to meet with her. Lannan eventually donated \$4 million to the cause. By mid-2002, the cost of the legal action had reached \$8 million, still barely a drop in the proverbial bucket next to the hundreds of millions of dollars in tax money that the federal government has spent to defend itself.

Some in the government saw the problem coming before Cobell filed suit. During 1992, the House of Representatives Committee on Government Operations issued a report, “Misplaced Trust: The Bureau of Indian Affairs’ Mismanagement of the Indian Trust Fund.” During 1994, Congress passed the Indian Trust Fund Management Reform Act, with the stated aim of cleaning up the mess. As part of this law’s implementation, Paul Homan, an expert at cleaning up failing private financial institutions, was hired. Homan, having taken stock of the situation, later quit in disgust, describing a banker’s nightmare.

The BIA, for example, did not establish an accounts receivable system, so it never knew how much money it was handling at any given time. Partial records indicated that more than \$50 million was never paid because the BIA had lost track of account holders. About 21,000 accounts were listed in the names of people who were dead. Large numbers of records had been stored in cardboard boxes, left to soak (and smear) in leaky warehouses. About \$695 million had been paid—but to the wrong people or Native governmental entities. One property record valued chain saws at \$99 million each. Some of the records were contaminated with asbestos, and others had been paved over by a parking lot. As he resigned, Homan said he had never seen anything like this in his thirty years as a banker.

Before he quit, Homan reported that no one knew just how many people were owed money. Of the 238,000 individual trusts that Homan's staff located, 118,000 were missing crucial papers, 50,000 had no addresses, and 16,000 accounts had no documents at all. Homan further reported that one could assume money had been skimmed extensively from the trust: "It's akin to leaving the vault door open," he said (Awehali, 2003).

In the meantime, before a dime has been paid to any of the half million Native people who are part of the class action, the Bush administration requested \$554 million in its 2004 budget to "reform" the trust fund, an increase of \$183.3 million over the \$370.2 million budgeted in 2003. "Reform" in this case means, to a large degree, paying legal talent to resist the class action suit. In a January 2001 interview with Harlan McKosato on the national radio show, "Native America Calling," Cobell noted that "just by not settling the case, it's costing the government and taxpayers \$160,000 an hour, \$7 million a day, \$2.5 billion a year" (Awehali, 2003).

"Pen and Ink Witchcraft"

With the government's mismanagement now so widely known, a sensible person might conclude that the time had come to find a way to reimburse the many Native people who have been cheated. If you are one of the 500,000 Native Americans who unwillingly did your banking with the BIA, when might you expect a corrective check in the mail? Don't hold your breath. If the Bush administration has its way, you could turn very blue before the guarantor of your trust makes you, as they say in financial litigation circles, "whole."

The spin doctors in the White House probably didn't realize that their designs resemble some treaty negotiations for its Alice-in-Wonderland quality (things are never what they seem). In 1791, the famed Ottawa speaker Egushawa, observing treaty negotiations, called such machinations "pen and ink witchcraft."

What Egushawa witnessed had nothing on the trust money mess. After eight years of legal song and dance by the federal government, the central fact of the case is this: The BIA and Treasury Department never built a record-keeping system capable of tracking the money owed to Native Americans based on income from its superintendency of their resources.

As time passed (the system, in its modern form, began with the advent of the Allotment Act in 1887), the lack of a functioning banking system made record keeping worse; the sloppiness of errant (or nonexistent) record keeping was compounded, for example, because of the divisions of estate required by generations of fractional Native inheritances. By the time Cobell and a few other banking-minded Native Americans began asking, seriously, what had become of their individual Indian monies, the Interior Department, by and large, did not have a clue.

In an average year, \$500 million or more was deposited into the Individual Indian Trust from companies leasing Native American land for grazing, oil drilling, timber, coal, and other natural resources. According to law and financial theory, the money is collected by the Interior and sent to the Treasury, where it is supposed to be placed into individual trust accounts. Problems began with the roughly 50,000 accounts that lacked names or correct addresses. One such account contained \$1 million (Awehali, 2003). Along the way, it also was learned that some companies simply neglected to pay as expected; they soon learned that, much of the time, no one seemed to be watching.

As early as 1999, the plaintiffs' legal team discovered that the Departments of the Interior and Treasury had "inadvertently" destroyed 162 boxes of vital trust records during the course of the trial, then waited months to notify the court of the "accident." "You tell me if that's fair," Cobell told Mike Wallace in a *60 Minutes* interview shortly after the discovery. "When they have to manage other people's money according to standards, why aren't they managing our money to standards? Is it because you manage brown people's money differently?" (Awehali, 2002).

Judge Lamberth was shocked when he discovered, in the course of the lawsuit, that the Interior and Treasury Departments had, as a matter of course, destroyed accounting documents and filed false reports with the court. In the course of the litigation, thirty-seven past and present government officials, including Bush's Secretary of the Interior Gale Norton and Clinton's Interior Secretary Bruce Babbitt, were held in contempt of court. On August 10, 1999, Lamberth ordered the Treasury Department to pay \$600,000 in fines for misconduct.

As he delved into the trust account debacle, Lamberth found that some records were stored in rat-infested New Mexico warehouses. Others were dispersed haphazardly on several remote reservations. When the Interior Department kept computer-

ized records at all, they were so inadequate and insecure that hackers could set up their own accounts (and presumably draw money from them).

During the first phase of the case, many experts testified that the Interior and Treasury lack the records to render any semblance of true accounting for the monies that the government was supposed to be managing. Instead, the plaintiffs suggested various methods of estimating what is owed. For example, the Geographic Information System (GIS) might use satellite-mapping technology to estimate the amount of oil produced by wells on Native lands and thereby derive an idea of royalties owed.

The “Midnight Rider”

In September 2003, Judge Lamberth ordered the Interior Department to conduct a thorough investigation into money that was supposed to be paid to Indians for oil, gas, timber, and grazing activities on their land, dating back to 1887. He said that the accounting must be completed by 2007.

Responding to Lamberth’s first-phase opinion and this directive, Cobell was enthusiastic at the time. “This is a landmark victory,” she said. “It is now clear that trust law and trust standards fully govern the management of the Individual Indian Trust and that Secretary Norton can no longer ignore the trust duties that she owes to 500,000 individual Indian trust beneficiaries” (Awehali, 2003).

The idea of a complete accounting, which sounded so simple, suddenly became very problematic in the land of pen-and-ink-witchcraft. The Interior and Treasury, with their allies on Capitol Hill and in the Bush White House, prepared a hastily inserted “midnight rider” to a federal spending bill that forbade spending that would have implemented Lamberth’s directive. Funding, according to the rider, was to be frozen for a year or until an accounting methodology could be agreed on by the Interior, Treasury, and Congress.

In the meantime, the Interior Department was reported by several news organizations as complaining that the type of historical accounting required by Judge Lamberth’s ruling would take ten years and cost \$6 to \$12 billion. Some feat of accounting that would be—the accounting equivalent, perhaps, of building the Panama Canal or putting many men on the moon, a rubber figure with an odor of obstructionist politics. (To illustrate just how rubbery the estimate is, let’s crunch a few round numbers. At \$100,000 each per year, very good pay for an accoun-

tant, \$10 billion would hire a hundred thousand accountants. Even if they worked ten years each, \$10 billion would still pay 10,000 number crunchers. Add a few zeroes here and there, and soon we’re talking some very serious money. Bear in mind that the folks who came up with these quick estimates work at the same agencies that lost track of all that Native American money in the first place.)

With a federal budget deficit approaching \$500 billion a year (including Iraq and Afghanistan war and reconstruction liabilities running at least \$87 billion a year), the Bush Administration and the then Republican-controlled Congress seemed unwilling to seriously consider paying up a century-plus of Indian trust money bills that could cost as much as \$40 billion—the bill that could come out of the second phase of the case, once the Interior and Treasury assessed the due bills, as ordered by Judge Lamberth. The midnight rider was sponsored in large part by a Republican-controlled executive branch and Congress that added 721,000 federal jobs to the federal payroll during George W. Bush’s first term as president.

About fifty Republicans voted against the appropriations bill containing the rider, however, led by Representative Richard Pombo (Republican, California), chairman of the House Resources Committee, with Representative J. D. Hayworth (Republican, Arizona), cochair of the bipartisan House Native American Caucus. Pombo, who favors a legislative solution to the court case, called the rider a “poison pill that was added to the legislation in blatant violation of House rules and protocol” (Reynolds, 2003). The rider passed narrowly, 216–205, on October 30, 2003.

The Senate passed the spending bill (with the midnight rider) 87–2 on November 4, and sent it to Bush for his signature November 10. Cobell sharply criticized President Bush’s administration, including Interior Secretary Norton, for sponsoring the rider. Said Cobell, “What this vote shows is the length that the Interior Secretary and the Bush administration will go to in their efforts to deny Indians the accounting for funds that belong to Indians—not the federal government. Now American Indians are being victimized once again by politicians in Washington” (Reynolds, 2003). Cobell said that she expected the courts to strike down the rider as an illegal interference with the judicial process, a violation of the Constitution’s separation of powers.

“It’s a clear act of bad faith to seek a stay based on an unconstitutional statute,” said Gingold

(Appeals Court, 2003). The Senate's legal counsel and House members from both parties said the provision is probably unconstitutional because the administration cannot dictate to courts how to interpret the law.

Wither the Trust Fund Billions?

So wither the trust fund case? When all is said and done, will the plaintiffs in *Cobell v. Norton* ever get anything close to what they are owed? While optimism is always in season and justice sometimes does actually prevail, there is ample precedent in United States legal history vis-à-vis Native Americans to create doubts that right and reasonable outcomes follow the opinions of courts presided over by hardworking, honest judges, even after the government has copiously admitted its errors.

Some historical parallels present themselves: John Marshall, chief justice of the U.S. Supreme Court, found in favor of the Cherokees' sovereignty; President Andrew Jackson ignored him and his Court, leading to the Trail of Tears. Jackson's action was an impeachable offense—contempt of the Supreme Court and a violation of his oath of office. It was never prosecuted because Georgia made a states' rights case that could have started the Civil War thirty years before it actually began.

More recently, during the mid-1970s, the courts found in favor of a 250,000-acre land claim for the Oneidas. Thirty years later, they have yet to receive any land from this legal proceeding.

Might *Cobell vs. Norton* end up being another perpetual motion employment engine for lawyers, and another reminder that sometimes the legal system talks the talk as the executive branch fails to walk the walk of justice? Or might the contending parties, with judicial prodding, find a way to at least estimate what is owed the plaintiffs and take the necessary steps to pay them? The next few years may provide an answer, after the second phase of *Cobell v. Norton* is adjudicated and a final ruling is issued—but not by Judge Lamberth, who, in a virtually unprecedented decision, was ousted from the case by a U.S. Court of Appeals in 2006.

Senator Ben Nighthorse Campbell, who is Cheyenne, has insisted that all parties to the Cobell litigation must work together to resolve the case; he believes that, otherwise, it may not be resolved at all. "We have one year to reach settlement on this issue," he said during a hearing of the Senate Committee on Indian Affairs, as it considered his bill,

S. 1770, to encourage individual beneficiary settlements in the lawsuit (Reynolds, 2003).

Native-owned companies could benefit from the requirement that the Interior Department compile an accounting for the 117-year record of Indian trust fund mismanagement. Earnings for such work may reach \$50 million by some estimates. Tlingit and Haida Technology Industries has applied to do some of the court-ordered accounting work, according to Dan DuBray, an Interior Department spokesperson quoted in the Fairbanks *Daily News-Miner* and the Juneau *Empire*, both on November 5, 2003.

Blackfeet History at Ghost Ridge

"I've heard from friends that the government thinks I'm tired and that they'll wear me down, so that I'll just go away," said Cobell (Awehali, 2003). Near Cobell's hometown a marker describes the winter of 1884, when 500 Blackfeet died of starvation and exposure while awaiting supplies promised them by the federal government. The dead were buried in a mass grave that is now called Ghost Ridge. During the more difficult stages of the lawsuit, Cobell said she has visited Ghost Ridge, thinking of her ancestors who perished in the cold 120 years ago, while waiting for the government to fulfill its promises (Awehali, 2003).

The Blackfeet starved as U.S. Indian Agent John Young hoarded food that would have allowed them to survive. From Ghost Ridge, it is not difficult to draw parallels to the entire course of Indian-European-American relations, most notably to the case at hand. Once again, Native land and fiscal resources were taken, hoarded in faraway places, as the promises of the "trust" relationship between the United States and Native peoples were massively abused.

James Bay and Northern Quebec Agreement

The James Bay and Northern Quebec Agreement (JBNQA) was signed in 1975 and represents the first treaty in what has become Canada's modern treaty period. It also continues a long history of treaty making between the First Nations and the crown and, later, Canada. Treaties were regularly utilized by the crown from the 1870s until 1921, when the last of the numbered treaties, Treaty 11, was signed. A five-decade moratorium on treaty making followed. Canadian officials distanced themselves from engaging the First Nations in treaties largely because the land previously required to promote Canada's nation-building efforts had already been obtained from them. As federal officials found out in the early 1970s, however, territorial occupation did not necessarily signify fee simple title. This issue exploded when the James Bay Crees initiated an aggressive lobby effort demanding a formal treaty relationship that would protect their territorial integrity.

All of the lands that comprise the JBNQA area were at one time within the demarcated region known as Rupert's Land. Officially the domain of the Hudson's Bay Company, the land in question was ceded to Canada in 1868. In 1870, by imperial order in council, crown officials agreed to obtain formal title to the lands through treaties with the First Nations, a process that never occurred. Two boundary extensions—in 1898 and 1912—resulted in the

transfer of territorial title to the province of Quebec, the latter of which promised formal recognition of the rights of the Indians inhabiting the lands. In return, the Indians were to release their rights to the province, and any agreements would then have to be approved by order in council, a commitment that was never honored. Nevertheless, Native people continued to utilize the vast region because the only non-Native presence consisted of a handful of Hudson's Bay Company employees, missionaries, and some members of the federal department responsible for Indian affairs.

Due to limited outside interest in the region, little thought was given to aboriginal rights in Quebec. The Native territorial presence notwithstanding, provincial officials in the mid-1960s began researching the region's hydroelectric potential. By 1971, the province of Quebec announced its intention to initiate development of the James Bay hydroelectric project. The project that government officials had in mind, however, would require blocking and, in certain cases, diverting rivers within the James Bay drainage basin. Subsequently, the province established the James Bay Development Corporation to develop all the territory's resources, which included hydroelectricity, forestry, mining, and tourism. Provincial officials failed to consult with the 10,000 Crees and 5,000 Inuits who occupied the area, people who discovered through media reports that their homeland was destined to be flooded.

The Crees quickly mobilized. Community leaders held information sessions and developed a political strategy they anticipated could end the onslaught of workers and heavy machinery moving into their territories. In 1972, the newly formed Quebec Association of Indians petitioned the Quebec Superior Court for an injunction to stop all construction in the region. The injunction was granted on the grounds that the province of Quebec had failed to settle all outstanding land claims as required by the 1898 and 1912 boundary extensions. This decision was overturned within days, once again opening the region to hydroelectric development. Many Native leaders, however, optimistically viewed the decision as affirming their claims and once again lobbied the provincial government for a land claim agreement.

By 1974, the Crees and Inuits of northern Quebec, the governments of Canada and Quebec, and the Quebec Hydro-Electric Commission concluded an agreement in principle, which led to the signing of the JBNQA in November 1975. Early in the negotiations, Cree Indians formed the Grand Council of

George Manuel (from left), president of the National Indian Brotherhood; Aurilien Gill, 3rd vice president of the Association of Indians, and Chief Max Louis, 2nd vice president of the Association of Indians speak in November 1974 at a news conference discussing the agreement between the James Bay Cree and the Quebec government. The agreement was finalized in 1975 and was the first treaty in the modern Canadian treaty period. (Bettmann/Corbis)

the Cree (of Quebec), with one chief and leaders from each of the eight Cree communities comprising the organization's board of directors. An executive group of four regional leaders was then selected, whereupon the Grand Council took over negotiations. Even though they represented the Cree people in negotiations, the Grand Council was not empowered to act without consulting the people at the community level. In sum, the Cree people remained the final decision makers.

The JBNQA total compensation package was worth \$225 million, a sum to be paid over a period of twenty years to the Cree Regional Authority and to the (Inuit) Makivik Corporation, on behalf of the Inuit, by the Canadian and Quebec governments. This modern-day treaty settled all outstanding Native land claims in northern Quebec at that time. It also defined Native rights and established regional land use regimes for both Native and non-Native people in the region and among

local, regional, provincial, and federal governments. The Crees retained 3,100 square miles of territory while the Inuit retained 5,000 square miles of settlement land, in addition to exclusive harvesting rights over an additional 10,000 square miles of land. The JBNQA effectively extinguished Aboriginal title to 600,000 square miles of land (McCutcheon, 1991).

Under the JBNQA, the territory was divided into Category I, II, and III lands. Category I lands are for the exclusive use and benefit of Native people. Category II lands belong to the province, but Native governments share in the management of hunting, fishing and trapping, tourism development, and forestry. Native people have exclusive hunting, fishing, and trapping rights on these lands. Category III lands are a special type of Quebec public lands, whereby Native and non-Native people may hunt and fish subject to regulations adopted in accordance with the JBNQA. A provision was

The James Bay hydroelectric project flooded many Cree and Inuit lands. (Christopher J. Morris/Corbis)

included requiring the province to monitor the environmental impact and the social effects of development. Committees have also been established to advise governments about environmental issues, policies, and regulation. Each committee consists of federal, provincial, and Native representatives.

The JBNQA also recognized a form of Aboriginal self-government. Accordingly, Inuit communities were incorporated as municipalities under Quebec law, and municipal powers are delegated to them by Quebec legislation. Quebec also established the Cree Regional Authority to assist in creating services for Cree communities. Cree and Inuit school boards were also established as part of the agreement, with a special mandate and unique powers enabling them to adopt culturally appropriate educational programs. Canada and Quebec jointly fund the school boards, with Canada paying 25 percent of the Inuit budget and three-quarters of the Cree budget. A coordinating committee of federal and provincial representatives and Native delegates was established to administer, review, and regulate wildlife harvesting, while

ensuring that Native rights to hunting, as acknowledged in the agreement, are not abused.

Implementation of the agreement began almost immediately. However, the process was uneven and the results varied from community to community. Cree and Inuit leaders both identified problem areas and lobbied the federal and provincial governments to meet their obligations as outlined in the JBNQA. In 1982, all involved approved of a review of the JBNQA implementation process to deal with the concerns identified by the Crees and Inuits. Unfortunately for Cree and Inuit leaders, the implementation review focused specifically on the adequacy of program support up to 1981 and failed to resolve many fundamental problems plaguing program implementation or any of the anticipated problems. During this period, however, constitutional issues were the leading political issue in Canada, and Native people recognized that their treaty rights had constitutional protection. With the JBNQA now a constitutionally protected treaty, Crees and Inuits began aggressively lobbying both provincial and

federal officials through the media for improved program implementation.

By 1986, the Canadian government approved the establishment of a mediated negotiation process between JBNQA beneficiaries and federal and provincial officials. The overarching goal was to address what had by now become problems endemic to the implementation process. Four years of protracted negotiations followed, leading to an agreement between the Canadian government and the Inuit in September 1990. The heart of the final agreement calls for the Inuits to receive a lump sum payment of \$22.8 million in lieu of relieving the federal government of its financial obligations pursuant to the JBNQA. Pending final implementation of this agreement, all matters related to the Inuits and the JBNQA will be resolved. Despite the resolution of the Inuit negotiations, the Crees and the federal government have not come to terms. The Crees maintain that the operational matters associated with the implementation process must first be addressed before final-stage negotiations may proceed.

The cash and natural resources provided to the Crees by the JBNQA have proven inadequate to the people's needs. What appeared to be a large sum of money in 1975 turned out to be modest in relation to the costs of social and economic development and of self-government. Despite problems concerning the final agreement, however, the Crees are now well versed in the language of politics. They have also come to the realization that, notwithstanding their poor relations with the federal and provincial governments and project developers, they are capable of maintaining a political strategy to their benefit. Negotiations between true equals may be the only way to resolve a process now entering its second generation of negotiations.

Lancaster, Pennsylvania, Treaty Councils

In 1742, Pennsylvania officials met with Iroquois sachems in council at Lancaster to secure an Iroquois alliance against the threat of French encroachment. Canassatego, speaker (tadadaho) of the Haudenosaunee (Iroquois) Confederacy, spoke on behalf of the Six Nations to the Pennsylvania officials. He confirmed the League of Friendship that existed between the two parties and stated that "we are bound by the strictest leagues to watch for each other's preservation" (Colden, 1902, 2: 18–24).

Two years later, Canassatego would go beyond pledging friendship to the English colonists. At Lancaster, Pennsylvania, in 1744, the great Iroquois chief advised the assembled colonial governors on Iroquois concepts of unity:

Our wise forefathers established Union and Amity between the Five Nations. This has made us formidable; this has given us great Weight and Authority with our neighboring Nations. We are a powerful Confederacy; and by your observing the same methods, our wise forefathers have taken, you will acquire such Strength and power. Therefore whatever befalls you, never fall out with one another (Van Doren and Boyd, 1938, 75).

Richard Peters described Canassatego at Lancaster as "a tall, well-made man," with "a very full chest and brawny limbs, a manly countenance, with a good-natured [sic] smile. He was about sixty years of age, very active, strong, and had a surprising liveliness in his speech" (Boyd, 1942, 244–245). Dressed in a scarlet camblet coat and a fine, gold-laced hat, Canassatego is described by historical observers

such as Peters as possessing an awesome presence that turned heads whenever he walked into a room.

Benjamin Franklin probably first learned of Canassatego's 1744 advice to the colonies as he set his words in type. Franklin's press regularly issued Indian treaties in small booklets, which enjoyed a lively sale throughout the colonies, from 1736 until the early 1760s, when his defense of Indians under assault by frontier settlers cost him his seat in the Pennsylvania Assembly. Franklin subsequently served the colonial government in England.

Canassatego's admonition would echo throughout the colonies for many years. For example, colonial representatives called upon them some thirty years later at a treaty council near Albany.

After some preliminaries, the sachems and treaty commissioners began their deliberations in earnest on August 24, 1775, at Cartwright's Tavern in Albany, New York. On the next day, the treaty commissioners (who had specific instructions from John Hancock and the Second Continental Congress) told the sachems that they were heeding the advice Iroquois forefathers had given to the colonial Americans at Lancaster, Pennsylvania, in 1744. At this point, the commissioners quoted Canassatego's words:

Brethren, We the Six Nations heartily recommend Union and a good agreement between you our Brethren, never disagree but preserve a strict Friendship for one another and thereby you as well as we will become stronger. Our Wise Forefathers established Union and Amity between the Five Nations . . . we are a powerful Confederacy, and if you observe the same methods . . . you will acquire fresh strength and power (Proceedings, n.d.).

The Americans then said that their forefathers had rejoiced to hear Canassatego's words, which sank

deep into their Hearts, the Advice was good, it was Kind. They said to one another, the Six Nations are a wise people, let us hearken to their Council and teach our children to follow it. Our old Men have done so. They have frequently taken a single Arrow and said, Children, see how easy it is broken, then they have tied twelve together with strong Cords—And our strongest Men could not break them—See said they—this is what the Six Nations

mean. Divided a single Man may destroy you—United, you are a match for the whole World (Proceedings, n.d.).

In this statement, the commissioners were not merely engaging in diplomatic protocol to flatter the Iroquois; they were actually summarizing a historical process of assimilating Iroquois ideas of unity that was expressed in subsequent meetings and in the papers of some of the Founding Fathers (Benjamin Franklin, James Wilson, and Thomas Jefferson, for example). Indeed, the Americans talked of creating a government of federated unity as an alternative to colonial conquest. The Americans continued and thanked the "great God that we are all united, that we have a strong Confederacy composed of twelve Provinces." The American delegates also pointed out that they have "lighted a Great Council Fire at Philadelphia and have sent Sixty five Counsellors to speak and act in the name of the whole" (Proceedings, n.d.).

Lone Wolf v. Hitchcock

In 1903, the United States Supreme Court issued a decision in the case of *Lone Wolf v. Hitchcock*, in which the Court allocated plenary authority over Indian affairs to Congress. This authority included the power not only to break Indian treaties at its discretion, but also to dispose of treaty-protected Indian land at will. Although widely discredited, the case

Lone Wolf, a Kiowa chief, led his people in resistance to the allotment of their reservation. (National Archives and Records Administration)

has never been overruled and represents a landmark case in American Indian law.

Lone Wolf v. Hitchcock was decided amid a background of separation, assimilation, and allotment. In an effort to confine Indian occupancy and use of land to specific territories, the earliest Indian treaties established the idea of reservations. However, the lure for gold, land, and other resources in Indian territory was a temptation too great for the settlers to resist. Consequently, many Indian tribes were removed westward to large blocks of land reserved for their use with the assurance that the new lands would remain Indian reservations forever. In fact, settlers soon encountered Indian Country as the nation expanded westward. Before long, homesteaders demanded more lands from the government, and the federal policy makers acquiesced by developing programs to diminish the Indians' reservation land base.

Specifically, in 1853 Commissioner of Indian Affairs George Manypenny instituted a general policy of attempting to negotiate allotment provisions in treaties, which converted communally held tribal lands into individually owned parcels. Any surplus lands remaining were then opened to settlement by non-Indians. Congress quickly adopted his policy and, by virtue of the General Allotment (Dawes) Act of 1887, Congress was able systematically to allot some 41 million acres of tribal lands. Former reservations soon became checkerboarded with non-Indian-owned land.

However, the Dawes Act did not apply to all Indian territory; rather, the allotment of certain areas, particularly those lands in the Oklahoma Territory, required a special act from Congress. In 1892, Congress sent three commissioners, known as the Jerome Commission, to negotiate with the Kiowas, a tribe whose reservation was located in the Oklahoma Territory, for the allotment and cession of their lands. According to the Treaty of Medicine Lodge, no further Kiowa land cessions would occur without the approval of a supermajority of the tribe. Specifically, Article XII of the treaty stated that any cession of tribal land required the signatures of "at least three-fourths of all the adult male Indians occupying the same."

Lone Wolf, the Kiowa chief, led his people in resistance to the allotment of their reservation. During negotiations, Lone Wolf reminded the commission that the Treaty of Medicine Lodge, which established their reservation, guaranteed their lands forever. In addition, Lone Wolf noted that the small farms that would result from allotment would not support tribal families. Realizing that the negotiations were going badly, the commission threatened the tribe, asserting that Congress has the power to take their land without payment or assent. Nevertheless, Lone Wolf and his tribe resisted any form of allotment.

Once negotiations faltered, the commissioners fraudulently induced some tribal members to sign various allotment documents under false pretenses. To obtain the supermajority required by the treaty for the cession of the Kiowa lands, the commissioners had members of other tribes sign the documents as well. By October 6, 1892, the government claimed that a majority of Kiowas had signed the agreement, which proposed to give every member of the tribe a 160-acre allotment and to pay \$2 million for the surplus lands. The Commission then returned to

Washington, asking Congress to proceed with the allotment of the Kiowa lands.

However, Lone Wolf and several other Kiowas claimed that any assent to the agreements had been obtained by fraudulent misrepresentations of the terms by interpreters. In addition, they alleged that the agreement was invalid since, according to the tribal rolls, less than three-fourths of the adult male Indians signed the agreement. In October 1899, the tribes held a council and drafted a petition to Congress signed by a supermajority of eligible Kiowa members. The petition was a clear and simple statement of the tribes' repudiation of the agreement.

Despite the Kiowas' opposition and any congressional concerns about the fraudulent process used by the commission, in February 1900 Congress proceeded with the allotment. Subsequently, Lone Wolf filed a complaint in the equity division of the Supreme Court of the District of Columbia seeking to restrain the Department of Interior from carrying out the provisions of the Allotment Act, arguing that the Acts of Congress were unconstitutional, void, and a violation of solemn treaty provisions.

The Court refused to entertain any complaint concerning the statute or the federal policy of allotment in general. Instead, by recognizing the tribe's dependent relationship with the federal government, the Court upheld Congress's authority to allot the Kiowa reservation without any tribal assent:

The contention in effect ignores the status of contracting Indians and the relation of dependency they bore and continue to bear towards the government of the United States. To uphold the claim would be to adjudge that the indirect operation of the treaty was to materially limit and qualify the controlling authority of Congress in respect to the care and protection of the Indians, and to deprive Congress, in a possible emergency, when the necessity might be urgent for a partition and disposal of the tribal lands, of all power to act, if the assent of the Indians could not be obtained (*Lone Wolf v. Hitchcock*, 1903, 564).

According to the Court, Congress, through its plenary power, has the authority to abrogate treaties unilaterally if that action is in furtherance of its obligation to care for and protect the Indians. Thus, the Court held that whether a supermajority of the tribe had signed the allotment documents was

inconsequential. Rather, because Congress thought it necessary to allot the Kiowa reservation for the care and protection of the tribal members, it was entitled to do so without their assent.

In effect, the *Lone Wolf* decision granted Congress not only the plenary authority to abrogate treaties with the Indians unilaterally, but also an absolute, unchecked power to regulate in all aspects of Indian affairs. By relying on the Indians' special fiduciary relationship with the federal government, the Court established the presumption that any congressional actions taken toward Indian affairs are made in good faith: "We must presume that Congress acted in perfect good faith in the dealings with the Indians of which complaint is made, and that the legislative branch of the government exercised its best judgment in the premises" (*Lone Wolf v. Hitchcock*, 1903, 568). Furthermore, by characterizing such plenary actions as political questions, the Court announced that congressional legislation in the field of Indian law is "not subject to be controlled by the judicial department of the government" and is therefore unreviewable (*Lone Wolf v. Hitchcock*, 1903, 565). Thus, because any regulation of Indian affairs is presumed to have been taken in good faith and because such regulation is a political question, Congress has unfettered authority to act as it sees fit.

In recent years, *Lone Wolf v. Hitchcock* has been widely discredited, and the Supreme Court has attempted to mute its harsh ruling. Specifically, the Court now requires that any congressional intention to abrogate an Indian treaty or treaty right be clear and plain. In addition, the Court has declared that congressional activity in Indian affairs is no longer an unreviewable political question; rather, if such action cannot be characterized as that of a good faith trustee toward its beneficiary, the Court will subject the action as to the Takings Clause of the Fifth Amendment. Nonetheless, *Lone Wolf v. Hitchcock* remains a precedent in the field of American Indian law and provides authority for Congress, subject to few limitations, to deal with Indian tribes as it sees fit.

Lyng v. Northwest Indian Cemetery Protective Association

This 1988 U.S. Supreme Court case concerned the protection of American Indian religious practices. The case exemplifies the difficulties that courts have in recognizing the holistic, connected nature of indigenous religious practices as opposed to mainstream religions and in applying constitutional religious principles to peoples not originally protected by such principles. The six justices who ruled in the majority stressed that the U.S. government was not prohibiting the free exercise of religion of members of three tribes by building a road near and allowing tree harvesting within a half mile of certain traditional ritual sites in the Chimney Rock section of Six Rivers National Forest.

Since the First Amendment applies only if the government prohibits the free exercise of religion, the constitutional claim of the American Indians failed. The majority felt that to rule otherwise would give the tribes effective ownership over public, government-controlled and -owned lands. The three dissenting justices noted that the Forest Service commissioned the Theodoratus Report, which examined

Native religion. For Native peoples, land is living and the relationship to land and the natural world is an ongoing relationship of creation. These justices saw that the road and harvest would destroy the Indian religious practices and that the government should have a compelling interest before going ahead with the project.

In the 1970s, the U.S. Forest Service upgraded roads on federal lands in northern California. Part of the project included the Chimney Rock area of the Six Rivers National Forest. The Hoopa Valley Indian Reservation adjoins the national forest. The Chimney Rock area was used by the Indians for religious ceremonies and was considered especially sacred. The 1977 Forest Service draft environmental impact statement discussed the detailed project plans. The Forest Service commissioned a study of cultural resources of the area, the Theodoratus Report (1979). This study supported a 1979 recommendation not to proceed with the road project because of the irreparable and serious damage to the sacred areas so central to the Hoopa belief systems.

In 1982, the Forest Service decided not to follow the report. The road would be built in Chimney Rock as far away as possible from specific ritual sites. Routes that would have avoided Chimney Rock were rejected because they would involve the acquisition of private land. In addition, a management plan was approved that allowed substantial cutting down of trees in Chimney Rock with a half-mile distance between protected sites and the harvest. Thus, specific areas were preserved while the nature of the entirety was altered.

The majority opinion, by holding that the government had not prohibited the free exercise of any religion, negated the need to apply the test. The government, as landowner, was simply managing its land for the benefit of all. To allow the diminution of the government's property rights was substantial, and the Forest Service was not required to accommodate the Natives' religious needs either constitutionally or statutorily by the American Indian Religious Freedom Act, which created no cause of action or enforceable rights according to the Court. In any event, the government had accommodated the Indian religious practices by the half-mile zone and the placement of the road.

The dissenting justices attempted to understand the differences between European-derived religious practices and American Indian religious practices. The former is church-based, and the government is an entity apart from the church. For many American

Indians, spirituality pervades everything. For them, the attempts to build the road and harvest the trees while providing some core area protections essentially destroyed the practice of their religion and cultural beliefs. Such action clearly fails to accord with the First Amendment.

Maine Indian Claims Settlement Act

The 1980 Maine Indian Claims Settlement Act (MISCA) was the first major Native American land claim settlement of its kind in the twentieth century. It paved the way for similar federal settlements with eastern aboriginal nations such as the Pequots and Narragansetts. Following several court rulings in the 1970s, the Maine Wabanaki convinced the United States that they were entitled to compensation for illegal land acquisitions made by the states of Massachusetts and Maine. In exchange for giving up their claims to nearly two-thirds of the state of Maine, the Wabanakis, principally the Penobscots and Passamaquoddies, received a settlement of \$81 million, federal recognition, the right to purchase at least 300,000 acres of land at fair market value, and limited immunity from state laws. Although MISCA was an impressive legal success, in the twenty-five years since its enactment, many Wabanakis feel the settlement poses some serious obstacles to their aboriginal sovereignty, economic growth, and environmental health.

The Maine settlement was flawed because it did not equally include all of the Maine Indians, namely

the Maliseets and Micmacs. The Houlton band of Maliseets obtained federal recognition and \$900,000 for land trust acquisition, but they remained subject to Maine's regulatory laws whereas the Passamaquoddies and Penobscots were exempt. The Aroostook band of Micmacs were not named at all in MISCA. Eleven years later, the Micmacs negotiated a separate settlement with the United States, gaining federal recognition and \$900,000 to purchase lands. Because they neither signed nor were mentioned in MISCA, they argue that the Act does not apply to them, a situation that makes them unique among the Maine Wabanakis.

The central problem with MISCA, however, is that it explicitly equated the regulatory rights of sovereign Indian nations with those of state municipalities. The Wabanakis argue that Maine has refused to acknowledge their aboriginal claim to national sovereignty, which exists *in addition* to the municipality provisions of the settlement (Chavaree, 1998). The state, in turn, argues that the Indians are trying to claim a form of sovereignty that was explicitly extinguished by mutual agreement in 1980. As of 2005, the courts have steadily upheld the state's municipality arguments—such as denying the Wabanakis' request to build casinos under federal law—a situation that has embittered many of them.

The U.S. government was brought to the bargaining table with the Wabanakis because the Indians were able to prove in federal court in 1975 that the 12.5 million acres of Wabanaki land acquired by Maine and Massachusetts violated the terms of the 1790 Intercourse Act (see Brodheur, 1985). These Intercourse laws, modified several times in the early 1800s, stated that land purchases from Indian governments had to be attended by a U.S. commissioner and ratified by Congress. The Wabanaki sales usually met neither requirement. President Jimmy Carter appointed a task force to settle the Wabanaki claim out of court in late 1977. By March of 1980, a tentative agreement was reached, and at that stage it was endorsed by a vote of the participating Wabanakis. The governor and the legislature of Maine passed the Maine Implementing Act in April. The Maine agreement was then ratified by the U.S. legislature with some significant additions to federal law and then signed by President Carter in early October 1980.

MISCA involved state law, finances, and land. First of all, it revised the laws that are applicable to Natives and Native land in Maine, with the state basically withdrawing from legal supervision of the

President Jimmy Carter signs the 1980 Maine Indian Claims Settlement Act, using an eagle feather from the Penobscot Nation as Maine state officials look on. (Steve Cartwright/Wabanaki Alliance)

Indians (the Maine Implementing Act). Aware that disagreements were bound to occur under the new system, the Implementing Act established a nine-member advisory body called the Maine Indian Tribal-State Commission (MITSC). MITSC is equally composed by appointees from the state and the Wabanakis, with their chair chosen by the appointees. MITSC is charged to review the effectiveness of the Implementing Act, to make recommendations on land acquisition, to draft fishing rules, to conduct wildlife studies, and to review petitions by tribes for extensions to the reservations. As the commission admits in its report, *At Loggerheads*, MITSC has had some success negotiating fish and wildlife disputes, reviewing land trust issues, and educating people about Wabanaki lifeways, but it is grossly underfunded and lacks the authority to broker the sovereignty disputes that have arisen over the last twenty-five years.

MICSA's second achievement was financial, but it was largely directed toward the restoration of

Native land holdings. The Act established a \$27 million trust to be shared equally between the Passamaquoddies and Penobscots, tax-free and with interest paid quarterly. It also set aside \$54.4 million to buy 300,000 acres to add to Passamaquoddy, Penobscot, and Maliseet territory. These new land acquisitions would be held in trust for the Wabanakis by the United States and would be subject to oversight by the Secretary of the Interior. Although the Houlton Maliseets got \$900,000 of this money for land trust acquisition, they did not get independent municipality status in their relationships with the state of Maine, nor did they get a trust fund.

The settlement was a great financial victory for the majority of the Wabanakis, but it also provided enormous benefits to the state of Maine. The federal government paid the \$81 million settlement's cost. Maine paid nothing, and the state cleared title to all of its lands. The Implementing Act states that all Indian land claims were henceforth extinguished in

Maine. (The state argues that even Aroostook Micmac claims were extinguished by the Act, a claim the Micmacs currently dispute.) Maine was thus able to dismantle its Department of Indian Affairs, divesting itself entirely 150 years of supervision of some of the poorest Native populations in the country. The U.S. government would henceforth provide subsidies and care for the Wabanakis. (Again, until 1991, the Aroostook Micmacs were treated as if they did not exist.)

The greatest benefit of MICSA for the state, however, was that, even though Maine shed the *responsibility* for the management of Indian affairs in Maine, it retained extensive *regulatory authority* over the territory of the Passamaquoddies, Penobscots, and Maliseets.

The sections of the Maine Implementing Act that define this authority (30 M.R.S.A. 6204–6) appear to restrict the sovereign powers of the Indians to jurisdiction over “internal tribal matters.” Except as otherwise provided in the Act, the Passamaquoddies and Penobscots have “the rights, privileges, powers and immunities of a *municipality*, including the power to enact ordinances, and collect taxes; be subject to all the duties, obligations, liabilities, and *limitations of a municipality*; and be subject to the laws of the State, except that ‘internal tribal matters’ are not subject to regulation by the State” (MITSC, 1997, 11).

According to the state’s interpretation of this provision, the Native nations are thus at liberty to manage their own government and legal system for minor infractions. Like city governments, however, they are otherwise regulated by the state on almost any issue of consequence. Wabanaki leaders currently argue that an *exclusive* focus on the municipality provisions of the Maine Implementing Act disregards their simultaneous aboriginal rights as sovereign peoples that existed long before the arrival of European settlers. In May 2002, Wabanaki leaders were put in the embarrassing position of surrendering their documents on environmental pollution under the state’s Freedom of Access Act, because the Maine Supreme court ruled that the Wabanaki nations were just like city governments in such situations.

An even more significant problem relating to the Maine Implementing Act, however, occurred at the federal level. The federal government was conscious that Maine’s foremost concern during the 1980 settlement was to maintain authority over trade and government within the bounds of the state.

Thus, the federal act that *ratified* the Maine Implementing Act included provisions that reaffirmed the Wabanakis’ former status as “state” Indians. Sections of the 1980 Maine Settlement Act (25 U.S.C. 1725 and 1735) state that federal laws and regulations that confer special status to Indians and that also preempt the jurisdiction of the state are *inapplicable* in Maine. Also, any federal law enacted after October 10, 1980, for the benefit of Indians that would affect or preempt the laws of the State of Maine “shall not apply within the State of Maine, unless [it] is specifically made applicable within the State” (MITSC, 1997, 13). As a result, the Wabanakis have been unable to take advantage of many of the recent federal court rulings allowing gambling casinos on Indian land.

The paradox of the federal 1980 Settlement Act is that the Wabanakis lost elements of their federal recognition. The U.S. government ratified the Maine Implementing Act *and* henceforth excluded the Wabanakis from some types of federal legislation expressly designed to have national effect. In the two decades since the 1980 settlement, federal legislation pertaining to casinos and pollution have made the Wabanakis painfully aware of the importance of maintaining regulatory authority over their own lands.

Meriam Report

The Meriam Report (1928), published as “The Problem of Indian Administration,” was a government-funded report that underscored the failure of the U.S. policy of the forced assimilation of American Indians into American society. It was undertaken after a decade of growing concern about the direction of U.S. Indian policy. Events in the 1920s demonstrated the persistence of themes and concerns that had characterized white-Indian relations over the previous half century. Not only had the goals of the late nineteenth-century assimilation policy, including the division of tribal lands into individual holdings, not been achieved, but pressure from whites for more of the Indian land base continued. The study underlying the report was initiated in 1926 by Hubert Work, Secretary of the Interior, who named Lewis Meriam as the leader of a committee of ten that would examine the nation’s Indian policy. Meriam’s analysis broke with the pattern of earlier studies by analyzing statistical indicators of individual well-being, rather than asking for the opinions of those who had designed or administered existing national policies. By underscoring the vast disparities in the quality of life between Indians and society at large, the Meriam report indicted existing national policies and opened the door to new approaches that culminated in the creation of the Indian Reorganization Act in 1934.

Widespread dissatisfaction with the outcomes of Indian policy underscored the need for the study. The 1920s witnessed the continuing efforts to dispossess Native Americans of their resource base even as reform groups raised criticisms of existing policies. The most noted of the land grabs at that time was embodied in the Bursum Bill of 1922, designed to create a system for validating land titles on Pueblo holdings that would have given preference to the claims of individual white squatters over longstanding Pueblo tribal rights based on treaties. Reform groups coalesced in the successful effort to defeat this measure and remained vocal. John Collier created the American Indian Defense Association in 1923 as part of his opposition to the Bursum Bill. The Indian Rights Association was revitalized in the same period. In 1924 Congress extended citizenship to all Indians who had not yet acquired it (even though some Indians didn’t want it). Some reformist Indian voices emerged in the Society of American Indians and the National Council of American Indians. Although not well financed, long lasting, or

organically connected to the particular needs and perspectives of tribal organizations, these groups did offer coherent, compelling general criticisms of government policies.

The changing national mood from Anglo conformity toward cultural pluralism added to the willingness to reconsider forced assimilation. For example, missionaries’ concern over the rising criticism of existing policies led to a sweeping study of socioeconomic aspects of Indian life as well as a defense of the efforts of the Bureau of Indian Affairs. The study, published as *Red Man in the United States*, was written by G.E.E. Lindquist for the Institute for Social and Religious Research in 1923.

Interior Secretary Hubert Work made two separate attempts to gain independent perspectives on living conditions among Indians. The first was embodied in the Advisory Council on Indian Affairs, also known as the Committee of 100, in 1923. Composed of people from outside the government, the group reflected growing national differences on policy rather than developing ideas of how to address these differences. Secretary Work tried again in 1927 when he contracted with the Institute of Government Research and appointed Lewis Meriam to head a committee to scrutinize Indian and national Indian policy.

The selection of Lewis Meriam to direct the study ensured that the work would be carried out in the spirit of pre-World War I progressivism, with its emphasis on efficient administrative actions as the key to successful reform. Meriam brought an array of research experiences to the study of Indian policy as well as a reputation as a disinterested social scientist who would not allow personal policy preferences to intrude on his objectivity. In addition to the nonpartisan Institute for Government Research (which later became the Brookings Institution), he had worked for the U.S. Census Office and the Children’s Bureau. His previous work included job classification with the civil service and the creation of wage systems in government bureaucracies.

The people selected to work with Meriam reflected the range of issues as well as the operating assumptions that defined the work of the committee. Areas of expertise represented on the committee included economic conditions (Edward Everett Dale, University of Oklahoma), education (W. Carson Ryan, Jr., Swarthmore College), extant records (Fayette Mackenzie, Juniata College), family life and women (Mary Marks, Ohio State University), farming (William Spillman, Bureau of Agricultural Eco-

nomics), health (Herbert Edwards, National Tuberculosis Association), Indian relocation to cities (Emma Duke, American Health Association), and legal issues (Ray Brown, University of Wisconsin). Yale-educated Henry Roe Cloud (Winnebago) served as general advisor and liaison for visits to Indian communities.

The reliance on social scientific expertise (rather than prior experience as an administrator of Indian policies) or on expertise on Indian issues underscored the desire of the committee to reach objective findings that would inform government policy. The work of the committee included extensive field visitation. The committee's staff visited all but fifteen areas under the jurisdiction of the Bureau of Indian Affairs, conducted over 500 home visits, and met with a wide range of groups on reservations, including many Indian-only sessions. Anthropologists were not included, in the belief that they were not value-neutral on issues of Indian life.

The summary of findings, presented as Chapter One, indicted the impact of past policies without assigning responsibility for the deplorable conditions. The report stated: "An overwhelming majority of the Indians are poor, even extremely poor, and they are not adjusted to the economic and social system of the dominant white civilization" (Meriam, 1928, 3). Policies intended to promote the individualization and assimilation of Indian people had failed. Debate about Indian economic or social "progress" from earlier eras was avoided because the report made comparisons with indicators of well-being in white society of the mid-1920s. This tactic undercut arguments used by some to claim that Indians were better off than they had ever been in the past. The committee's decision to examine the lives of Indians who had migrated to cities produced data demonstrating that social and economic difficulties were pervasive among Indians rather than confined to those who continued to reside on reservations. Statistics underscored the high incidence of disease, the alarming extent of infant mortality, the prevalence of extreme poverty, the absence of economic development, the disorganization of family life, and the failure of existing approaches to education. At each juncture, the report showed that the conditions were worse than most citizens could imagine and would be intolerable if experienced by white citizens.

The Meriam Report was premised on the desirability of assimilating American Indians into society at large. It called for the Indian Service to be con-

verted to an organization devoted to education for the social and economic advancement of Indian people in order to prepare them for fuller participation in general society or, absent that development, to be readied to live in parallel with white society. An underlying assumption of the report was that an improved Indian quality of life and a fuller participation in the national economy would reduce the degree of prejudice expressed toward Indians by white society. General recommendations included more respect for Indian people and the recognition that Indian rights extended beyond treaty provisions to embrace the full range of rights enjoyed by the general citizenry. Specific actions included the creation of a planning and development program that would make use of experts in areas such as agricultural economics, endemic diseases among Indians, marketing, and vocational guidance. These new workers would keep accurate records, maintain better relations with Indians, receive adequate salaries, be provided with better housing, and receive good retirement and health benefits. For the members of the Meriam Commission, the combination of professional expertise and social science methodology would yield an effective assimilation program.

Despite the Meriam Report's support for a more intelligent implementation of modified assimilation policies, symbolically the report marked the end of assimilation as a policy and stimulated the debate over the future direction of Indian policy. The report amplified growing criticisms of the Bureau of Indian Affairs from those who wanted more rapid assimilation and those who sought to restore traditional Indian culture to the extent possible. Proponents of radical assimilation saw the BIA as retarding assimilation by serving as a crutch that made Indians reluctant to "stand on their own" within American society. On the other side, a group of reformers led by John Collier sought to restore tribal sovereignty and traditional Native values to the extent possible and practicable. They believed that the BIA was destroying Indian ways. This debate was won by the Collier forces in the early years of Franklin Delano Roosevelt's administration with the passage of the Indian Reorganization Act in 1934. Although Lewis Meriam tried for a time to work with Collier on the promotion of IRA goals, he ultimately broke with the volatile reformer and moved into the ranks of conservative Republicans who favored assimilation.

Métis Nation Accord

In 1992, Canada, British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, and the Métis nation of Canada, represented by the Métis National Council (MNC) and provincial Métis representative bodies, signed the Métis Nation Accord. The Accord set out provisions requiring all signatories to negotiate the implementation of aboriginal self-government. Unfortunately for the Métis, the Accord was directly tied to the success of the Charlottetown Accord (1992), which called for comprehensive changes of Canada's Constitution. These changes were designed in part to enable the First Nations political participation and representation in Canada, as well as formal recognition of the right to aboriginal self-government. It also represented a commitment on Canada's part to address the appropriate roles and responsibilities of governments as they relate to the Métis. The Charlottetown Accord was rejected in referendum by the Canadian people in 1992.

The Métis nation evolved during the eighteenth and nineteenth centuries from the miscegenation of French and Scottish fur traders with Cree, Ojibwa, Saukteaux, and Assiniboine women. The Métis developed as a unique people, distinct from Native people and Europeans. Today an estimated 200,000 Métis live in Canada, accounting for more than 20 percent of the aboriginal population living in Métis communities and urban centers. The Métis have long claimed national status and a unique culture, a distinct language, a unique economy, and enduring

philosophies, but Canadian officials historically refused to accept this position. However, in 1982, the Canadian Constitution was amended to recognize the Métis as one of the country's groups of aboriginal peoples (along with Native Americans and the Inuit). By the end of the 1980s it appeared as though federal officials were willing to consider the social, political, and economic issues of the Métis.

The Métis Nation Accord represented a significant first step in relationship building between the federal government and the Métis nation. With the proposed constitutional changes in mind, the Métis National Council and its governing members initiated consultations with the Métis nation in September 1991. These discussions led to various MNC submissions to the federal constitutional processes through the spring of 1992. Central to the Métis strategy was forcing the federal government to assume its responsibility for the Métis's social and political betterment. The federal government responded by agreeing that the Charlottetown Accord would be amended to explicitly include the Métis. Resulting from this successful lobby, the Métis Nation Accord was established as a modern-day treaty between the federal government, all provinces west of Ontario, and the Métis nation.

The Métis Nation Accord was an impressive political accommodation that would have resolved many of Métis's legal questions and outstanding claims, including:

- Agreement on a definition of Métis.
- The establishment of tripartite self-government negotiations among the federal government, the Métis governments, and the respective provincial governments, as well as a commitment of financial resources for the negotiations.
- A commitment on the part of government to negotiate a land and resource base for Métis.
- A commitment on the part of government to undertake an enumeration of the Métis and establish a central registry.
- A commitment on the part of government to devolve programs and services to the Métis, provide transfer payments to the Métis government to support these programs and services, and to preserve existing funding and services already provided to the Métis.
- Provisions for the protection of the Alberta Métis settlements.

President of the Métis Nation of Ontario, Tony Belcourt (right), Steve Powley (center), and their lawyer Jean Teillet (left) celebrate their hunting rights victory in the Supreme Court of Canada in Ottawa, September 19, 2000. (Chris Wattie/Reuters/Corbis)

Following the failure of the Charlottetown Accord, none of the Accord signatories expressed a willingness to engage in multilateral discussions, leaving the Métis with few choices in their fight to see their aboriginal rights recognized. They may pursue recognition of these rights in the Canadian courts, or they can remain on the political periphery as provincial and federal officials engage in jurisdictional wrangling. Litigation proved successful, and in 2004, after more than a decade in the courts, the Métis were recognized by Supreme Court of Canada as possessing aboriginal rights. The case resulted from a Métis father and son, Steve and Roddy Powley, being charged in 1993 with hunting moose without a license and unlawful possession of moose meat, contrary to Ontario's *Game and Fish Act*. The Métis nation of Ontario determined to use this case to establish the existence of the Métis hunting rights. In 1998, a two-week trial resulted in the trial judge's determining

that the Métis community at Sault Ste. Marie had an existing aboriginal right to hunt, a decision that was upheld by the Supreme Court of Canada.

The Métis Nation Accord was a progressive policy of accommodation that would have committed provincial and federal governments to negotiate: self-government agreements, lands and resources, the transfer of the portion of aboriginal programs and services available to Métis, as well as cost sharing agreements relating to Métis institutions, programs, and services. For now, the Métis will have to endure the complexities of Canadian Indian bureaucracy.

National Indian Gaming Commission

An independent federal agency created by the Indian Gaming Regulatory Act (IGRA) in 1988, the National Indian Gaming Commission (NIGC) regulates Indian gaming nationally. The commission consists of a chairman and two commissioners charged with assuring that Indian gaming is free from organized crime, primarily benefits American Indian communities, and offers fair games. The commission may conduct investigations, impose civil fines, close gaming facilities, review and approve gaming ordinances written by tribal councils, and do background checks and audits. The commission has headquarters in Washington, D.C., and regional offices in Portland, Sacramento, Phoenix, Tulsa, and St. Paul. The president chooses the chairman of the commission with the consent of Congress, and the Secretary of the Interior appoints the other two commissioners. Two members of federally recognized Indian communities must serve on the commission, and the NIGC must include members of both political parties. No commissioner can be affiliated with a gaming facility, and commissioners serve for three years. Fees assessed on revenue from Indian gaming operations fund the commission.

Congressman Morris Udall of Arizona began the Congressional effort to establish guidelines for the regulation of Indian gaming in 1983. By 1986, Udall had introduced H.R. 1920, which included provisions for the NIGC. The House passed Udall's bill, but it died in the Senate. The next year, Senator

Daniel Inouye of Hawai'i, the new chairman of the Select Committee on Indian Affairs, introduced S. 555, which passed and became the IGRA. This legislation created the NIGC and defined its role in Indian gaming. The IGRA established three classes of Indian gaming. Class I games consisted of traditional social gambling for small prizes; Class II games included bingo, pull tabs, punch boards, tip jars, instant bingo, and nonbanked card games, and the law classified all other games Class III. The IGRA gave the NIGC a regulatory role in both Class II and III gaming and allowed tribal governments sole jurisdiction over Class I games.

Critics of the NIGC contend that it lacks the necessary power to regulate Indian gaming effectively and has failed to uncover any cases of major corruption in the industry. These criticisms have reached a popular audience through articles in popular publications such as *Time*. However, gaming communities insist that NIGC oversight is sufficient, noting the Minimum Internal Control Standards (MICS) for Indian gaming operations issued in 1999. These standards require Indian casinos to follow very specific guidelines in all facets of their operations. The NIGC even requires detailed plans for the spending of gaming profits, annual audits, and internal standard reports. Additionally, the National Indian Gaming Association (NIGA) maintains that Indian gaming is more highly regulated than other gaming operations because Class III operations are subject to regulations on the tribal, state, and federal levels.

The NIGC has used its authority on a number of occasions, shutting down gaming facilities for various reasons. In 2003, the NIGC shut down the Sac and Fox tribe's Meskwaki Casino in Iowa for six months until a formally recognized tribal council took control of casino profits, and in 2000 the commission closed the facility owned by the Kiowa tribe of Oklahoma for over five years for violations of the IGRA.

Gaming communities also have challenged the extent of NIGC authority through the courts. For example, in 1990, the Cabazon band of Mission Indians filed a suit against the NIGC protesting their designation of electronic facsimile games as Class III, and the courts upheld the commission's definitions in 1994. In 2001, the Colorado River Indian Tribes challenged the commission's right to audit their Blue Water Casino for MICS. In 2005, the district court in Washington, D.C., decided that the IGRA did not grant the NIGC this power. Despite this decision, the

commission will continue to check for compliance with the MICS as part of their responsibility to both Indian gaming facilities and the public.

Native American Graves Protection and Repatriation Act

For centuries, the skeletal remains of American Indians were removed from their burial sites, studied, catalogued, and relegated to the bins of museums and science labs. NAGPRA addresses the right of the dead to an undisturbed resting place among their own people. It also addresses the right of the living to ensure that their ancestors and their ancestral sacred items are interred with the respect they are due (Morris Udall, 1990).

Since 1906, the United States has taken management authority over the cultural and scientific resources under its jurisdiction. The 1906 Antiquities Act (16 U.S.C. §§431–433) and later the Archaeological Resources Protection Act (ARPA, 16 U.S.C. §§470aa-mm, 1979) established permitting authority for scientific data recovery on federal and Indian lands. The items removed from the ground, mostly

Skeletal remains at an Indian burial ground in South Bowers Beach, Delaware. Congress passed the Native American Graves Protection and Repatriation Act to achieve two main objectives: the protection of sacred objects like human remains from excavation and the return of such objects housed in federal museums to the appropriate Native American groups. (Kevin Fleming/Corbis)

Native American human remains and burial items, were to remain under government control and thus were stored largely in government and university repositories. Attempts by tribes to reclaim the remains of their ancestors and tribal property were unsuccessful (Echo-Hawk, 1986). When the Onondaga nation went to court in 1899 to retrieve the Wampum Belts held by the New York State Museum, they found that courts did not acknowledge the nation as having enforceable property rights (*Onondaga Nation v. Thacher*, 61 N.Y.S. 1027 [N.Y. App. Div. 1899]).

At the end of the twentieth century, largely due to pressure brought to bear by Indian activists, and despite opposition by various conservative scholars, the American public and the U.S. government began to recognize the culture of American Indians as meriting respect and protection on a formalized basis. Congress passed the American Indian Religious Freedom Act (AIRFA, 42 U.S.C. §1996, 1994) on August 11, 1978, and the president issued the Sacred Sites Executive Order (E.O. No. 13,007, 61 Fed. Reg. 26771, May 24, 1996), supporting the rights of Native Americans to practice traditional ceremonies. The National Historic Preservation Act (NHPA, 16 U.S.C. §§470a et. seq., 1992) was amended to recognize traditional cultural places meriting listing on the National Register of Historic Places and established Tribal Historic Preservation Officers who could replace state authority on tribal lands. Legislation specifically to address the cultural property rights of Native Americans is the Native American Graves Protection and Repatriation Act (NAGPRA, 25 U.S.C. §§3001–3013, 1990).

After compromises reached on the language and scope of the law by the archaeological, museum, and tribal communities, the NAGPRA legislation received unanimous support in Congress. NAGPRA is a law with four attributes. It comprises property law, Indian law, human rights law, and an administrative process.

NAGPRA as Property Law

NAGPRA enfranchises tribes and Native Americans in the common law of property and Fifth Amendment property rights. The law recognizes that, although human remains are not property and cannot be owned under the common law, descendants have the obligation and right to direct the disposition of their ancestors (Bowman, 1989). Funerary objects, sacred objects, and objects of cultural patri-

mony removed from tribes and Native American individuals without their permission, that are held in the control of federal agencies and museums that receive federal funds, must be returned to claimants under NAGPRA. If the museum has a lawful chain of ownership and transfer for the item, it may assert the right of possession. Under NAGPRA no taking shall occur.

Protected items in NAGPRA are the human remains of Native Americans and Native Hawaiians and cultural items. Cultural items include funerary objects (items placed with or intended for burials); sacred objects (ceremonial items needed by traditional Native American religious leaders for the practice of traditional religion by present-day adherents); and cultural patrimony (the inalienable items owned by the group that have ongoing historical, traditional, or cultural importance and were considered as such at the time the object was separated from the group).

The parties eligible to make a repatriation claim for NAGPRA-protected items held in the collections of federal agencies or museums are lineal descendants of named individuals with their associated funerary items. Also eligible are federally recognized tribes or Native Hawaiian organizations having a shared group identity with the cultural item when there is no claim of a lineal descendent for human remains, funerary objects, sacred objects, and objects of cultural patrimony. When newly exhumed burials and NAGPRA-protected items are located on federal or Indian land, the priority of claimants is as follows: lineal descendants; then tribal landowners on their tribal land regardless of cultural relationship; culturally affiliated federally recognized tribes and Native Hawaiian organizations on federal land; then federally recognized tribes or Native Hawaiian organizations that are the aboriginal occupants of the area regardless of cultural affiliation, unless another group with standing has a stronger claim of relationship.

NAGPRA as Indian Law

NAGPRA acknowledges the unique relationship between the federal government and tribes and Native Hawaiian organizations (25 U.S.C. §3010). As such, the law requires consultation with federally recognized tribes and with Native Hawaiian organizations on a government-to-government basis at each stage of the process. The NAGPRA process, further described in a following section, resolves years

of past land management authority that did not account for the property interests of Native Americans. That NAGPRA is contained within Title 25 of the United States Code, the Indian law section, rather than other options such as Title 16, where cultural property is addressed, reflects the decision of Congress to imbue that law with the generally applicable tenets of Indian law. One such Indian law provision applicable in the NAGPRA process is the absence of a time bar for claims brought to establish title of Indians to human remains of their descendants and to cultural property. (See *County of Oneida v. Oneida Indian Nation*, 470 U.S. 226 [1985].)

NAGPRA as Human Rights Law

NAGPRA does not provide Native Americans with any greater rights than would otherwise be afforded to those seeking to make claims recognized under the common law and to seek relief from a “taking” under the Fifth Amendment of the Constitution. As such, NAGPRA may be seen as “equal protection” law. Enfranchising Native Americans with property rights due but not historically respected is the essence of human rights law.

NAGPRA as Administrative Process

The NAGPRA process establishes separate means to approach “repatriation” of Native American and Native Hawaiian human remains and cultural items separated from the land and held in museum and federal agency collections, from the immediate determination of “ownership” upon the discovery of human remains and cultural items excavated on federal or Indian lands after the date of the law, November 16, 1990.

Repatriation

Federal agencies and institutions that receive federal funds and have possession of or control over Native American cultural items must summarize their Native American and Native Hawaiian collections and enter into consultations to determine whether federally recognized tribes and Native Hawaiian organizations wish to make claims for the repatriation of items to which they are culturally affiliated. As to human remains and associated funerary objects, the consultation is intended to aid the museums and federal agencies in compiling an itemized inventory, containing decisions on cultural affilia-

tion, such that lineal descendants and culturally affiliated tribes can make claims for repatriation.

Inventories are sent to the National Park Service (NPS), National NAGPRA Program. Summaries are sent directly to all interested tribes as they trigger consultation. Notices of Inventory Completion are published in the *Federal Register*, as are decisions by the museum or federal agency as to the cultural affiliation of the human remains and associated funerary objects. Based on those decisions, lineal descendants and culturally affiliated tribes can claim the remains and/or items. When tribes or Native Hawaiian organizations come to repatriation agreements with museums or federal agencies as to cultural items in the summary, the museum or agency prepares a Notice of Intent to Repatriate that is sent to NPS for publication in the *Federal Register*. If there are no competing claims in response to either type of notice in thirty days, on the thirty-first day repatriation—that is transfer of control—can occur. As a practical matter, the claimant group and the museum or federal agency begin consultation on the manner of transfer once they have come to an initial agreement.

Those human remains and funerary objects for which no cultural affiliation determination can be reasonably made are listed in the inventory as culturally unidentifiable. To assist tribes, museums, and federal agencies in making further cultural affiliation determinations, NPS maintains a public access database of culturally unidentifiable Native American human remains and funerary objects in the inventories. Future regulations will direct the eventual disposition of culturally unidentifiable human remains. Until then, guidance may be obtained from the Review Committee.

NAGPRA does not require that science be undertaken to make a cultural affiliation determination, but it does not prohibit science undertaken in consultation with the interested parties. It does allow a museum or federal agency with NAGPRA-protected items in the collection to receive permission from the Secretary of the Interior to retain items until the end of a study that is of major benefit to the United States.

Disputes over repatriation factual issues may be referred to the Review Committee for an advisory opinion. This is not a predicate to court action but provides a means to have the facts examined by an expert neutral panel. Disputes can arise when tribes make competing claims and when the decision of the land manager or museum as to which tribe has the preponderance of evidence in its favor is questioned,

or a dispute can arise between a tribe and a museum or federal agency if the claimant disagrees with a decision on cultural affiliation or repatriation. A tribe or Native Hawaiian organization making an initial claim must show (1) they have standing to make a claim, (2) the item is a NAGPRA-protected item, and (3) there is a relationship of shared group identity between the claimant and the item. A museum may then overcome the claim of a tribe if the museum can carry the burden to prove that they have the right of possession (that, under the common law of property, they hold title that began with permission of the initial owner to alienate the item).

Ownership

NAGPRA requires consultation with tribes and Native Hawaiian organizations prior to the removal of human remains or cultural objects from federal or tribal land, including Hawaiian Homes Commission land. When there is an agreement in place prior to the discovery of a NAGPRA-protected item, the event is called an "intentional excavation." The disposition of newly discovered items follows the agreement. When no agreement is in place, the event is called an "inadvertent discovery," and all work must cease for thirty days while consultation occurs to reach an agreement on disposition. Thus, advance planning is more effective than stopping a project to do remedial decision making. Native American human remains and associated funerary objects that are not claimed remain in federal control pending future regulations on disposition.

Illegal Trafficking in Native American Human Remains and Cultural Items

NAGPRA makes it a crime to traffic in Native American human remains and cultural items (18 U.S.C. §1170). It is illegal to sell, purchase, use for profit, or transport for sale or profit the human remains of a Native American, taken from any location, of any age, unless the actor has the right of possession. Under the common law this means that only the descendent with authority to put the remains into the marketplace may lawfully do so. The same is true of Native American cultural items. Violation of NAGPRA can be committed either by removing the item from federal or Indian lands, including the lands of a Native Hawaiian organization, or by trafficking in items from museum or federal agency collections that are subject to the repatriation provisions. For instance, a museum that holds back a NAGPRA-protected item from the NAGPRA process

so that it may be offered for sale at an auction commits an act of trafficking. The first offense is a misdemeanor and the second offense is a felony. The new federal sentencing guidelines heighten the penalties but require a value calculation to determine the severity of the penalty.

Conclusion

NAGPRA has not caused all Native American and Native Hawaiian cultural items to be stripped from the collections of museums. Rather, the institutional knowledge about tribal culture has been enriched through the process of consultation. Post-NAGPRA collection protocols typically involve respectful treatment of the dead. Native Americans and tribes are regularly (although not always) regarded as necessary participants in consultation in the determination of rights to items in collections and as potential owners of human remains and cultural items that may be discovered on the landscape. It is also worth noting that many non-Native museums have profited handsomely from these laws, having received generous subsidies to conduct their inventories. In any case, the process is ongoing and the progress profound.

North West Company

Following Britain's conquest of Canada, French traders from Montreal were supplanted in the fur trade by independent Scotsmen. Many of these new

Scottish merchants allied themselves with the French already in the country but also competed against one another. Under the leadership of Simon McTavish and the brothers Benjamin and Joseph Frobisher, a few of the leading Montreal merchants united in 1779, forming a new power in the fur trade that in 1783 became officially known as the North West Company. This new company suffered much internal strife, yet it competed successfully with and was the chief rival of the Hudson's Bay Company from 1779 to 1821.

The company was headquartered on Vaudreuil Street in Montreal. Stockholders were the Montreal trading companies and the "wintering partners," the men who did the actual trading for furs with the Native Americans. The company also employed French-Canadian voyageurs familiar with the Indian trade. The Northwesters, as men of the company were called, tended to be more active and aggressive agents in expanding the Indian trade than their Hudson's Bay Company rivals. From their main supply depot at the Grand Portage, which linked Lake Superior and Montreal to the system of lakes and rivers and interior trading posts of the *pays d'en haut* (most of Ontario, the area west of the Mississippi and south of the Great Lakes and beyond to the Canadian prairies), Northwest Company men extended the Indian trade into new lands between the Hudson's Bay territories and Louisiana as well as westward. During the late 1700s the Grand Portage became a summer rendezvous site for Indian families, French voyageurs, Scottish clerks, *pays d'en haut* wintering partners, and Montreal and London agents.

The more intrepid character of the North West Company was embodied in one of the company's partners, Alexander Mackenzie, who began a series of explorations of the Northwest, which carried him to the Arctic (1789) and Pacific (1792–1793) Oceans. Another Northwester, geographer David Thompson, extended trade westward to the Missouri River and the Mandan Indians, and later to the Columbia River.

The bold enterprise of the North West Company stirred the older Hudson's Bay Company into action. Competition intensified between the two British companies as both suffered from a depressed fur market in Europe caused by the Napoleonic Wars and the overharvesting of animals. Rivalry escalated to bloodshed as the Hudson's Bay Company took bold steps to harass the North West Company. In 1811, a large tract of land in the Red River Valley was

granted to Lord Selkirk (a major Hudson's Bay Company shareholder) for settlement. The colony's location would essentially cut off the North West Company from lands farther to the west and divide the territory to the east. In 1814, restrictions on the pemmican trade were enacted, which also alienated the Métis population who were the producers of pemmican, as well as occupants of the Red River area. The struggle reached a bloody pitch when war between the two companies peaked at the Battle of Seven Oaks (1816), resulting in Lord Selkirk's arresting several North West Company proprietors and seizing company property. With fears of a failing company and pressure from the British government to stop hostilities and ensure imperial stability, North West Company shareholders agreed to merge with their hated rival. In July of 1821, an agreement was signed with the Hudson's Bay Company, whereby it absorbed the North West Company.

The greater portion of labor for the trade came from the tribes who traded the pelts, hides, and pemmican to North West Company agents for manufactured goods. To strengthen trade connections, the North West Company (more than the Hudson's Bay Company with its stricter ideals of race and class) encouraged adopting Indian ceremonies and customs, the strongest connection being marriage *à la façon du pays* (after the custom of the country). The North West Company appreciated the advantage that marriages of its men to Indian women brought and allowed all ranks to marry. These unions strengthened trade relations and created reciprocal social and economic bonds for Indians that drew traders into tribal kinship circles. The result of such unions accelerated changes in many quarters of the Indian world including their economic, social, ceremonial, demographic, and political worlds as well as inter- and intratribal power. Perhaps the greatest evidence of change these unions created were mixed-blood offspring.

In its four decades of existence, the North West Company altered significantly the dimensions of the Indian trade, imperial claims to the West, and the lives of numerous western tribes.

Northwest Ordinance (1787)

Composed by the Confederation Congress (1787–1789) in the same year as the Constitution, the Northwest Ordinance is a multifaceted document. Ostensibly it is a design by the Congress for regional development of a territory it presumed it had acquired through its apparent success in negotiating the terms of independence in 1783. However, its character as a statement of republican ideals in a framework for the territorial governance (of non-Natives by choice and of Natives and slaves by force) renders it a catalogue of reference for a slate of issues relevant to contemporary cultural and political themes. Slavery, state's rights, religious freedom, habeus corpus, universal schooling, the financial ethics of politicians, and, not least, Indian relations are all addressed, if imperfectly and highly selectively, by the terms or context of the Northwest Ordinance. Truly, the audacity of the wide-ranging affairs brought together by the Congress under this document lies in its aim to provide development objectives for an extensive territory it had yet to bring under physical control and in its character as a precursor to the Bill of Rights. It was composed concurrently with the federal Constitution, which famously mentions Indians only as economically defined exceptions to the establishment of the new citizenry ("Indians not taxed" [*Article I, Section 2*, for example]) and elsewhere as simply trade concerns. As a result, many scholars of Indian affairs look to the Ordinance as an immediate predecessor to glean clues about the intentions of the Congress toward American Indians. In that context, the Ordinance is most recognized and referenced by its (cynical) statement of the apparent position of the Congress toward Indian Nations, articulated in the Third Article, which consists, significantly, of an exegesis primarily concerned with morality:

Religion, morality, and knowledge, being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged. The utmost good faith shall always be observed towards the Indians; their lands and property shall never be taken from them without their consent; and, in their property, rights, and liberty, they shall never be invaded or disturbed, unless in just and lawful wars authorized by Congress; but laws founded in justice and humanity, shall from time to time be

made for preventing wrongs being done to them, and for preserving peace and friendship with them (Continental Congress, 1904–1937, 31: 340–341).

Among the earliest of formal statements of general intent toward Indian nations as a whole, the document, while not a treaty, is consistently utilized as a point of reference, with the "utmost good faith" and "without their consent" clauses suggesting the obligation of the federal government to act as the trustee of American Indian lands, an obligation that it would later codify and then proceed more or less to ignore. To limit the interpretation of the Ordinance to these assumptions would miss many critical aspects of the legislation and an understanding of its creators' strategic interests. Within the same year, preparations were made to make expedient use of the option reserved in the latter clause, "in just and lawful wars." The campaign against the tribes of the Northwest Territory began in earnest in 1788 with the assignment of Arthur St. Clair to the region as governor.

With the apparent inconsistencies between the document's stated intentions and the state of affairs in the region it aimed to administer, the Northwest Ordinance can be best understood through analysis of economic policy at the time of its writing and of the key figures shaping Indian policy. The Ordinance continued the Federalist-driven vision of a monopoly on Indian affairs, to the exclusion of the states, begun with the 1785 passage of the Indian Policy Act and continued with the 1786 Ordinance for the Regulation and Management of Indian Affairs; but this earlier legislation that attempted to bring Indian affairs under centralized oversight was not effective (Prucha, 1995, 47). Items such as the requirement for trading licenses to be issued only by Congress were all but ignored on the frontier.

Despite the ongoing state of war, many scholars believe that the Congress did intend to deal more peaceably with Indian nations than in the past, was aware of the standing of its actions in international law, and did hope to control and contain the settlement of the frontier, as opposed to allowing the wholesale overrunning of Indian lands (the "wrongs done to them" mentioned in the Ordinance) (Deloria and Wilkins, 1999, 17). However, assumptions must be seen as strategic: Congress had become convinced that it was far more efficient to treat Indians in a manner that recognized their autonomy and thereby maintained peace, but that exchanged the peace, as

well as terms of trade, for their lands through purchase agreements made exclusively with the central government. The most significant obstacle to this strategy was, of course, the states themselves (through their anti-Federalist delegates), who generally wished to deal with Indians in a manner profitable for their own interests or that of their foremost citizens, until such conflicts arose that needed military backing. This was particularly the case in states such as Georgia, North Carolina, and New York, where representatives had already begun negotiating terms of trade with the Iroquois tribes without authorization from Congress.

The strategy to resolve this situation was a combined effort of military officials such as Secretary of War Henry Knox and, of course, George Washington, who knew only too well how expensive Indian wars were, and of the many economic thinkers among the Congress; the postrevolutionary government was deeply in debt and was, above all, concerned with securing financial stability. To that end, Congress—moving toward the centralization of power it articulated in the Constitutional Convention—saw that the control of Indian trade and of the wealth contained in title to Indian-controlled lands was essential to the new nation's financial future. Proposals to sell lands in the Ohio country were already before the Congress (Prucha, 1995, 45). This explains the immediacy with which the Congress secured the Northwest Territory militarily, as well as its treating with Indians, as General Knox had been persuasive in asserting, not as conquered peoples, but relatively liberally and on terms that would encourage them to deal only with the Congress (Horsman, 1967, 41).

Thus, with respect to Indian relations, the Ordinance is significant as a template for Indian relations and treaty making as it would be conducted into the 1800s. Indeed, the conflicts in the Northwest would be resolved at the Treaty of Greenville in 1795, in which, like the treaties of Fort Harmar (1789) and Canandaigua (1794) before it, “in consideration of the peace now established,” the terms of agreement between apparently equal parties would become increasingly standardized, to more clearly define Indian rights and to negotiate the transfer of very specific tracts of land, treaty by treaty, from individual tribes, always with the proviso that if they “shall be disposed to sell” additional lands in the future they will deal only with agents of the United States.

This is the context for a much less referenced Ordinance passage, a statement of its objective to

“lay out the parts of the district in which the Indian titles shall have been extinguished.”

The Northwest Ordinance's evaluation by historians has been mixed. Many recognize it as the crowning achievement of the Confederation period, while others see it as a crowning act of hypocrisy. Apologists generally note its forethought for the future of the republic through its procedural provisions for the organization and incorporation of new states, and its pre-Bill of Rights narrative, with less attention to the source for such vision. It is important to note that recent scholarship has shown that an additional dimension of the document, with respect to American Indian history, is that its authors, like those of the Constitution, were familiar with existing forms of Indian governance that preserved individual liberties and that, in cases such as the Iroquois Confederacy, provided protocols for the incorporation of new member nations (Grinde and Johansen, 1991, 194). Their apparent ability to be influenced by Native thought and governance, and yet provide so calculatingly for their dispossession, gives critical evidence of the complex character of the founding generation. Further complicating this scenario is the clear conflict of interest of some members of Congress who were involved in regional planning legislation, yet who also held vested interest in the outcomes (for instance, Hauptman, 1995). The Ordinance would be ratified under the constitutional government in 1789; only its trade provisions would require further articulation in the Trade and Intercourse Acts.

Nunavut Land Claims Agreement

In 1993, the Inuit people of the central and eastern Arctic, the Canadian government, and the government of the North West Territories signed the largest aboriginal land claim in Canadian history. Following two decades of negotiations, the agreement covered 1.2 million square miles of territory and had the federal government recognize Inuit title to more than 220,000 square miles of land in the eastern Arctic. On 22,000 square miles of these

lands, the Inuit were assigned mineral rights, and the agreement established land use regulations and control over the resources (Dahl, Hicks, and Jull, 2000, 58). The Nunavut Land Claims Agreement (NLCA) was brought into effect in June 1993, with the passing of the Nunavut Land Claims Agreement Act. The agreement contains forty-one articles that, in addition to providing land title to the Inuits of Nunavut, provide clear rules of ownership, rights, and obligations concerning Nunavut's land, water, and resources. In return for ceding certain territories, the Inuits also received \$1.14 billion in compensation and an additional \$13 million in the form of a Training Trust Fund to ensure that the Inuits have access to sufficient funding to assist in meeting their responsibilities under the claim (Légaré, 2003, 119). The NLCA also provided for the Inuits becoming full participants in a number of comanagement entities that are responsible for territorial resource management.

On April 1, 1999, Nunavut became the first territory to join the federation of Canada since Newfoundland in 1949. Representing the culmination of

nearly twenty-five years of negotiations between the federal government and the Inuits, Nunavut became Canada's third territory. The Inuit land claim was born of their long-standing territorial occupation. Yet despite Inuit territorial claims, by the 1940s, Canadian occupation of the north had become the norm. Threatened by U.S. troops stationed in the eastern Arctic and potential American sovereignty claims, Ottawa mobilized the Royal Canadian Mounted Police (RCMP), situating officers across the Canadian arctic in an effort to enhance Canadian sovereignty. This also accounted for the introduction of federal Indian policy and programming to the north. Promoting its long-standing civilization policy, the Canadian government facilitated program delivery by promoting the settlement of what federal officials at the time considered to be a nomadic people into small, easily accessible communities.

Reacting to the steady infiltration of non-Native people from the south and the imposition of Canadian programs, an organization called the Indian and Eskimo Association (IEA) was created in the mid-1960s to conduct research on the rights of indigenous peoples in Canada and to initiate a fight for territorial land claims. The goal was to augment Inuit social, economic, and political influence by wresting control over decision-making powers from the federal government. Following two IEA meetings in late 1970 and early 1971, the Inuits formed the Inuit Tapirisat Corporation (ITC). ITC delegates had many concerns, which were reflected in the significant organizational mandate. Founded to secure Inuit land title and establish resource management protocols with the Canadian government and other outside institutions, ITC began to lobby for the creation of Nunavut. Inuit leaders anticipated that Nunavut's formation would resolve their outstanding land claims in the region. In addition to fighting for aboriginal rights, ITC was to work with government officials to limit large-scale development, such as oil exploration, and to promote small scale and local development, such as northern tourism. It was also concerned with developing the proper devices to permit Inuit participation in policy formulation, the creation of programs and research for dealing with rights to territory and resources, all the while seeking protection and maintenance of traditional land use and harvesting practices.

The process that led to the establishment of Nunavut began in 1973. During this period the concept of aboriginal title was becoming a significant

Members of the Arctic Rangers raise the first Nunavut flag in Iqaluit, Nunavut, on April 1, 1999. (AP/Wide World Photos)

legal and political issue in Canada. That year the Supreme Court of Canada, in *Calder v. Attorney-General of British Columbia*, recognized pre-existing aboriginal rights, even those not exclusively outlined in the Royal Proclamation of 1763. This confirmed that a separate system of aboriginal rights did in fact exist, albeit a structure relegated to a lesser position in Western society. In this instance, aboriginal title arises from the long-term use and continuous occupancy of the land by aboriginal peoples prior to the arrival of European and British colonial powers to North America. The *Calder* decision was the first in Canada to use the terms "aboriginal rights" and "land claim." The message to Canadian officials who had previously ignored the concept of aboriginal title was clear: They needed to create a more flexible policy concerning the definition, classification, and recognition of aboriginal rights.

Such a policy would entail the extinguishment of aboriginal title held by Native groups who, until then, had never signed a treaty as indicated by the Royal Proclamation of 1763, which dictated that a public meeting be held and community agreement reached prior to Indian land being sold to the Crown. The Inuits were concerned with this strategy, having never signed a treaty with Canada. However, in 1974, the Canadian government implemented a new comprehensive land claims policy, which was described as a process in which the claimant group will receive defined rights, compensation, and other benefits in exchange for relinquishing rights relating to the title claimed over all or part of the land in question. The federal government then provided funding to, among others, the ITC to determine the land areas they wanted ownership rights over. ITC utilized the final report prepared as a working paper in the preparation of Nunavut land claim proposal. This was developed in part by a team of researchers, led by anthropologist Milton Freeman, who initiated an extensive land use and occupancy project that defined the boundaries of Inuit land use in Ketikmeot, Keewatin, and Baffin. These demarcations would eventually be adopted in 1979 as the Nunavut borders.

ITC worked diligently on their claim and, in 1976, submitted their grievance to the federal government. The ITC land claim proposed the creation of a new territory and representative government, an unprecedented request at the time. The Inuit goal was to resolve the land claim, which called for the Beaufort Sea and Yukon North Slope areas used by the Inuvialuit to be included in the Nunavut Territory, while simultaneously promoting Inuit political development. The proposal was later withdrawn due to its complexity and because the Inuits at the community level were upset that non-Inuit lawyers in Ottawa and Toronto drafted the proposal, eschewing an advocacy approach necessitating community-based guidance. The move toward a final land claim resulted in Inuit factionalism, which manifested itself when the Inuvialuit split from ITC to negotiate a separate land claim agreement. Nevertheless, that year the Federal Electoral Boundaries Commission recommended dividing the Northwest Territories into two federal electoral districts: Nunatsiaq and the Western Arctic.

The Inuits made clear that they intended to maintain their land base and that they would not consider any amount of compensation for sale of their territory. Further, the Inuits had no intention of

remaining a part of the North West Territories (NWT). Rather, their territory was to remain under Inuit control. They would, however, accept in the new territory a “public government” as opposed to “aboriginal self-government.” According to this model, all citizens could vote, run for office, and in general, participate in public affairs. All people, irrespective of aboriginal status, would fall under the government’s jurisdiction. The NWT legislature expressed its dissatisfaction with the Inuit proposal, insisting that division of the NWT into two smaller territories was undesirable. The federal government considered these concerns. However, it was clear that both Inuit and Canadian officials favored the establishment of a separate Inuit territory, arguing that the Inuits would remain a minority in the NWT under the current structure and that the sheer size of the territory would make territorial program delivery increasingly difficult. The Inuits notified the federal government in 1980 that no final land claim agreement would be finalized that did not involve the creation of a separate and uniquely Inuit territory, to which the federal government conceded.

The North West Territories (NWT) Inuit Land Claims Commission (ILCC) was formed in 1977 to focus exclusively on land claims negotiations. That year, the ILCC submitted its claims proposal to Ottawa following an extended consultation process with northern Inuit communities. In September 1977, “Speaking for the First Citizens of the Canadian Arctic” was presented, which was a necessarily less complex version of the ITC’s previous proposal. The land claim component was well received; however, the negotiations came to an abrupt halt following the federal government’s rejection of the Inuit request to resolve the issue of their future political development prior to moving on to land claims. This delay proved fatal for the ILCC, which disbanded in 1979, only to be replaced by the Nunavut Land Claims Project (NLCP). Inuit leaders agreed that year to participate in the NWT election, which was an historic first. A majority of Inuit members were elected to the NWT Legislative Assembly, and participating in the territorial political process warmed Inuit leaders to the prospect of pursuing their land claims on the basis of aboriginal rights. The NWT Legislative Assembly then established a Special Committee on Unity to determine how residents felt about the proposed territorial division. The final report indicated that residents favored the split, and, based on these findings, legislators voted in favor of division, sixteen to one.

In 1979, the federal electoral boundaries commission's recommendation to divide the NWT into two areas was executed, and the new eastern district (Nunatsiak) roughly corresponded with the Inuits' proposed Nunavut territory. The ITC was following closely the evolution of the claims process, and, at their 1979 organizational meeting, drafted "Political Development in Nunavut," a proposal that incorporated the best aspects of all previous proposals. This document stated four objectives: (1) ownership rights over portions of land rich in nonrenewable resources; (2) decision-making power over the management of land and resources within the settlement area; (3) financial indemnity and royalties from resources developed in the area; and (4) a commitment from Ottawa to negotiate self-government once a land claim was signed. Once again, the ITC reaffirmed that land claims resolutions must also be accompanied by the division of the NWT to permit for the creation of Nunavut and Inuit governance. ITC established a fifteen-year policy attainment schedule. The following year, ITC delegates voted unanimously to pass a resolution, officially calling for the establishment of the Nunavut territory, and in March 1981 the NWT Legislative Assembly ordered a plebiscite to be called to settle the issue of division.

The federal government had previously been reluctant to consent to Inuit demands calling for the creation of a territory prior to resolving outstanding land claims. Officials did, however, accept the legitimacy of a plebiscite. John Munro, the Minister of Indian Affairs, announced that the Canadian government would abide by the plebiscite's results and the NWT Legislative Assembly's decisions, as based on the population's desires. Ottawa did set three preconditions to division. First, settlement of Inuit land claims must occur prior to the proposed division. Second, a boundary separating the east and west of the territories would have to be approved by the NWT residents. And, third, an accord would need to be reached defining the basic structural arrangements of the government of the Nunavut Territory.

Prior to the plebiscite, the Inuits received a vote of confidence concerning their land claims. In 1982, following the patriation of Canada's Constitution from Britain, included in the new Constitution Act, 1982 was Section 35(3). This clause protected land claims, "that now exist by way of land claims agreements or may be so acquired." This suggested that, upon the finalization of the land claims process, the

accompanying agreement would become a constitutionally protected pact. Then, in April 1982, a plebiscite was held to determine support for the proposed division of the NWT into two independent territories. Despite low voter turnout, the majority of the NWT population (56 percent) favored the idea of division. In the eastern Arctic, where the Inuit population was highest, the percentage in favor of division hovered around 80 percent. Anticipating the establishment of an Inuit territory, a boundary settlement was pursued, albeit unsuccessfully.

The resolution of the NWT issue pleased Inuit delegates; they were now required to negotiate their territorial boundaries. A plebiscite held in April 1982, indicated that the majority of NWT population (56 percent) favored the idea of division into two new political territories. Anticipating the establishment of an Inuit territory, a boundary settlement was pursued in the late 1980s, albeit unsuccessfully negotiated. In April 1990, a former NWT commissioner was appointed to act as mediator in the boundary dispute, followed by one year of negotiations. In April 1991, the Inuit and Dene representatives recommended the proposed compromise border and, in a plebiscite held May 4, 1992, the majority (54 percent) of NWT residents approved the proposal.

Following the 1982 plebiscite, work began on a structured proposal intended to assist in the creation of a new government to be known as the Nunavut Territory. The Constitutional Alliance of the Northwest Territories (CA) was formed in 1982. Following dissemination of the plebiscite results, the CA created two forums intended to provide for debate and planning: the Nunavut Constitutional Forum (NCF) was established for the eastern arctic and the Western Constitutional Forum (WCF) for the western arctic. Anticipating significant revenues resulting from mineral extraction, the Tunngavik Federation of Nunavut (TFN) was established to succeed the ITC in 1982 and was now responsible to pursue land claims negotiations on behalf of the Inuits of Nunavut. Within one year of replacing the TFN, the NCI had drafted a comprehensive working proposal, entitled "Building Nunavut." A revised and expanded edition followed two years later.

The negotiations yielded early successes, and agreements were reached concerning the Inuits' role in wildlife management, on offshore rights, and on a resource management system that involved Inuit decision-making powers. Perhaps the most difficult component of the negotiations concerned the creation of a territorial boundary that everyone could

agree on. There were overlapping areas in the central part of the territory where both the Inuits, who lived primarily in the eastern Arctic, and the Dene-Métis, who occupied the western Arctic, claimed traditional rights. In 1985, a tentative agreement was reached by the NCF and WCF that collapsed when the Dene-Métis refused to ratify it. Finally, John Parker, former NWT commissioner, was appointed to decide on a boundary in 1991. His proposed line was also disputed but later adopted in a territory-wide plebiscite. Even with a boundary in place, other questions remained. From the beginning, the Inuits were clear in their desire to see Nunavut and its government incorporated directly into the claims agreement. Federal officials were also clear in expressing their opinion that the land claims process was an inappropriate forum by which to create a public government that was meant to serve all people, including a non-Native minority. A compromise was reached that resulted in a caveat placed in the claim that would provide for the creation of the new territory without actually making division part of the claim.

A decade-long negotiations process took place, during which time myriad subagreements were reached and the creation of Nunavut became ever more a reality. Then, in 1985, the Coolican Task Force Report was released, leading to a revised federal land claims policy. The new policy recognized aboriginal decision-making powers for joint management boards, resource-sharing revenue, and inclusion of off shore areas. The Inuits were pleased, as were the various Inuit organizations involved in the negotiations. That same year, the final report of the Royal Commission on the Economic Union and Development Prospects for Canada was released, recommending that the creation of a new territory in the Eastern Arctic would make Canada's north "more governable." The commissioners also believed that a new territory would better accommodate different rates of political and constitutional development occurring. In the wake of a new land claims policy and the Royal Commission, the Inuit negotiators strengthened their resolve and refused to accept any federal offer that did not result in the creation of a separate Inuit territory. The federal government realized that this was a sticking point and made the decision to pursue the final land claim with the promise that a new Inuit territory would be established. This agreement was formalized in the Nunavut Political Accord, signed in April 1990 by the Canadian government, the NWT government,

and the Inuit negotiating body, the Tungavik Federation of Nunavut (TFN).

Although not directly involved in the Nunavut proposal, the Inuits from Inuvialuit who chose to break away from the Nunavut process in 1976 to settle their land claims did at times influence negotiations. Intense pressure from impending economic development initiatives led the Inuvialuit to settle the first comprehensive land claim settlement in the NWT with the government of Canada. Working together, Canada, the Dene, the Métis, and the Inuvialuit established the Iqaluit Agreement, which assigned the Inuvialuit surface ownership rights to 60,000 square miles of land as well as certain subsurface rights to another 8,000 square miles of land. The agreement afforded the Inuvialuit special harvesting rights, environmental protection, their participation in a number of comanagement regimes, federal support for economic development initiatives, and the establishment of a social development fund. Financial compensation in the amount of \$45 million was paid to the Inuvialuit in annual installments until 1997. The final land claim notwithstanding, the Inuvialuit had to be consulted as the Nunavut process moved forward. This was followed by a proposal that the proposed boundary of Nunavut based on the Inuit land claim settlement area and the Dene/Métis and Inuvialuit claim settlement areas form the western territory. The Dene nation and Métis Association of the NWT did not reach an agreement with the TFN concerning the precise boundary of their respective claims areas; hence the Parker boundary.

Following years of negotiations, an agreement in principle was reached in 1990, and a single-line boundary between the claims settlement areas of the Dene/Métis and the Inuits was accepted in the 1992 plebiscite. The Government of the Northwest Territories (GNWT), the TFN, and the Canadian government adopted the boundary for division in the Nunavut Political Accord. In December 1991, negotiations were finalized and the final agreement committed Canada, the GNWT, and TFN to negotiate a political accord to deal with powers, principles of financing, and timing for the establishment of a distinct Nunavut government. The Inuit referendum was held November 3–5, 1992, with 69 percent voting in favor of the proposed land claims agreement. The agreement was also successfully passed through Parliament, received Royal Assent, and, on July 9, 1993, an order-in-council was prepared, realizing the agreement. Federal, territorial, and Inuit representa-

tives signed the land claim agreement on May 25, 1993, which enabled the transfer of more than \$1.1 billion to the Inuits.

The land claim was ratified and enacted by the Canadian Parliament in two pieces of legislation: the Nunavut Land Claims Agreement Act, ratifying the settlement, and the Nunavut Act, establishing Nunavut as a territory as well as enabling its government. In the six months following the Nunavut Act, the recently created Nunavut Implementation Commission worked with the federal government and various Inuit organizations to develop recommendations about the proposed locations of Nunavut's capital, the administrative structures of government, and the operating procedures for the Nunavut Legislative Assembly. Operating at an annual cost of \$3 million, the commission ran until 1999. The Commission's final hundred-page report was divided into fourteen sections and made 104 recommendations concerning the political structures of the government of Nunavut.

The land claim settlement is the largest land claim in Canadian history. The 1993 agreement gives the Inuit territorial ownership to 220,000 square miles of land, mineral rights to about one-tenth of the area, and a financial settlement of \$1 billion to be paid out over fourteen years. As part of the deal, the Inuits agreed to abandon their claims to all other northern lands. Under the Nunavut Act, the territory of Nunavut is designated as a 1.2-million-square-mile parcel of land that is separate from the NWT. Nunavut has the same territorial powers and responsibilities as the NWT; however, because the Inuits make up 85 percent of the population, Native interests dominate territorial governance (Légaré, 2003, 119).

Some of the more outstanding features of the agreement include:

- Title to approximately 220,000 square miles of land, of which about 22,000 square miles include mineral rights.
- Equal representation of Inuit within government on a new set of wildlife management, resource management, and environmental boards.
- The right to harvest wildlife on lands and waters throughout the Nunavut settlement area.
- Capital transfer payments of \$1.148 billion, payable to the Inuits over fourteen years.
- A \$13 million Training Trust Fund.

- A share of federal government royalties for Nunavut Inuits from oil, gas, and mineral development on Crown lands.
- Where Inuits own surface title to the land, the right to negotiate with industry for economic and social benefits with nonrenewable resource development.
- The right of first refusal on sport and commercial development of renewable resources in the Nunavut Settlement Area.
- The creation of three federally funded national parks.
- The inclusion of a political accord that provides for the establishment of the new Territory of Nunavut and through this a form of self-government for the Nunavut Inuit.

In 1995, Iqaluit was chosen over Rankin Inlet as Nunavut's capital city, and during the next four years, federal and territorial officials worked toward establishing Nunavut's government. Recognizing that the process would take some time, the federal government appointed Jack Anawak to serve as interim Commissioner of Nunavut responsible for establishing a functional government for Nunavut's official entry into Confederation. In 1998, amendments to the Nunavut Act were adopted by Parliament and received Royal Assent and, on February 15, Nunavut residents went to the polls to elect nineteen members to the new Legislative Assembly. On April 1, 1999, Nunavut and its new government were constituted, followed by the unveiling of the Nunavut flag and coat of arms. Once Nunavut's residents elect the Members of the Legislative Assembly (MLAs), the latter hold a secret ballot to elect a speaker of the assembly to oversee operations. The MLAs also elect by secret ballot the premier of Nunavut, as well as the executive (cabinet). Nunavut's government has ten departments, each headed by a minister. MLAs lacking ministerial portfolios form the opposition. Territorial elections are held every five years by popular vote, and one member of parliament (MP) and one senator represent Nunavut federally.

The federal government, according to a five-year formula financing agreement, funds Nunavut operations. The remainder of the budgeted operations is funded through taxation and the sale of goods and services. The inaugural allocation for the 1999–2000 governmental budget was \$620 million, of which \$580 million was allocated to cover the costs of programs and services.

The government of Nunavut conducts the majority of its business in Inuktitut, the language of the Inuit. Nunavut's other official languages are English and French. The government of Nunavut is decentralized, and the nearly 700 headquarters staffers are divided among Iqaluit, the capital of Nunavut, and ten other communities. Iqaluit is home to the ministerial, policy and planning, financial administration, and personnel-related functions of the government of Nunavut's other departments. Decentralizing was anticipated to provide Nunavut's three regions equal decision-making authority and to extend new jobs to as many areas as possible.

The more than \$1.1 billion dollars in compensation money will pass from the federal government to the people of Nunavut over fourteen years, ending in 2007. This money is managed by the NTI (replacing the TFN), a highly centralized organization comprised of a General Assembly consisting of forty-eight delegates held annually, a ten-member Board of Directors that meets quarterly, and an Executive Committee that meets monthly. The General Assembly approves the annual budget, can increase or restrict spending, and can modify its programs and services, the latter of which must be approved by two-thirds of the delegates. The Board of Directors meets to review and evaluate the Executive Committee's decisions. Six of the ten board members come from Regional Inuit Associations, which gives significant weight to regional interests within the board. The Executive Committee is the most powerful cog in the machine. The Inuit beneficiaries elect the four-member committee that meets monthly to implement the decisions approved by the General assembly, while supervising the NTI's day-to-day operations (Légaré, 2003, 120–123).

The NLCA extends to various components of Nunavut's political economy, which includes its role in organizing territorial capital. The NLCA provides for representative hiring of Inuits within government, it outlines preferential procurement policies by the federal and territorial governments for Inuit firms, it specifies an Inuit Impact and Benefit Agreement be performed prior to implementing major development projects, and it affords greater Inuit control over natural resources and the right to harvest. Nunavut is a public government that provides the Inuit with political influence, because they constitute approximately 85 percent of the territorial population. The government of Nunavut incorporates Inuit values and beliefs into a public government model.

Oliphant v. Suquamish Indian Tribe

Oliphant v. Suquamish Indian Tribe was a landmark U.S. Supreme Court decision that eroded the legal standing of tribal governments' sovereignty. The far-reaching effects of the verdict's precedent are still being clarified today. Justice William Rehnquist authored the decision, a six-to-two split, arguing that tribal governments have no jurisdiction over non-Indians who commit crimes on their lands.

The two crimes instigating the litigation both occurred in the 7,276-acre Suquamish Port Madison Reservation across Puget Sound west of Seattle. The annual celebration of Chief Seattle Days on the reservation had become a popular event for non-Indians. The Suquamish petitioned state, county, and federal law enforcement officers for assistance in dealing with the thousands of visitors who attended. They were told to create their own enforcement using their own resources (Wilkins, 1997, 190).

On August 19, 1973, during the Chief Seattle Days celebration, Mark David Oliphant assaulted

a member of the tribal police. He then resisted arrest and was summarily detained. Oliphant sought a writ of habeas corpus in the U.S. District Court for the Western District of Washington, maintaining that the authorities of the Suquamish Port Madison Reservation were not qualified authorities of the U.S. government and his civil rights had been violated. Oliphant lost the case. The case was appealed, as *Oliphant v. Schlie*, to the Ninth Circuit Court of Appeals, which also ruled against Oliphant. The lawyers for the tribe were quite surprised when, in 1978, the Supreme Court agreed to hear the case.

On August 12, 1974, the second petitioner in *Oliphant v. Suquamish Indian Tribe*, Daniel B. Belgarde, was charged with a high-speed highway chase that ended when he lost control of his vehicle and collided with a tribal police vehicle. He was detained, posted bail, and was allowed to leave. Nearly a week later, proceedings began against him for violating the tribal code and damaging tribal property. The tribal court proceedings were postponed pending a final decision of jurisdiction in *Oliphant v. Suquamish Indian Tribe*.

The Supreme Court ruled against the Suquamish. A majority of the judges used the legal justification that improper execution of habeas corpus was a violation of the Fourteenth Amendment. They stated that habeas corpus was improperly executed because the Suquamish tribal authorities lacked the specific written jurisdiction to detain non-Indians. Other rationales for lack of jurisdiction cited by Justice Rehnquist were that nineteenth-century congressional acts reflected a belief that tribes did not have "jurisdiction absent a congressional statute or treaty provision to that effect" (435 U.S. 191).

Rehnquist's reading of the Treaty of Point Elliot between the United States and Suquamish found no treaty language to guarantee the right to try non-Indians who commit crimes on treaty lands. Justice Rehnquist justified his decision for limited tribal sovereignty by citing a case in which the Choctaw nation requested from Congress the prerogative to punish non-Indians who entered their territory and committed crimes. Because the Choctaw treaty language concretely delineated this right, Rehnquist argued that by default most tribes were understood to lack this power (Wildenthal, 2003, 74–75).

Justice Thurgood Marshall, joined by Chief Justice Warren E. Burger, dissented from the majority opinion. Their rationale was that, without concrete

treaty language specifically denying it, the right to keep the peace is "a *sine qua non* [essential quality] of the sovereignty that the Suquamish originally possessed" (435 U.S. 191, 213). This was the same rationale for the federal district court's ruling against Oliphant, which Justice Marshall cited in his written dissent.

Suquamish tribal lawyers were mystified by the legal logic of decision. One of these lawyers explained their opinion by quipping, "petitioner [Oliphant] takes the novel position that since his race differs from that of the government controlling the land on which he committed his offense, he is immune from prosecution by that government" (Wilkins, 1997, 194).

The ramifications of this decision reshaped the status of tribal governments' jurisdiction on reservations, as well as interpretations of Chief Justice John Marshall's famous reference to "domestic dependent nations" in *Cherokee Nation v. Georgia* (30 US 1 [1831]). The larger legal issue at contention in *Oliphant v. Suquamish Indian Tribe* was the precise legal parameters of a "domestic dependent nation" and the extent of its sovereignty. The Suquamish Port Madison Reservation had a population of only roughly 100 tribal members at the time of the decision. The small size of the reservation and the lack of many legal precedents in its history perhaps made this case an odd choice for the Supreme Court to review as indicative of the larger legal issue at stake. Several experts in law and tribal sovereignty agree that *Oliphant* was a poor case for asserting a tribal government's right to try criminals who commit crimes on their lands. The outcome of the case might have been different if it had involved a larger reservation with greater lands and population and a greater history of case law precedent, such as the Navajo Nation (Wildenthal, 2003, 77).

In 1973, the Suquamish tribal government established a Law and Order Code. The Code, which covered a spectrum of offenses from theft to rape, extended the Suquamish tribal government's criminal jurisdiction over Indians and non-Indians alike. The Suquamish Law and Order Code was held to be invalid for non-Indians because it provided similar but not identical protections to those guaranteed under the Constitution.

Yet, Rehnquist was adamant in his decision that he was arbitrating a case that protects encroachment on U.S. citizens' rights. The equal, if complex, U.S. citizenship of every American Indian appears absent from his legal logic.

Many advocates of tribal sovereignty were struck with disbelief by the decisions of *Oliphant v. Suquamish Indian Tribe* (1978) and *Duro v. Reina* (1990). Historically, the Supreme Court had shown a strong tendency to uphold the regulatory authority of tribal governments. The legal jurisdiction of such things as economic matters, land use, zoning, the environment, and family law had been consistently ruled as the domain of tribal governments (Wildenthal, 2003, 85).

The 1960s and the 1970s were times of great political activism as well as legal upheaval in Native–federal relations. Events such as the 1969 occupation of Alcatraz, and the 1973 occupation of Wounded Knee were coupled with unprecedented legal victories and rights secured from the executive, legislative, and judicial branches of U.S. government. These legal victories and new rights created resentment in certain circles of government. David Wilkins suggests that the *Oliphant* decision can be seen as a backlash among disaffected non-Indians against these legal victories secured in the previous decades (Wilkins, 1997, 186). This resentment is discernable in the comments by the vice chair of a congressional review commission on American Indian policy, a representative from the state of Washington, Lloyd Meeds. ““American Indian tribes are not a third set of governments in the American Federal system. They are not sovereign. The Congress of the United States has permitted them to be self-governing entities but not entities which would govern others. . . . [E]ven if *Oliphant* is upheld by the United States Supreme Court, the Congress must still decide whether Indian power over non-Indians is wise” (U.S. Congress, 1977, 587).

Two later decisions impacted by *Oliphant* also merit discussion. In *Duro v. Reina* (495 U.S. 676 [1990]), the U.S. Supreme Court considered whether tribal government jurisdiction was applicable to an American Indian who committed a crime on a reservation where the defendant was not a member. Justice Anthony M. Kennedy authored the decision, which found that tribal governments do not have the right to prosecute a nonmember Indian. Yet he upheld that tribal governments could eject whomever they chose from their lands. In *Means v. Chinle District Court* (1999) the well-known Indian activist Russell Means was prosecuted by the Navajo Nation for a crime he committed on their reservation. Means held that, under federal precedents *Oliphant* and *Duro*, he could not be prosecuted by a tribal government. Yet despite these precedents and

because the Navajo Nation’s Supreme Court took a broad interpretation of the Navajo–United States Treaty of 1868, Means’s case was rejected. Navajo Chief Justice Robert Yazzie ruled that the language of this treaty and Means’s in-law relationship to the Navajo Nation allowed him to reject the precedent of *Oliphant* and *Duro* in this decision. Whether this represents groundwork for a potential reexamination of *Oliphant* at a later date remains to be seen.

Plenary Power

Its name derived from the Latin term *plenus*, meaning “full,” plenary power is the full, complete, and unlimited power of Congress as granted under the Constitution. In practical terms, this power allows Congress to pass laws, levy taxes, wage wars, and hold in custody offenders of U.S. law. Although plenary power was intimated and exercised through earlier court cases, the Supreme Court first used the term in *Gibbons v. Ogden*, where the power of Congress to regulate interstate and foreign commerce was upheld (Wilkins and Lomawaima, 2001, 102). Many scholars view the exercise of such expansive federal power against the right of every citizen for equal protection under the law as the central tension of the U.S. government.

Legal scholar Nicholas Johnson argues that, while the “majoritarian perspective” typically

views the “shifting boundary between rights and powers” as “unproblematic or even attractive” (i.e., as a sign of a reflective, organic democracy), the fluidity of this boundary is viewed differently from the minority perspective. He notes that critical race theorists have long critiqued this majoritarian perspective as a barrier to racial reform arguing, “the dilemma and danger for minorities is that plenary power tethered merely by majoritarian preferences and necessities leave minorities simply to gamble on the direction of future swings in the mood of the majority” (Johnson, 1996, 1556). Johnson’s cogent critique of the implications of both fettered and unfettered plenary power for “minorities” seems particularly relevant to the impact of plenary power on American Indians.

While the exercise of plenary power in Indian affairs introduces the same rights–power paradox found in “minority affairs” discussed by Johnson (1996), there is an important difference: The pre- and extraconstitutional status of tribes places them outside the constitutionally defined “rights” discourse as it applies to states and enfranchised individuals (Wilkins, 1994, 355). As Wilkins notes, “the Bill of Rights . . . does not protect tribes or their members from congressional actions aimed at reducing tribal sovereignty, political rights, or aboriginal Indian lands” (1994, 354). Rather, the paradox for Indian tribes emerges through the tension between plenary power and sovereignty. American Indians exist in the precarious space between the congressional claim of an absolute and unlimited plenary power and treaty-defined rights to sovereignty that are greater than those of states but less than those of external nations. This tension is understood and theorized in American Indian law and policy as the concept of “irreconcilability” introduced by Ball (1987) in the seminal article, “Constitution, Court, Indian Tribes.” He writes:

[W]e claim that the Constitution, and the laws of the United States which shall be the supreme law of the land. But we also claim to recognize the sovereignty of Native American Nations, the original occupants of the land. These claims—one to jurisdictional monopoly, the other to jurisdictional multiplicity—are irreconcilable (Ball, 1987, 3).

Though they recognize the significance of this tension, Wilkins and Lomawaima (2001) maintain that this so-called irreconcilability remains only

when one presumes an unlimited and absolute definition of plenary power, begging the question: What is the actual extent of congressional power over Indian tribes?

Deloria and Lytle (1983) identify two sources of congressional power over Indian affairs: (1) Article I, Section 8, of the Constitution, which stipulates that Congress shall have the power to “regulate commerce with foreign nations . . . states . . . and *with the Indian tribes*,” [emphasis added], and (2) the “guardianship theory,” first suggested by Justice John Marshall in the landmark cases of *Johnson v. McIntosh* and *Cherokee Nation v. Georgia*, and subsequently conscripted into law by Justice Miller in *United States v. Kagama*. Deloria and Lytle contend, “taken together, these sources of power provide Congress with an almost omnipotent control over Indians” (1983, 40).

In contradistinction to this position, Wilkins and Lomawaima (2001) maintain that nothing in the Constitution provides for congressional power over tribes. They argue that the commerce clause empowers Congress only to regulate *in relation with* tribes, not over them. Also, instead of the “guardianship theory” cited by Deloria and Lytle, Wilkins and Lomawaima cite the treaty clause (Article 2, Section 2, cl. 2) as the most relevant source of congressional power. They maintain that, even though there is no explicit mention of tribes in the treaty clause, an implicit right operates since treaties “were the principal mechanism that linked tribes and the federal government,” a right that also distinguishes tribes from states (Wilkins and Lomawaima, 2001, 103). In addition to differences regarding the appropriate sources and scope of congressional power, Wilkins (1994) notes that there is considerable disagreement among scholars over whether plenary power is a necessary power that protects tribes or a patently antidemocratic practice that represents an abuse of power.

To investigate the matter further, Wilkins reviewed 107 federal court cases involving plenary power between 1886 and 1914—the period in American history when plenary power was exercised in the “most virulent and unabashed form” (Wilkins 1994, 350). Through this comprehensive study, Wilkins found three major categories of interpretation and practice regarding plenary power: (1) absolute, (2) exclusive, and, (3) preemptive. *Exclusive plenary power* refers to the exclusive legislative power of Congress to engage in treaty making with tribes or to recognize particular rights that Indians have

been deprived because of their extraconstitutional standing (Wilkins, 1994, 354, 355). *Absolute plenary power* refers to the exercise of power not limited by other textual constitutional provisions or other congressional objectives. *Preemptive power* is the congressional exercise of power that may preempt or supersede state law.

The era of plenary power examined by Wilkins commenced in 1886 with the Supreme Court's decision in *United States v. Kagama*. In this case, the defendant challenged the constitutionality of the Seven Major Crimes Act (23 Stat., 362, 385 [1885]), which authorized federal jurisdiction over "major crimes" (e.g., murder, rape, arson) in Indian Country. Despite the complete lack of constitutional authority, the Court ruled against Kagama, confirming federal jurisdiction over major crimes in Indian Country. The decision read:

[T]hese Indians are within the geographical limits of the United States. The soil and people within these limits are under the political control of the Government of the United States, or of the States of the Union . . . What authority the State governments may have to enact criminal laws for the Indians will be presently considered. But the power to organize territorial governments, and make laws for their inhabitants, arises not so much from . . . [the Commerce clause but] . . . from the ownership of the country in which the Territories are, and the right of exclusive sovereignty which must exist in the National Government, and can be found nowhere else (*United States v. Kagama*, 1885).

Wilkins and Lomawaima (2001) delineate several errors inherent in this analysis. Most notably, they cite the irrational logic exemplified by the Court's use of extraconstitutional and/or extralegal constructs (i.e., Doctrine of Discovery, wardship, and dependency) while completely disregarding the extraconstitutional status of Indian tribes, who, as internal sovereigns, were neither governed nor protected by the constitution.

The inauspicious introduction of absolute plenary power is offset by the last case of the era—*Perrin v. United States*—which intimates an end to such unlimited and abuses of power. The case involved the sale of liquor on lands ceded to South Dakota by the Yankton Sioux by a treaty in 1894. Pursuant to this agreement, the chiefs forbid the sale

of any liquor on ceded lands. After the cession, the U.S. government challenged the tribes' authority to enforce the terms of this agreement. In a change of tide, the Court upheld this initial provision, finding that plenary power should "not go beyond what is reasonably essential for [the protection of tribes], and that, to be effective, its exercise must not be purely arbitrary but founded on some reasonable basis." Deloria and Lytle explain the decision as follows:

[The Court held that] the presence of Indians, with a peculiar status and a negotiated consideration for the cession of their lands, imposed a unique federal servitude on these lands so that, even though they were not wholly within the jurisdiction of South Dakota insofar as location, private title, and political independence from the federal government, they nevertheless were federal lands for the purposes described and would remain so until an affirmative congressional enactment released them from this servitude (1983, 73, 74).

Wilkins (1994) notes, however, that, while Perrin represents a victory of sorts, the Court still deferred to Congress to determine what counts as an "arbitrary" and/or "reasonable" basis for decision making.

Kagama and *Perrin* demarcate the beginning and end of an era when plenary power was interpreted in as many different ways as there were court cases. In the final analysis, the majority of scholars view both the preemptive and exclusive exercise of plenary power as authorized under the Constitution but criticize the absolute interpretations of plenary power as "fundamentally wrong" and in "violation of the treaty and trust relationship between the United States and Indian tribes" (Wilkins and Lomawaima, 2001, 115). Consequently, Wilkins and Lomawaima call for the U.S. government to honor the Constitution and treaty relationships and "resolve to use plenary power only in its exclusive and preemptive senses and explicitly . . . reject and renounce the unlimited/absolute definition as a violation of the democratic principles of enumerated powers, limited government, consent of the governed and the rule of law" (Wilkins and Lomawaima, 2001, 116).

Praying Villages of Massachusetts

Beginning in 1651, the Massachusetts Bay colony embarked on a mission to "civilize" and Christianize the Native peoples of New England. They attempted to accomplish this through the establishment of what came to be known as praying villages or praying towns. Many historians believe that these early settlements set the precedent for the reservation system, which came into prominence nearly 200 years later.

From the time it received its charter in 1629, one of the primary goals of the Massachusetts Bay Company was to spread Christianity and English culture. Indeed, the colony's original seal featured an Indian and the motto, "Come Over and Help Us." In the colony's formative years, however, there was little missionary activity. The Puritan settlers were more interested in simply subsisting and carving out a viable colony. Furthermore, they had first to consolidate their power and establish military dominance in the region, which was more or less accomplished after the Pequot War of 1637 and the submission of the Massachusett Indians in the mid-1640s.

In 1646, John Eliot began a rigorous campaign of proselytizing to the tribes of New England, including the Massachusett, Nipmuck, Pawtucket, and the Pennacook Confederacy. The success of this initial foray was limited, leading Eliot and the colony's

leadership to believe that the Indians first had to be immersed in English culture before they could be converted. To accomplish this, they established proto-reservations, or praying villages, where the Native people could be isolated and taught European customs. The first such village was Natick, which was soon followed by numerous others. By the outbreak of King Philip's War in 1675, there were fourteen such missions.

The Massachusetts Bay government set land aside for the praying villages and maintained control over them. Each reservation was laid out in an orderly manner, with English-style structures and streets spread across the village. The Native inhabitants also followed European subsistence patterns, tilling the surrounding fields and tending to livestock. In terms of government, the villages' adult male populations elected their own local leaders and drafted legislation. All laws and ordinances passed by the villagers, however, were subject to the approval of a superintendent who was appointed by the Massachusetts Bay General Court.

A staunch assimilationist, John Eliot insisted that the villages' inhabitants throw off their Indian culture. Native dress and religion, tribalism, polygamy, and powwows were strictly prohibited, while the European conception of private property was hammered home. A system of punishments and incentives was enacted: Those who transgressed or violated the villages' codes were fined; those who exhibited "good" behavior and made progress in adopting white ways were rewarded. This crash course in "civilization" was followed by a relentless effort to Christianize the Indians. Eliot worked with Indian converts to translate the Bible into Algonquian. He also wrote *The Indian Primer* and other texts outlining the cornerstones of Puritanical theology.

The success of the praying villages was limited. Most New England Indians shunned the missions and opted to keep their distance from the intruding non-Native world. The minority who did join the villages were from the most weakened tribes, such as the Massachusetts and Nipmucks. Their world had been decimated by disease and the English conquest of their lands. For these "praying Indians," the adoption of European culture seemed to be the only alternative. Nevertheless, despite the best efforts of Eliot and others, they remained caught between Puritan society and their former tribes, never fully accepted by either.

When King Philip's War broke out in 1675, many of the Indians in the praying villages sided with the

Wampanoag sachem, Metacom (King Philip), and his pan-Indian alliance. Others remained neutral or even fought alongside the colonists. Regardless of where they stood in the conflict, all New England Indians lost out once the war came to an end in 1676. Most of those who survived the bloody ordeal were pushed out of their traditional lands and summarily shipped off to isolated reservations or the West Indies. The colony's General Court eliminated all but three praying villages. The villages that remained were overrun and eventually absorbed by land-hungry whites in a few years. By the turn of the century, Eliot's initial experiment of assimilation and Christianization was just a fading memory.

Pyramid Lake Paiute Tribe v. Morton

The case of *Pyramid Lake Paiute Tribe v. Morton* brought to the courts' attention the fact that not all cases regarding Indian water policy necessarily involved water for agriculture. Early in the twentieth century, the Winters doctrine had set out the principle that Indian tribes had a reserved right to enough water to fulfill the purpose of their reservation, but that purpose had been almost exclusively defined by subsequent court decisions and Bureau of Indian Affairs policy as irrigated agriculture. Irrigation also was foremost in the minds of officials of the Bureau of Reclamation as they sought to develop the West's water resources for the benefit of non-Indian farmers.

In 1902, passage of the Reclamation Act, sponsored by Congressman Francis Newlands of Nevada, began the modern age of western water development. The first project funded by the new apparatus, devised by and named after Newlands

himself, was the first case in the new century in which Indians had to deal with a massive loss of water rights due to non-Indian water development (Wilkinson, 1992). The construction of the Newlands Reclamation Project in California's Central Valley, the first large-scale attempt by the federal government to subsidize irrigated agriculture in the West, involved diverting much of the area's water, including that of Pyramid Lake in Nevada, which is sacred to the Pyramid Lake Paiutes. Pyramid Lake, completely within the tribe's reservation boundaries and the source of their livelihood by fishing, became a shadow of its former self. The Newlands Project also entailed an immense construction on the Truckee River near Fallon, Nevada. The original proposal intended to divert the waters of the Carson River to feed the project, but, when those waters proved insufficient, reclamation officials turned their eyes toward the Truckee.

The construction of Derby Dam, about thirty-five miles upstream from Pyramid Lake, reduced the river's flow by half, which both lowered the level of the lake by about seventy feet and permitted the buildup of silt. This led to an insufficient flow to prevent the salination of the lake, a factor in the death of the Lahontan cutthroat trout, the primary source of livelihood for the area's Paiutes. Consideration of the lake and its associated wetlands as resources in their own right, apart from agriculture, was not something the courts or the Department of the Interior were prepared to accept. By the late 1960s, the Secretary of the Interior issued regulations regarding how much water could be diverted from Pyramid Lake, but by that time the fishery and wetlands were so seriously damaged that it would take a complete change in course to restore the tribe's asset.

In the case of *Pyramid Lake Paiute Tribe v. Morton*, a federal district court ruled that the allocation of water by the Interior Department violated the government's trust responsibility toward the Indians (Fixico, 1988). The court cited the trust responsibility of the federal government as requiring it to protect Pyramid Lake for the use of the tribe. The case pointed out the often contradictory nature of government policy in the area of water rights. While one federal agency within the Department of the Interior, the Bureau of Reclamation, was developing non-Indian water resources with no attention to Indian needs, the Bureau of Indian Affairs was ineffectively "advocating" for those Indian needs. In the end, it took the cooperation of environmentalist

groups, reacting in response to the highly toxic materials leached out as a by-product of Newlands irrigation, to get the diversions from the Truckee River reduced. Unfortunately, this has had the unfortunate side effect of concentrating the leached toxins in the water that remained.

After fourteen years of negotiations, the California–Nevada Interstate Water Compact was signed in 1968 to allocate waters in Lake Tahoe and the Truckee, Carson, and Walker River basins. The agreement served the interests of local water user groups in Nevada and California but infringed, once again, on the water rights of the Pyramid Lake Paiutes. Eventually, the compact of 1968 was amended. The California and Nevada state legislatures approved the new version in 1971, but Congress refused to ratify it (Haller, 1989). It was not until 1990 that parties in the region were able to reach agreement on the Truckee–Carson–Pyramid Lake Water Rights Settlement, which ensured enough water flow into Pyramid Lake to resurrect the damaged wetlands, which are so integral to the Pyramid Lake Paiute identity and lifeways.

Radiation Exposure Compensation Act

The Radiation Exposure Compensation Act (RECA), passed by Congress in 1990, provides payments to people who contracted certain cancers and other serious diseases as a result of their exposure to radiation released during aboveground nuclear weapons tests or as the result of their exposure to radiation during employment in underground uranium mines in Arizona, Colorado, New Mexico,

Utah, or Wyoming between 1947 and 1971. Many of the Native Americans, mostly Navajos, applying for aid have had their requests denied because of difficulties with the strict rules for aid.

The dangers of radiation were not well understood by the public during the early years of the Cold War, although uranium was discovered to be radioactive in 1896. Uranium is a naturally occurring, silvery-white metallic element that is needed to create nuclear fission. Exposure to radiation from uranium can occur in various ways. The breakdown of uranium products creates radon progeny. These can attach to dust particles and, if workers inhale the dust, the particles lodge in their lungs, where they release intense doses of radiation.

People working with uranium need protective clothing to shield their bodies from radiation damage that causes cancer and kidney damage. Additionally, exposure to various agents in the mining community, such as silica and other dusts, can cause nonmalignant respiratory diseases such as pulmonary fibrosis, cor pulmonale related to fibrosis, silicosis, and pneumoconiosis. Until the 1970s, miners typically wore only short-sleeved T-shirts, denim pants, and helmets. In that decade, mine managers started taking some precautions against radiation exposure.

RECA designated responsibility for establishing regulations for the submission and payment of claims to the Attorney General. In May 1992, the Department of Justice began accepting claims and making payments. Navajo workers formed about a fourth of the workforce in the uranium mines and mills of western Colorado and New Mexico, eastern Utah, and Arizona. However, they have not received a fourth of RECA benefits.

A substantial number of Navajos do not have a strong command of English, preventing them from understanding the RECA law and applying for benefits. Additionally, RECA regulations have been criticized for being unnecessarily stringent and unreasonably burdensome. Workers were required to provide proof that they were exposed to specified minimum levels of radiation, set at 200 Working Level Months. There is no scientific evidence that workers who were exposed to less than 200 months of radiation are safe from radiation-related ailments.

Uranium workers experience lung cancer at a rate that is twenty-eight times the normal rate. Despite this, the first version of RECA excluded lung cancer patients if they smoked more than one pack

of cigarette products per year. Even Navajos who used tobacco for ceremonial purposes thus were banned from receiving compensation. The government also required documentation of marital status for wives of miners to get benefits but only accepted state-issued marriage certificates. Many Navajos do not have such documents, preventing widows of uranium miners from collecting benefits. Compounding the anger of the uranium workers and their relatives, the federal government did not sufficiently fund RECA. A “downwinder” (a person exposed to radiation during aboveground nuclear tests) was designated to receive \$50,000, an on-site participant in testing was awarded \$75,000, and a uranium miner received \$100,000. However, the federal government issued IOUs and partial payments instead of full cash payments to those who qualified for aid.

To lobby the government for assistance, the Navajos have formed a number of organizations, including Diné Citizens Against Ruining Our Environment, the Eastern Navajo Agency Uranium Workers, the Northern Arizona Navajo Downwinders, the Utah Navajo Downwinders, and the Navajo Nation Dependents of Uranium Workers. Women and children who lived in uranium camps with their miner husbands and fathers were also exposed to radiation. Many of the wives have developed cancers and respiratory problems. The children also suffer from a high rate of birth defects. In response to Navajo complaints, the federal government amended RECA in 2000 to add new claimant categories, provide additional compensable illnesses, lower the radiation exposure threshold, and remove lifestyle restrictions.

Royal Commission on Aboriginal Peoples

In the wake of the Oka crisis of 1990, Prime Minister Brian Mulroney (Progressive Conservative) established the Royal Commission on Aboriginal Peoples (RCAP) in August 1991. What began as a dispute over the expansion of a municipal golf course onto sacred lands between the town of Oka and the Kahnésatake Mohawk Reserve resulted in a seventy-nine-day, \$500-million standoff between the Mohawks, the Quebec Provincial Police, and the Canadian Armed Forces. Concerned that similar events could erupt in other parts of Canada, the prime minister approached former Chief Justice of the Supreme Court Brian Dickson to prepare a report to determine whether a royal commission on aboriginal affairs should be established to investigate the issues. While praising aboriginal leaders for their forthright interface with federal officials in their efforts to solve the myriad problems plaguing aboriginal communities, Dickson’s final report indicated that most aboriginal people were frustrated and disappointed with their treatment at the hands of provincial and federal authorities. Dickson recommended creating a royal commission to deal specifically with aboriginal issues as a central component of the national agenda. Although the commission began with high hopes, time has revealed that it has failed to live up to its potential.

Dickson further recommended that the established commission of inquiry investigate the evolution of the relationship among aboriginal peoples (Indian, Inuit, and Métis), the Canadian government, and Canadian society as a whole, to examine any and all issues that it deemed relevant to any, or all, aboriginal peoples in Canada. It was expected also to propose specific solutions, rooted in domestic and international experience, to resolve the existing problems confronting aboriginal peoples. Following the establishment of the RCAP, commissioners and federal officials determined that the realities of aboriginal life also needed to be understood by all Canadians prior to the formulation of effective solutions and that, until this education process took place, the renewal of the relationship among the “partners in Confederation” would be overly complicated. In their attempts to establish an effective mandate, the commissioners sought guidance from, and met with, members of the Assembly of First Nations (AFN), the Native Council of Canada (NCC), the Métis National Council (MNC),

the Inuit Tapirisat of Canada (ITC), the National Association of Friendship Centres, and the Native Women's Association of Canada (NWAC).

The RCAP commissioners included as co-chairs the Honorable Rene Dussault, Justice of the Quebec Court of Appeal, and Georges Erasmus, former grand chief of the Assembly of First Nations. Filling out the commission were Paul Chartrand, Métis lawyer and academic; the Honorable Bertha Wilson, the first woman appointee to the Supreme Court of Canada; Mary Sillett, founding member and former president of Pauktuutit, the Inuit Women's Association; Viola Robinson, former president of the Native Council of Canada; and Peter Meekison, academic and former deputy minister of Federal and Intergovernmental Affairs for the government of Alberta.

The RCAP was concerned with demythologizing an array of preconceived notions about aboriginal people in order to build a new relationship that would aid in the development of aboriginal self-government. This would help aboriginal people to regain control of the direction of their everyday lives. Commissioners traveled throughout Canada during the public consultation phase of the process. Gaining access to people was important. Commissioners especially wanted the RCAP to be easily accessible to those people wishing to participate from remote areas of Canada. As a result, four aboriginal languages were used, and a special telephone line was also established to help secure these opinions. In all, the RCAP met 100 times, had 178 days of hearings, recorded 76,000 pages of transcripts, generated 356 research studies, and published four special reports and two commentaries on self-government. It cost close to \$60 million. The final report was a six-volume set consisting of 3,536 pages dealing with myriad issues as diverse as justice, land claims, relocation of the Inuit, and health, to name a few (Belanger and Newhouse, 2004, 165).

The RCAP's recommendations were guided by five key principles commissioners were certain could enable the rebuilding of aboriginal life in Canada: (1) Aboriginal nations have to be reconstituted; (2) a process must be established for the assumption of governing powers by aboriginal nations; (3) there must be a fundamental reallocation of lands and resources; (4) aboriginal people need education and crucial skills for governance and economic self-reliance; and (5) economic development (or lack thereof) must be addressed if the

existing rates of poverty and despondency of lives defined by unemployment and welfare are to change. The commissioners envisaged a new Canadian partnership based on mutual recognition, one in which aboriginal and nonaboriginal people would "acknowledge and relate to one another as equals, co-existing side by side and governing themselves according to their own laws and institutions."

As such, a sizable body of literature was devoted to the exigencies of aboriginal self-government that included twenty-five regional case studies, each focusing on a specific aboriginal nation. Some aboriginal academics and politicians saw the RCAP vision as a pooling of existing sovereignties requiring the formation of these varied groups into a unified entity in order to exercise their right to self-government. In all, those who made presentations to the RCAP considered self-government as one of the most important issues facing Native communities today. The RCAP insisted that Canadians take a proactive role by first sincerely acknowledging the injustices of the past. They also stressed the need to forge a profound and unambiguous commitment to establishing a new relationship for the future.

The RCAP was in the midst of its public consultation phase when, in 1993, the Jean Chrétien-led Liberal Party ousted the Progressive Conservative (PC) party from office. Even though PC leader Mulroney commissioned the RCAP, Chrétien and the Liberals chose to see the RCAP to its final report. Published in 1996, the RCAP forcefully argued that the right of aboriginal peoples to govern themselves is recognized in both international and domestic law. The principles of mutual recognition, mutual respect, sharing, and mutual responsibility helped define "a process that can provide the solutions to many of the difficulties afflicting relations among Aboriginal and non-Aboriginal people . . . When taken in sequence, the four principles form a complete whole, each playing an equal role in developing a balanced societal relationship. Relations that embody these principles are, in the broadest sense of the word, partnerships."

In January 1998, the federal government issued its comprehensive policy response to the RCAP. Entitled *Gathering Strength: Canada's Aboriginal Action Plan*, the strategy set out a policy framework for future government action based on four objectives. Stressing the renewal of the aboriginal-Canadian relationship, the government followed

with an apology for the residential school debacle and the establishment of a \$350-million “healing fund” to address those abuses. *Gathering Strength* also promoted the preservation and promotion of aboriginal languages; the increased public understanding of aboriginal traditions and issues; the inclusion of aboriginal partners in policy and program design, development, and delivery; government willingness to explore how existing systems might be improved; and addressing the needs of urban aboriginal people more effectively. Some of the major recommendations included:

- Legislation, including a new Royal Proclamation stating Canada’s commitment to a new relationship and companion legislation setting out a treaty process and recognition of aboriginal nations and governments.
- Recognition of an aboriginal order of government, subject to the Charter of Rights and Freedoms, with authority over matters related to the good government and welfare of aboriginal peoples and their territories.
- Replacement of the federal Department of Indian Affairs with two departments, one to implement the new relationship with aboriginal nations and one to provide services for nonself-governing communities.
- Creation of an aboriginal parliament.
- Expansion of the aboriginal land and resource base.

Of the 470 recommendations contained in the RCAP’s final report, recommendations that were the most profound and comprehensive ever made by a royal commission concerning the structure and functioning of Canadian society, none have as yet been endorsed by the Liberals or operationalized by the Canadian government. To date, aboriginal leaders and academics regularly refer to the RCAP findings as innovative and progressive. Historically, several royal commissions have been struck to investigate Indian affairs in addition to numerous parliamentary committees. Nevertheless, one decade after its release, the RCAP report is in danger of becoming yet another missed opportunity to improve the relationship between the federal government and one of its “partners in Confederation.”

Standing Bear v. Crook

The *Standing Bear vs. Crook* court case began with the last request of a dying son and ended with a groundbreaking legal decision. For the first time, Native Americans were considered human beings under U.S. law.

In 1877, the U.S. government told Chief Standing Bear (Machunazha) and his Poncas that they must move from their Nebraska reservation to the Indian Territory (Oklahoma). The government sent several tribal leaders to examine their new land, promising the Ponca that they could return to Nebraska if they were dissatisfied. The chiefs rejected the land as being barren, full of rocks, and unsuitable for farming. However, they were told they had no choice; the tribe was moving.

Many Ponca died en route. By the end of 1878, only 430 of the 710 Poncas who had been sent to the Indian Territory were still alive; the rest had been lost to starvation and disease. One of the last to die was Standing Bear’s sixteen-year-old son. He asked that his body be buried with those of his ancestors. Standing Bear promised, and, in January 1879, he headed north with a small burial party. They traveled by hidden trails and reached the Omaha Indian Reservation before soldiers caught up with them.

Standing Bear, a Ponca chieftain, filed suit against U.S. policy which ultimately resulted in the United States legally recognizing Native Americans as human beings. (Library of Congress)

General George Crook was ordered to arrest and return the Ponca. When he saw them, Crook was saddened by their pitiable condition and impressed with their stoicism. He contacted the *Omaha Daily Herald's* assistant editor, Thomas Henry Tibbles, and enlisted his help. Crook believed his removal order was cruel but felt powerless to do anything about it himself. He encouraged Tibbles to use his newspaper to "... fight against those who are robbing these helpless people" (Brown, 1970, 340–341).

Tibbles was able to enlist the help of two prominent attorneys, A. J. Poppleton and J. L. Webster. Using the Fourteenth Amendment as the basis of their case, they persuaded Judge Elmer S. Dundy to grant an application for a writ of habeas corpus. Webster quoted from the amendment, which states that all *persons* born or naturalized in the United States are citizens of the United States and cannot be deprived of life, liberty, or property without due

process of law. Webster inferred that the Indians must then be citizens since they were born "on our soil." "If they are not citizens," he said, "what are they? Are they wild animals, deer to be chased by every hound?" (*Omaha Herald*, 1879, 8).

The second day of the trial climaxed with Standing Bear's testimony: "You see me standing here. Where do you think I come from? From the water, the woods or where? God made me and he put me on my land. But, I was ordered to stand up and leave my land. . . ? When I got down there it seemed as if I was in a big fire. One-hundred and fifty-eight of my people were burned up; now I stand before you. I came away to save my wife and children and friends. I never want to go back there again. I want to go back to my old reservation to live there and be buried in the land of my fathers" (*Omaha Herald*, 1879, 8).

The trial ended with Judge Dundy declaring Standing Bear "a person under the law" and thus entitled to basic human rights (*Omaha Republican*, 1879, 1). When the news reached the Ponca still in Oklahoma, Standing Bear's brother, Big Snake, decided to test the law and headed north with thirty of his followers. However, Dundy had written the law to apply only in the case of Standing Bear, so orders were sent to arrest Big Snake. He was bayoneted and killed while resisting arrest.

The first attempt by Indians to fulfill the high hopes created by Judge Dundy's decision had ended in the tragic death of an innocent man. Standing Bear, who had started the entire process by his simple desire to return his dead son to the land of his birth, now had a brother to bury as well. It had only been a few months since newspapers across the country had called for citizenship rights for peaceful Indians, but it was not until 1924, forty-five years later, that those citizenship rights, which had seemed so attainable in the spring of 1879, would finally be given to the First Americans.

Tee-Hit-Ton v. United States

The United States purchased Alaska from Russia through the Treaty of 1867, but this treaty made no mention of the Natives or their land rights. The Tee-Hit-Ton band of the Tlingit Indians inhabited lands in Alaska that would later be established as the Tongass National Forest. In 1951, Congress sold timber from the Tongass National Forest to a private lumber company, and the Tee-Hit-Ton sued the United States for compensation under the Fifth Amendment of the U.S. Constitution. The Supreme Court decided against the Tee-Hit-Ton, affirming that, since Congress had never acknowledged their land rights, none existed.

The first Russian settlers of present-day Alaska arrived at Three Saints Bay in 1784. Tensions between these early settlers and Native peoples quickly arose over cultural differences, hunting and fishing rights, and land tenure. By the early nineteenth century, American traders were moving into Alaska to establish communities on lands occupied by indigenous groups such as the Eskimos, Aleuts, and Tlingits. Alaska is comprised of 365 million acres that contain a small percentage of inhabitable land but numerous natural resources. As these resources became known to non-Natives, white settlement increased, along with a growing call for statehood and the relentless usurpation of Native land. During the gold rush in 1898, for instance, non-Natives successfully filed claims for title to Native lands, causing severe Native displacement. Moreover, the diversion of streams and the disturbance of their natural environment caused Native people to lose access to and use of important natural resources. Slowly, Native rights developed into a legal issue.

In 1947, Congress passed a resolution instructing the Secretary of the Interior to contract for the

sale of timber from land in and near the Tongass National Forest, "notwithstanding any claim of possessory rights" (61 Stat. 920). The resolution mandated that the receipts from the timber sale be placed in a special Treasury account until the Native land rights issues were settled. On August 20, 1951, the Secretary of Agriculture contracted to a private company all marketable timber from a section in the forest. The Tee-Hit-Tons filed suit claiming aboriginal title to the land and a proprietary interest in the timber harvested and sold.

The primary issue in the *Tee-Hit-Ton* case was whether aboriginal land ownership conferred protection under the Fifth Amendment. A Court of Claims ruled that, while the Tee-Hit-Ton were an identifiable group of American Indians and possessed "original Indian title or Indian right of occupancy," their title had lost its legal standing since it was not explicitly mentioned in the Treaty of 1867. On these grounds, the Court of Claims dismissed the *Tee-Hit-Ton* case (128 Ct. Cl., at 92, 120F).

The Tee-Hit-Tons then appealed their case to the Supreme Court, which heard the appeal. Justice Reed delivered the final opinion denying the Tee-Hit-Ton claims. The Court made several important statements in this denial of Native land rights. The first was that Congress never recognized any permanent rights of Alaska Natives, a fact underscored by the 1947 timber sale. If Congress never affirmed the Tee-Hit-Tons' rights to occupy the forest section where the timber was cut, then it did not acknowledge Native title to this land. The Tee-Hit-Tons possessed aboriginal title only and did not qualify for compensation for the harvested timber. Congress's sale of the timber also implicitly denied Native possessory rights to timber on this land. An important second point was the Court's confirmation of the legal concept of the conqueror's sovereignty over, and ownership of, Native lands. Justice Reed wrote that "every American schoolboy knows that the savage tribes of this continent were deprived of their ancestral ranges by force and that, even when the Indians ceded millions of acres by treaty, it was not a sale but the conqueror's will that deprived them of their land" (348 U.S. 272 [1955] at 289–290). The Court supported this statement with previous land cases and quoted from *Johnson v. McIntosh* (8 Wheat. 543, p. 587) "that discovery gave an exclusive right to extinguish the Indian title of occupancy, either by purchase or by conquest." The Supreme Court determined that Indian occupancy can be extinguished by Congress unilaterally and without recompense.

The Supreme Court heard the *Tee-Hit-Ton* case in the 1950s, at the zenith of the termination policy. Since *Lone Wolf v. Hitchcock* (1903), the Court had supported congressional regulation of tribal domestic affairs but had allowed Native claims to be filed under the Fifth Amendment. The Court's decision was handed down prior to the admission of Alaska to statehood. When the Alaska Statehood Act passed on July 7, 1958, it formally repudiated any land rights held by Alaska Natives or those held in trust for them by the United States.

The *Tee-Hit-Ton* decision set a disturbing legal precedent for future cases that concerned property issues and Native sovereignty. The case implicitly permitted congressional confiscation of lands and resources, whether reservations were created by executive order or through treaty. Three years after the *Tee-Hit-Ton* decision, federal Indian law (414 U.S. 661, 670, 32–43, 583–645, 675–687, 1958) established some fundamental protections of Indian possessory and property rights with regard to aboriginal land title. These issues were significantly resolved according to the Alaska Native Claims Settlement Act of 1971, which provided that 44 million acres of land and \$962 million be allocated for Alaska Natives, in exchange for the extinguishment of all indigenous claims. The land and monies were conveyed to Native peoples through regional and village corporations.

Termination

The positive experiences of some American Indians during the post–World War II era living off the reservations, receiving a regular salary, and having control of personal finances led to a call by some of the more assimilated American Indian people, supported by much of the non-Indian population, to "free" the Native American from the reservation sys-

tem. Accordingly, such a move would "free" the federal government from its trust responsibility to American Indian peoples.

Conservative members of Congress, unhappy with the reforms enacted during the Indian New Deal, worked to have them rescinded even before Roosevelt left office. The members wanted to redefine Indian policy and terminate federal relations with some tribes. Their sentiments reflected the national mood of intolerance toward cultural diversity, as well as a desire to trim the federal bureaucracy created by the Roosevelt administration. They saw withdrawing services to Native Americans as one way to cut federal spending.

Some in Congress determined that it was in the best interest of Native Americans to phase out tribal governments and any guardian responsibilities of the federal government. Thus Congress would remove its protection from Native lands and encourage business leaders to help Native Americans develop their own resources. These same congresspersons maintained that Indians would assimilate faster into the population if they owned their lands outright and were allowed to trade freely. This approach would also open the way for states to tax Indian lands so that Native Americans could help pay for public services (Trafzer, 2000, 389).

The Indian Claims Commission Act of 1946, which was part of the termination movement, turned out to be beneficial for the Native Americans. Under the provisions of this Act, Native Americans were allowed to file claims against the federal government for lands that had been illegally seized. Even though Native Americans could receive monetary compensation, no amount of money could make up for the upheaval and disruption to their way of life. Through the seizure of sacred lands and traditional hunting areas, the deeply held and sacred values of the tribes were disrupted and their usual means of support destroyed. However, compensation did provide Native Americans with funds that enabled them to get their economies moving, at least to some degree.

With conservatism growing strongly in the government and society, John Collier's successors, Commissioners of Indian Affairs William Brophy and John Nichols, were not able to withstand the pressure to roll back change. Conservative congresspersons and Dillon S. Myer, chosen by President Harry S. Truman in 1950 to head the Bureau of Indian Affairs, favored termination. They were able to push through their agenda.

During World War II, Myer had been the director of the War Relocation Authority, which had forcibly removed Japanese Americans from their homes into internment camps. Myer had also been responsible for managing the rural relocation of thousands of people. Throughout the war, Myer maintained the position that Japanese Americans and cultural groups should be assimilated into the dominant society, thereby reducing racial conflicts.

It is not surprising that, when Myer became commissioner, he would act to have Native Americans assimilated into U.S. society. Toward this end, he launched a major counterrevolution against John Collier's policies. Myer believed that a Native American culture was nonexistent and that it was wrong for the government to encourage Native languages, arts, literature, and governments. He had little interest in cultural preservation programs and little concern for cultural pluralism, and he ordered an end to these programs.

Myer played down the role of Indian Day Schools, especially those that were on or near the reservations. He perceived that these schools made too many accommodations to the culture and the customs of the Native American tribes. Myer wanted boarding schools to be enlarged so that more children could be taken from the reservations and their parents. He wanted students to be taught the regular class subjects so that their assimilation would be hastened.

After the election of Dwight D. Eisenhower as president in 1952, Myer realized he would have no place in the new administration. He then offered his services to Glenn Emmons, the new commissioner for Indian affairs. In this capacity he helped draft a document for Congress endorsing termination. Through Myer's work and influence, the Bureau of Indian Affairs had already advocated termination as the "new" national Indian policy by the time that Emmons took over the position of commissioner of Indian affairs in 1953. It is of interest that neither Myer nor Emmons considered it necessary or appropriate to seek Native American advice in formulating the new policy.

Termination was a policy designed by politicians to achieve the withdrawal of federal services and funds that had been promised in treaties, laws, and agreements. Assimilationists were in the ascendancy again, and Congress passed legislation to desegregate Indian communities from mainstream American culture (Fixico, 1991). The administrators implemented the policy quickly before Native Amer-

icans had time to respond to the new threat. It would appear that Emmons had his own agenda in supporting termination. He was a former banker from New Mexico, a state with a large Native American population. Many business interests in the state were eager to reopen reservation lands. Emmons and Senator Arthur V. Watkins of Utah, chair of the Senate Committee on Indian Affairs, championed termination as a way of abolishing the tax-exempt status of tribes. Conservative congresspersons chaired the committees on Indian affairs in both houses. They spent time and energy to move a resolution quickly through Congress. On August 1, 1953, Congress unanimously passed House Concurrent Resolution 108.

The thrust of the resolution was that Indians would be subject to the same laws and entitled to the same privileges and responsibilities as other Americans. The resolution abolished the status of Native peoples as wards and listed tribes in various states that were prepared to have federal services ended. Although House Concurrent Resolution 108 was not in itself law, it had the full support of Emmons and the Bureau of Indian Affairs, and it marked the beginning of an official congressional termination policy.

The Federally Impacted Areas Aid Act (20 U.S.C. 236), passed by Congress in 1951, was the second act—the first being the Johnson O'Malley Act of 1934—designed to aid Native American education in public schools. The Impacted Aid Act assisted school districts that had a reduced tax base because of federally owned land, that is, it provided monies to schools responsible for educating children from armed service bases so that the local schools would not have to sustain an unfair burden. It also provided monies for the education of Native Americans. With this increased funding, local schools now saw the Native American student as fiscally desirable.

In spite of the Johnson O'Malley Act of 1934 and the Impacted Aid Act, it was evident that the federal government would continue to play a primary role in the funding of Native education. The federal-Indian trust relationship, the statutes passed by Congress to maintain that relationship, and the federal funding required to execute the responsibilities in Native education ensured that the federal government would continue to be involved. For their part, the Native communities were concerned with the degree of control that the federal government exerted through the maintenance of its responsibilities (AIPRC, 1976, 167–170).

In the early days of the Impacted Aid Act and its amendments, the states officially were required to make a choice between the Johnson O'Malley or Impact Aid. The Johnson O'Malley Act of 1934 provided supplemental funds to support education programs for Indian students attending public school and for the culturally related and supplementary academic needs of Indian children attending public schools. The Impacted Aid Act was amended in 1958 to allow state school systems to collect both through the Impact Aid Act for the basic support of schools and through the Johnson O'Malley Act for the support of the special education needs of Indian students.

Debate in the federal government resulted in the passage of six termination bills in 1953. In the course of only two weeks, both houses of Congress passed Public Law 280. The president signed the law, but he noted that Congress had not included a provision asking for Native consent to the law. The law placed Indian lands in Minnesota, Wisconsin, California, Nebraska, and Oregon under criminal and civil jurisdiction of the states. The law also invited other states to assume jurisdiction over Indian lands (Trafzer, 2000, 390–392). As a result, states were to assume responsibility for the education of Native American children.

In 1954, Congress passed the Klamath Termination Act. As a result, in 1958 approximately 77 percent of the Klamaths voted to terminate and receive a one-time per-capita payment of \$43,000. The 23 percent who voted to retain their Klamath status in 1973 voted to withdraw from the tribe and receive a payment of \$173,000. Even though Klamaths had terminated their sovereign relationship with the federal government, they were still identified as Indians. The termination did not work out. The Klamath tribe found that it did not have the infrastructure to function successfully in the changed economic conditions. In 1975 the Klamaths readopted their tribal status, and in 1978 Congress recognized the Klamaths and restored their status (Trafzer, 2000, 393–395).

In 1961, the Menominee tribe of Wisconsin was selected by the federal government for release from its governmental ties under the Termination Act. This termination was a disaster for the tribe. As a result of misunderstanding the terms of the Act, members of the tribe failed to invest the money they received or plan for a future without regular subsidy from the government. The tribe quickly used its cash reserves and was left without resources to satisfy

basic needs and continue education services. When the Menominee did not receive money regularly, as was the custom, poverty and then diseases ravaged the tribe. As conditions worsened, the tribe sold much of its prime lands along the rivers and surrounding areas and left itself without resources (Trafzer, 2000, 394).

In all, about seventy tribes were part of the termination era policies. The Menominees of Wisconsin had previously experienced quite a high level of economic development. Termination brought disaster to the economy and health of the tribe. They experienced the effects of tuberculosis as well as a rapidly increasing infant mortality. When the Menominees experienced threats to their power and self-determination, they formed the group Determination of Rights and Unity for Menominee Shareholders (DRUMS) to reverse the effects of termination. President Richard M. Nixon signed the Menominee Restoration Act December 22, 1973 (87 Stat730, 25 U.S.C. 903 et seq.), restoring most of the reservation to the tribe and recognized them as a tribe. Thus began the end of termination.

Another outcome of the Termination Act was the relocation of many other tribes to urban areas. This relocation also proved disastrous, as many Native Americans had great difficulty adjusting to their new surroundings. When they did not adjust to life in the city, they returned to their lands only to find that they were greatly reduced in size. Tribes had been forced to sell large tracts of land, as they needed money for survival. It did not take too long for the government and the tribes to recognize that the termination program, as it was passed and implemented, was a failure (Reyhner and Eder, 1994, 52).

Besides amounting to a failure, the policies of the termination era were in conflict with the existing body of federal Indian law. In 1948, Felix S. Cohen, in the *Handbook of Federal Indian Law*, had consolidated this body of law, which had set the groundwork for interactions between the federal government and the Native Americans. Beginning with the passage of House Concurrent Resolution 108, termination was specified as federal policy for Indian tribes. From that point until the early 1970s, the drive for termination was maintained by the decentralization policy of the federal government, a desire to open up Indian lands, a desire for Native Americans to be assimilated, and a wish to cut back on social programs. In order not to emphasize the discrepancies between new legislation and previous

laws, the BIA simply revised Cohen's 1948 book, deleting or changing sections that were in contradiction with new legislation. The bureau included new opinions to support new policies. The final move was to issue a new edition of Cohen's book in 1972 without mention of any previous editions. This version was and continues to be a highly regarded legal reference (Kickingbird and Charleston, 1991, 16).

Trade and Intercourse Acts

The first Trade and Intercourse Act of July 22, 1790, was enacted "to regulate trade and intercourse with the Indian tribes." Indian historian Francis Paul Prucha writes of this legislation:

Continuing the pattern set in the Ordinance of 1786 and earlier colonial legislation, the law first of all provided for the licensing of traders and established penalties for trading without a license. Then it struck directly at the frontier difficulties. To prevent the steady erosion of the Indian Country by individuals who privately acquired lands from the Indians, it declared the purchase of lands from the Indians invalid unless made by a public treaty with the United States. To put a stop to the outrages committed against the Indians by whites who aggressively invaded the Indian Country, the act made provisions for the punishment of murder and

other crimes committed by whites against the Indians in the Indian Country.

One of the first laws of the new American nation to deal with Indian matters, the act reads:

Section 1. Be it enacted . . . That no person shall be permitted to carry on any trade or intercourse with the Indian tribes, without a license for that purpose under the hand and seal of the superintendent of the [War] department, or of such other person as the President of the United States shall appoint for that purpose; which superintendent, or other person so appointed, shall, on application, issue such license to any proper person, who shall enter into bond with one or more sureties, approved of by the superintendent, or person issuing such license, or by the President of the United States, in the penal sum of one thousand dollars, payable to the President of the United States for the time being, for the use of the United States, conditioned for the true and faithful observance of such rules, regulations and restriction, as now are, or hereafter shall be made for the government of trade and intercourse with the Indian tribes. The said superintendents, and persons by them licensed as aforesaid, shall be governed in all things touching the said trade and intercourse, by such rules and regulations as the President shall prescribe. And no other person shall be permitted to carry on any trade or intercourse with the Indians without such license as aforesaid. No license shall be granted for a longer term than two years. Provided nevertheless, That the President may make such order respecting the tribes surrounded in their settlements by the citizens of the United States, as to secure an intercourse without license, if he may deem it proper.

Sec. 2. And be it further enacted, That the superintendent, or person issuing such license, shall have full power and authority to recall all such license as he may have issued, if the person so licensed shall transgress any of the regulations or restrictions provided for the government of trade and intercourse with the Indian tribes, and shall put in suit such bonds as he may have taken, immediately on the breach of any condition in said bond: Provided always, That if it shall appear on trial, that the

person from whom such license shall have been recalled, has not offended against any of the provisions of this act, or the regulations prescribed for the trade and intercourse with the Indian tribes, he shall be entitled to receive a new license.

Sec. 3. And be it further enacted, That every person who shall attempt to trade with the Indian tribes, or be found in the Indian country with such merchandise in his possession as are usually vended to the Indians, without a license first had and obtained, as in this act prescribed, and being thereof convicted in any court proper to try the same, shall forfeit all the merchandise so offered for sale to the Indian tribes, or so found in the Indian country, which forfeiture shall be one half to the benefit of the person prosecuting, and the other half to the benefit of the United States.

Sec. 4. And be it enacted and declared, That no sale of lands made by any Indians, or any nation or tribe of Indians within the United States, shall be valid to any person or persons, or to any state, whether having the right of pre-emption to such lands or not, unless the same shall be made and duly executed at some public treaty, held under the authority of the United States.

Sec. 5. And be it further enacted, That if any citizen or inhabitant of the United States, or of either of the territorial districts of the United States, shall go into any town, settlement or territory belonging to any nation or tribe of Indians, and shall there commit any crime upon, or trespass against, the person or property of any peaceable and friendly Indian or Indians, which, if committed within the jurisdiction of any state, or within the jurisdiction of either of the said districts, against a citizen or white inhabitant thereof, would be punishable by the laws of such state or district, such offender or offenders shall be subject to the same punishment, and shall be proceeded against in the same manner as if the offence had been committed within the jurisdiction of the state or district to which he or they may belong, against a citizen or white inhabitant thereof.

Sec. 6. And be it further enacted, That for any of the crimes or offences aforesaid, the like proceedings shall be had for apprehending,

imprisoning or bailing the offender, as the case may be, and for recognizing the witnesses for their appearance to testify in the case, and where the offender shall be committed, or the witnesses shall be in a district other than that in which the offence is to be tried, for the removal of the offender and the witnesses or either of them, as the case may be, to the district in which the trial is to be had, as by the act to establish the judicial courts of the United States, are directed for any crimes or offences against the United States.

Sec. 7. And be it further enacted, That this act shall be in force for the term of two years, and from thence to the end of the next session of Congress, and no longer.

The second Trade and Intercourse Act, enacted on March 1, 1793, was designed to improve on the Trade and Intercourse act decreed three years earlier. The law was established in reaction to a report from President George Washington, who told Congress that the original act was not working and needed to be strengthened. As historian Francis Paul Prucha explains:

The [1793] law was a considerably stronger and more inclusive piece of legislation than its predecessor of 1790. The seven sections of the earlier law were expanded to fifteen. Part of the increase came from the new sections authorizing the president to give goods and money to the tribes to “promote civilization . . . and to secure the continuance of their friendship,” and from a long section that aimed to stop horse stealing, but the bulk of the augmentation came from the detailed provision enacted to stop criminal attacks of whites against the Indians and irregular acquisition of their lands. This act, too, was a temporary one, having the same limitations as the first trade and intercourse act.

Thomas Jefferson, in his annual message in 1801, called for a permanent renewal of the several trade and intercourse acts that had been enacted in the previous congresses. Historian Francis Paul Prucha writes, “Accordingly, on March 30, 1802, a new trade and intercourse act became law. It was for the most part merely a restatement of the laws of 1796 and 1799, but by now the period of trial was over. The act of 1802 was no longer a temporary

measure; it was to remain in force, with occasional additions, as the basic law governing Indian relations until it was replaced by a new codification of Indian policy in 1834.”

Enacted on June 30, 1834, the Trade and Intercourse Act of 1834 was the last of several such federal acts to “regulate trade and intercourse with the Indian tribes, and to preserve peace on the frontiers.” Running for thirty sections, the most important portion of the Act, Section 1, reads:

Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That all that part of the United States west of the Mississippi, and not within the states of Missouri and Louisiana, or the territory of Arkansas, and, also, that part of the United States east of the Mississippi river, and not within any state[,] to which the Indian title has not been extinguished, for the purposes of this act, be taken and deemed to be the Indian country.

Note: The bracketed comma was added by the Supreme Court in the case of *Bates v. Clark* to clarify the legislation’s meaning.

Tribal Courts

Judicial systems are operated by Indian nations through laws and procedures enacted by the tribe. Like federal and state courts, tribal courts play a pivotal role in the functioning of the communities they serve and regularly adjudicate a wide variety of cases. Tribal courts, however, are not courts of general jurisdiction and maintain a limited authority to hear disputes. This is especially true for criminal cases, but often applies to civil and other disputes as well.

Although the passage of the Indian Reorganization Act of 1934 was an impetus for the creation of formal tribal courts, their development predates the

Act. In *Ex Parte Crow Dog* (1883), a Lakota Sioux killed a fellow tribal member and was brought to justice by the tribe. There was no formal Lakota court system at this time and a traditional methodology was employed to bring about a resolution to the dispute. The federal government was displeased with the tribal resolution, so it prosecuted the defendant for murder and he was sentenced to death. The U.S. Supreme Court overturned the conviction because it found that the tribe, through a prior treaty, had a reserved the right to carry out its own justice.

Following *Ex Parte Crow Dog*, Congress moved quickly to pass the Major Crimes Act, which granted the federal government jurisdiction over Indians who commit certain felonies while in Indian Country. Passage of the Major Crimes Act undermined tribal sovereignty because it denied tribes the power to administer justice within their own borders. Around this same time, the Department of the Interior set up Courts of Indian Offenses, which are commonly referred to as CFR courts (Code of Federal Regulations). CFR courts were run by the Bureau of Indian Affairs superintendents and handled less serious criminal actions not covered by the Major Crimes Act. In addition to this, CFR courts were often used to advance the federal government’s assimilationist goals and did not necessarily operate in a manner that was consistent with advancing tribal interests.

During 1934, Congress passed the Indian Reorganization Act, giving Native tribes and nations limited self-governing rights, among other things. With such rights, Indian nations often adopted constitutions and created systems of government that were similar to those of the United States. Accordingly, many tribes formed court systems to adjudicate disputes occurring within their respective nations. Funding for tribal courts comes from the federal government, private sources, and the Indian nations. Native tribes and nations that have not adopted court systems rely on federal courts, CFR courts, and sometimes state justice systems for their judicial needs. To date, more than 200 Indian nations and Alaska Native villages have established court systems.

Unlike state courts, reservation courts have limited authority over cases that arise within their nations. Although at one time it was presumed to be an inherent power, tribal courts presently have no general criminal jurisdiction over non-Indians and can impose only limited fines and prison terms of

less than one year on Indians committing crimes in Indian country. Because of this, tribes often must rely on the federal government and on state governments in some instances to prosecute crimes occurring in Indian Country. A scarcity of resources and frequently a lack of interest by federal and state authorities to prosecute crimes in Indian Country are quite common. As a result, many offenses in Indian Country go unpunished.

Although the U.S. Constitution does not apply to tribal court actions, the Indian Civil Rights Act of 1968 guarantees many of the same protections found in the Bill of Rights. Therefore, defendants' rights in tribal courts are often similar to those found in the state and federal systems.

Tribal courts have a much more expansive authority to hear civil claims and routinely adjudicate such issues as domestic relations matters, tort cases, tribal tax issues, regulatory proceedings, and contractual disputes. In some instances, the tribal court has exclusive jurisdiction over a particular matter. One such area is divorce hearings. In divorce proceedings, the tribal court is often the only court that can adjudicate the matter if both parties are Indian and are domiciled in the respective Indian nation. In other cases, the state or federal courts and a given tribe may have concurrent jurisdiction, or the state or federal courts cannot hear a case unless the tribal remedies have been exhausted.

Even though tribal civil jurisdiction is noticeably broader than its criminal authority, it too has limitations. For example, tribal courts cannot hear probate cases involving assets held in trust by the United States. These types of hearings are conducted by administrative law judges in the Department of the Interior. Also, through acts of Congress and Supreme Court decisions, tribal civil jurisdiction has been severely diminished in other areas over the past few decades. This is particularly evident when one of the parties in a lawsuit is non-Indian.

The U.S. Constitution requires each state to enforce or give full faith and credit to the judgments of other states. With the exception of a few statutorily defined areas, full faith and credit does not apply to the tribes. As a result, tribes and states are not required to enforce each other's judgments. It is common, however, for states and tribes to regularly give full effect to each other's judgments. This is known as comity.

In some states, tribal criminal judicial authority has been significantly diminished, if not nullified, via Public Law 280. Public Law 280, which was

enacted in 1953 by the federal government, gave six states exclusive jurisdiction over reservations within their boundaries. In these states, the Major Crimes Act is not applicable because the state has full authority to enforce their criminal laws. It should be noted that some tribes located in Public Law 280 states have retained some of their judicial authority and have managed to create tribal courts to enforce certain laws. Although Public Law 280 is applicable to civil jurisdiction as well, tribal courts can have concurrent jurisdiction in such matters if they choose to.

Tribal court systems range in both structure and size. For example, tribal courts may or may not operate independently of tribal councils. Some tribes have created a judicial branch that is separate from its other branches of government, while in other instances the tribal council retains authority over the judicial arm. There are also differences on how judicial positions are filled (appointment versus election) and what educational requirements are needed to become a tribal judge (law degree versus no formal legal education). Some tribes, like the Navajo, have an intricate judicial system, similar to that of a typical state judiciary, which addresses substantial numbers of cases per year. In contrast, other tribes have smaller systems that handle minimal numbers of cases in any given year.

Many Indian tribes have recently made traditional courts or peacemaker courts a vital part of their judicial systems. Through peacemaker courts, a tribe or Native nation attempts to settle disputes through traditional methods before it reaches the formal tribal courts. This approach resembles the growing trend among the Anglo system of adopting alternative dispute resolution as a viable alternative to the adversarial system.

Trust, Doctrine of

Since the nineteenth century, the U.S. government has considered itself to have a trust relationship with Native American nations within its borders. The trust relationship has been defined as a legal obligation of the United States to protect Native American lands and resources, as well as Indians' rights to self-government. In theory, this trust relationship is supposed to protect Indian interests; in practice, it has sometimes been a political and legal "cover" for the exploitation of land and resources, as well as of Indian people themselves. Trust has been exercised on a very pervasive, personal level under the related doctrine of wardship, by which the federal government, principally through the Bureau of Indian Affairs, has exercised nearly total control over Native Americans' personal lives.

The doctrine of a fiduciary or trust relationship toward Native Americans is said to have grown out of various court decisions. The best-known of these is *Cherokee Nation v. Georgia*, in which Chief Justice John Marshall held that Indian nations stood in U.S. law as wards to their federal guardian. In theory, trust responsibilities generally fall into three areas: (1) protection of Indian trust property; (2) protection of the Indian right of self-government; (3) provision of social, medical, and educational services necessary for survival of individual members.

Legal scholar Frank Pommersheim has written that "it was in this soil of expansion and exploitation that federal Indian law developed and took root. This was a soil without constitutional loam. . . . The theory of the trust responsibility with the U.S. government as owner and trustee of Indian land, natural resources, and [trust] provider of many services is in direct conflict with any meaningful theory of tribal sovereignty" (Johansen, 1998, 345). In other words, as the courts talk a measured sense of sovereignty for reservation residents, the government walks a potent form of colonialism through the trust doctrine.

Equally rootless in the loam of the Constitution and equally inconsistent with any meaningful theory of Native American sovereignty is the plenary power of Congress over Indian affairs. Plenary

power, another assumption of control, largely evolved out of the Supreme Court's 1903 decision in *Lone Wolf v. Hitchcock*. For most of the rest of the twentieth century, U.S. courts held that Congress is the ultimate trustee and has virtually unlimited discretionary power in this relationship. The pervasive network of rules and regulations promulgated by Congress and administered by the Bureau of Indian Affairs and other agencies for the "protection" of Indians has often had the effect of diminishing the day-to-day operation of Native American sovereignty by subjecting nearly every move made by individual Native Americans to federal government approval.

The nature of this "protection" usually has been defined by the government vis-à-vis its own interests, with minimal Native consultation. During the late 1870s, for example, the General Allotment (or Dawes) Act was advanced as a means to "protect" (i.e., "civilize") American Indians. This form of protection cost Indians two-thirds of their collective land base over the next half century.

For many years, the BIA and the Treasury Department operated as Indians' bankers through Individual Indian Monies accounts. Following a class action suit in the 1990s, these accounts were found to be permeated with negligence and fraud that has and will cost individual Native Americans many billions of dollars. In 1995, an audit of funds being held in trust for Indians by the BIA could not account for perhaps \$20 billion (the true figure remains elusive). The auditing firm, Arthur Andersen & Co., spent five years on its study and found trust accounts to be a total mess. Of the 2,000 accounts the BIA maintained at the time, 15 percent were missing paperwork, leaving little or no trace of the money in them. These 2,000 accounts represent only money held by Indian groups (such as BIA-recognized Native American governments), not the 300,000 individual accounts maintained by the BIA, of which a complete audit would be prohibitively expensive.

Occasionally, however, Native American governments have been able to use the trust relationship to their advantage. The Osages of Oklahoma, for example, faced in 1906 with allotment, accepted its provisions on condition that their nation retain collective control over copious oil and natural gas resources underlying their reservation, and they have retained control of these resources to this day.

Robert C. Coulter, executive director of the Indian Law Resource Center, and Steven B. Tullberg,

a senior staff attorney at the Center, argue that trust status, as practiced by the U.S. government, has often been less than trustworthy:

Advocates of the trust theory have forgotten or overlooked the fact that the federal government itself initiated the destructive policies of Indian removal, allotment, termination and other wholesale denials of Indian rights. Through these policies and a host of other federal acts, the federal government has confiscated massive areas of Indian lands for its own use and that of its non-Indian citizenry. One looks in vain through the historical record for actions by the Supreme Court to protect Indians from these confiscatory actions (Coulter and Tullberg, 1984, 188).

Legal scholar Felix S. Cohen reflected on the rather unusual status of Indian trusts in Anglo-American law:

In the white man's business world, a "trust" is likely to be a property of great value; the trustee is required to protect the trust property and to turn over all the profits of the enterprise to the beneficiaries of the trust. The trustee has no control over the beneficiaries' person. In the Indian's world, the same principles should apply; there is no legal basis for the common view that the Indian bureau may deal with Indian trust property as if it were the owner thereof, or use such power over lands to control Indian lives and thoughts. Unfortunately, administrators often find it convenient to forget their duties, which are lumped under the legal term "trusteeship," and to concentrate on their powers, which go by the name of guardianship" (Cohen and Cohen, 1960, 333).

During recent years, some Native American nations have benefited from tardy enforcement of another aspect of the trust doctrine, the Trade and Intercourse Acts (1790, et seq. 1 Stat. 137 [1790 Act]; 25 U.S.C.A. Sec. 177 [1793 Act]). In 1789, in one of his first acts as president of the United States, George Washington asked Secretary of War Henry Knox to prepare a report on the status of Indian affairs. Knox prepared a lengthy report on Native Americans' rights and the mechanisms for dealing with them under the new United States Constitution. His conclusions closely resembled Spanish and English

interpretations of the doctrine of discovery since the time of Francisco de Vitoria in the early sixteenth century. Knox found that the Indians had a right to their lands and that land could not be taken except by mutual consent (as in the signing of a treaty) or in a "just" war as defined by the European powers of the day. Knox determined that non-Indian squatters must be kept off Indian lands to keep the peace on the frontier.

Out of Knox's report came the first of several Trade and Intercourse Acts, passed by Congress between 1790 and 1834. The first Congress to convene under the Constitution passed the first such act in 1790 (25 U.S.C. para. 177). The act held that no sale of Indian lands was valid without the authority of the United States. This initial act was extended and amended several times (1793, 1796, 1802, 1817, 1822, and 1834). In addition to extending federal authority to land sales, many of the Trade and Intercourse Acts forbade European-American entry into Indian lands, regulated trade, and prohibited liquor sale on Indian land. The Trade and Intercourse Act of 1802 contained this clause providing for the prosecution of non-Indians who trespassed on Indian land:

SEC. 2. And be it further enacted, that if any citizen, or other person resident in, the United States . . . shall cross over, or go within the said boundary line, to hunt, or in any wise destroy the game; or shall drive, or otherwise convey any stock of horses or cattle to range on any lands allotted or secured by treaty with the United States, to any Indian tribe, he shall forfeit a sum not exceeding one hundred dollars, or be imprisoned not exceeding six months.

Some of the Trade and Intercourse Acts made depredations by non-Indians against Indians a federal crime in protected areas and pledged monetary compensation to injured Indians if they did not seek revenge. The Acts also set uniform standards for the punishment of crimes by non-Indians against Indians (and vice versa) and enunciated a goal of "civilization and education" for U.S. Indian policy. Trade with Indians also came under federal regulation in the Trade and Intercourse Acts.

In a legal sense, the Trade and Non-Intercourse Acts were a double-edged sword for Indian sovereignty. On one hand, they were passed to protect Indians from land fraud; on the other, they were an extension of federal law over Indian Country. The

later intercourse acts were drafted under the theory that “tribes should be considered foreign nations and that tribal lands protected by treaty, even though situated within the boundaries of a state, should be considered outside the limits of jurisdictions of states” (Act of June 30, 1834, 4 Stat. 729, 733).

Jurisdiction over trade and land sales concerning Indians had been an issue in the English colonies from the first settlements, but came into sharp focus at the Albany Congress of 1754, when Iroquois delegates led by Tiyanoga (Hendrick) advised Benjamin Franklin and other colonial delegates to develop a single system for trade, land dealings, and diplomacy. The individual colonies rejected the Albany Plan, but the idea that the federal government retains authority over the states for dealing with Indians was written into the Constitution and has been central to American Indian law in the United States for more than two centuries.

The Trade and Intercourse Act of 1817 (3 Stat. 383) attempted the first systematic regulation of criminal jurisdiction regarding both Indians and non-Indians in Indian Country. The Act held that anyone, Indian or not, who committed an offense in Indian Country would be subject to the same punishment as if the offense had occurred in the United States, except for offenses defined as domestic. This exception became an important influence on subsequent court decisions delimiting jurisdiction. This law became the source of opinions that defined the powers of Indian courts; generally, a non-Indian accused of a crime on Indian land has been held to be under the jurisdiction of the United States, while an Indian charged with an offense against another Indian is tried in a local (Native) court.

“Wardship,” in American Indian law and policy, refers to a special version of the trust relationship in which the government assumes near total control of individual Native Americans’ lives. This legal doctrine has been said to have been based on opinions by Chief Justice John Marshall (in *Worcester v. Georgia*) that Native Americans live in “dependent domestic nations” and are therefore wards of the federal government. The BIA was initially established to hold Indians’ land and resources “in trust.” Wardship status rationalized the establishment of Indian reservations and schools to assimilate Native Americans into mainstream U.S. culture.

In *Worcester v. Georgia*, Justice Marshall wrote that inhabitants of Native nations had assumed a relationship of “pupilage” (or wardship) in their

relations with the United States. Using this doctrine, which has no Constitutional basis, the executive branch of the U.S. government, principally through the Bureau of Indian Affairs, has created a superstructure of policies and programs that have had a vast impact on individual Native Americans and their governments. Through the use of the plenary power of Congress, policies such as allotment divested much of the Indian estate between 1854 and 1934. The concept of wardship also lies behind the storage of thousands of Native skeletal remains and burial artifacts in many federal and state research institutions. The idea of Native sovereignty in modern times has been developed in large part in opposition to wardship doctrines. Indians reacted to a social control system that was so tight that in many cases (for example, if a will affected the status of allotted land) individual actions of Native American people were subject to approval by the Secretary of Interior.

A concept of wardship also has been used since the midnineteenth century to construct for American Indians a cradle-to-grave social control system that was described during the midtwentieth century by legal scholar Felix Cohen:

Under the reign of these magic words [“wardship” and “trust”] nothing Indian was safe. The Indian’s hair was cut, his dances forbidden, his oil lands, timber lands, and grazing lands were disposed of by Indian agents and Indian commissioners for whom the magic word “wardship” always made up for lack of statutory authority . . . (Johansen, 1997, 19).

While Chief Justice Marshall’s opinions have been used as a legal rationale for government policies that have treated American Indians as “wards,” “There is nothing,” according to Robert C. Coulter, executive director of the Indian Law Resource Center, “in the rulings of the Marshall Court [which] even remotely suggested that the United States could unilaterally impose a guardian-ward relationship on Indians, that it held trust title to Indian lands, or that, as trustee, it could dispose of lands without Indian consent” (Coulter and Tullberg, 1984, 367–368).

Wardship, as historically practiced by the Bureau of Indian Affairs, differs markedly from the legal status of non-Indian wards. Under most conditions, wardship is viewed as a temporary condition,

with established standards for cession. Civil guardianship and custody law must allow people who have been deprived of their civil rights means of regaining them in accordance with the due process clause (the Fourteenth Amendment) of the U.S. Constitution. As developed by the BIA, however, Indian wardship has no standard for cession and no ending date. An Indian is defined as a ward regardless of his or her accomplishments or other actions and as the object of a policy that may well have misinterpreted Justice Marshall's intent.

Tungavik Federation, Nunavut

On April 1, 1999, Nunavut became Canada's third territory and the first to join the Confederation since 1949. After a quarter century of Inuit-Canada negotiations, the Inuit received title and the mineral rights

to a fixed parcel of land. Anticipating significant revenues resulting from mineral extraction, the Inuits created the Nunavut Tungavik Inc. (NTI) in April 1993, as a private corporation responsible for ensuring that the 212 sections contained in the forty articles of the Nunavut Land Claims Agreement (NLCA) are properly implemented (Légaré, 2003, 119). The NTI also represents the interests of the 24,000 Inuit beneficiaries of the NLCA (Légaré, 2003, 117).

The NTI succeeded the Tungavik Federation of Nunavut (TFN), which itself succeeded the Inuit Tapirisat of Canada (ITC) in 1982. That year, the TFN was incorporated to pursue land claims negotiations on behalf of the Inuits of Nunavut. In 1987, Canada, the Dene, the Métis, and the Inuvialuit established the Iqaluit Agreement, which proposed that the boundary of Nunavut be based on the Inuit land claim settlement area and that the Dene-Métis and Inuvialuit claim settlement areas form a western territory. However, the Dene nation and the Métis association of the NWT did not reach an agreement with the TFN concerning the precise boundary of their respective claims areas. As a result, the Iqaluit Agreement failed and the various federations were dissolved.

Despite this setback, negotiations over these issues continued, and in 1990 an agreement in principle was reached, and a single-line boundary between the claims settlement areas of the Dene-Métis and the Inuit was accepted in a May 1992 plebiscite. The government of the Northwest Territories, the TFN, and the Canadian government adopted the boundary for division in the Nunavut Political Accord. The final agreement committed Canada, the NWT, and the TFN to negotiate a political accord to deal with powers, principles of financing, and timing for the establishment of a distinct Nunavut government. Government and Inuit representatives signed the land claim agreement on May 25, 1993, which enabled the transfer of \$1.1 billion to the Inuit.

The NTI is a highly centralized organization comprised of a General Assembly consisting of forty-eight delegates that meets annually, a ten-member Board of Directors that meets quarterly, and an Executive Committee that meets monthly. The General Assembly approves the annual budget, has the authority to increase or restrict spending, and can modify its programs and services, the latter of which must be approved by two-thirds of the delegates. The Board of Directors meets to review and

evaluate the Executive Committee's decisions. Six of the ten board members come from regional Inuit associations, which gives significant weight to regional interests within the board. The four-member Executive Committee is the most powerful component. The committee, which is elected by the Inuit beneficiaries, meets monthly to implement the decisions approved by the General Assembly, while also supervising the NTI's day-to-day operations (Légaré, 2003, 120–123).

The NTI has a staff of fifty-five employees, 90 percent of whom are Inuits, and an annual budget exceeding \$21 million (Légaré, 2003, 123). Working closely (if not always amicably) with the government of Nunavut, the NTI oversees the Nunavut Elders Benefit Plan, established as a reward for elders sharing their knowledge during the initial stages of the research that led to the creation of the Nunavut Territory, and the Nunavut Hunter Support Program, developed to promote traditional wildlife harvesting activities and to reinforce social cohesiveness. The NTI also supervises the operations of the Public Co-Management Boards responsible for the management of renewable and nonrenewable resources; the Nunavut Social Development Council, which conducts research on Inuit cultural and social issues and advises Nunavut officials regarding the social impact of their policies; and the regional Inuit associations, in addition to the Inuit Heritage Trust and the Nunavut Trust. The former exists to manage all archaeological sites and to establish by-laws related to archeological permits (and to deliver them); the latter is responsible for managing and investing the \$1.1-billion land claims settlement.

United Nations, Indians and

The United Nations was formed in 1945, in San Francisco, when fifty nations came together to declare their commitment to the codification of international law for the purposes of promoting world peace and cooperation. Within the UN Charter's statements was the resolution to protect the equal rights and the self-determination of all peoples, as well as to bring an end to colonialism and to work with colonized peoples to develop self-determination. It was this clause that led American Indians to seek the redress of grievances through the United Nations.

The earliest attempt to petition an international body for recognition of Indian rights came in the 1920s when several members of the Iroquois Confederacy came together to appeal to the League of Nations, the predecessor of the United Nations, to recognize their right to sovereignty. After two years of exhaustive work, Deskaheah, the envoy's leader, realized he would not meet with success. International appeals were set aside until Vine Deloria, Jr. again raised the issue in *Behind the Trail of Broken Treaties: An Indian Declaration of Independence*. Published in 1974, Deloria's book introduced a new generation of American Indians to the concept of international justice and nationhood.

This new sense of nationalism took definitive shape in 1974 at the first International Treaty Council (ITC) held in South Dakota on the Standing Rock Reservation. The ITC, originally headed by Russell Means and Jimmie Durham, was a branch of the American Indian Movement (AIM). At the council, numerous elders from various Indian groups came together to discuss the principles and process of activism and determine a future route to pursue recognition of their rights from the U.S. government. It was agreed that, to attract broader international attention, they would need to frame their demands as that of one sovereign nation to another; therefore

the group set about creating relationships with newly decolonized and independent countries. Such a legal context is well rooted in Native American history since treaties were often negotiated on similar terms. The ITC was granted the status of a non-governmental organization in the UN and in 1977, in Geneva, appeared before the NGO Conference on Discrimination Against Indian Populations. There they testified about the land theft and discriminatory practices of the U.S. government.

In 1980, two delegations were sent to meet with the UN Commission on Human Rights and the Sub-commission on Prevention of Discrimination and Protection of Minorities, as well as to speak at the Fourth Russell Tribunal on the wrongs committed by the federal government against American Indians. It was hoped by the International Treaty Council, who had organized these delegations, that the United Nations would hear and respond to their plea for self-determination. In 1981, at the NGO Conference on Indigenous Peoples and the Land, the Working Group on Indigenous Populations was formed as a subpart of the UN Economic and Social Council. Its purpose was to review and assess the living conditions and treaty rights of Native peoples.

By 1983, however, American Indian access to the appeals process of the UN was being constantly parried by the United States' invocation of a clause in the UN Charter that defines colonized territories as those that are geographically separated from their invaders by thirty miles of ocean and by another section of the clause that guarantees territorial integrity to all states. Nevertheless, the fight continues as people from nations around the world continue to take an interest in human rights issues for Native peoples in the United States and elsewhere.

The UN Working Group on the Rights of Indigenous Populations produced the Draft Declaration on the Rights of Indigenous Peoples in 1993, which became a framework for the desired relationship between nations. The Declaration called for the respect of basic human rights and cultural identity, as well as for the protection of indigenous land bases and natural resources, political rights, and, above all, Native self-determination. In addition, the United Nations has worked to incorporate the protection of Native rights into its program for environmental protection through the UN Conference on Environment and Development.

United States v. Dann

The U.S. Supreme Court decision in *United States v. Mary and Carrie Dann* is one event in a complex, ongoing land battle between the western Shoshone tribes and the federal government.

In the late 1600s, at the time of first contact between the western Shoshones and Europeans, the western Shoshones, a seasonally nomadic people, controlled over 60 million acres of land stretching from the Snake River in southern Idaho, through the Great Basin of Nevada, to Death Valley in California. The traditional lands of the western Shoshones are arid and rugged, consisting of many mountain ranges separated by deep, narrow valleys. Because most of the land is too dry and alkaline for farming, early European-American immigrants passed through the region and settled instead in the fertile valleys of California and Oregon.

The Shoshones were largely left alone to continue their traditional way of life until the 1840s. At that time, westward immigration, spurred in part by the discovery of gold in western Nevada's Comstock, caused a marked increase of European-American incursions into Shoshone territory. Construction of the first coast-to-coast railroad and telegraph networks caused further disruptions. Some Shoshone responded to these invasions by conducting "hostilities and depredations" on wagon trains, postal workers, and telegraph lines. The 1863 treaty between the United States and the western Shoshones, known as the Treaty of Ruby Valley, was designed to end these conflicts and ensure "the safety of all travellers passing peaceably" through western Shoshone territory in exchange for a \$5,000 annuity. Upon signing the treaty, the Shoshone were given \$5,000 worth of provisions and clothing; this was the only annuity the tribe ever received.

The Dann family, members of the Western Shoshone tribe, stand on their land near Elko, Nevada, in 1980. Mary and Carrie Dann have been in a legal battle with the U.S. government for the past thirty years over grazing rights. (Ted Streshinsky/Corbis)

Additional concessions contained in the treaty permit the establishment of U.S. military posts, as well as private mining, ranching and timber operations, within Shoshone territory. Even so, over the years, Shoshone territory remained sparsely populated. The small increase in European-American residents did not much disrupt the traditional lifestyle of the Shoshone, who, having turned from a subsistence lifestyle to cattle ranching, continued to occupy their traditional homeland, where they lived much as they always had. Today, although dense population centers have developed around Salt Lake City and Las Vegas, most of the Great Basin remains sparsely populated with an average population density of just one or two people per square mile.

Despite its small population, the commercial and military significance of the Great Basin has increased over time. The area is mineral rich; 64 percent of the gold extracted annually in the United States—almost 10 percent of the gold produced annually worldwide—is found there. In addition to

its mineral wealth, the isolation and emptiness of the Great Basin are a source of military value. Due to the region's low population density, clear air, and general absence of private land ownership, the U.S. government has located a number of military bases and weapons ranges, as well as the proposed Yucca Mountain nuclear waste repository, in the Great Basin.

The ongoing legal conflict between the U.S. government and the western Shoshones in general and Shoshone ranchers Carrie and Mary Dann, in particular, began with a case brought before the Indian Claims Commission (ICC) in 1951.

The Indian Claims Commission was established by Congress to settle the outstanding claims of Indian tribes. The Commission's goal was to extinguish tribal claims by paying tribes for land that had been taken without compensation. Attorneys representing the Te-Moak tribe brought the ICC case on behalf of all western Shoshones. The ICC case was a source of conflict from its inception, largely because

the Te-Moak tribe consists of just four of the more than fourteen bands that constitute the western Shoshone nation. Unrepresented bands argued that the Te-Moak attorneys did not have the authority to act on their behalf. Yet the ICC recognized the attorneys as representing the entire western Shoshone Tribe.

Although the attorneys (who under a contingent fee agreement were entitled to 10 percent of the tribe's recovery) told tribal members that the purpose of the ICC action was to reach an agreement for back annuity payments, some tribal elders feared that the action would result in a loss of tribal lands. Subsequent attempts by the Te-Moak to fire their attorneys and stay the proceedings were denied by the ICC. Attempts by other Shoshone individuals and bands to intervene in the action were also denied.

In 1966, the Te-Moak attorneys stipulated to July 1, 1872, as the valuation date for nearly 24 million acres of western Shoshone lands in the state of Nevada. By this stipulation, the attorneys and the government agreed that the western Shoshones had lost title to their aboriginal lands as of July 1, 1872, through gradual European-American encroachment and set the 1872 value of the land as appropriate compensation for its loss. The stipulation ignored the fact that in 1966 many western Shoshones were still in actual possession of their traditional land. In addition, the agreement contradicted the holding in *Johnson v. McIntosh* and the prohibition contained in the Non-Intercourse Acts against the transfer of tribally controlled land to non-Indians without prior government approval. The stipulation violated basic tenets of federal Indian law as well as the government's fiduciary duty to preserve and manage tribal resources.

In 1974, while the ICC case was still pending, the federal government brought a trespass action against the Dann sisters for grazing their livestock on federal land without a permit. This trespass action was the genesis of the U.S. Supreme Court case of *United States v. Dann*. The Danns, who had been grazing their cattle for thirty years on the land in question without a permit, responded that the western Shoshone tribe held aboriginal title to the land and, as tribal members, they were entitled to use the lands under tribal—not federal—law. The government argued that the issue of aboriginal title had already been decided by the ICC and so was not available to the Danns as a defense. The district court found in the government's favor.

The Danns appealed the case to the Ninth Circuit Court of Appeals, which reversed, holding that the ICC decision could not have decided the question of extinguishment of aboriginal title. The court reasoned that it was not within the ICC's jurisdiction to extinguish title to land and, further, the ICC had not yet issued a final decision in the case. The Ninth Circuit then sent the case back to the federal district court in Nevada on remand.

While the remanded case was pending in district court, the ICC issued a decision awarding \$26 million to the western Shoshone tribe as compensation for loss of its aboriginal lands. According to the subsequent district court decision, the ICC award acted to extinguish the tribe's aboriginal title, thus barring the Danns' defense. The Danns again appealed to the Ninth Circuit, which once again reversed. The court held that since the tribe had not yet accepted payment of the award, the Danns could still raise the issue of extinguishment as a defense.

The government appealed this decision to the U.S. Supreme Court, which ruled against the Danns on the grounds that (1) Congress intended the decisions of the ICC to be final and (2) once the \$26 million ICC award was appropriated into a Treasury account for the benefit of the tribe, payment had occurred. This 1985 decision arguably effected a judicial extinguishment of the western Shoshones' aboriginal title.

After the ICC award, many western Shoshone feared that distribution of the money would extinguish any remaining claim they might have to their traditional lands. For this reason, the tribe refused to accept a payout of the money in the Treasury account. By 2004, interest had increased the prospective award to more than \$145 million, or roughly \$30,000 per eligible tribal member. As the amount of money in the fund grew, so did pressure from many Shoshone for a distribution. By the time President George W. Bush signed the Western Shoshone Distribution Act on July 7, 2004, the tribe was deeply divided over the issue. While the Danns and other "traditionals" refuse to accept their individual shares, many others believe that the money is at least some compensation for the lands the Tribe has lost.

Despite the Supreme Court ruling, the Danns have continued to graze their livestock on range-lands managed by the Bureau of Land Management (BLM). In response, the BLM has assessed \$3 million in grazing fees, penalties, and interest against the Danns. Since 1992, the agency has attempted to coerce the Danns' compliance with BLM regulations

through threats, court action, and occasional roundups. In 2002, forty federal agents with guns, ATVs, and helicopters rounded up about 230 of the sisters' cattle. The animals were auctioned off for \$60,000—much less than the cost of the roundup and auction—and many of the purchasers were Dann sympathizers who immediately returned the animals to the sisters.

In the years since the government's 1974 trespass action, the Danns' cause has been widely publicized and has received widespread international recognition and support. Having exhausted the remedies available to them in the U.S. courts, the Danns have taken their case to the tribunals of the Organization of American States and the United Nations, where they have received favorable decisions. Although these international decisions are not binding on the federal government, they put the United States in an embarrassing position by publicly censuring the government for its treatment of the western Shoshones. It remains to be seen what effect these decisions will have on U.S. Indian policy, the western Shoshones, and the Danns.

United States v. Kagama

In *United States v. Kagama* [118 U.S. 375 (1886)], the U.S. Supreme Court enunciated a "superior position" of the federal government vis-à-vis Native nations (a doctrine that came to be known as plenary power) when it upheld the Major Crimes Act (1885). The court was upholding the federal trust responsibility against erosion by the states. The court said that "the people of the states . . . are often [the Indians'] deadliest enemies." This case was the first Supreme Court decision to directly address the legality of federal jurisdiction over both Indians and non-Indians in Indian Country.

A year after the Major Crimes Act was passed, attorneys for Kagama argued that it was unconstitutional. The Supreme Court ruled that the commerce clause of the Constitution did not authorize the Congress to regulate the internal affairs of Indian nations and their members. However, the court held that, since the states had no legal authority over Indians living on reservations, the role of sovereign must be played by the United States. Native American conceptions of sovereignty were omitted from this legal formulation.

The facts of the case concerned two Indians, Kagama and Mahawaha, who killed another Indian on the Hupa Reservation in California. They were arrested, tried, and convicted in federal court on grounds that the commerce clause of the Constitution gave the government jurisdiction on the Hupa reservation. The U.S. Supreme Court, following John Marshall's opinions in *Cherokee Nation v. Georgia* (1831) and *Worcester v. Georgia* (1832), held that Indian lands did not comprise foreign nations. "These Indian tribes are the wards of the nation," ruled the court. "They are communities dependent on the United States . . . From their very weaknesses and helplessness, so largely due to the course of dealing of the federal government with them and the treaties in which it has been promised, there arises the duty of protection, and with it the power." The court also held that "The Indians owe no allegiance to a state within which their reservation may be established, and the state gives them no protection."

Justice Samuel Miller, writing for the court majority, said that the government had always regarded Native nations as semisovereign entities, "not as states, not as nations, but as separate people, with power of regulating their internal relations and thus not brought into the laws of the Union or the States within whose limits they resided."

Kiowa attorney Kirke Kickingbird provided the following evaluation of Kagama's legal legacy:

The decision in Kagama and the line of cases which flowed from it led to an overly broad and often destructive exercise of federal power in Indian affairs. In these decisions, the courts have placed no legally enforceable standards or criteria on the trustee. Instead, they have designated Congressional power in Indian affairs as "plenary," or almost absolute (Kickingbird, 1983, 20).

Wardship Doctrine

Wardship, in American Indian law and policy, is a legal doctrine, sometimes said to be based on opinions by U.S. Supreme Court Chief Justice John Marshall, that Native Americans live in “dependent domestic nations” and are therefore wards of the federal government. The Bureau of Indian Affairs was initially established to hold Indians’ land and resources “in trust.” Wardship status rationalized the establishment of Indian reservations and schools to assimilate Native Americans into mainstream U.S. culture. The concept of wardship also lay behind the storage of thousands of Native skeletal remains and burial artifacts in many federal and state research institutions. The idea of Native sovereignty in modern times has been developed in large part in opposition to wardship doctrines. Native Americans reacted to a social-control system that was so tight that in many cases (for example, if a will affected the status of allotted land) individual actions of Native American people were subject to approval by the Secretary of Interior.

The assertion of states’ rights over Native territory in the southeastern United States provided the legal grist for an 1832 Supreme Court decision written by Chief Justice John Marshall. In *Worcester v. Georgia*, Justice Marshall wrote that inhabitants of Native nations had assumed a relationship of “pupilage” in their relations with the United States. Using this doctrine, which has no constitutional basis, the executive branch of the U.S. government, principally through the Bureau of Indian Affairs, has created a superstructure of policies and programs that has had a vast impact on individual Native Americans and their governments. Through the use of the plenary power of Congress, such policies as allotment divested much of the Indian estate between 1854 and 1934.

A concept of wardship also has been used since the midnineteenth century to construct for American Indians a cradle-to-grave social control system that

John Marshall, Chief Justice of the Supreme Court, created the Wardship policy for Native Americans. (Library of Congress)

was described during the midtwentieth century by the legal scholar Felix Cohen:

Under the reign of these magic words [“wardship” and “trust”] nothing Indian was safe. The Indian’s hair was cut, his dances forbidden, his oil lands, timber lands, and grazing lands were disposed of by Indian agents and Indian commissioners for whom the magic word “wardship” always made up for lack of statutory authority . . .

While Chief Justice Marshall’s opinions have been used as a legal rationale for government policies that have treated American Indians as “wards,” in the opinion of Robert C. Coulter, executive director of the Indian Law Resource Center, “There is nothing in the rulings of the Marshall Court [which] even remotely suggested that the United States could unilaterally impose a guardian-ward relationship on Indians, that it held trust title to Indian lands, or that, as trustee, it could dispose of lands without Indian consent.”

Wardship as historically practiced by the Bureau of Indian Affairs differs markedly from the legal status of non-Native wards. Under most conditions, wardship is viewed as a temporary condition, with established standards for cession. Civil guardianship and custody law must allow people who have been deprived of their civil rights the means of regaining them in accordance with the due process clause of the U.S. Constitution. As developed by the BIA, however, Indian wardship has no standard for cession, and no ending date. An Indian is defined as a ward regardless of his or her accomplishments or other actions.

Winters v. United States

The most generous basis for Indian water rights is the Winters (or reserved rights) doctrine, established in 1908 by the Supreme Court in *Winters v. United States*. It is also the most important point of contention among non-Indian water claimants. The roots of the case lie in a series of treaties signed by Montana Indian tribes, including the 1851 Treaty of Fort Laramie and four later treaties in 1855, 1874, 1888, and 1896, in which the tribes ceded much of their ancestral lands to the U.S. government. The last two treaties fixed the borders of the Fort Belknap Reservation, with its northern boundary, according to the 1888 treaty, as the “middle of the main channel of Milk River.”

After the Indians began to settle on the new reservation, it became clear that government efforts to turn them into agriculturalists conflicted with their preference to raise livestock and maintain their cultural traditions. After 1888, non-Indian homesteaders began settling lands around the reservation and drawing off water for crop irrigation and stock watering. Reservation agents facilitated the opening of the reservation to non-Indian ownership and

leasing agreements so that, by 1920, non-Indians controlled over 58 percent of the reservation’s irrigated lands. In 1905, a severe drought stuck the region, and upstream irrigation left little water for both the reservation and other downstream users. When off-reservation ranchers blocked the flow of the Milk River onto the reservation, Agent William R. Logan began to work for the restoration of Indian water rights—to aid not the Indians but rather the growing non-Native population on the reservation (Massie, 1987). The federal government sued on behalf of the Fort Belknap tribes to protect their rights to Milk River water.

The case was filed to adjudicate the water rights of the tribes of the Fort Belknap Reservation and local, non-Indian-owned farms that were located along the northern border of the Fort Belknap Reservation. Both Indians and non-Indians needed the Milk, because it was the only reliable source of water in the region. Further, the Bureau of Indian Affairs (BIA) had promised to develop irrigation for the reservation from the river while non-Indian settlers had been promised a federal reclamation project to irrigate their lands from the Milk. The Indians claimed that, when they ceded aboriginal lands surrounding the reservation, they retained for themselves the rest of the reservation land and enough water to make it useful.

In 1908, the Supreme Court acknowledged the existence of Indian water rights for the first time. In an eight-to-one decision, the Court held in *Winters v. United States* that, when Indian reservations were established, the tribes and the United States implicitly reserved sufficient water, along with the land, to fulfill the purposes of the reservations (Hundley, 1982). The case is significant not only because its decision restored water to the tribes, but even more so for the reasoning that led to the decision. Justice Joseph McKenna, speaking for the majority, reasoned:

The lands ceded, were, it is true, also arid; and some argument may be urged, and is urged, that with their cession there was the cession of the waters, without which they would be valueless, and “civilized communities could not be established thereon.” And this, it is further contended, the Indians knew, and yet made no reservation of the waters. We realize that there is a conflict of implications, but that which makes for the retention of the waters is of greater force than that which makes for

their cession. The Indians had command of the lands and the waters—command of all their beneficial use, whether kept for hunting, “and grazing roving herds of stock,” or turned to agriculture and the arts of civilization. Did they give up all this? Did they reduce the area of their occupation and give up the waters which made it valuable or adequate? (*Winters v. United States*, 1908)

McKenna based his reasoning on the section of the 1888 agreement that said, “whereas the said Indians are desirous of disposing of so much [land] as they do not require, in order to obtain the means to enable them to become self-supporting, as a pastoral and agricultural people, and to educate their children in the paths of civilization.” Even though no treaty or written agreement between the Fort Belknap tribes and the government specified water rights for the tribe, rights to enough water to make the land productive were implied to fulfill provisions of the treaty. The treaty stated that reservation lands were set aside so that tribal people could become self-supporting through an agricultural existence. The court then drew the inference that land without water is useless for the purposes of farming and ranching. Therefore, when the federal government set up the reservations, they also, the theory went, reserved enough water for the Indians to turn the terrain into productive farmland.

As a result of *Winters*, Indian water rights are defined and governed, at least in theory, by a body of federal law that recognizes Indian tribes’ sovereignty over the water on their reservations. The Supreme Court held that tribal governments have jurisdiction over both tribal members and activities on the Indian reservations, and this ruling has affected the ways that Indians can use the water that flows through or adjacent to their reservations. However, by handing down a decision while not providing any way of reconciling it with the system of water allocation already in use throughout much of the West, the Court did more to provoke further conflicts over water between Indian and non-Indian populations than it did to settle them. *Winters* did nothing at all to determine either the scope of its application or the parameters for determining the amount of water Indian tribes could claim (Hundley, 1978). Almost from the time the decision was handed down and especially during the 1980s and 1990s, tribes have repeatedly been forced back to the courts in efforts to quantify their federal water

rights, even though such lawsuits have jeopardized the possible extent of those rights.

The main reason for the continued difficulty in securing water rights under *Winters* has been that the application of what came to be known as the *Winters* doctrine has constantly come up against prior appropriation, the prevailing method of allocating water claims in the western United States. When the doctrine of prior appropriation is taken to include Indian tribal use, the courts necessarily enter the picture to allocate the amounts that the tribe would have the rights to as determined by their use of the water source. Because so many Indian reservations were established before most other water uses began in the West, tribes often hold the oldest and thus most valuable water rights. Since many Indian groups have occupied their land since before non-Native settlement, they have strong, ancient priority claims to water for tribal uses. However, state water laws in the West often place a priority on the idea of beneficial use, which, more often than not, involves agriculture. Although many Southwestern tribes, such as the Pueblos, have a long agricultural tradition predating European contact, and others, such as the Jicarilla Apache, have a mixed subsistence tradition, the factors of modern reservation life do not always mean that the tribes will use water for agriculture. Since Indian tribes are theoretically not held to state laws regarding water use, conflicts have continually risen over which water rights allocation system is applicable to the adjudication of rivers that flow through both Indian and non-Indian lands. The *Winters* doctrine would seem to support the view that Indians have the right to sufficient water to irrigate reservation agricultural lands; yet the doctrine of prior appropriation supports the idea that, if the Indians did not historically irrigate their lands, non-Indian water claims would be substantiated. The courts then have to examine what water was reserved for use on the Indian reservations, how tribal water rights are quantified and used, and how these water rights are regulated and enforced. Because of the potential extent and great value of the water that could be claimed by Indian tribes under the *Winters* doctrine, especially in the American West, where water has become increasingly scarce, Indian water rights have constantly been under attack in the federal and state courts and in other political arenas as well.

As contradictory as the two dominant systems of allocation, *Winters* and prior appropriation, may

appear, the situation in practice has been both less contradictory and more confusing than the various federal decisions would indicate. This is in part because the Justice Department's official position in favor of prior appropriation in the West conflicts with its legal obligation to uphold the reserved rights or Winters doctrine (McCool, 1987a). The Winters doctrine theoretically makes prior appropriation irrelevant. In practice, however, federal irrigation and reclamation programs have rarely been undertaken in the interests of Indian peoples, even when they were constructed adjacent to Indian lands. The Bureau of Reclamation (BOR), dedicated to the doctrine of prior appropriation and the promotion of non-Indian irrigated agriculture in the West, exercised great power and acted decisively in the interests of their constituents when allocating the waters made useful by their construction projects. Legal scholar Donald Worster was correct when he noted that "neither the courts nor Congress managed to settle the issue" and that "white appropriators had an uneasy but clear edge: they were already in possession" (Worster, 1985). *Winters* might have given the tribes a theoretically large claim to the waters of the West, but battles over gaining access to those waters continue to occupy the tribes, the federal and state courts, the Department of the Interior (as both the promoter of non-Indian development through the BOR and as the defender of Indian rights through the BIA), and Congress.

Worcester v. Georgia

In *Worcester v. Georgia* presented before the Supreme Court in 1832, Chief Justice John Marshall determined that the Cherokee nation, as a distinct community, was empowered to exercise sovereign control over its internal affairs within the limits of its territory. According to the ruling, the U.S. federal government was duty bound to protect the Cherokee Indians from Georgia's violation of their treaty rights and from the interference of the state in their internal issues.

During the 1820s, the Cherokees held land in Georgia, North Carolina, Alabama, and Tennessee. In 1823, at the core of the Cherokees' crusade against removal from the Southeast, Cherokee leaders addressed President James Monroe to "remind him that the Cherokee are not foreigners but original inhabitants of America, and that they inhabit and stand on the soil of their own territory" (Vogel, 1972, 106). Recognition of Cherokee sovereignty and land rights by the federal government represented their strongest defense against removal.

By adopting their own constitution in 1827, the Cherokees rejected Georgia's jurisdiction. The state responded in December 1828, with an act by which it unilaterally extended its laws over the Cherokee people and nullified Cherokee legislation from June 1, 1830, onward. In answer to what they considered an infringement of their sovereignty, John Ross and three Cherokee representatives addressed a memorial to Congress on February 27, 1829, by which they declared, "the Cherokee are not prepared to submit to Georgia's persecuting edict. They would therefore . . . appeal to the United States government for justice and protection" (Ross, 1829).

To prevent non-Indians from aiding the Cherokee in their resistance against removal, Georgia passed an act in December 1830, whereby "all white persons residing in the Cherokee nation on the first day of March next [1831] without a license or permit from his Excellency, the governor, . . . and who shall not have taken the oath herein after required shall be guilty of a high misdemeanor, and upon conviction thereof, shall be punished by confinement in the penitentiary at hard labor, for a term not less than

four years" (*History of the Presbyterian Church in the Cherokee Nation*, n.d., 84–85).

The missionaries who resided in the Cherokee nation were the primary targets of the Act. In 1825, Reverend Samuel Worcester started his service with the American Board of Commissioners for Foreign Missions to the Cherokees at the Brainerd mission in Tennessee. He was transferred to New Echota, the capital of the Cherokee nation, in November 1827. Despite the new legislation, Worcester did not leave the Cherokee nation and refused to take the oath of allegiance to the state of Georgia. As a consequence, on March 12, 1831, Reverends Worcester, Thompson, and Proctor were arrested and presented to Judge Augustin Clayton in the Court of Gwinnett County. Clayton released the missionaries because he believed they were under the protection of the United States as agents of the government. Samuel Worcester benefited more clearly than the others from this status as a postmaster in New Echota.

Upon the request of Governor George Gilmer of Georgia, Secretary of War John Eaton denied the missionaries the status of agents of the government (McLoughlin, 1984, 259–260). In a letter dated May 16, 1831, Gilmer informed Samuel Worcester of his dismissal as a postmaster. In July 1831, the Georgia Guard arrested eleven missionaries, and they were sentenced to hard labor on September 16, 1831. Unlike most of their colleagues who surrendered to the state's law by either moving out of Georgia or taking the oath of allegiance, Samuel Worcester and Elizur Butler stood firm in their original position until the case eventually reached the Supreme Court in January 1832.

Chief Justice John Marshall pointed out that the constitutional power to deal with the Indians resided with the federal government alone, thus affirming the United States' recognition of Native peoples' sovereignty. The treaties signed between the Cherokee nation and the U.S. government demonstrated the political autonomy of the Cherokee people. Consequently, Georgia had no authority to nullify Cherokee laws or to interfere in the regulation of the dealings between American citizens and the Cherokees within the Cherokee nation. As such, Georgia was not entitled to forbid or restrain by means of a license Samuel Worcester's and the other missionaries' presence in the Cherokee nation, since the Cherokees allowed the missionaries to reside in their territory.

On March 3, 1832, Chief Justice John Marshall concluded: "The Cherokee nation is a distinct com-

Samuel A. Worcester was a missionary to the Cherokee nation and refused to leave in spite of government regulations. (Library of Congress)

munity, occupying its own territory, with boundaries accurately described, in which the laws of Georgia have no force. . . . It is the opinion of this court that the judgment of the superior court of the county of Gwinnett, in the state of Georgia, condemning Samuel A. Worcester to hard labor, in the penitentiary of the state of Georgia, for four years, was pronounced by that court under color of a law which is void, as being repugnant to the constitution, treaties and laws of the United States, and ought, therefore, to be reversed and annulled" (Getches, 1998, 120–121).

Governor Lumpkin of Georgia did not enforce Marshall's judgment immediately. In his 1832 annual message, Lumpkin condemned the decision of the Supreme Court as "Federal usurpation . . . intending to prostrate the sovereignty of this State." In addition, the governor announced the continuation of his plan "to ensure a speedy settlement of the unoccupied lands in Cherokee Country" (Lumpkin, 1907, 104, 106). Samuel Worcester and Elizur Butler were finally released in January 1833, but Georgia continued with the implementation of removal. The Cherokees' forced removal from Georgia to the Indian

Territory in present-day Oklahoma was achieved from 1835 through 1838.

Although *Worcester v. Georgia* did not thwart Georgia's removal of the Cherokees, it has served as a cornerstone in the deliberations about Indian peoples' self-government from the 1830s to the present. Marshall's decision marked clearly the limits of the states' jurisdiction and the role of the federal government as a guardian of Indian sovereignty. The case is still cited to preserve Indian nations from unconstitutional intrusions of individual states in their internal affairs.

People and Groups in American Indian History

Aboriginal Peoples Television Network

"History would have been told differently if our reporters had been there." Or so claims the aboriginal Peoples Television Network (APTN), Canada's first and only aboriginal television network, established in 1999. The journey from concept to active broadcaster was, however, long and at times arduous.

In the late 1960s, aboriginal opposition to proposed changes to federal legislation aimed at terminating Canadian Indian special status manifested itself in the form of political organizations. In an attempt to keep aboriginal people nationwide informed of political events, several organizations established newsletters, many of which developed into larger monthly and weekly newspapers. An aboriginal print media industry slowly developed that eventually expanded to include small, community-based aboriginal-owned radio stations. During the early 1990s, however, significant cutbacks to federal funding nearly crippled the industry. While a number of publications survived, national statistics showed newspaper readership numbers to be waning while television viewers to be increasing significantly. Federal aboriginal officials soon began to promote the creation of a national aboriginal television network in an attempt to stabilize the national aboriginal communications program.

A small northern aboriginal television network, Television Northern Canada (TVNC), which began broadcasting northern and aboriginal programming from the Yukon to northern Labrador in 1991, was the catalyst that fueled the national aboriginal television network debate. A federal survey followed in 1998 that showed two-thirds of all Canadians supporting the idea of a national aboriginal television network, even if it meant displacing available services. Additional surveys demonstrated that Canadians were willing to pay an additional 15 percent for their monthly cable bill to receive an aboriginal television network. Canadian public support combined with strong lobbying by aboriginal communities, producers, and a variety of organizations led the

Canadian Radio-Television Telecommunications Commission (CRTC) to announce in February 1999 that the APTN would receive a national broadcast license.

The Aboriginal Peoples Television Network (APTN), Canada's first national aboriginal television network dedicated to Native programming, was launched on September 1, 1999. With programming for and about aboriginal people, APTN was developed to provide aboriginal producers, directors, actors, writers, and media professionals the opportunity to create innovative and relevant programming for national viewers reflecting Canada's diverse aboriginal cultures, both contemporary and historic. APTN offers a window into these worlds through a variety of programming, including dramas, entertainment specials, documentaries, news magazines, children's series, cooking shows, and education programs.

As APTN has grown, so has its audience. What was an upstart national television network with a limited market has evolved into an important entertainment, news, and educational choice delivered to more than 9 million households in Canada. Seventy percent of APTN programming originates in Canada, with more than half of the programs broadcast in English, 15 percent in French, and one-quarter in a variety of aboriginal languages including Inuktitut, Cree, Inuinaqtuun, Ojibway, Inuvialuktun, Mohawk, Dene, Gwich'in and Miqma'aq, Slavey, Dogrib, Chipewyan, and Tlingit. Nearly half of its programming is APTN-specific and cannot be seen on other networks. APTN airs 70 percent Canadian content with the remaining 30 percent of the schedule devoted to broadcasting indigenous programming from Australia, New Zealand, Central and South America, and the United States. Perhaps most notably, the majority of APTN programming originates with independent aboriginal producers from across the country and around the world, with the exception of news and live events. Network revenues are derived predominantly from subscriber fees and advertising proceeds. Employees of aboriginal descent comprise three-quarters of the APTN staff.

APTN has become more important than people realized following its inaugural 1999 broadcast. Recent data indicate that there are 500 aboriginal producers and broadcasters operating from a limited pool of money and that the communications system needs an influx of \$10 million (Belanger, Newhouse, and Fitzmaurice, 2005). Without this funding, most

of these broadcasters could be off the air in less than a year. With statistics showing that APTN viewing numbers have grown from weekly totals of 900,000 in 1999 to over 1,750,000 in 2003, APTN could become the main source of aboriginal news and entertainment in Canada in the near future.

Akwesasne Freedom School

The history of Native America would not be complete without mention of decades of forced assimilation through education in which speaking one's Native tongue was forbidden. Native students were often sent to boarding schools far from their homes, resulting in Native language decline and loss over a number of generations. However, across the nation, tribes have been making efforts at language revitalization and cultural reclamation, including the Mohawks of Akwesasne ("land where the partridge drums").

Beginning in 1979, an unprecedented effort to take control of their children's education began on the Akwesasne Mohawk Reservation with the establishment of the Akwesasne Freedom School (AFS). The Akwesasne Reservation, also known as the St. Regis Mohawk Indian Reservation, is located in northern New York and straddles the Canadian international border extending into Quebec and Ontario. The Mohawks are one of the five original members of the Haudenosaunee (People of the Longhouse) or Iroquois Confederacy, which also includes the Oneida, Onondaga, Cayuga, and Seneca.

AFS was started in 1979 by a group of traditional Mohawk parents and community members who were concerned with the lack of cultural teaching and Mohawk language in public schools. AFS was dedicated to raising children in a traditional manner and to regaining what little remained of the Mohawk language. At its beginning, AFS held classes in makeshift classrooms during a two-year-long encampment. Conflict over tribal and state jurisdiction created division among the residents of Akwasasne, and families in the encampment decided not to send their children to public schools. Instead, they took responsibility for their children's education into their own hands. Parents, who had been forbidden to speak Mohawk in their own schooling, transformed themselves into teachers and carpenters building a grassroots community-based school.

Today, this pre-K through eight independent school is known for its language immersion program, conducting instruction in the Kanienkéha (Mohawk) language for grades pre-K through six. The school adopted a total immersion approach in 1985 in hopes of speeding up the process of developing language fluency. Students are placed in a transition program during seventh and eighth grades when English-dominant instruction prepares them to enter an off-reservation public high school. The school operates on a year-round, six-weeks-on/two-weeks-off basis and enrolls approximately sixty-five students. The schedule allows students to follow the natural seasonal cycle and helps ensure they are using the language on a year-round basis. Parents continue to play an integral role in the school's operation, sharing responsibilities from construction and cleaning to curriculum development.

The curriculum is based on the Ohén:ton Kariwahtékwen ("Words That Come Before All Else"), also known as the Thanksgiving Address, which pays respect to all living things. Students begin and end each day with its recitation while reading, writing, math, science, and history revolve around its teachings. Using art, song, and traditional stories, teachers instill values of respect, peace, and community. Community gardens and walks through nearby woods provide a natural environment for learning about traditional medicine plants and human relationships with the natural world. Students have the opportunity to attend traditional Longhouse ceremonies throughout the year as part of the curriculum. Originally a housing structure for extended families that went out of use in the nine-

teenth century, the Longhouse today refers to the traditional ceremonial place of the Haudenosaunee.

The school's goals are to ground students in their culture while teaching skills and knowledge necessary in the non-Native world. In 2002, AFS students were awarded the President's Environmental Youth Award for a wetland restoration project. Some alumni were awarded a place with the high school National Honor Society while others achieved valedictorian status. A sense of Mohawk identity, culture, and language provides a solid foundation for academic achievement.

AFS is independent of state and federal funding and relies primarily on support from the Akwasasne Mohawk Board of Education, private foundations, donations, and fund-raisers. An annual quilt auction is the largest fund-raising event for the school, and handmade donated quilts bring in thousands of dollars.

In 1986 toxic chemicals from a nearby industrial plant were found in the school wells. While bottled water helped the problem temporarily, a massive campaign to build a new school has been underway for the past several years. Partially completed, inadequate funding temporarily halted the project. However, AFS continues to work toward the goal of finishing its new building and toward supporting and encouraging Mohawk children to learn their roles and responsibilities as Haudenosaunees.

Akwasasne Notes

Started during American Indian activism's modern reassertion in the late 1960s, *Akwasasne Notes* became one of the foremost Native-owned editorial voices for Native American rights in the United States and Canada. In a trade where advertising pays most of the bills, it carried nearly none. At a time when newspapers have come to resemble poor cousins of television, it rarely published in color, relying instead on pages dense with text. In a media world of megacorporations, *Akwasasne Notes* operated on a shoestring budget, rarely paying contributors or

editors and fiercely maintaining its editorial independence.

Akwesasne Notes was first begun as a compilation of news on topics of concern to Native Americans. In December 1968, the idea for such a journal was born around the kitchen table of Ernie (Kaientaronkwen) Benedict at Akwesasne. The first editor of the newspaper was Jerry Gambill, a non-Native Canadian, who was given the Mohawk name Rarihokwats. Gambill was employed as a community assistance worker in the Canadian Department of Indian Affairs when he first traveled to Akwesasne. He was fired from his government job in 1967 but remained at Akwesasne, living on Cornwall Island.

Akwesasne Notes's coverage has included a reunion of Native peoples who took part in the occupation of Alcatraz Island, reports on a heated intellectual debate over whether the Iroquois Great Law helped inspire the U.S. Constitution, a report from indigenous peoples in Australia contributed by a Mohawk family who visited there, the latest plans for coal mining on the Hopi Reservation, and an account of negotiations between Nicaraguan Native peoples and the U.S. government. Other articles reported on the repression of Tibetan Natives by the Chinese government and the organization of U.S. chapters of the Green Party. *Akwesasne Notes* has also described Native American resistance to the destruction of Brazil's rain forests, detailed accounts of human rights violations in Guatemala, reported trade agreements between American Indian tribes and Third World nations, discussed a proposed world constitution, and editorially supported Greenpeace.

Akwesasne Notes's circulation averaged about 10,000 copies per issue during the 1970s. Most subscribers received the paper by mail. The publication had a geographic reach that few newspapers could match, with copies being mailed to indigenous people and their supporters around the world.

As a voice of Akwesasne's traditional council of chiefs, the newspaper's content reflected its global approach to issues involving indigenous rights, but the focus of its coverage remained the Haudenosaunee ("People of the Longhouse"), the confederation of Indian nations that the French called the Iroquois and the English the Six Nations. To read *Notes*, one had to lay aside any notions of the noble savage, because its pages freely reported on internal dissension and occasional murder and fraud, providing graphic descriptions of the abysmal living conditions on many reservations.

On January 9, 1988, a firebomb razed the newspaper's offices during gambling-related violence at Akwesasne. Installed in a new office with donated equipment gathered from a worldwide network of supporters, *Akwesasne Notes* didn't miss a bimonthly issue after it sustained \$200,000 in uninsured losses from the midwinter fire. The fire gutted the Nation House that had been the newspaper's home for much of the previous two decades. In its first editorial after the fire (Spring 1988), the editors wrote: "Our offices were torched by those amongst us here at Akwesasne who oppose our reporting on the conflicts that are plaguing the Haudenosaunee [Iroquois] nations. . . . With the gambling, the cigarette smuggling, the violence . . . it is understandable why those criminal elements amongst us are opposed to a free press disseminating information about the illegal and immoral activities around us . . . They almost succeeded in putting us out of business . . . but we will survive" ("How It Is with Us," 1988, 2).

In 1991, following ongoing gambling-related turmoil at Akwesasne, the newspaper stopped publishing. It resumed in early 1995 in a glossy magazine format. For almost two years, the magazine provided a showcase for Native American issues and artwork. Unable to support the expenses of such a format, the publication reverted to a tabloid newspaper format in 1997, then again ceased publication. During almost three decades of publication, *Akwesasne Notes* incubated the talents of a number of notable Native American journalists and scholars, among them Jose Barreiro, editor of *Native Americas* magazine; John C. Mohawk, Seneca professor of Native American Studies at the State University of New York (Buffalo); and Doug George-Kanentiio, Mohawk activist and freelance writer.

Alaska Native Brotherhood

Twelve Alaskan Indian men who were former students of the Sitka Industrial Training School and the Carlisle Indian School formed the Alaska Native Brotherhood (ANB) on November 5, 1912, in Juneau,

Alaska. Initially, membership was restricted to English-speaking, Christian Indians who pledged abstinence from alcohol. The ANB focused its energies on promoting Native solidarity, achieving U.S. citizenship, abolishing racial prejudice, and securing economic equality through the recognition of Indian land title and mineral rights, as well as the preservation of salmon stocks. The ANB promoted citizenship through good hygiene, punctuality, and regular school attendance, in addition to wearing Western dress, securing gainful and regular employment, using English as the primary language, and living in self-contained housing units apart from other Indians. The ANB embraced three central goals: (1) to force the recognition of the citizenship rights for the Natives of southeast Alaska; (2) to provide proper education for Native children; and (3) to abolish customs regarded by non-Natives as barbaric and uncivilized.

Comprised mainly of Tlingit and Haida men, the ANB was patterned after the non-Native fraternal organization known as the Arctic Brotherhood, a formal fishing union that strenuously lobbied the U.S. government for Alaskan congressional representation. Local ANB chapters called “camps” were located in various Native communities, guided by a central organizational and communications hub known as the Grand Camp that kept ANB delegates in regular contact and informed of political occurrences. Members held an annual convention of all the camps each November. Despite its nonsectarian approach, the ANB officers maintained a close relationship with the Presbyterian Sheldon Jackson school. By advocating the civilization and assimilation doctrine promoted by the federal government, the ANB’s leaders embraced a political philosophy that was antithetical to traditional Tlingit and Haida political culture. Nevertheless, by the mid-1920s, nearly every Native community in southeast Alaska had a local camp of either the ANB or the Alaska Native Sisterhood (established 1915). Further, the members of most Native communities openly cooperated with the Brotherhood and the Sisterhood.

The U.S. government during this period considered Native people to be wards of the state. This prompted ANB leaders to fight for citizenship and its attendant rights. As the ANB grew in popularity, its leaders became increasingly convinced of the organization’s influence over Alaskan politics. In 1921, ANB representative William Paul attempted to convince officials in Washington to prohibit fish traps from narrow bays and channels in Alaska.

Although Paul’s request was ignored, his appearance informed federal officials that the ANB was the political voice for Native Alaskans. The ANB continued lobbying federal officials to grant Indians full citizenship status, and, in 1924, the U.S. government acquiesced, subsequently passing the Indian Citizenship Act. Following the ANB’s attainment of Alaskan Indian enfranchisement, the Brotherhood attempted to extend its influence by subsequently working with both Native and non-Native labor leaders, eventually establishing itself as an influential labor union and bargaining agent. By the mid-1920s, the ANB represented Native Alaskans in both political and labor matters. Buoyed by support resulting from the distribution of the ANB journal, the *Alaska Fisherman* (established 1924), the ANB would remain an influential bargaining agent and labor force into the 1940s. Toward the end of the 1920s, ANB leaders denounced as discriminatory a recent announcement by the federal government that a single school system would be established for Native Americans. In 1929, William Paul successfully argued in court that Native parents had the right to send their children to the school of their choice. The attempt to dispose of separate Indian schools and to compel the federal government to recognize Native people as citizens was an ANB strategy designed to wrest from government control the direction of their lives. The ANB also announced its intention in 1929 to recover Tlingit land by joining forces with the Haidas to pursue a land claim settlement against the U.S. government. The ANB refined its political strategy at each of its subsequent five annual conventions, while persistently lobbying federal officials for change. The U.S. government eventually gave in and passed the Tlingit and Haida Jurisdictional Act of 15 June 1935, enabling the Tlingits and Haidas to initiate their land claim against the government and the U.S. Court of Claims.

By 1935, there were twenty-two camps with 2,200 members out of a total population of 6,000 Tlingit and Haida (Drucker, 1958). Significant community-based support notwithstanding, the Brotherhood was denied control of the land claims suit. Instead, the Department of the Interior supervised the creation of the Tlingit-Haida Central Council to pursue the land claim. For the first time in two decades, a proposed ANB strategy had failed. During this period, the ANB returned to the Tlingit heritage they had suppressed since the organization’s inception in 1912. Both the Tlingit language and the potlatch were reintegrated into the ANB philosophy.

The following year, the federal government extended the Indian Reorganization Act (IRA) to Alaska (1936), enabling the formation of tribal governments at the village level. The ANB supported the IRA, a popular move that further strengthened its political resolve.

As the ANB grew in popularity, the Brotherhood became involved in issues beyond labor activism and its desire to ensure Native incorporation. In 1929, an ANB Grand Officer was refused access to the main level of a movie theater in Juneau. Informed that he would have to sit in the Native section of the balcony, he brought his complaint to the ANB. A similar event occurred a few years later when a group of Natives caused damage to an ice-cream parlor after being refused admission. The goal was to have their case heard publicly in court. Following these two high-profile events, the ANB aggressively lobbied the Alaska Territorial Legislature for change, and, in 1946, an antidiscrimination law was passed. Despite claiming these impressive political accomplishments, the ANB created the Tlingit-Haida Central Council (THCC) in the 1940s. The THCC was the legal organization established by the ANB to pursue the land claim, since anyone in Alaska could join the ANB. Despite the separate mandates (the ANB specialized in community activism, while the THCC took over more formal governmental duties), the two organizations continued to work together and share leadership at many levels.

The ANB continued in the wake of diminished political influence, and by the 1950s it could claim the financial stability that helped it remain free of political coercion. Financial success also meant that the ANB could spend \$50,000 to construct a new building at Hoonah in time for its 1952 convention. Organizational funding was largely generated through membership fees; each member contributed \$10 to join and paid an annual \$12 fee (Drucker, 1958). The Grand Camp directed half of this money to the Grand Treasurer. The money raised was used for a variety of other purposes, which included hiring a lawyer to defend a Native man convicted of violating fishing laws in the early 1950s.

The 1960s was a tumultuous period for Native people in Alaska and, in particular, the ANB. Having long been usurped by the Tlingit-Haida Central Council as the governing body of the Tlingit and Haida people, the land claim filed in the 1930s that the ANB had hoped to resolve was finalized in 1968 with an award to the Tlingits and Haidas of \$7.5 million. This opened the door for the Alaska Native

Claims Settlement Act (ANSCA) in 1971, which transferred approximately one-ninth of Alaska's land plus \$962.5 million in compensation to Native interests, thereby resolving all land claims previously brought against the state. Even though it was part of the original movement to support Alaska land claims and despite the fact that the ANB was one of the constituent organizations of the Alaska Federated Natives (AFN), it was largely shut out of these discussions. The ANB was further excluded from AFN operations following a reorganization in the mid-1970s. They nevertheless continued to hold annual meetings each November and delegates continued to pass resolutions that the Grand Camp took to state and federal officials. In October 2005, the ANB held its ninety-second annual convention, in Juneau.

As of 2005, the ANB was restructuring. Now visible online (ANB, n.d.), the organization Web site proudly lists ANB accomplishments, which include desegregation of Alaska schools, securing the Native franchise and relief for elderly Natives, supporting implementation of the IRA in Alaska, and bringing hospitals to Native people in Alaska. This is an impressive list to be sure, although most of these events occurred prior to the 1950s. The group is also refashioning its constitution, its manual of ceremonies, and its rules of order and official handbook. Criticism has been leveled at the ANB for becoming overly intricate, suggesting organizational inertia. Further, complaints persist that the ANB is slow to develop and circulate and to act on resolutions. Nevertheless, the ANB persists into the twenty-first century.

All Indian Pueblo Council

The All Indian Pueblo Council (AIPC) is a representative, pantribal body composed of the governors of the nineteen New Mexico pueblos. As a consortium, the AIPC is empowered by and through each of the pueblo governors and tribal councils to act on behalf of all the member pueblos on matters that affect numerous member tribes, such as legal, economic, political, social, and environmental issues. The AIPC does not have governmental authority over the pueblos. Rather, each pueblo governs and usually advocates for itself in most matters, with the AIPC often coordinating pueblo efforts on issues concerning land rights, water rights, education, and religious and cultural issues.

Many Pueblo people assert that the roots of the AIPC extend back to the 1680 Pueblo Revolt, when leaders of many Pueblo groups met to organize resistance to the Spanish occupation, taxation, and religious repression. Although there is ample evidence from Pueblo leaders that a pantribal council met periodically throughout their history, the modern AIPC was formed in 1922 when numerous Pueblo leaders, along with Indian activist John Collier, called a meeting to formulate a strategy to deal with the threat posed by a bill sponsored by New Mexico senator Holm Bursum to Pueblo land and water rights, and, by extension, to their entire way of life. Successful in their efforts against the Bursum Bill, the group established a precedent for cooperative action to influence government policy that would continue to guide the AIPC.

Much of its early activity during the 1920s and 1930s was concerned with land rights, in particular learning how to deal with the federal government through Collier's tutelage (Collier served as Commissioner of Indian Affairs during the Roosevelt administration). Pueblo leaders learned how to organize and affect federal and state decisions that impacted both their tribal sovereignty and their land and water rights in the legislative, bureaucratic, and judicial realms. The AIPC was successful in advocating for the establishment of the Pueblo Lands Board to settle the countless claims arising from the pres-

ence of non-Indian squatters on lands promised to the Pueblos through the Treaty of Guadalupe Hidalgo's guarantees of the Spanish land grants.

However, local concerns were never far from the minds of the Pueblo leaders who actually made up the council. After World War II, AIPC members concentrated on improving the day-to-day existence of the Pueblo peoples. Much of this work had to do with spurring the Office of Indian Affairs both to take action on long-term issues and to deal effectively with ad hoc emergencies. Martin Vigil, the AIPC chairman for much of the postwar period, thought that the AIPC should be a forum for dealing with issues concerning the relationship between the Pueblos and the state and federal governments, particularly with regard to land and water rights.

In contrast with the American Indian Movement and other Red Power groups of the 1960s and 1970s, the AIPC kept its focus on issues of local importance, although many of these issues, such as water rights, had national implications. Education, which had always been important to the AIPC, also took on a new emphasis during these years. In its modern guise, the AIPC has concentrated more on issues of preserving Pueblo cultures through the operation of the Indian Pueblo Cultural Center and the Institute for Pueblo Indian Studies in Albuquerque, and on the operation of education and alcohol/addiction programs. However, it has served and continues to serve a vital role in protecting and even expanding the Pueblos' land base and water rights over much of the twentieth century. Its example shows that successful, coordinated action can be taken to protect tribal self-determination over land and water resources.

American Indian Higher Education Consortium

The American Indian Higher Education Consortium (AIHEC) was founded in 1972 by the presidents of the six oldest tribally controlled community colleges in America to lobby for American Indian Higher Education initiatives. Their mission was, and still is, to further the ability of Indian students to realize their academic potential and to foster Indian self-determination. AIHEC's Web page says that its mission:

... identifies four objectives: maintain commonly standards of quality in American Indian education; support the development of new tribally controlled colleges; promote and assist in the development of legislation to support American Indian higher education; and encourage greater participation by American Indians in the development of higher education policy ...

AIHEC now represents more than thirty colleges and universities in the United States and one in Canada. The consortium works to locate and maintain funding through the Tribally Controlled College or University Assistance Act and other government sources. Tribal colleges and universities do not usually qualify for state or local funds, due to their trust relationship with the federal government and their location on land held in trust (AIHEC, 2006, 1).

AIHEC was instrumental in securing legislation by executive order, No. 13021 issued by President Bill Clinton on October 19, 1996 and also signed by President George W. Bush on July 3, 2002 (No. 13270). These executive orders guarantee the support of various federal agencies and departments for tribal colleges. AIHEC and the presidents of the tribal colleges spent three years working to secure the initial executive order (Executive Orders 13021 and 13270, n.d., 1). In 1994, a research initiative was created by the AIHEC board of directors as a joint effort between the AIHEC and the American Indian College Fund. The initiative's goal is to conduct research and to create and maintain a database to track "Tribal college enrollment, budgets, curricula, facilities, services and student outcome" (Database, 1994, 1). Another aspect of the research initiative is to improve each college's research abilities. The AIHEC board of directors has identified this research initiative as being a top priority, second only to securing

and maintaining financial and legislative support for tribal colleges (Research Abilities, n.d.).

The AIHEC also acts as a clearinghouse for tribal colleges, government agencies, and the general public. AIHEC supports the *Tribal College Journal* (TCJ), providing the advisory board a voice, while granting editorial independence, "so it [is] not a typical in-house publication." After twelve years in publication, TCJ now prints more than 11,000 copies of its quarterly journal (TCJ, n.d.).

American Indian Movement

The American Indian Movement (AIM) was founded in 1968 by a group of Anishinabe that included Dennis Banks, Mary Jane Wilson, George Mitchell, and Pat Ballanger. Modeling itself after the Black Panther Party, AIM initially gained credibility

by forming street patrols to quell police violence routinely visited on the Indian community in Minneapolis. Over the next few years, service programs similar to those of the Panthers were established, including alternative schools, a multimedia news service, legal and health clinics, low-cost housing initiatives, and job-placement assistance.

In 1969 a group calling itself Indians of All Tribes (IAT) seized and occupied the abandoned federal prison on Alcatraz Island in San Francisco Bay. Visiting Alcatraz in late 1969, Dennis Banks recruited a young Santee Sioux, John Trudell, who served as AIM's primary spokesperson from 1970 to 1979. Russell Means, a reservation-born, urban-raised Oglala Lakota, was also recruited. Means, a brilliant media strategist, conceived of and led the occupation of Mount Rushmore in the fall of 1970 and organized AIM's seizure of the *Mayflower* replica at Plymouth, Massachusetts, on Thanksgiving Day, 1971.

By 1971, AIM was focusing on land and treaty issues, with an increased emphasis on reservation life. The group rapidly gained credibility, dramatically increasing the size and diversity of its membership. By late 1972, by unofficial count, forty-three AIM chapters had been started in the United States and another half-dozen in Canada. AIM soon had solid alliances with the Crusade for Justice, a Denver-based Chicano organization headed by Rodolfo "Corky" Gonzales, the Los Angeles-based Brown Berets and Chicano Moratorium, Jesse Jackson's Operation Push in Chicago, the Puerto Rican Young Lords Party in New York, and the remnants of the Black Panther Party in Oakland, California. Euro-American activists supported AIM through organizations such as Venceremos and Vietnam Veterans Against the War (VVAW), and Cherokee activist/artist Jimmie Durham organized a network of Native American Support Committees (NASCs) that spanned the continent. An international dimension was added by AIM's relationship with the All-African People's Revolutionary Party, headed by Stokely Carmichael (Kwame Turé).

For several years AIM pursued a strategy of forcing highly visible confrontations with federal, state, and local authorities. The 1971 takeover of unused military facilities at Fort Lawton, near Seattle, resulted in the construction of an American Indian cultural institution on the site, The Daybreak Star Center. Confrontations in Oklahoma and Minnesota led to the establishment of Native-controlled schools. In Denver, AIM actions produced improved health care for Native people.

Members of the American Indian Movement (AIM) beat a drum in support of their cause during the 1973 occupation of Wounded Knee, South Dakota. AIM's flag is displayed behind the group. (Corbis/Bettman-UPI)

It was, however, in the small town of Gordon, Nebraska, just south of the Pine Ridge Reservation, that AIM consolidated its reputation among Native peoples. There, Raymond Yellow Thunder, a middle-aged Oglala, had been tortured and murdered by two local residents, Melvin and Leslie Hare, in January 1972. As was routine in those days, local authorities refused to respond and Yellow Thunder's family appealed to AIM. Russell Means led more than one thousand Indians and supporters into Gordon, announcing that AIM had come to put Gordon on the map, adding that if the Hares weren't charged with murder within seventy-two hours, they would come back to take it off the map. Shortly thereafter, the Hare brothers became the first whites in Nebraska history to be prosecuted, convicted, and imprisoned for killing an Indian.

As a result of this unprecedented victory, AIM gained the widespread respect of traditionalists,

who were beginning to view the movement as a modern warriors' society dedicated to defending the people. Hundreds of younger members were attracted by the movement's confrontational politics, which released them from a lifelong sense of disempowerment. Soon, displays of "Indianness" such as braids, ribbon shirts, and chokers joined bumper stickers reading "Indian and Proud" as standard fashion statements wherever Native people gathered. The shame of being born into oppression had been cast off in Indian country.

Trail of Broken Treaties

The Trail of Broken Treaties ended with the most spectacular of AIM's confrontations, in which the Bureau of Indian Affairs' Washington, D.C. headquarters was occupied. By 1972 the organization had been embraced by Leonard Crow Dog, a Brûlé Lakota traditionalist from the Rosebud Reservation, adjoining Pine Ridge. He became the movement's spiritual leader and after his 1972 Sun Dance, it was agreed that AIM should carry the struggle forward into a new phase by organizing delegations from as many peoples as possible to converge on Washington, D.C. AIM's intent was to force President Richard M. Nixon, then running for reelection, to publicly acknowledge and pledge corrective action concerning the U.S. government's long-standing pattern of violating treaties with American Indians, usurping their governments, and expropriating their lands and resources. As a result of such policies and practices, Native people had long been the most impoverished population group identified in the U.S. Census. In 1972, for example, annual per-capita income on the Pine Ridge Reservation was barely \$1,200, unemployment hovered at about 90 percent, and male life expectancy averaged 44.6 years.

Arrangements were made with federal authorities for planned demonstrations and ceremonies, as well as for food and housing for the participants. When officials reneged, several hundred protesters occupied the BIA headquarters, conducting daily press conferences and refusing to leave until Nixon personally agreed to respond to each demand in the demonstrators' twenty-point program. Nixon agreed—another promise that would be broken—and the occupiers withdrew, taking large numbers of BIA files with them. Over the next several months, the files were copied, the originals returned to the BIA, and duplicates distributed to the peoples whose assets and affairs were affected. Among many other

programs that provoked Indian peoples' rage, the BIA files revealed an involuntary sterilization program secretly run by the BIA's Indian Health Service (IHS). Eventually it was estimated that, between 1970 and 1975, approximately 40 percent of all American Indian women of childbearing age had been sterilized, a disclosure that forced the relocation of IHS to the Department of Health, Education and Welfare (now Health and Human Services).

BIA documents also revealed fraudulent governmental activity with respect to assets managed in trust by the BIA as a result of the plenary power asserted by the United States over Indian affairs since 1903. Under BIA-negotiated leases, American Indians were receiving, on average, about 10 percent of the royalties they would have received on the open market. Armed with this information, many Native people were able to force changes in the administration of their lands and resources, although trust funds still unaccounted for by the BIA total well over a \$100 billion.

Rather than responding to the issues raised by the Trail of Broken Treaties, the Nixon administration launched a campaign to discredit AIM and whatever information it might disseminate. Sensational stories were planted in the press, falsely claiming that AIM "vandals" had done more physical damage to the Capitol than anyone since the British in 1812. The federally funded National Tribal Chairmen's Association denounced AIM leaders as irresponsible revolutionaries without a Native constituency. In the meantime, the FBI was instructed to target and politically neutralize the movement.

Wounded Knee Siege

As AIM members returned home in triumph, Russell Means found himself barred from the Pine Ridge Reservation—despite the fact that he was an enrolled tribal member and owned land there—by thugs working for recently installed Pine Ridge President Dick Wilson. Wilson had been given federal funds to establish a paramilitary group that came to be known as the Guardians of the Oglala Nation (GOONs). The GOONs, who overlapped considerably with the BIA police, were used to terrorize Wilson's opponents. In response, the Oglala Sioux Civil Rights Organization (OSCRO), headed by Pedro Bissonette, was organized to impeach Wilson.

In January 1973 Dennis Banks called for AIM members to gather in Rapid City to begin a major civil rights campaign. Upon arrival, they learned

that Wesley Bad Heart Bull, a young Oglala, had been stabbed to death in the nearby town of Buffalo Gap. As in the Yellow Thunder case, local police refused to bring charges and the victim's mother asked for AIM's help. This time, however, the authorities were prepared when the AIM contingent arrived in Custer, South Dakota. First, an anonymous caller caused the *Rapid City Journal* to announce that the demonstration had been canceled, so the turnout was low. The Indians were then met by a combined force of local, county, and state police tactical units, overseen by FBI observers. In the ensuing struggle, the Custer County Courthouse and the local chamber of commerce building were set ablaze and most of the Indians, including Russell Means, Dennis Banks, and Bad Heart Bull's mother Sarah were subsequently arrested on charges of riot and arson. The trials dragged on for years and resulted in convictions of most of the defendants. Sarah Bad Heart Bull was sentenced to serve a year in jail, while her son's killer never spent a day behind bars.

In the meantime, impeachment efforts on Pine Ridge had been thwarted. OSCRO had obtained more signatures for Wilson's removal than the number of votes by which he was elected, but the BIA—having first brought in a sixty-man Special Operations Group (SOG) of U.S. marshals to “maintain order”—allowed Wilson to preside over his own impeachment. Under these conditions, Wilson was retained in office by a fourteen-to-zero vote of the tribal council and immediately proclaimed a reservation-wide ban on all political meetings. Unable to resolve their grievances through any sort of conventional due process, the elders of the traditional Oglala leadership asked AIM to intervene.

On February 27, 1973, it was decided that a press conference would be held the following day to expose what was happening on Pine Ridge. A symbolic site was chosen—the mass grave of some 350 Lakotas massacred by the U.S. Army at Wounded Knee in 1890. About 150 AIM members immediately went to the tiny hamlet to prepare, while others began notifying the media. At dawn, those inside Wounded Knee realized that, overnight, Wilson's GOONs had set up roadblocks that both prevented press access and sealed in the AIM organizers. SOG reinforcements and FBI personnel soon arrived and by the following day, two “consultants”—actually special warfare experts—had been dispatched by Nixon's military advisor, General Alexander Haig.

The seventy-one-day Siege of Wounded Knee had begun. Unprepared for an armed confrontation or a protracted occupation, the AIM contingent obtained weapons from a local trading post and quickly improvised defensive “bunkers.” Supporters soon worked out a way to smuggle in food, clothing, arms, and ammunition through the federal lines. By March 7, nearly 300 marshals and more than 100 FBI agents were deployed on Pine Ridge, supported by about 250 BIA police, most of them SWAT team members from other reservations, some 150 GOONs and about an equal number of non-Indian vigilantes. State and local police in the five surrounding states intercepted anyone suspected of heading for Wounded Knee, arresting some 1,200 persons over the next two months.

General Haig's “consultants” arranged for the provision of military equipment, ranging from armored personnel carriers to M-79 grenade launchers; an elite rapid deployment force stood by for an airborne assault; and the Strategic Air Command conducted aerial reconnaissance. More flares illuminated the perimeter at night than were used by U.S. forces in Vietnam during any year of the war. All told, a half-million rounds were fired into the perimeter during the siege, killing Frank Clearwater, an Apache, and Buddy Lamont, an Oglala, and wounding many others. In addition, Wilson's GOONs are believed to have murdered as many as thirteen people captured while attempting to slip in. When sheer government firepower failed to stop supplies from reaching the encampment, the grass was burned off for a half-mile in all directions.

The confrontation ended only when federal officials agreed to conduct a full investigation of the Wilson regime and to meet with traditional Oglala leaders concerning U.S. violations of the 1868 Fort Laramie Treaty, the document that officially defines U.S.-Lakota relations. Again, the agreement was violated by the authorities, but AIM's purpose had been accomplished. By the end of the siege on May 7, 1973, the conditions on Pine Ridge, and in Indian Country generally, had been the focus of international attention for over two months.

Within the year, AIM would translate this attention into the establishment of its diplomatic arm, the International Indian Treaty Council (IITC). Directed by NASC's Jimmie Durham, the IITC's mandate was to bring the issue of indigenous rights to the United Nations. By 1977, it was the first Native American organization to attain formal United

Nations consultative status. Durham was instrumental in organizing the “Indian Summer in Geneva,” a conference that led to the establishment in 1982 of the UN Working Group on Indigenous Populations. The Working Group provided a regular forum for reporting violations of Native rights and for drafting a Universal Declaration of Rights of Indigenous Peoples for adoption by the UN General Assembly. It has become a major international forum for indigenous peoples around the world, and the Draft Declaration, completed in 1993, is under review by the UN Commission on Human Rights.

AIM Trials

In May 1973, however, these international developments lay in the future. AIM’s priority was to survive the 185 indictments its members faced following the siege of Wounded Knee. In February 1974 Russell Means and Dennis Banks went to trial, charged with everything from criminal conspiracy and kidnapping to car theft and assaulting federal officers. Prosecutors were unscrupulous, even introducing the testimony of an “eyewitness” who had been in California during the siege. After more than eight months, Judge Fred J. Nichol dismissed all charges, noting that the waters of justice had been “polluted” (his word) by governmental misconduct, and that “[t]he FBI has stooped to a new low” (Johansen and Maestas, 1979, 91).

Later it was revealed the FBI had an infiltrator in the defense team throughout the trial. By the end of 1974, the government had obtained only five minor convictions after having prosecuted forty cases. The Wounded Knee Legal Defense/Offense Committee (WKLDOC), created by attorneys Ken Tilson and Beverly Axelrod, challenged U.S. jurisdiction over the remaining cases as violating the 1868 treaty. Judge Warren Urbom ruled, in effect, that, while this would once have been true, the United States had so long and regularly violated the treaty that its legal force had been eroded. The Justice Department dismissed fifty pending cases, but twenty “leadership trials” dragged on for another year. Spiritual leader Leonard Crow Dog, Oklahoma AIM leader Carter Camp, and Stan Holder, who headed security at Wounded Knee, were convicted of interfering with a group of marshals who had attempted to enter the AIM perimeter disguised as postal inspectors. Ultimately, federal prosecutors obtained only fifteen guilty verdicts, none for substantial offenses.

It later became apparent that the government had not gone to court expecting a better conviction rate. Rather, its strategy was one of political neutralization, using pretextual arrests to keep the activists tied up in court, their organization bankrupted by bail and legal costs. This continued, albeit on a more selective basis. Russell Means, for example, faced one charge after another for years. He was even tried for murder in 1976, despite the fact that his alleged victim stated repeatedly before he died that Means was *not* one of the assailants. Acquitted in each case, the apparently endless proceedings eventually exhausted Means’s patience. His refusal, as well as that of other AIM members, to rise for the judge in Sarah Bad Heart Bull’s 1974 trial resulted in a courtroom brawl and Means’s only felony conviction, for which he was sentenced to four years under a South Dakota statute that had never before been used and was repealed while he was in prison.

Dennis Banks was convicted on the Custer charges in July 1975. Facing a fifteen-year sentence, he became a fugitive. California Governor Jerry Brown granted him sanctuary, citing South Dakota Attorney General William Janklow’s statement that “the way to deal with AIM leaders is to put a bullet between their eyes.” Janklow had campaigned on a pledge to “put the AIM leaders either in jail or under it” (Churchill and Vander Wall, 2002, 345–346).

In 1982 Brown was succeeded by George Deukmejian, and Banks again went underground, surfacing on the Onondaga Reservation in upstate New York. Finally, in September 1984, after obtaining assurances of safety from Janklow, who had since become governor of South Dakota, Banks surrendered and served thirteen months.

In the meantime, in November 1975, Banks, his wife Kamook, and AIM members Kenny Loud Hawk and Russell Redner were charged with federal explosives and firearms violations. The case was dismissed for lack of evidence in 1976, reinstated in 1980, and again dismissed in 1983, this time because the government had violated the defendants’ right to a speedy trial. In January 1986 the U.S. Supreme Court reinstated the charges, and six months later the case was again thrown out on the basis of additional prosecutorial misconduct. The Justice Department sought reinstatement yet again and, in late 1988, a weary Dennis Banks entered a pro forma guilty plea in exchange for a suspended sentence and the dropping of charges against his codefendants.

In another case, Los Angeles AIM members Paul “Skyhorse” Durant and Richard “Mohawk”

Billings were accused of the torture and murder of a cab driver. Local officials had arrested the likely culprits within hours of the slaying and were preparing charges when the FBI apparently convinced them to immunize the accused as state's witnesses and to charge Skyhorse and Mohawk instead. When the case finally came to trial it became obvious that the state's evidence was either meaningless or crudely fabricated. Finally a primary witness admitted that he had killed the victim, and Skyhorse and Mohawk were acquitted. By then, however, they had been imprisoned for nearly four years and AIM's reputation in California was irreparably damaged.

Summing up this ongoing legal travesty, WKL-DOC attorney William Kunstler observed, "the purpose of the trials [was] to break the spirit of the American Indian Movement by tying up its leaders and supporters in court and forcing [it] to spend huge amounts of money, time and talent to keep [its] people out of jail, instead of building an organization that can work effectively for the Indian people" (Matthiessen, 1991, 193–194). Black Panther Party attorney Charles Garry noted that this approach was identical to that used by the FBI in its efforts to destroy the Panthers' political effectiveness between 1969 and 1971.

Reign of Terror on Pine Ridge

During the siege, Dick Wilson proclaimed that AIM would die at Wounded Knee. In a less dramatic manner this was confirmed by a 1973 FBI document entitled "Paramilitary Operations in Indian Country." Even before the U.S. marshals were withdrawn from Wounded Knee, the GOONs were appearing with new, fully automatic M-16 rifles and state-of-the-art military communications equipment. Years later, GOON leader Duane Brewer admitted that the FBI had secretly funneled weapons, munitions, and equipment to them. The FBI claims it only provided the BIA police with such lethal paraphernalia, but it was common knowledge that approximately two-thirds of the reservation police doubled as GOONs.

Between March 1973 and March 1976, at least sixty-nine AIM members and supporters were murdered on or near Pine Ridge, giving the reservation a murder rate *eight times* that of Detroit, then considered the "murder capital of the United States" (Johansen and Maestas, 1979, 83). One of the first fatalities was OSCRO leader Pedro Bissonette, shot point-blank in the chest with a 12-gauge shotgun after being stopped at a police roadblock in October

1973 and then was left to bleed to death. In March 1975, Bissonette's apolitical sister-in-law Jeanette was also shot to death. According to Brewer, she had been mistaken for Ellen Moves Camp, a prominent Pine Ridge activist. AIM supporter Jim Little was severely beaten in September 1975 and died while the ambulance took an hour to come the two miles from the BIA hospital. In January 1976, attorney Byron DeSersa, a Wilson opponent, was shot and left to bleed to death in a ditch. Numerous witnesses identified the assailants—all known GOONs—but FBI personnel on the scene arrested no one but one witness, an elderly Cheyenne named Guy Dull Knife, whom the agents accused of becoming "abusive" when they failed to act.

As the death toll rose, approximately 340 additional AIM members and supporters on Pine Ridge were subjected to serious physical assaults, including attempts on their lives. In March 1975, the home of seventy-year-old Matthew King, an assistant to Chief Fools Crow and an uncle of Russell Means, was riddled by gunfire. Two nights later, Fools Crow's house was burned to the ground. Tribal council member Severt Young Bear's home was shot at so often that he "lost track" of the number of instances. In June, Means was shot in the back by a BIA police officer, who claimed that Means was engaging in "rowdy behavior." The following November, a BIA officer opened fire on the home of AIM supporter Chester Stone, wounding Stone, his wife, and two small children.

AIM and its supporters continued to seek due-process remedies. In 1974 Russell Means opposed Wilson in the elections for tribal president. Means won the primary by a wide margin but ostensibly lost the runoff by an even larger number of votes. The Denver office of the Justice Department's Civil Rights Division found evidence of massive fraud, but nonetheless Wilson remained in office. Criminal investigation of the Wilson regime had been a central demand of the Wounded Knee standoff, and in 1975 the General Accounting Office finally completed an audit. It concluded that Wilson could not account for more than \$300,000 in federal highway funds, but no charges were ever filed.

Many, perhaps most, of the crimes committed against AIM and its supporters were committed by the BIA police who were not likely to investigate themselves. George O'Clock, special agent in charge of the FBI's Rapid City Resident Agency, which had primary jurisdiction over the reservation, explained that he was too "short of manpower" to investigate

the homicides, attempted homicides, or assaults against AIM. During this same period, however, O'Clock had sufficient resources to create more than 316,000 investigative documents on the victims of this violence.

In July 1975 Denver Civil Rights Division investigators returned to Pine Ridge and concluded that the Wilson regime, with the complicity of federal authorities, had visited a "reign of terror" on reservation residents for over two years. Their recommendation for resumption of a congressional inquiry into FBI operations on Pine Ridge, which had just been "indefinitely postponed," was ignored. In 1987, GOON leader Duane Brewer confirmed that, for all practical purposes, the GOONs had operated as a death squad, coordinated by the FBI in much the same way that the Central Intelligence Agency used paramilitary organizations in Latin America. The reign of terror on Pine Ridge was not law enforcement gone awry so much as an exercise in counterinsurgency warfare by domestic police agencies. The FBI, it appears, was escalating the illegal counterintelligence operations, or COINTELPROs revealed in the 1975 Senate Select Committee's *Report on Intelligence Activities and the Rights of Americans*, that the Bureau had conducted to "disrupt, destabilize and destroy" the Black Panther Party and other activist organizations.

Despite all of these efforts, the FBI had not succeeded in destroying the American Indian Movement. AIM security had organized armed defensive clusters around the reservation and the GOONs began to back off. An opportunity to eliminate the resistance altogether presented itself on June 26, 1975, when two FBI agents, Ronald Williams and Jack Coler, approached a Northwest AIM encampment on the property of Harry and Cecelia Jumping Bull, elderly traditionalists living a few miles south of the town of Oglala. Ostensibly the agents were serving a (nonexistent) warrant for the arrest of seventeen-year-old Jimmy Eagle, accused of stealing a pair of used cowboy boots. In fact, they stopped close to the Northwest AIM camp and opened fire. Receiving heavy return fire, the two agents were soon fatally shot as they radioed frantically for backup. Despite the reservation's remote location, the requested help began to arrive almost immediately. The FBI later claimed that roughly 150 BIA SWAT personnel were "coincidentally" in the area for an unrelated training exercise, and before the end of the day FBI SWAT teams based in Quantico, Virginia, Minneapolis, Chicago, Denver, and elsewhere

were on the scene. Governor Janklow managed to arrive with a group of local vigilantes while the fire-fight was still in progress. Apparently the FBI had hoped to quickly overrun the AIM encampment at the Jumping Bull compound, then send in an overwhelming force to eliminate AIM positions across the reservation. However, when AIM responded strongly, both BIA and FBI units took up blocking positions rather than mounting an attack. Coler and Williams were thus abandoned and all of the "insurgents" escaped, with the exception of Joe Stuntz Killwright, an AIM member from Coeur d'Alene, Idaho, killed by a sniper at long range.

The FBI immediately barred the press from the scene, then "explained" publicly that the agents had been "lured" into an "ambush" by "AIM guerillas." The government spokesperson, flown in from Washington, D.C., for the occasion, even provided reporters with what were supposed to be one of the agents' last words before he was "viciously executed." None of this was factual, but headlines across the country depicted AIM as killers and the FBI sent in 400 agents, complete with combat fatigues, M-16s, armored personnel carriers, and Huey helicopters. For two months they conducted Vietnam-style "sweeps" through the reservation, kicking in doors and mounting "air assaults" on the properties of known AIM members on both Pine Ridge and Rosebud.

As AIM was being pounded into disarray, Dick Wilson went to Washington to sign preliminary documents transferring title of the Sheep Mountain Gunnery Range to the Interior Department's National Park Service. This area, the northwestern eighth of the reservation, was ostensibly to be incorporated into the Badlands National Monument, but the Interior Department had known for some time that it contained large deposits of uranium intermixed with molybdenum. Eventually the Oglalas recovered the surface lands involved, but not the subsurface mineral rights.

The FBI still needed to hold someone accountable for the deaths of Coler and Williams, and it also wanted to prevent AIM from effectively regrouping. To these ends it began the RESMURS (Reservation Murders) investigation, an acronym applied only to the deaths of the agents, not to the scores of still unsolved Indian homicides. Although the FBI knew that a number of local Oglalas were involved, it targeted Bob Robideau, Dino Butler, and Leonard Peltier, "outsiders" perceived to be the backbone of Northwest AIM.

Butler and Robideau were captured in the summer of 1975 and tried in Cedar Rapids, Iowa, in June 1976. At trial, the government's credibility was undermined by its reliance on transparently false witnesses, and the all-white jury returned verdicts of not guilty on all counts. The jury noted that Butler and Robideau had acted in self-defense, doing "only what any reasonable person would do, under the circumstances" that had been created on Pine Ridge (Churchill, 2003, 280).

Meanwhile, Peltier had escaped to a traditional Cree community in Alberta, Canada. Arrested in February 1976, he was extradited to the United States, primarily on the basis of a fraudulent "eyewitness affidavit" prepared by the FBI. This flagrant violation of the U.S.-Canada extradition treaty was later exposed, prompting the Canadian parliament to consider canceling the treaty altogether. Peltier was still fighting extradition during the Butler and Robideau trials and thus was tried separately upon his return.

Determined not to repeat the "mistakes" of its first trial, the Justice Department had Peltier's case moved to North Dakota, where it found district judge Paul Benson willing to narrowly restrict the evidence to the events of June 26, 1975. This precluded the introduction of the Cedar Rapids trial record and, more generally, any explanation of the reign of terror prevailing at the time of the firefight. Prosecutors then argued a "lone gunman" theory, completely contradicting the evidence they had introduced against Butler and Robideau. Based on the introduction of much fabricated evidence, the jury quickly found Peltier guilty of double homicide and on June 1, 1977, Judge Benson sentenced Peltier to two consecutive life sentences.

The Eighth Circuit Court of Appeals acknowledged more than thirty reversible errors, but allowed Peltier's conviction to stand. Shortly thereafter, William Webster, the chief judge of the circuit court, became director of the FBI, but both the Eighth Circuit and the Supreme Court denied review. Despite ongoing appeals based on additional evidence of governmental misconduct and on prosecutor Lynn Crooks' 1987 acknowledgment that he "really has no idea who shot those agents," Leonard Peltier remains in prison in 2007, routinely denied parole because he refuses to "accept responsibility" for the deaths of the agents. Petitions for his release have been signed by more than 14 million people internationally, and Amnesty International has declared Peltier a "prisoner of conscience." In Janu-

ary 2001, President Bill Clinton was on the verge of signing a long-promised commutation of Peltier's sentence when FBI agents mounted highly publicized protests and Clinton backed down. Peltier thus remains in prison, not for any crime he has committed, but as a symbol of the federal government's arbitrary ability to repress indigenous peoples' legitimate aspirations to liberation.

The Ongoing Struggle

By the late 1970s AIM was in serious decline. Its reputation suffered as a result of rumors, which may have had some substance, that in February 1976 AIM members had murdered one of their own, a Mi'kmaq named Anna Mae Pictou Aquash, who had been "bad-jacketed" (a standard COINTELPRO tactic) as an infiltrator. In 2005, the case was revived by federal prosecutors, apparently as part of a wider effort to discredit activist organizations of the 1960s and 1970s. One former AIM member, Arlo Looking Cloud, was tried and convicted; another, John Graham, is fighting extradition from Canada; and it appears that indictments will be brought against several others.

In 1979, shortly after his wife, three children, and mother-in-law were murdered on the Duck Valley Reservation in Nevada, John Trudell, the only remaining "national" AIM officer, resigned and announced that all comparable positions had been abolished.

In 1978 Dennis Banks organized The Longest Walk, a march from San Francisco to Washington, D.C., to protest pending legislation to repeal all treaties with American Indians. The bills were subsequently defeated, in part due to this action but more fundamentally because U.S. claims to the legitimacy of the occupation of Indian lands are based largely on those same treaties. Banks, too, has "retired" from AIM, although he continues to coordinate walks and runs to draw attention to Native issues.

During 1979 Jimmie Durham and IITC associate director Paul Chaat Smith resigned as well, citing the organization's increasingly close ties to the governments of Cuba and other socialist countries. During the mid-1980s the IITC incorporated and replaced its council of traditional elders with a handpicked board, which immediately aligned itself with Nicaragua's Sandinista government, thereby helping quash the right of the indigenous people in Nicaragua to self-determination. This splintered what was left of AIM. The Treaty Council continues

to exist, without a discernible base of grassroots support and functioning essentially as an appendage of the statist entities it was created to oppose.

Russell Means during 1981 led the seizure of an 880-acre tract in the Black Hills National Forest. Named Yellow Thunder Camp, the site was continuously occupied until 1985 while AIM took the battle to court. It won a landmark decision, with District Judge Robert O'Brien ruling that the Lakotas, and thus other Indians, were entitled to view entire geographic areas as sacred sites and to enjoy use and, in certain instances, occupancy rights. This was soon nullified, however, by the Supreme Court's 1988 decision in the "G-O Road" case, *Lyng v. Northwest Indian Cemetery Protective Association*.

Means and Colorado AIM leader Glenn Morris organized a broad coalition of local organizations to protest the annual Columbus Day parade in Denver during the early 1990s. In the summer of 1992, a jury not only acquitted Means, Morris, and two other Colorado AIM members of violating the First Amendment rights of the Columbus Day organizers, but stated that the city of Denver had violated international law by issuing a permit for the parade. This led to the cancellation of an extravagant 1992 celebration of the quincentennial of Columbus's "discovery of America." By 2000 such celebrations of genocide had reemerged, and again protestors led by Colorado AIM were acquitted. In 2002, over 240 people were arrested and charged with disrupting the parade; after losing yet another jury trial, Denver officials were forced to drop charges against all remaining defendants.

AIM's Denver victories in the early 1990s stimulated activities in chapters across the country, and even this modest resurgence illustrated that the FBI was still anxious to neutralize the movement. In a bizarre twist, a barrage of notices were issued by an entity calling itself the National American Indian Movement, claiming that the Colorado chapter was fraudulent, that its leadership consisted of "white men masquerading as Indians" and "probable police agents," and that the entire group had therefore been "summarily expelled" from AIM. It turned out that "National AIM" was actually a Minnesota-based nonprofit corporation with no membership of its own, subsisting on corporate and federal funding. Nonetheless, the confusion it generated negated any potential for a genuine AIM revitalization.

Despite the generally successful neutralization of the movement, AIM was instrumental in transforming the circumstances of Native life in ways that

may prove irreversible. A sense of pride was instilled among people long oppressed; Indian issues were forced into public consciousness for the first time in many generations; and the movement illustrated that gains could be made by direct confrontation. This understanding is reflected in the armed confrontations undertaken by Mohawks at Oka, near Montreal, and elsewhere, confrontations over land issues that continue in 2006 in places such as Caledonia, Ontario. The militant struggles of the 1970s have laid the groundwork for a future that certainly looks brighter than it did for Indian people two generations ago.

Anderson, Wallace Mad Bear

A medicine man and prophet, Wallace Mad Bear Anderson also was a noted Native American rights activist during the 1950s and 1960s. During his lifetime, he led national and international efforts for the recognition of the sovereignty of Indian nations.

Anderson, a member of the Tuscarora nation, was born on November 9, 1927, in Buffalo, New York. Called Mad Bear by his grandmother because of his temper, he grew up on the Tuscarora Indian Reservation, near Niagara Falls. As a young man, he enlisted in the U.S. Navy. After he returned from service, Anderson applied for a loan under the GI Bill to build a house on the reservation. When the loan was denied, Anderson's belief that he was discriminated against because of his race prompted him to become an activist for Native American rights.

In 1957, Anderson led Iroquois protests against state income taxes. The demonstrations culminated in a march to the Massena, New York, state courthouse, where several hundred protestors burned summonses for their unpaid taxes. The following year, Anderson became a key figure in the Tuscarora Reservoir Protest. After the Power Authority of the State of New York seized 1,383 acres of the Tus-

carora Reservation to build a reservoir that would flood the land, Tuscarora men, women, and children joined forces to resist the taking of their land. Anderson and others blocked surveyors from entering the reservation and deflated workers' tires. When approximately 100 state troopers threatened to enter the reservation, the demonstrators laid in the road to block their trucks. Despite the efforts of the Tuscaroras, the U.S. Supreme Court ruled in *Federal Power Commission v. Tuscarora Indian Nation* (1960) that the taking of the land was legal, and the reservoir was eventually built.

In March 1959, Anderson aided in a revolt of Iroquois at the Six Nations Reserve in Brantford, Ontario. After the Iroquois declared their sovereignty, twelve Royal Canadian Mounted Police invaded the reservation's council house, but the Iroquois forced them to leave. That same month, Anderson attempted a citizen's arrest of Commissioner of Indian Affairs Glenn Emmons, whom some Native Americans, resentful of the federal termination policy, had accused of misconduct in office. Emmons avoided Anderson but later resigned.

After receiving an invitation from revolutionary leader Fidel Castro, Anderson led a delegation of Native Americans to Cuba in July 1959. Members of the Six Nations and the Miccosukee of Florida agreed to recognize the sovereignty of Cuba in exchange for Cuba's recognition of their own sovereignty. Indian sovereignty was an important issue for Anderson; he once stated that his main purpose in life was to help the Indian people regain sovereignty, rather than be absorbed by a society that he regarded as "sick."

Anderson founded the North American Indian Unity Caravan in 1967 to encourage the activism that was growing among Native Americans nationwide. Later that year, he delivered to Congress messages from 133 tribes that did not want their reservations to be terminated, which helped to defeat one of the final termination bills. Anderson toured the nation with his caravan for the following six years, but he paused to plan and participate in the Alcatraz Occupation in 1969. In 1975, he was the national director of the Indian Nationalist Movement of North America.

Anderson's work as a medicine man was featured in the book *Rolling Thunder* (1974) by Doug Boyd. In discussing his concept of good medicine, Anderson also articulates the philosophy behind his individual activism.

Anishinabe Algonquin National Council

The Council (also called the Algonquin Anishinabeg Nation Tribal Council) is a political unit representing seven Algonquin communities located in the Ottawa River watershed. Six of the communities are located in the Outaouais and Abitibi-Témiscamingue regions of the province of Quebec: la Première Nation Abitibiwinini (Pikogan, population 800), Eagle Village First Nation–Kipawa (Témiscaming, population 650), Kitcisakik First Nation (Val d'Or, population 386), Kitigan Zibi Anishin-

abeg (Maniwaki, population 2500), La Nation Anishnabe de Lac Simon (Lac Simon, population 1200), and Long Point First Nation (Winneway River, population 650). The seventh community is located in the district of Cochrane in the province of Ontario: Wahgoshig First Nation (Matheson, population 250). Of all the communities, Kitigan Zibi is the closest to Ottawa.

In 1989, Algonquin communities in western Quebec, including those just listed, submitted a formal and comprehensive land claim to Canada's Department of Indian and Northern Affairs regarding lands in the Ottawa River watershed. In light of research conducted by these communities, the federal government agreed to pursue land claims negotiations with the Algonquin of western Quebec. In 1992, representatives of Abitibiwinni, Eagle Village, Lac Simon, Long Point, and Kitigan Zibi Anishinabeg met to form the Algonquin Anishinabeg Nation Tribal Council specifically to facilitate the land claims process. Although the initial meeting was hosted by the Kitcisakik First Nation, the Council decided to operate out of Kitigan Zibi since it was only eighty-four miles north of Ottawa.

The areas claimed by the Algonquin Anishinabeg Nation Tribal Council cover a large area, although not all nations' claims are equal in size. The smallest is Eagle Village at 21.49 hectares. The largest is Kitigan Zibi at 18,437 hectares.

The Council initially focused strictly on politics. Its office in Kitigan Zibi had only two staff members, who were both involved in the land claims process. In 1996, however, the Council hired an architect, a human resources advisor, and an engineer to offer expanded services to the member communities. In 1999, Kitcisakik First Nation joined the Tribal Council. The following year, Wahgoshig First Nation also became a member, although its participation was limited to political issues. That same year, the Minister for Indian and Northern Affairs proposed that the Algonquin Chiefs conduct a scooping-out exercise, whose purpose was to determine if sufficient common ground existed to begin negotiations with the potential for success within a reasonable time frame.

Kipawa, Kitcisakik, Kitigan Zibi, Pikogan, Lac Simon, and Long Point–Winneway initially agreed to this exercise, beginning the scooping-out exercise in February 2001. Kitigan Zibi later pulled out of this collaboration and conducted its own scooping-out exercise. In October 2002, Kitigan Zibi and Lac Simon requested the beginning of negotiations. As of

2006, the Algonquin nation as a whole had yet to decide if there will be issues of overlapping claims that could affect negotiations.

The Anishinabe Algonquin National Council has two current priorities. The first is the advancement and protection of aboriginal rights. The second is the provision of advisory and technical services to member communities. To accomplish these priorities, the Council has embarked on a training plan to develop the skills of its members, including training courses on basic management skills.

The Council is governed by a board of directors, composed of the chiefs from the member communities as well as representatives for elders, women, and youth. All of these representatives are elected by the people.

In 2004, the Council Office expanded its staff by hiring an information officer and an economic development officer. That same year, perhaps in an effort to launch land claims negotiations, the Long Point First Nation presented a resolution to the Assembly of First Nations, asking support for its natural resources permit system. The resolution also called on the federal and Quebec governments to respect the permit system.

During the 2005 federal election campaign, Gilles Duceppe, leader of the Bloc Quebecois Party, drew attention to the poor living conditions that existed in Kitcisakik First Nation and called for the federal government to proceed with the construction of a new town. Since the community is not covered under the Indian Act, however, and the negotiation process had yet to begin as of 2006, it is not clear which government is responsible for assisting the community.

The Anishinabe Algonquin National Council maintains an informative Web site, and the Department of Indian and Northern Affairs keeps a regularly updated report of land claims issues on its Web site.

Apess, William

Author of the first published American Indian autobiography, *A Son of the Forest*, and a leader in the Mashpee Revolt, William Apess (Pequot) was born in Colrain, Massachusetts, on January 31, 1798. His father, William, reportedly a descendent of the Wampanoag King Philip, was Pequot and white, and

his mother, Candace, was perhaps African American and Pequot, and probably a slave.

Apess's Pequot ancestors had been nearly eliminated in 1637, when the Pilgrims, Puritans, and other tribes with which they had allied burned the Mystic River Pequot fort, killing seven hundred men, women, and children. Survivors were largely sold into slavery in the West Indies. A few, like Apess's family, persisted on the fringes in southeastern Connecticut, eking out livings as domestics and day laborers. Some report that Apess's father was a shoemaker; others suggest both of Apess's parents were basketmakers. What is certain is that Apess's world was one carved out of the leftovers of genocide and colonialism.

Apess's early years were spent in extreme poverty, hunger, and abuse at the hands of his alcoholic grandparents, with whom he and his siblings had been left. After being nearly beaten to death by his grandmother, Apess was "bound out" at the age of five. The Furmans, the white family with whom he was first indentured, allowed him an education for at least part of the year between the ages of six and eleven. This was the only formal education he received. He was subsequently sold to two wealthy families before running away in April of 1813, from the William Williamses of New York, who forbade his attending Methodist camp meetings. Apess had studied the teaching of John Calvin, repopularized during the Second Great Awakening—humans, all miserable sinners, could be saved only by God's grace. He was later drawn to the Methodists, who taught that Christ was the savior of all mankind, brethren in their belief and in His love.

Apess enlisted as a drummer in the War of 1812 and developed a problem with alcohol, later working for a while in Canada, trying to quit drinking. Around 1816–1817, Apess returned to Connecticut. Despite his lengthy separation from his people, Apess conceived of himself as Pequot. He was baptized in December 1818. In 1821, he married Mary Wood of Salem, Connecticut, a mixed-blood formerly bound servant and fellow Methodist. They had two daughters and a son. Apess was ordained as a Protestant Methodist minister between 1829 and 1830.

Published in 1829, his *A Son of the Forest* recounts his early life in a manner that might seem dispassionate to some readers given the circumstances. It is, in one sense, a Christian conversion narrative, making it appealing to a white audience marveling

at the novelty of an Indian writer and giving faith to Natives and African Americans, who might be “saved” and “civilized.” However, *A Son of the Forest* sharply indicts whites for colonialism and for bringing alcohol and poverty to his people and other tribes. Apess also published in 1831 *The Increase of the Kingdom of Christ: A Sermon*, along with an appendix entitled “The Indians: The Ten Lost Tribes.” Apess followed this with the publication of his *The Experiences of Five Christian Indians of the Pequot Tribe* in 1833, the first edition of which included his “An Indian’s Looking-Glass for the White Man,” an essay denouncing white Christian hypocrisy.

As an itinerant preacher, Apess met the Mashpee. His actions on their behalf, including serving jail time, were some of the earliest intertribal activist efforts on behalf of tribal sovereignty. During the Mashpee revolt, he wrote and published a list of Indian complaints regarding the whites entitled *Indian Nullification of the Unconstitutional Laws of Massachusetts, Relative to the Mashpee Tribe; or, the Pretended Riot Explained* (1835). He gave his popular “Eulogy on King Philip” in Boston during 1836. Apess’s death in 1839 may have been a result of his continuing struggle with alcohol.

Aquash, Anna Mae Pictou

One of the leading women of the American Indian Movement in the early 1970s, Anna Mae Pictou Aquash was a staunch advocate for American Indian rights. In spite of her many endeavors as an activist, however, she is often remembered for her untimely and mysterious murder on the Pine Ridge Reservation in South Dakota.

Born to Mi’kmaq parents on March 27, 1945, near Shubenacadie, Nova Scotia, Anna Mae, along with her two older sisters and younger brother, spent much of her youth in poverty in Pictou Landing, a Mi’kmaq reserve in Nova Scotia. Her father practiced traditional craftwork and instilled into his stepdaughter a sense of her heritage and culture until his death in 1956. Her mother then abandoned her children to marry another man. Anna Mae’s insecure family life, combined with the racial taunts she received from her non-Indian schoolmates, had a detrimental effect on her grades. She attended Milford High School but dropped out at the end of the ninth grade.

In 1962, Anna Mae journeyed to Maine to work the potato and berry harvest, then moved to Boston, Massachusetts, with Jake Maloney, another Mi’kmaq. She secured a job at the Elvin Selow sewing factory while Jake opened a karate school. In June 1964, the couple had their first child, Denise, followed by Deborah, seventeen months later. Desiring to raise their daughters in a more traditional setting, the family moved to New Brunswick, where they formally married at Richibucto and settled onto a Mi’kmaq reserve.

In 1969, the couple’s marriage ended, and Anna Mae returned to her job at the sewing factory while volunteering at the Boston Indian Council—an organization that she had helped to create. Among other things, the Council strove to aid the city’s Indian population avoid alcohol abuse, a problem with which Anna Mae struggled herself in the aftermath of her marital difficulties. In November 1970, Anna Mae participated in the American Indian Movement’s national day of mourning at the 350th anniversary celebration of the arrival of the Pilgrims in Plymouth, Massachusetts. Her interest in Indian activism piqued as she listened enthusiastically to Russell Means’s oratory. Quitting her factory job, Anna Mae moved to Bar Harbor, Maine, and worked as a teacher in the Teaching and Research in Bicultural Education School Project (TRIBES) until its funding expired. In 1971, she returned with her daughters to Boston and entered the New Careers program at Wheelock College. She began teaching at the experimental Ruggles Street Day Care in the district of Roxbury—a predominantly black community in the city. Offered a scholarship to Brandeis University, she chose instead to continue her work with urban Indians and helped initiate the Boston Indian Council’s job placement

program with the General Motors Plant in Framingham, Massachusetts.

During her time in Boston, Anna Mae met and established a relationship with Nogeeshik Aquash, an Ojibwa artist from Walpole Island in Ontario, Canada. The two traveled to Washington, D.C., with members of the Boston Indian Council to participate in the final stage of the Trail of Broken Treaties. In March 1973, she and Nogeeshik left for the Pine Ridge Reservation in South Dakota to help the besieged Indian activists at Wounded Knee. There, Anna Mae smuggled supplies past the government roadblocks at night and aided in the construction of protective bunkers for the beleaguered Indians. On April 12, Wallace Black Elk married Anna Mae and Nogeeshik in a traditional Lakota ceremony. Thirteen days later, the Aquashes were detained and released by the FBI as they attempted to leave Wounded Knee. Returning first to Boston in an unsuccessful attempt to start an AIM survival school in the city, the couple then moved to Ontario to set up a display of Indian art and culture at the National Arts Centre. The exhibit spawned an interest in traditional Mi'kmaq ribbon shirts, and Anna Mae foresaw the sale of these colorful shirts as a fund-raising enterprise for AIM.

With the conclusion of her exhibit in May 1974, Anna Mae, now separated from her husband, moved to the Minneapolis–St. Paul area, where she made ribbon shirts and worked for the Red School House, the AIM survival school in St. Paul, and for AIM's central office in Minneapolis. There, she became closely associated with Dennis Banks and soon became a national AIM leader in her own right. In the fall, she traveled to Los Angeles to aid in the establishment of an AIM office on the West Coast. In January 1975, she along with fellow workers from the Los Angeles office, Dino Butler and his future wife Nilak (Kelly Jean McCormick), journeyed to Gresham, Wisconsin, to aid the Menominee Warrior Society in their short-lived takeover of an unused abbey—hoping to convert the building into an Indian health center. After departing Gresham, she organized a benefit concert in St. Paul for AIM survival schools before moving briefly to Rosebud, South Dakota, and then to Oglala on the Pine Ridge Reservation near Tent City—the AIM encampment on the property of the Jumping Bull family. AIM members were there in reaction to growing tensions on the reservation between Pine Ridge tribal chairman Dick Wilson and Lakota traditionalists. Anna Mae became involved in community work with local

women and began to develop plans for a comprehensive cultural history of the Indian peoples of North America.

In early June 1975, Anna Mae accompanied her compatriots at Tent City to the annual AIM convention in Farmington, New Mexico. Upon their return to Pine Ridge, the activists were involved in a June 26 shoot-out on the Jumping Bull property with two FBI agents. Both agents died, along with one member of AIM. The reservation immediately became the focus of a massive manhunt as the FBI attempted to apprehend the individuals responsible for the death of their agents. As far as the government was concerned, Anna Mae's presence implicated her as either a suspect in or a witness to the incident. Finally located on the Rosebud Reservation at the home of AIM's spiritual leader, Leonard Crow Dog, she was charged on September 5 with unlawful possession of explosives and firearms and taken to Pierre, South Dakota. Released on bond, Anna Mae chose to flee rather than stay and face trial. Recaptured by the FBI on November 14 on the Port Madison Reservation in Washington, she returned to South Dakota to stand trial on the Rosebud charges. Released again prior to the day of her trial, Anna Mae left her Pierre motel room on the evening of November 24 and went into hiding in Colorado.

On February 24, 1976, a rancher discovered Anna Mae's decomposed and frozen body in a ravine near Wanblee, South Dakota. Unable to identify the body, the pathologist removed her hands for possible later identification and ruled that exposure was the cause of death. On March 3, Jane Doe was buried in the cemetery at the Holy Rosary Mission (Red Cloud Indian School) at Pine Ridge. That same day, the FBI lab identified the severed hands as belonging to Anna Mae Aquash. Her family asked for a second autopsy and had the body exhumed on March 10. An independent pathologist discovered that she had been murdered—shot in the back of the head at close range with a .32-caliber weapon. Four days later, her body was reburied at the Wallace Little Ranch in Oglala, where it remained for twenty-eight years. On June 21, 2004, Anna Mae's family returned her remains to the Mi'kmaq reserve in Nova Scotia.

What happened to Anna Mae following her November 24 flight from Pierre until her death in December 1975 (or possibly early January 1976) is conjecture. There is compelling evidence that she fled to Denver and was there kidnapped and taken to South Dakota by some members of AIM who

falsely suspected her of being an FBI informant. She was subsequently killed, according to this theory, to rid the organization of a government spy. Although approached several times in the past by the FBI in hopes of employing her services, Anna Mae openly denied any allegations that she was on the FBI's payroll. The FBI also stated that there was no truth to the assertions. Other members of AIM believe she was killed by a faction of the organization who believed she could identify those responsible for the June 26 deaths of the two FBI agents on the Jumping Bull property. Arlo Looking Cloud was convicted of the murder in 1974.

Assembly of First Nations

The Assembly of First Nations (AFN) was established in 1982 as Canada's national organization representing the First Nations' political interests. Following the Canadian government's announcement that it had initiated the Constitutional repatriation process, the National Indian Brotherhood (NIB), the Native Council of Canada (NCC), and the Inuit Committee on National Issues were invited to participate in the 1978 deliberations. By the time of the nation's adoption of self-governance in 1982, however, the NIB, once considered Canada's premier First Nations political organization, had imploded from internal dissension. Emerging from the organizational debris was the Assembly of First Nations (AFN).

The evolution of the AFN can be traced to the establishment of the National Indian Council (NIC) in 1961. This organization was created to represent Canadian First Nations groups, including status Indians, nonstatus Indians, Inuit, and the Métis. However, the conflicting interests of the various First Nations groups led the NIC to split into two unaffiliated organizations in 1968: The NIB was formed to represent status Indians, while the Métis established the Canadian Métis Society. The NIB emerged prior to the federal government's 1969 white paper policy, which called for the assimilation of all the First Nations peoples into Canadian soci-

ety and the elimination of the mention of Indians from the Canadian Constitution. Following the white paper's release, however, the NIB aggressively and successfully lobbied Parliament to rescind the unpopular policy proposal.

For the next thirteen years, the NIB's organizational structure remained unchanged. This became a cause of friction, due primarily to the fact that NIB members were appointed, not elected. Complaints asserting that the NIB was not accountable to the chiefs were politically destabilizing. Unsure that the NIB could effectively represent their interests, 300 status Indians and First Nations chiefs arrived in London, England, in 1979, in an attempt to halt the repatriation of the Constitution, causing even greater dissension among First Nations leaders. First Nations confidence in the NIB failed after a number of questionable moves by its founder, Del Riley, which were followed by calls for organizational reform. The discussion of organizational restructuring focused on the need to create a body that was representative and accountable to First Nations community leaders. It was at this point that the NIB began the transition which led to the formation in 1982 of the AFN. The AFN was an organization open to the chiefs representing all of the status Indian bands in Canada, as opposed to being an organization of regional representatives. The new structure permitted First Nations leaders to formulate and administer AFN policies.

In response to the First Nations' lobbying efforts, Canada revised its Constitution in 1982 and recognized aboriginal rights. The Constitution recognized the Métis, Inuit, status Indians, and nonstatus Indians of Canada as aboriginal people, while also affirming "existing aboriginal and treaty rights." From 1983–1987, the AFN met with the provincial premiers at four First Ministers Conferences in an attempt to define aboriginal self-government. The AFN also began working closely with other prominent lobbying groups and organizations, such as the United Nations, in an attempt to convince Canada to uphold the spirit and intent of treaties. By the mid-1980s, the AFN had become an influential contributor to the ongoing Constitutional debates, as well as a critic of the U.S.–Canada Free Trade Agreement and other proposed legislative changes and issues affecting Canada's First Nations. AFN resistance helped scuttle the Meech Lake Accord in 1990, which proposed Constitutional amendments that recognized Quebec's distinct society while simultaneously ignoring distinct First Nations societies. This, in turn,

Assembly of First Nations Chief Phil Fontaine (left) smokes from a pipe offered by Elder Fred Kelly in a ceremony marking an announcement regarding Indian Residential Schools. (Jim Young/Reuters/Corbis)

resulted in the federal government's openly consulting with First Nations leaders prior to drafting the Charlottetown Accord in 1992, which was rejected by Canadians in a national referendum in 1992. Had the Accord been successful, aboriginal self-government would have been realized, significantly augmenting the First Nations' political influence.

Throughout the 1990s, the AFN continued working with the federal government while zealously lobbying for the formal recognition of aboriginal self-government and the expansion of aboriginal rights. Once again, in 2001, the Canadian government put proposed changes to legislation on the agenda. Without consulting First Nations leaders, federal officials in 2001 proposed legislative changes known as the First Nations Governance Initiative (FNGI) that many AFN delegates considered analogous to the termination policy embodied in the 1969 white paper policy. After years of AFN-led resis-

tance, the Liberal government in 2004 rescinded its unpopular initiative.

Banderas, Juan de la Cruz

Juan Banderas was a noted Yaqui Indian war leader of the early nineteenth century. After receiving visions in 1825, Banderas attempted to unite the Indian nations of northwestern Mexico under the banner of the Virgin of Guadalupe and the last great Aztec emperor, Moctezuma II. Although Banderas successfully challenged Mexican dominance for seven years between 1825 and 1832, local forces captured and executed the Yaqui leader in January 1833. Thereafter Banderas became a powerful symbol of Yaqui resistance to foreign domination.

Banderas was born Juan Ignacio Jusacamea in the Yaqui town Rahum, possibly from the family line that included Muni, leader of the Yaqui Rebellion of 1740. In Rahum, Banderas held the important post of flag bearer in the town military organization. Following Mexican independence from Spain in 1821, Banderas rose to prominence, leading resistance to state land and political policies aimed at integrating the Yaquis into the Mexican nation. In particular, the western state of Occidente (modern Sonora and Sinaloa) attempted to impose taxes on the Yaquis, survey their lands, and integrate Indian towns into the local municipal system. Upon arrest for resisting state programs, Banderas reported having visions summoning him to establish an independent Indian nation-state. In several proclamations, the Yaqui leader invoked the protection of the patron saint and symbol of Mexican independence, the Virgin of Guadalupe, and expressed a desire to restore the sovereignty of the last great Aztec emperor, Moctezuma II. A man of great organizational and oratory skill, Banderas invited all the Indian nations of Sonora and Sinaloa to join the rebellion, although he garnered strong support only from the Yaqui, Mayo, and Opatá nations.

From 1825 to 1827, Banderas's forces restored Indian control over much of the state of Occidente. With between 2,000 and 3,000 fighters armed largely with bows and arrows, Indian units enjoyed several military victories over the disorganized state forces. Banderas excelled at guerilla tactics, engaging in strikes on lonely outposts, and then retreating to local Indian towns or mountain ranges. Combined Yaqui, Mayo, and Opatá units forced panicked Mexicans to consolidate in the larger towns of Guaymas and Alamos, and prompted local non-Indians to relocate the capital from El Fuerte south to Cosalá, Sinaloa. Defeated in 1827, Banderas accepted a

pardon. His resistance, however, forced the Occidente government to acknowledge the Yaqui leader's position as commander general of his nation, a concession to the preindependence system. Although Banderas invoked European and indigenous religious symbols, the messianic appeal of his movement was likely overridden by more concrete political and strategic concerns among his followers.

By 1831, a new series of state laws aimed at colonizing Yaqui territory and incorporating their towns into the local municipal structure sparked a second Banderas rebellion. That year, the Yaqui commander allied with Opatá Indian leader Dolores Gutiérrez and gained immediate success. Having several thousand warriors in their command, Banderas and Gutiérrez enjoyed support among the Opatá and Lower Pima peoples in northern Occidente and the Yaqui and Mayo peoples in the south of the state. For approximately two years rebel forces swept the countryside, attacking isolated ranches and mines, burning farms and houses, profaning churches, and killing settlers. Banderas's military success ended in December 1832, however, when his troops met defeat at Soyopa, Sonora. The revolt crushed, in January 1833 Banderas, Gutiérrez, and eleven others were executed. Thereafter, Banderas's main rival, Juan María Jusacamea, succeeded him as captain general and accommodated Mexican nationalist policies. Banderas's articulated goals of an independent Indian state did not die with him, however. His movement ushered in intermittent warfare between Yaquis and Mexicans that would continue through the Mexican Revolution. In light of Yaqui resistance, nineteenth-century Mexican officials never fully succeeded in their aims of integrating the Yaqui towns into the local municipal system, collecting taxes, or alienating Yaqui lands.

Contemporaries and later observers have debated the significance of Juan Banderas and his movement. Mexicans of the time viewed him simply as a military strongman, leading a bandit movement for personal reward. Twentieth-century anthropologist Edward Holland Spicer places Banderas squarely within a longer tradition of Yaqui resistance to European encroachment. Historian Evelyn Hu-DeHart credits him with beginning the Yaquis' century-long guerilla war against the more powerful Mexican nation-state. To modern Yaquis, Banderas holds an exalted place: a militant torchbearer of the independent spirit of their people.

Banks, Dennis

From the 1960s to the present, Dennis Banks has been a prominent Native American activist, educator, and advocate for Indian rights. He is most famous for his activities as cofounder of the American Indian Movement (AIM) and leader in the historic standoff between the FBI and AIM at Wounded Knee, South Dakota. While he has attracted great political controversy, he is widely loved by traditional indigenous elders and Native rights supporters from around the world.

Born in 1937 on the Leech Lake Reservation in Minnesota, Banks's Ojibwa grandparents raised him to have traditional cultural values. He recalled what happened when he returned home as a boy and announced that he had killed a porcupine, his first success as a hunter. When asked to show his grandparents the porcupine, he confessed that he left it deep in the forest. To teach him an important lesson in life—not to kill any living creature indiscriminately—he was instructed to go back into the dark forest and recover the porcupine. He then was taught the proper way to pray over the animal, asking for forgiveness and promising to use every part of the animal for a good purpose. He cleaned it, cooked the meat, and saved all the quills to be used as decorations for quillwork clothing and birchbark boxes. The experience profoundly changed his worldview at an early age.

His life was seriously disrupted when U.S. government officials took him from his family. They forced him to attend a government boarding school, where he was subjected to a repressive assimilation program. At the age of seventeen, Banks enlisted in the U.S. Air Force and shipped off to Japan. He fell in love with the Japanese people and married a Japanese woman.

When Banks left the Air Force, he was shipped back to the United States and found himself in the Indian slums of Minneapolis, Minnesota. He was arrested and sent to prison for stealing groceries to feed his growing family. Here he decided to educate

himself, becoming immersed in the study of federal Indian affairs. He learned of the existence of more than 300 broken treaties. Reading in the U.S. Constitution (Article VI) that “treaties are to be judged the supreme law of the land,” Banks discovered a legal basis for the defense of Indian rights. Upon his release, he and a number of other Indians, including Russell Means and Vernon and Clyde Bellecourt, founded the American Indian Movement.

In 1972, Banks helped organize a march on Washington, D.C., called the Trail of Broken Treaties. The group arrived at the Bureau of Indian Affairs and demanded that past broken treaties be honored. When a positive response was not received, AIM entered and occupied the BIA building. They raised their AIM flag, barricaded the doors, and called the media. President Richard M. Nixon called for additional snipers to protect the White House and asked the FBI to intervene. After the Iroquois chiefs arrived, a settlement was negotiated. Banks and the AIM members left the BIA building and caravanned in parade of old “rez cars” back to the Lakota reservation in Pine Ridge, South Dakota. The Lakota medicine men, Frank Fools Crow and Leonard Crow Dog, conducted ceremonies.

On February 27, 1973, Dennis Banks and 200 people, including AIM members and their Lakota supporters, found themselves surrounded by FBI agents, U.S. marshals, BIA police officers, and the notorious goon squad of the Pine Ridge tribal council. They had been invited onto the reservation by tribal elders for protection against the terrorism fostered by tribal president Richard “Dick” Wilson. The confrontation quickly turned into an armed standoff. The FBI brought in superior firepower and armored personnel carriers designed for wartime combat. Banks called the Iroquois chiefs, the Muskogee medicine man Philip Deere, and other tribal leaders for support. The armed siege made national news, as TV cameras lined up to record the “last battle of the Indian wars.” The standoff lasted seventy-one days, ending, after the deaths of two Indian men, with the signing of a “peace pact” that soon was added to the list of broken treaties.

Dennis Banks was given sanctuary from federal prosecution by California Governor Jerry Brown. Having earned an associates of arts degree at Davis University, Banks went on to serve as chancellor of Deganawidah-Quetzalcoatl (D-Q) University, developing educational programs while organizing in 1978 a new and larger march from Alcatraz Island to Washington, D.C., called the Longest Walk. Modeled

Dennis Banks, an Ojibwa, was a co-founder of the American Indian Movement. (Bettman/Corbis)

after Martin Luther King's civil-rights marches, the event's purpose, ultimately successful, was to halt proposed legislation to abrogate Indian treaties.

Taking refuge on the Onondaga nation after Governor Brown left office, Banks eventually surrendered to authorities and served eighteen months in a South Dakota prison. After his release, he worked as a substance abuse counselor on the Pine Ridge Reservation. Banks went on to work successfully for strict legislation to protect Indian graves against desecration. He published his autobiography, *Sacred Soul*, in 1988.

Dennis Banks led the ultimately unsuccessful 1996 drive for executive clemency for the political prisoner, Leonard Peltier. He has performed in movies and has released CDs of original and traditional music. He continues to lead sacred runs around the world in support of various Native

causes, and he remains active as a substance abuse counselor, lecturer, and elder.

Bearskin, Leaford

Leaford Bearskin (b. 1921) was elected in 1983 as Chief of the Wyandotte Nation, known since the 1500s in American history as part of the Hurons, as well as the Keepers of the Council Fire for the Old Northwest (Delaware) Confederacy. In this capacity, he led the Wyandotte into the twenty-first century after a long career as a military officer and civilian employee of the U.S. Air Force. Among his accomplishments as chief, Bearskin helped the tribe achieve economic self-sufficiency with several business ventures that have benefited both the tribe and local communities. Through his leadership, the Wyandotte have enhanced health care, education, nutrition services, employment opportunities, and emergency services for tribal members. Magnified by his history as a bomber pilot in World War II, an airlift squadron commander during the Berlin Blockade of 1948, and an air base group commander, Bearskin also initiated several Veterans' Day events in northeastern Oklahoma and established a Wyandotte Color Guard to represent the tribe at nation-wide events.

Bearskin was born in a log cabin on 140 acres of allotment land along Sycamore Creek in the hills northeast of Wyandotte, Oklahoma, where he attended public school. The family lost the land after his older brother was stricken with polio. Bearskin's parents borrowed money from the local bank to get medication. Subsequently, a land speculator came through town and bought several mortgages from the bank, including the Bearskins', and then foreclosed on them.

After graduating from high school, Bearskin wanted to attend college but he lacked the financial

means to do so. Since he also harbored a secret desire to fly an airplane, Bearskin joined the Army Air Corps in 1941. Assigned to an air base in Alaska after the Japanese bombed Pearl Harbor, Bearskin applied for flight school when the Corps revised the minimum requirements for pilot training to a high school diploma. Thus began a highly distinguished career in which Bearskin was awarded such military honors as the Distinguished Flying Cross, the Asiatic Campaign Medal (with four major battle stars), the National Defense Medal, the United Nations Service Medal, and the Air Force Longevity Service Award (with three bronze oak-leaf clusters). After numerous outstanding efficiency ratings and many commendations, Bearskin retired from the Air Force in 1960. Following his retirement, Bearskin spent another twenty years working for the Air Force as a civil servant in the areas of missile weapons systems, logistics, and headquarters operations.

Beginning with his election as chief in 1983, Bearskin has made voluminous contributions to the Wyandotte nation and the surrounding communities of northeastern Oklahoma. Bearskin rewrote the tribal constitution, obtained a grant for the tribe's first economic development project (the Wyandotte convenience store complex), and returned the Wyandotte nation offices to tribal land. He also led a \$5.7-million settlement with the U.S. government of Wyandotte land claims in Ohio. Additional tribal programs Bearskin instituted include a senior citizens nutrition program, a food delivery program to local shut-ins, the construction of a tribal social activities center, the creation of a tribal library, and the establishment of a health clinic also available to non-Indian members of the community on a space-available basis. Educationally, the Wyandotte Turtle Tots preschool was recognized as the best preschool in the United States in 1995 and 1996 by the U.S. Department of Education.

Also impacting communities nearby, such as Wyandotte, Fairland, and Miami, Oklahoma, Bearskin oversaw the creation of a cemetery for anyone in the area, Indian or non-Indian, who needed a place to be buried. Under his watch, the Wyandotte nation also made significant enhancements to local public services. The tribe helped the city of Wyandotte create twenty-four-hour law enforcement, helping cut down on crime in the area. The tribe also supports the city's fire department, emergency medical services, and flood management control, and it supervises and funds several regional transportation projects, building or improving roads and

bridges to benefit the whole of Ottawa County. Chief Bearskin also ensured that the tribe's wellness center is available to the entire community. Nationally, Bearskin oversaw the tribe's purchase of six technical schools across the United States that teach highly employable vocational subjects such as court reporting, medical records maintenance, and other skills.

Chief Bearskin instigated the establishment of a Wyandotte Cultural Center, and he directed a cultural committee to revive an annual powwow that had not occurred since the early 1960s. Since its rebeginning in 1991, the annual intertribal event draws up to 4,000 people to the Wyandotte nation in early September and has a dramatic impact on the service-oriented businesses of the area. Chief Bearskin also instituted a Wyandotte language program that is ongoing, and throughout his career traveled extensively speaking about the Wyandottes, their lifeways, and concerns. In 2005, Bearskin led the Wyandotte nation in establishing a gaming complex in Wyandotte County, Kansas.

Black Elk

Black Elk, a Lakota spiritual leader, came of age during the late nineteenth century, as European encroachment reached his homeland. His views of Native life at that time reached large audiences beginning in the early twentieth century through the books of John Neihardt, the best-known of which is *Black Elk Speaks*. Black Elk is therefore known as a traditional spiritual leader, although he also spent much of his later life as a Catholic.

Black Elk was eleven years old in the summer of 1874 when, by his account (published in *Black Elk Speaks*), an expedition under General George Armstrong Custer invaded the *Paha Sapa* ("hills that are black"), land sacred to the Lakota. The Black Hills had been guaranteed to the Lakota "in perpetuity" by the Fort Laramie Treaty of 1868. Custer's expedition was on a geological mission, not a military one.

Custer was looking for gold. He found it, and in his wake several thousand gold seekers poured into the Black Hills, ignoring the treaty.

In the words of Black Elk, the Lakota and Cheyenne “painted their faces black”—went to war—to regain the Black Hills. The result was Custer’s Last Stand in 1876. In his memoir, Black Elk told Neihardt that he was a young warrior who participated in the battle of the Little Bighorn. Young Black Elk tried to take the first scalp, but the soldier under Black Elk’s hatchet proved to have an unusually tough scalp, so Black Elk shot him.

The Seventh Calvary initiated a battle that the Lakota Chief Kill Eagle likened to a hurricane or to bees swarming out of a hive. Completely surrounded and cut off from reinforcements stationed only nine miles away, Custer’s force was cut to ribbons during one furious, bloody hour on a battleground that nearly disappeared under a huge cloud of dust. The battle provoked momentary joy among the Sioux and Cheyennes, who for decades had watched their hunting ranges curtailed by what Black Elk characterized as the gnawing flood of the *Wasi’chu* (literally “takers of the fat,” used to characterize the invaders).

After the Wounded Knee massacre, Black Elk watched his people, once the mounted lords of the Plains, become hungry, impoverished prisoners, pent up on thirteen government reservations. In 1886, when he was twenty-three years of age, Black Elk joined Buffalo Bill’s Wild West Show. After a tour of large cities on the eastern seaboard, the troupe traveled to England.

The first three decades of Black Elk’s life are chronicled in Neihardt’s book-length poem *Black Elk Speaks*, first published in 1932; much of the same period was covered in Joseph Epes Brown’s *The Sacred Pipe: Black Elk’s Account of the Seven Rites of the Oglala Sioux*. The final words in Dee Brown’s *Bury My Heart at Wounded Knee* (1970) come from Black Elk: “It was a beautiful dream . . . The nation’s hoop is broken and scattered. There is no center anymore, and the sacred tree is dead.”

Another book, Michael Steltenkamp’s *Black Elk: Holy Man of the Oglala* (1993), describes Black Elk’s final years as a Roman Catholic missionary. Steltenkamp, who is a Jesuit himself (as well as an anthropologist), said he learned of Black Elk’s conversion from Lucy Looks Twice, Black Elk’s only surviving child, who died in 1978. The Catholic Church also sent Black Elk on fund-raising trips to cities such as New York, Boston, Chicago, Washington,

D.C., and Omaha. In 1934, shortly after publication of *Black Elk Speaks*, Black Elk complained that Neihardt hadn’t said enough about his life as a Catholic. Black Elk added that his family was all baptized. All his children and grandchildren belonged to the Catholic Church, he asserted.

During his later years, Black Elk combined Catholic missionary work with occasional showmanship at South Dakota tourist attractions that capitalized on his image as a Lakota holy man. Steltenkamp wrote that Black Elk sensed no contradictions in mixing the two interpretations of the “great mystery.” Black Elk died in 1950. He is said to have believed that lights in the sky would accompany his death. The night Black Elk died, the Pine Ridge area experienced an intense and unusually bright meteor shower.

Blackfeet Confederacy

The Blackfeet claim modern-day central Montana, southern Alberta, and western Saskatchewan to be their homeland. Recent archaeological discoveries confirm these claims while demonstrating thousands of years of Blackfeet territorial occupation. Four distinctive political groups comprised the Blackfeet Confederacy: the Piikunis, North Piikunis, Kainais, and Siksikas. The imposition of the U.S.–Canadian border in the nineteenth century split the members of the Blackfeet Confederacy, leaving six bands in Canada and one in the United States. In the United States, the Piikunis reside on a reservation in Montana, while in Canada, where they are known as the Blackfoot, three reserve communities in southern Alberta are home to the Kainais, the North Piikunis, and the Siksikas.

The name “Blackfeet” is an English term originally used to describe the people who dyed their moccasins black. The Blackfeet were organized into small bands typically no larger than twenty or thirty people. The bands were self-governing and self-sufficient entities that occupied demarcated territories for their exclusive use and benefit. They fended off anyone who broached their sovereignty, be it American whiskey traders or other nations, such as the Crees from the east or the Shoshones from the south. Prior to their acquisition of horses in the mideighteenth century, the Blackfeet traversed their territory on foot. During this period known as the “dog days,” characterized by limited mobility, dogs were the beasts of burden and hooked up to travois to haul teepees and other heavier materials. While the small band sizes were militarily limiting, they made hunting buffalo effective. This resulted in the creation of highly refined techniques for hunting buffalo, the animal the Blackfeet were most dependent on spiritually and materially.

The introduction of the horse in the early eighteenth century was a technological revolution of sorts, permitting the development of more efficient hunting techniques. The Blackfeet were able to travel farther east on horseback, a development that led also to their acquiring guns from the French. This had the effect of positioning the Blackfeet as the pre-eminent military power in the northwestern region of the Great Plains. A period of rapid and aggressive territorial expansion followed, as the Blackfeet pushed the Shoshones to the southwestern corner of Montana while forcing the Flatheads and Kootenais across the Continental Divide. Northern movement led the Blackfeet to effectively displace the Crees from those territories. By the end of the eighteenth century, the Blackfeet controlled a significant portion of the Montana territory, extending into modern Alberta and western Saskatchewan. The explorers Lewis and Clark confirm these results, claiming that, as of 1806, the Piikunis controlled all of north-central Montana. With an estimated population of 15,000, an ample source of raw materials in the form of buffalo to maintain their traditional economy, and a well-known reputation as fierce warriors, the Blackfeet controlled this extensive region well into the mid-nineteenth century despite the appearance of British officials and the U.S. cavalry seeking to expand their territorial claims.

From 1840 to 1860, the Blackfeet Confederacy bands became distinctive political entities occupying specific territories. For instance, the Kainais, North

Piikunis, and Siksikas remained north of the international boundary, whereas the Piikunis lived south of the border. In 1851, following the signing of the Treaty of Fort Laramie, the U.S. government identified the Piikunis as one of the tribes authorized to use the vast Montana territory north of the Missouri River and east of the Continental Divide, even though they were not directly involved in the treaty negotiations. This nevertheless did not end cross-cultural hostilities. Colonel E. M. Baker almost killed Heavy Runner’s entire band, the majority of who were women and children, in a surprise attack in January 1870. The Baker Massacre was revenge for the murder of a prominent settler named Malcolm Clark. In all, 173 Blackfeet died and an additional 140 were taken prisoner. This, in turn, led to a reduction of the overall Blackfeet reserve in 1873 and 1874.

In Canada, the Kainais, the North Piikunis, and the Siksikas signed Treaty 7 with representatives of the British crown and the Canadian government in 1877. Despite their poor experience treating with the U.S. government, Canadian success in removing whiskey traders from southern Alberta convinced Blackfeet leaders to negotiate with the crown. In return for annuities, the promise from federal officials to protect the buffalo, and the establishment of protected reserves, the Kainais, North Piikunis, and Siksikas agreed to cede more than 25,000 square miles of their territory to the Canadian government. The Piikuni remained south of the international boundary, contained on their reservation north of the Missouri and Marias Rivers. The loss of the buffalo by the early 1880s led to a desperate situation in Canada and the United States, however. In the United States, Blackfeet leaders were forced to sell a portion of their land, which broke up the contiguous Blackfeet Reservation. The Blackfoot (which is the accepted designation for these bands living in Canada) north of the border found themselves increasingly confined to their reserves, as they became more dependent on government rations and Indian agent generosity for their survival. Later, pressure from the U.S. government led the Blackfeet to surrender a scenic portion of their reservation, land that eventually became part of Glacier National Park.

Indian agents on both sides of the forty-ninth parallel argued that farming and ranching were key to Blackfeet self-sufficiency. As part of Treaty 7, the crown provided farming implements and minimal training to aspiring Blackfoot farmers. In addition to farming, the U.S. government permitted the Black-

feet the right to allot lands to individual families on the reservation, and within a year construction on a large irrigation project began. By the early 1920s, however, the Blackfeet's economy had all but collapsed, with an estimated two-thirds of tribal members reliant on federal handouts. Similarly, in Canada, Blackfoot bands faced tough economic times, due in part to federal efforts to dispossess Indians of the reserves through the illegal leasing and allocation of land to Great War veterans as a reward for their efforts in the European theater. In response, Kainai war veteran Mike Mountain Horse organized two political conferences, in 1924 and 1925, to bring an end to the illegal leasing of reserve lands and to lobby the government for a renewed political relationship. Although little came of the conferences, most Blackfoot leaders continued to resist the leasing of reserve lands. In particular, Kainai Chief Shot Both Sides became a vocal proponent of protecting his people's territorial autonomy and, in the 1920s, initiated a moratorium on leasing reserve land.

The Blackfeet in Montana reorganized according to the provisions of the 1934 Indian Reorganization Act (IRA), the land allotment process was terminated, the sale of reservation lands to non-Indians was halted, and a number of vocational training programs were implemented. In Canada, Blackfoot leaders reacted to the federal government's policy of benign neglect by forming the Indian Association of Alberta (IAA) in 1939. A strictly regional organization that concerned itself with Alberta Indian issues, the IAA promoted equality without endorsing Indian assimilation. It was concerned with drawing the public's attention to social issues on reserves while never losing sight of protecting the Alberta treaties. It continued as a lobby group until the 1970s.

By the 1960s, the Blackfeet, both in the United States and Canada, began to witness better economic times. The Blackfeet in Montana began receiving petroleum royalties, followed by the construction of a pencil factory in 1972. Although still under the threat of termination from the U.S. government, the Blackfeet boast an enrollment of 15,560, of which 8,560 are off-reservation and 7,000 are on-reservation. The Blackfoot in Canada are separated into three main reserve communities: Kainais, Piikunis, and Siksikas. Kainais have a population of more than 9,000, while the Piikunis and Siksikas have a total registered population of 3,375 and 5,922, respectively. The Kainais have a small industrial base, receive royalties on water rights and mineral

extraction, and maintain active farming and ranching industries. The Siksikas First Nation receives natural resource royalties and engage in agriculture and ranching, while benefiting from tourism. They also hold exclusive land rights to one of Canada's fastest growing economic sectors. The Piikunis are engaged in petroleum exploration, agriculture and ranching, as well as tourism.

The connection between the Blackfeet of Montana and the Blackfoot of Canada remains close, with friends and family regularly crossing the international boundary to visit and work. The Sun Dance celebration remains a central event and various religious societies still meet, entailing cross-border travel.

Black Hawk

Black Hawk (Makataimeshekiakiak) was a distinguished warrior in the War of 1812 and an inveterate foe of American expansion. Two decades later, he waged the last Indian war in the Old Northwest to curb white encroachment of his homeland.

Black Hawk was a chief of the Thunder Clan of the Sauk and Fox. (Library of Congress)

Black Hawk was born about 1767, a member of the Thunder Clan of the Sauk and Fox, and grew up at Saukenuk in northeastern Illinois. He joined his first war party at the age of fifteen and fought in successive wars and raids against the neighboring Osages and Cherokees. A chief since 1788, Black Hawk resented American interference in Indian affairs and became stridently pro-British in outlook. This sentiment conflicted directly with most tribal elders, who were friendly toward the United States and received gifts and annuities in return.

By 1804, Black Hawk's dislike turned to hatred when Indiana territorial Governor William Henry Harrison persuaded several Sauk and Fox chiefs to sell most of their peoples' land east of the Mississippi River. Black Hawk refused to sign the treaty and remained at his village of Saukenuk. When the War of 1812 erupted eight years later, his warrior band joined Tecumseh's pan-tribal alliance in their struggle against the whites. Real Indian unity proved fleeting, however. Despite Black Hawk's

best efforts, the Sauk and Fox nation split into the British band under himself and a pro-American faction allied to Chief Keokuk.

Black Hawk fought and helped defeat General James Winchester at the Battle of Frenchtown in January 1813 and subsequently attended the unsuccessful siege of Fort Meigs that May. When British forces failed to dislodge Major George Croghan from Fort Stephenson in August 1813, however, he grew disillusioned and withdrew to his homeland for the winter. Black Hawk reentered the fray in July 1814 when his warriors ambushed and defeated a detachment of the First U.S. Infantry on Campbell's Island in the Mississippi River.

In September, Black Hawk enjoyed similar success when he drove off an expedition under Major Zachary Taylor at Rock River, Illinois. Black Hawk was therefore very upset with his British allies when they signed a peace treaty and abandoned all their western conquests to the United States. Throughout the spring of 1815, he raided several settlements near Fort Howard, Missouri, in protest. His warriors defeated a pursuing party of rangers at the Battle of the Sinkhole in June 1815, the final skirmish of the War of 1812. The following year, Black Hawk sullenly concluded a peace treaty with the United States and was the last war chief to do so.

For the next twenty years, Black Hawk lived in an uneasy truce with his white neighbors at Saukenuk, but by 1829 the Illinois state government applied pressure on the Indians to migrate. When the old chief refused, Governor John Reynolds called out the militia in June 1831 to evict them by force. Bloodshed was averted, however, when the Sauk and Fox tribe slipped quietly across the Mississippi River into Iowa and endured an uncomfortable winter there. Black Hawk had come under the influence of White Cloud, a Winnebago prophet, who urged action against the whites, and Black Hawk decided to reclaim his ancestral home. On April 5, 1832, the tribe, numbering 1,400 men, women, and children, crossed back into Illinois for the stated purpose of occupying Saukenuk. It was hoped hostilities could be avoided.

The Americans reacted by summoning the troops of General Henry Atkinson and Colonel Henry Dodge, who immediately marched against them. The Indians, having received no pledge of assistance from the neighboring Winnebago and Potawatomi tribes, decided the odds were too steep and tried to surrender. When two of their peace envoys were killed by Illinois militia, the Battle of

Stillman's Run erupted on May 14, 1832, and Black Hawk was again victorious. The Indians then reached the Mississippi River and prepared to cross. They were in the act of building rafts when they were attacked by the steamboat *Warrior* on August 1, 1832.

Again, the Indians tried to signal their surrender, to no avail. After inflicting considerable losses, the steamboat withdrew because of lack of fuel, just as Atkinson's column arrived. An intense battle ensued in which 150 Native Americans were slain and a similar number captured. Several survivors made their way across to the west bank of the Mississippi, where they were immediately attacked by Sioux Indian war parties. Black Hawk was eventually captured and taken east by Lieutenant Jefferson Davis to meet with President Andrew Jackson. After several months of confinement at Fort Monroe, Virginia, he was released in the custody of rival chief, Keokuk.

Back in Iowa, Black Hawk dictated his memoirs, a stinging indictment against European-American injustice, to Indian agent Antonine LeClaire. When published in 1833, the book became a national best seller. Black Hawk continued living quietly for another five years and died in Keokuk's village on October 3, 1838. His defeat signaled the collapse of Native American resistance to white expansion east of the Mississippi.

Black Kettle

Perhaps the most famous Southern Cheyenne leader during the mid-1800s was the peace advocate Black Kettle (Moketavato). His rise in power came when

the Cheyenne people turned to more centralized authority as the threat of American encroachment increased. While some Cheyenne leaders and warrior societies chose aggression, Black Kettle preferred to guide the Cheyennes through the violence of the 1860s that defined Cheyenne–American government relations by peaceful resolutions. Despite suffering horrific atrocities by the American military, being opposed and even ostracized by his own people, and being betrayed and vilified by white leaders, Black Kettle endorsed peace—even until his own violent death—as the answer to the threatening destruction of the Cheyennes.

Few biographical details are known about Black Kettle, especially of his earlier years. The famed trader George Bent, who married Black Kettle's niece, provides some information. According to Bent, Black Kettle was the son of Swift Hawk Lying Down (who never was a chief), who was of the Sutaio tribe (a kindred people to the Cheyennes and a portion of whom were incorporated into the tribe during the 1700s and became one of the tribe's divisions) and who was a good warrior. Cheyenne historian George Bird Grinnell suggests that Black Kettle even carried Medicine Arrows into battle against the Delaware in 1853. When exactly Black Kettle became a chief is uncertain, but he is known to have become *the* principal chief by 1860. That same year historical evidence identifies the Cheyenne leader with the name Black Kettle, the name for which he is most known. Black Kettle lived on the vast territory of the southern Plains, a region guaranteed the tribe under the Fort Laramie Treaty of 1851. The Pike's Peak gold rush of 1859, however, created a flood of white migration to Colorado, bringing with it intrusion on Cheyenne lands and hostilities between the two cultures.

The U.S. government sought to resolve the situation by forcing a new treaty on the Cheyennes in 1861 (Treaty of Fort Wise) that would cede all tribal lands save a small reservation (the Sand Creek reservation) in southeastern Colorado. Black Kettle supported the treaty, fearing an even worse outcome if he did not, and then he struggled to see the Cheyennes kept their part of the agreements. The lack of agricultural success and hunting at the Sand Creek Reservation, along with epidemic diseases, created a dismal situation for the Cheyennes. Young men began to leave the reservation and prey on nearby settlers and passing wagon trains. Tensions escalated between the two cultures, especially after federal troops left the West to fight the Civil War.

Black Kettle continued to press for harmonious relations, especially for his band, but Coloradans refused the peace.

Coloradans desired a world cleansed of Native peoples, and leading that charge were men like Colonel John M. Chivington, commander of the Third Colorado Volunteers. Without warning, Chivington's troops attacked Black Kettle's encampment on Sand Creek in southeastern Colorado on November 29, 1864, in spite of Black Kettle's efforts to secure peace. The attack left about 200 of Black Kettle's Cheyennes, many women and children, slaughtered by Chivington's men, who then sexually mutilated, scalped, and took body parts as trophies of their conquest.

Black Kettle miraculously escaped the massacre at Sand Creek. More remarkably, he continued to be an advocate for peace even as other Cheyennes pursued violent retribution throughout the southern Plains. Eventually, Black Kettle and other Indian leaders achieved an uneasy truce with the government and agreed to a new reservation in Kansas. Not all Cheyennes approved. Many ignored the agreements and continued ranging over their ancestral lands. Federal negotiators again sought to remove the Cheyennes, this time to two smaller reservations in Indian Territory (today's Oklahoma). Black Kettle was among the chiefs who signed this treaty, the Medicine Lodge Treaty of 1867. The federal government, however, failed to uphold its agreements by not giving the Cheyennes all the promised supplies. As a result, many Cheyennes left the reservations to hunt, roam, and raid. Some attacked white settlements, leading to a full-scale American military response. In 1868, General Philip Sheridan orchestrated a wintertime total war campaign against any southern Plains tribes not found at the agencies. The newly formed Seventh Cavalry led by George Armstrong Custer was selected to take the lead.

On the frozen morning of November 27, 1868, almost four years to the day since the Sand Creek Massacre, Custer's command attacked Black Kettle's Cheyenne camp on the Washita River, well within the boundaries of the Cheyenne Reservation. During the initial attack, both Black Kettle and his wife were shot down. In that moment the Cheyennes lost one of its greatest leaders. In a matter of months the old Cheyenne way of life was lost as well.

Boas, Franz

Franz Boas was an influential social philosopher and anthropologist. He is remembered today largely because of his application of the scientific method to the study of human society and his resulting rejection of the notion of racial hierarchy.

Boas was born in Germany in 1858. He completed a Ph.D. in physics but later became interested in studying human geography. In 1887, Boas immigrated to New York City. A year later, he accepted his first teaching position, and in 1896 he was hired by Columbia University, where he taught anthropology for more than forty years. He died in 1942. Boas was an impolitic, unyielding academician dedicated to the pursuit of knowledge and truth (at least as he defined it). Because he was an unconventional thinker who was frank in his assessment of others' work, the early part of Boas's academic career was marred by friction, frequent job changes, and occasional periods of unemployment.

Boas was a highly productive writer and researcher. During the most productive eighteen years of his career, he published more than sixty journal articles, a monograph, and two academic papers. Boas wrote and published both popular and scientific articles, but the bulk of his published work consists of ethnographic data that he gathered and recorded during his anthropological fieldwork in tribal communities. These data include myths, songs, linguistic information, descriptions of rituals, and physical measurements, such as head size and height.

Although Boas was in many ways ahead of his peers, he was still a product of the Victorian era (1837–1901) in which he grew up. For example, early in his career, Boas participated in now discredited research, such as attempting to gauge a people's intelligence based on their average head size. A common criticism of Boas's work is that he emphasized the gathering and recording of ethnographic data over its analysis. To a certain extent, this emphasis can be explained as an attempt to catalogue and pre-

serve for future generations what Boas and his contemporaries perceived to be vanishing cultures. Another explanation might be an unwillingness and/or inability to see Native perspectives.

In addition to his work as a scholar and educator, for many years Boas curated museum exhibits. When Boas began his museum work, artifacts were customarily arranged in groups of similar items—for example, weapons, pottery, tools. Typically, the artifacts also were organized to create an appearance of evolutionary development. Thus, a stone arrowhead from North America would be placed beside a Viking age iron spear point, which would lie next to a steel Bowie knife, and so forth. Boas revolutionized this type of museum exhibit by rearranging the displays, grouping objects from a single tribe and placing the artifacts of neighboring tribes in close proximity. This new exhibit style eventually transformed museum displays around the world.

At the time that anthropology was gaining strength as an academic discipline, social theory had not yet separated the concepts of culture, race, and nationality. The prevalent view was that people from each region of the world had a certain “temperament,” or personality, that was the result of factors such as climate, diet, religion, language, and physical traits. According to this view, nations, or races, could be grouped into a hierarchy, or pyramid, with one’s own group at the top and other races at the bottom. Among Europeans and European-Americans, a common belief was that Caucasians surpassed all other human groups in intelligence, physique, and social development. This belief was used to justify such racially motivated policies as slavery, the removal of Native Americans from their lands, and the European fascist movements that led to World War II. While some of the most prominent early American anthropologists used anthropology to perpetuate the racially deterministic beliefs of the day, Boas did just the opposite.

Boas applied the scientific method he had learned in his study of physics to the study of human society. This led him to reject the theory of racial hierarchy and instead to theorize that differences among societies did not indicate that one group was superior or inferior to another, but rather that each group was uniquely well adapted to fulfill its members’ needs and ensure their collective survival. Boas’s scholarship and ideas were widely disseminated and came eventually to affect the views of the larger society, ultimately helping to break the monolithic Victorian worldview into the separate

Bonnin, Gertrude Simmons

Gertrude Bonnin (Yankton Dakota, 1876–1938), whose Native name was Zitkala-sa, provided a written window on Sioux life at the juncture of the Native American and Anglo-American worlds. Born the year of the Custer Battle, she died on the

Throughout her life pan-Indian activist and writer Gertrude Bonnin fought for Native American self-determination and the preservation of Indian culture. (Library of Congress)

eve of World War II. Bonnin was one of several prominent literary figures to come out of the boarding schools, whose engines of assimilation produced strident critiques of their methods (and of Anglo-American society generally) by the likes of Luther Standing Bear, George Eastman, and Bonnin, among others.

"This is a story," wrote Ruth Spack, in *America's Second Tongue: American Indian Education and the Ownership of English, 1860–1900* "of language and how people used it to further their own political and cultural agendas" (2002, 7). Thus, Bonnin and other Native American students took control of English as a means of expression even as they were forced to speak it to the exclusion of their Native tongues. This was not always the kind of assimilation that their Anglo-American teachers had anticipated.

Bonnin distrusted most non-Indians, but early sought a formal education against her mother's wishes, eventually attending the Boston Conserva-

tory of Music. Her articles and poetry were published in large-circulation magazines, such as her "Red Man's Helper" in the June 1900 edition of *The Atlantic Monthly*. One of Bonnin's books, the autobiographical *American Indian Stories* (1921), described her changing perceptions of the Euro-American world and her gradual acceptance of Christianity. She also authored *Old Indian Legends* (1901), among other titles.

Bonnin returned to the Carlisle Industrial School as a teacher and developed a curriculum for boarding school education from a Native perspective (which was rejected). She also edited *American Indian Magazine*, a publication of the Society of American Indians. She was among a number of very literate American Indian activists in her time who valued printed media (non-Indian outlets as well as their own) to advocate for change. Bonnin's autobiographical essays, including "Impressions of an Indian Childhood," "School Days of an Indian Girl," and "An Indian Teacher Among Indians," enraged Richard Henry Pratt, founder of the boarding school system, even as he used her reputation as an example of how Native American children were helped by the schools (Katanski, 2005, 17).

Bonnin intensely resented the use of her work to support theories of social evolution; at one point, she wrote, "No one can dispute my own impressions and bitterness" (Katanski, 2005, 29). Amelia V. Katanski, in *Learning to Write "Indian,"* characterizes much of Bonnin's work as "images of angry, pain-filled students, whose plight challenged white educators' justifications of the boarding schools" (2005, 166). However, she recognized the compromises between tradition and non-Native change that so affected her life, as in the first sentence of "Impressions of an Indian Childhood," in which she described living with her mother in a tepee made not of buffalo hides, but canvas (Katanski, 2005, 116).

With Eastman, Bonnin was a founder of the Society of American Indians, an early pan-Indian advocacy organization in the 1920s. She also was known for her talent on the violin. Bonnin investigated the swindling of Indians in Oklahoma by settlers who swarmed into the area after the discovery of oil, and she advised the government's Meriam Commission in the late 1920s. Bonnin remained active in Indian affairs until she died in 1938.

Brant, Joseph

Joseph Brant was an influential Mohawk leader whose lasting achievement was the establishment of the Six Nations Grand River Reservation in southern Ontario. An active ally of the British during the American Revolution, he was known for conducting military raids against New York State colonists. After the war, his allegiance to the British was rewarded with a reserve of several hundred square miles along the Grand River, held in trust by the British crown. The final ten years of his life were marked by frustration with British authorities, however, who often blocked his attempts to sell portions of the land to raise sorely needed money for his people. Very well educated for a frontiersman, Brant helped to translate a bilingual Mohawk–English prayer book, and kept up an extensive political correspondence for much of his life. His Mohawk name, Thayendanegea (pronounced Tai-yen-da-nay-geh), has been variously translated as “He Places Two Bets” or “Two Sticks of Wood Bound Together.”

The records of Brant’s youth are obscure, but both of his principal biographers agree that he was born of humble origins. Little is known of his parents, Margaret and Peter (Tehonwaghkwangeraghkwa). John Norton, a close friend of Brant’s, wrote that they may have been captured Canadian Wyandots adopted by the Mohawks near the Bay of Quinte. Because Margaret was certainly not from sachem lineage, her son’s political future was limited. Joseph was probably born on a hunting trip in Haudenosaunee (Six Nations, or Iroquois) territory in Ohio during 1743. Over the next ten years, Margaret went through three husbands, had more children (Molly was from her second husband), and lived in the town of Canajoharie on the Mohawk River. Her third husband was a well connected Mohawk sachem named Brant Canagaraduncka.

Because Joseph’s new father-in-law was a sachem, Sir William Johnson’s courtship of his half sister, Molly, made political sense for the rising

Mohawk chief Joseph Brant, also known as Thayendanegea, was a significant Native American leader during the American Revolution. Brant allied himself with the British against the American colonists. (National Archives and Records Administration)

British Indian superintendent. Johnson wished to keep the Mohawks as strong allies, and he took fifteen-year-old Brant on raids and battles against the French in 1758, although Brant did not see much action until the siege of Fort Niagara in 1759.

When the Reverend Eleazar Wheelock wrote to Johnson seeking bright young candidates for his Indian school in Lebanon, Connecticut, Johnson sent Brant in 1761. In addition to learning basic skills in English literacy, Brant developed friendships with many of the missionaries trained at Wheelock’s school, such as Samuel Kirkland. In 1763, Pontiac’s rebellion broke out, however, and Brant was summoned home by his mother. Brant was asked to recruit warriors to discipline Pontiac’s Shawnees and Delawares who were waging war against the

British. While on a recruiting trip along the Susquehanna River, Brant met Neggen Aoghyatonghere, or Peggy, whom he eventually married in 1765. They had two children, Isaac and Christina, and lived a comfortable life in Canajoharie, with Brant working as an interpreter for William Johnson, and then his successor Guy Johnson, for seventy pounds a year. After Peggy died of tuberculosis in 1771, Brant married her half sister Susanna in 1773.

As war with the colonies loomed in 1775, Brant went to England with his superior, Guy Johnson, who was seeking appointment as Indian superintendent. During his eight-month stay, Brant met George III, attended parties, and was generally well liked for his pledges of fidelity to the crown.

Although the British initially resisted employing Indians in warfare, by 1777 Brant was asked by Guy Johnson to recruit the members of the Six Nations for action. For the next several years, Captain Brant headed small groups of Indians and frontier Loyalists to harass upstate New York towns. Brant commanded several noteworthy raids on Oriskany, Cherry Valley, and German Flats, even burning his friend Samuel Kirkland's church at Oneida. Thomas Campbell, in his 1806 poem, "Gertrude of Wyoming," blamed "the Monster Brant" for the massacre of 227 people at Wyoming, New York, even though Brant was not present.

Following General Sullivan's march through central New York in 1779, Brant conducted many successful raids in 1780 and 1781, but the pro-British Indians were largely forced to hunker down at Fort Niagara for the remainder of the war. Brant's second wife, Susanna, died there, also of tuberculosis. Shortly afterward, however, Brant met Catharine Adonwentishon, daughter of George Croghan and a Mohawk woman. At thirty-six years of age, Brant married her and he also became lifelong friends with her half brother, the sachem Henry Tekarihoga.

When the war ended in 1783, the British made no provisions for their Indian allies, and, as a result, they were afraid that the Indians might turn on them. Although Brant remained an ostensible supporter of the British for the next twenty years, he began also to support pan-Indian unity as a means to counteract the intrigues of British and American politics. At an important postwar council at Sandusky, Ohio, in 1783, Brant recommended that all the Indian nations act as one body in the future. The British General Frederick Haldimand, trying to placate the Mohawks, arranged in October 1784 to

award them several hundred square miles of land along the Grand River as recompense for the lands they had lost in New York.

Brant was grateful to Haldimand but the political betrayal by the British had lasting consequences. Just after the war, Brant went again to England to request financial restitution on behalf of the Mohawks for what they lost in the war and to inquire about the delay in his Indian department pension. Although he was finally successful on both counts, he was insulted that Indian requests were so slowly acted on.

The second half of Brant's life saw him trying simultaneously to heal the disagreements between the various Indian nations and to obtain Indian ownership of Grand River. As a result, he was sometimes perceived as unscrupulous. In actuality, however, it was the British and the Americans who drove these intrigues. To his credit, Brant frequently made trips to Ohio and Detroit, telling the Indians not to rely on the British for military aid. He told the Haudenosaunee living in New York, who began to court the favor of the United States after 1790, that they should not rely on American favors. By August 1793, when the Miami and Shawnee rebellions were at their peak of success, Brant urged the western Indians to accept a compromise borderline with the United States at the Muskingum River, but other British agents successfully quashed his peace proposal. From the Americans' point of view, however, the collapse of the August 1793 negotiations was due to Brant.

At the same time that Brant was unsuccessfully trying to get the western and Haudenosaunee Indians to work together, he also was involved in numerous Haudenosaunee land sales. Although Brant was probably guilty of accepting bribes at the largest New York sales—the 1788 Phelps-Gorham Purchase and the 1797 Treaty of Big Tree—even most of the whites who attended were directly bribed or had some financial stake in the sale. Bribed or not, most of these land sales should be evaluated in light of the crushing poverty that the Haudenosaunee began to experience in the 1790s.

Indian poverty was the primary motive behind the final act of Brant's life, the sale of large portions of the Grand River lands to his business associates (Johnson, 1964; Kelsay, 1984). Haldimand gave the land to the Six Nations in trust in 1784. By 1797, however, Brant was petitioning the trustees to give the Indians the land in fee simple, allowing them the

right to make sales. British authorities, who saw Indian populations on the border as useful political tools, declined. Over the course of the next ten years, Brant became enraged by the delaying tactics of the British Indian Superintendent William Claus and Canada's Lieutenant Governor Peter Russell. In 1804, Brant secretly sent his friend, John Norton, an adopted Mohawk of Scottish ancestry, to go over Russell's head and lobby English authorities directly. When the Six Nation sachems heard that Norton was advertising himself as a Mohawk chief on a mission they knew nothing about, they met in 1805 and stripped Brant of his authority. Although Brant was eventually reinstated by his Grand River constituents, he died on November 24, 1807, before he cleared title on the land.

The principal biographies of Brant have different strengths. The first, by William Leete Stone, is extraordinarily thorough regarding his Revolutionary activities and politics. Stone benefited from correspondence with many people who knew Brant well. Even today, Stone's biography remains a rich source of primary documents and speeches not reprinted in later works on Brant. Curiously, however, Stone spends only twenty pages on the final decade of Brant's life. Isabel Kelsay's modern biography, which corrects Stone's omission, is very well footnoted and an excellent research tool for scholars. Charles Johnson's collection provides a detailed and comprehensive overview of Brant's financial dealings at Grand River.

Campbell, Ben Nighthorse

Ben Nighthorse Campbell was elected four times to the U.S. House of Representatives from Colorado, beginning in 1986. In 1993, he became the only modern-day Native American to serve in the United States Senate, serving two terms until 2005. At the same time, Campbell also was a member of the traditional Council of 44 in his Northern Cheyenne homeland in Montana.

Campbell's mother, Mary Vierra, was a Portuguese immigrant who arrived in the United States at the age of six. The Vierra family settled in a large Portuguese community near Sacramento, California. When Vierra contracted tuberculosis, she met Albert Campbell, a Northern Cheyenne, at a hospital where he was being treated for alcoholism. The couple later married. Campbell was born April 13, 1933, in Auburn, California. During Campbell's childhood, his father continued to have problems with alcohol, often leaving the family for months at a time. Campbell's mother also continued to experience health problems with tuberculosis. At home, often no one was available to care for Campbell or his younger sister, Alberta. As a result, the young Campbell spent much of his youth in the streets, getting into trouble.

By age ten, Campbell had spent five years in Sacramento's St. Patrick's Catholic Orphanage. He attended Placer High School but dropped out in 1951 to join the U.S. Air Force and served in the Korean War. He was discharged from the Air Force in 1953 with the rank of Airman Second Class, as well as the Korean Service Medal and the Air Medal.

Returning to the United States, Campbell earned a bachelor of arts in physical education and fine arts at California State University (San Jose), graduating in 1957. Campbell also became a championship competitor in judo. He won the U.S. collegiate championship in his weight class three times and took a gold medal at the 1963 Pan American Games. Campbell also attended Tokyo's Meiji University between 1960 and 1964, majoring in Japanese culture. In 1964, he represented the United States as captain of the judo team at the 1964 Tokyo Olympic Games. Campbell was chosen to carry the American flag during the closing ceremonies after swimmer Don Schollander was unable to attend. In 1974, Campbell authored a judo training manual, *Championship Judo Training Drills*.

In 1983, Campbell became the second Native American to be elected to Colorado's legislature,

Ben Nighthorse Campbell, former Colorado congressman and Northern Cheyenne. (Peter Turnley/Corbis)

where he served until his election to the U.S. House of Representatives in 1986. He served in the House from 1987 to 1993, after which he was elected to the U.S. Senate, becoming the first Native American in more than sixty years—since Charles Curtis—to serve in the Senate. In 1995, he switched from the Democratic to the Republican party.

Campbell was reelected to the Senate in 1998 and served from January 3, 1993, to January 3, 2005, during which time he chaired the Committee on Indian Affairs. Campbell declined to run for reelection to the Senate in 2004. His Senate seat was won by Democrat Ken Salazar in the November 2004 election.

Senator Campbell had more freestanding Senate legislation passed into law (twelve public laws) than any other member of the 106th Congress. Senator Campbell consistently fought to balance the federal budget through spending cuts, to reduce the tax rate on American families, and to impose strict account-

ability for all federal spending. He was a recognized leader in public lands and natural resources policy. In the 106th Session of Congress he alone sponsored legislation that created the Sand Creek Massacre National Historic Site, the Black Canyon of the Gunnison National Park, and the Colorado Ute Settlement Act Amendments of 2000.

An advocate of zero-tolerance for illegal drug use legislation, Senator Campbell secured funding to combat drug trafficking through the creation of the Rocky Mountain High Intensity Drug Trafficking Area. The program coordinates federal, state, and local law enforcement agencies efforts to combat the manufacture and distribution of illegal drugs such as methamphetamine.

Campbell has been married to the former Linda Price for more than thirty-five years. He is the father of two children, Colin Campbell and Shanan Longfellow, and grandfather to Luke and Saylor Longfellow and Lauren Campbell. The family shares

many activities, including riding motorcycles. He has been a rancher and a horse trainer in his adopted hometown of Ignacio, Colorado, and long has maintained a jewelry design business.

Canassatego

As tadadaho (speaker) of the Haudensaunee (Iroquois) Confederacy during the mideighteenth century, Canassatego played an important role in frontier diplomacy, notably educating Benjamin Franklin and other Anglo-American colonial leaders regarding the value of the Haudenosaunee (Iroquois) Confederacy as a political model.

In 1742, Pennsylvania officials met with Iroquois sachems in council at Lancaster to secure an Iroquois alliance against the threat of French encroachment. At this council, Canassatego spoke to Pennsylvania officials on behalf of the Six Nations. He confirmed the League of Friendship that existed between the two parties and stated that "We are bound by the strictest leagues to watch for each other's preservation" (Colden, 1902, 2: 18).

Two years later, Canassatego would go beyond pledging friendship to the English colonists. At a 1744 treaty council also in Lancaster, Pennsylvania, the great Iroquois chief advised the assembled colonial governors on Iroquois concepts of unity, telling them, "Our wise forefathers established Union and Amity between the Five Nations. This has made us formidable; this has given us great Weight and Authority with our neighboring Nations. We are a powerful Confederacy; and by your observing the same methods, our wise forefathers have taken, you will acquire such Strength and power. Therefore

whatever befalls you, never fall out with one another" (Van Doren and Boyd, 1938, 75).

The preacher Richard Peters provided this description of Canassatego at Lancaster: "a tall, well-made man," with "a very full chest and brawny limbs, a manly countenance, with a good-natured [sic] smile. He was about sixty years of age, very active, strong, and had a surprising liveliness in his speech" (Boyd, 1942, 244–245). Dressed in a scarlet coat and a fine, gold-laced hat, Canassatego is described by historical observers such as Peters as possessing an awesome presence that turned heads whenever he walked into a room.

Shortly after he advised colonial leaders to form a federal union at the 1744 Lancaster Treaty Council, Canassatego also became a British literary figure, the hero of John Shebbeare's *Lydia, or, Filial Piety*, published in 1755. The real Canassatego had died in 1750. With the flowery eloquence prized by romantic novelists of his time, Shebbeare portrayed Canassatego as something more than human—something more, even, than the noble savage that was so popular in Enlightenment Europe. Having saved the life of a helpless English maiden from the designs of a predatory English ship captain en route to England, Canassatego, once in England, became judge and jury for all that was contradictory and corrupt in mideighteenth-century England.

While Shebbeare described his work as history and himself as an historian, *Lydia* is obviously a story that many people today would call historical fiction, with an emphasis on fiction. Canassatego never visited Europe. While not an historical account per se, *Lydia* is another example of how images of American Indians and their societies were used in counterpoint to Europe's. Borrowing the eyes of Canassatego to needle the corruptions of English civilization, Shebbeare assures his readers that the Iroquois sachem is qualified for the job. Not only were the Iroquois known throughout the Western world for their valor and military prowess, but, according to Shebbeare, "Nor, in the milder parts of legislative knowledge, are their souls deficient. Eloquence, reason, truth, and probity are not less the characteristics of this people's knowledge" (Shebbeare, 1755, Act 1: 34).

Shebbeare seemed to have researched the real Canassatego's life relatively well. At the Lancaster Treaty Council of 1744, in addition to advising the colonists to form a federated union on an Iroquois model, Canassatego worried about the increasing

dependence of his people on European manufactured goods. In *Lydia*, Shebbeare has Canassatego complaining that many Native Americans have become dependent on European manufactures: "What are we but slaves, who traverse the wide Woods of America in search of furs and skins" (Shebbeare, 1755, Act 1: 11)

Disembarking in England, Shebbeare's Canassatego meets with a rude sight: a ragged collection of dwellings "little better than the Huts of Indians" and men rising from the bowels of the earth, dirty, broken, and degraded. Asking his hosts for an explanation, Canassatego is told that the men have been digging coal. The Iroquois sachem inquires whether everyone in England digs coal for a living and reflects that he is beginning to understand why so many English have fled to America.

Subsequent encounters do little to warm Canassatego to English life and government. The sachem's hosts are forced to confess that England has a class structure and that some labor for the benefit of others: "He asked if England were not a free country," wrote Shebbeare, "where all were destined to the same employment, or if the Great Spirit had made two species of men, one inferior to the other, and the lesser destined to the service of the greater? How can it be reconciled that Creatures born of the same land, in the same Form, and endowed with the same Faculties, should be doomed to this inhuman labour whilst others live at ease?" (Shebbeare, 1755, Act 2: 7).

Canonicus

The name of Canonicus (ca. 1562–1647), also called Cananacus, Conanicus, and various other variations, might be a Latin derivation of Qunnoune (Drake, 1880, 118). He was the sachem of the Narragansetts, a native North American nation established in what is today Rhode Island. Although "he never fully trusted the English" (Hodge, 1912, I, 202), mostly because of their aggressive ways, Canonicus always remained friendly to them. He gave Roger Williams the tract of land where Providence, Rhode Island, now stands. Long after his death, he was still remembered as a great sachem, as evidenced by the U.S. Navy naming four ships after him. He should not be confused with Canonchet, a later Narragansett sachem.

The earliest Narragansett sachem that the English had heard about was Tashtasick, who is sometimes referred to as Canonicus's father. But the tradition also reports that Wessonsuoum and Keneschoo, his son and daughter, were the parents of Canonicus (Drake, 1880, 118). He spent his life in a village called Narragansett, north of what is now Kingston, Rhode Island. Following the two-sachem rule, the Narragansetts had Canonicus as their home sachem, while Miantonomo, his nephew, dealt with other matters, such as war parties.

Unlike other nearby nations, the Narragansetts largely avoided the diseases that devastated New England's native population in 1617–1619. This situation strengthened Canonicus's power and authority, in part because numerous refugees from other nations joined his people. Although he fought the Wampanoags, Canonicus remained at peace with his English neighbors. In the spring of 1636, after he escaped from Massachusetts, Roger Williams went to the Narragansett country. Tradition reports that he was greeted by Canonicus with the words, "What cheer, nétop [my friend]" (Simmons, 1978, 194). They soon established a good relationship and Canonicus later gave some land to Williams, who was involved in the diplomatic efforts to stop the Narragansett war against the Wampanoags. It was also under Williams's influence that Canonicus decided, in 1637, to help the Puritans and their Mohegan allies in their war against the Pequots.

After the Pequot nation's dispersal following that devastating war, Mohegans and Narragansetts agreed to a treaty that would erase old enmities. It was broken in 1643 when Sequasson, an allied sachem, was attacked by Uncas, sachem of the Mohegans. Miantonomo asked the English if he

could retaliate and their answer was that they would not intervene. Unfortunately, he was captured by Uncas in a raid soon after. Despite the £40 ransom sent by Canonicus, Uncas handed Miantonomo over to the English, who sentenced him to death secretly under Uncas's rule. The Narragansetts sought revenge for the disrespect of the ransom custom.

On April 19, 1644, after having been under Puritan pressure for a long time, the Narragansetts surrendered themselves and their lands voluntarily to King Charles I for protection. Canonicus refused to explain his decision, and suffered a loss of esteem among his people as a result.

Canonicus signed a surrender treaty on August 28, 1645, in which he acknowledged various misdeeds, as he agreed to cede the Pequot country (Simmons, 1978, 92). Canonicus never regained his full authority. He died on June 4, 1647, at the age of roughly eighty-five (Drake, 1880, 119).

Captain Jack

Kintpuash (Modoc, ca. 1837–1873), later called Captain Jack by Anglo-American colonists of California, played a major role as a leader in the Modoc War of 1872–1873. Born at the Wa'chamshwash village on the Lower Lost River near the California–Oregon border, Kintpuash's father was ambushed and slain by whites during the Ben Wright Massacre of 1846. Little is known of his life before age twenty-five. We do know that his Modoc name, Kintpuash, meant "he has water brash [psoriasis]."

The Modocs had little contact with the immigrants until the advent of the 1849 California Gold Rush. Around this time, Kintpuash acquired the nickname Captain Jack because he wore a uniform coat with brass buttons that had been given to him

Captain Jack, aka Kintpuash, a Modoc leader, was a key leader in the Modoc war. (Library of Congress)

by a U.S. Army officer. Although the Modocs opposed Anglo-American expansion into their lands, Captain Jack counseled peace and encouraged trade with the settlers living near Eureka, California, during the 1840s. He had taken two wives by this time.

The Gold Rush intensified tensions and hostilities in the 1850s until Schonchin John, a Modoc chief, signed a treaty removing his band to a reservation in Oregon in 1864. The area was also the traditional homeland of the Klamaths, however, who resented the Modoc intrusion. Realizing that the land in Oregon was insufficient, Captain Jack and his followers returned to California and requested a reservation there. The federal and state authorities denied their request.

Settlers soon began to insist on the forced removal of Modocs. On November 28, 1872, forces invaded Captain Jack's camp and coerced him into consenting to removal. As tensions mounted at the

meeting, violence broke out. Scarfaced Charley, a Modoc leader angered by the Army's behavior, refused to give up his gun, and shots were fired during the ensuing struggle. When the fighting stopped, eight soldiers and fifteen Modocs were dead.

Fearing reprisals, the Modocs under Captain Jack fled to the Lava Beds nearby, believing that they would be safe there. However, this was not to be the case. Hooker Jim and his Modocs, encamped on the other side of the Lost River, were attacked by settlers, and, while retreating to the Lava Beds, they killed twelve whites in revenge. Within this hostile environment, the Modoc leaders, Captain Jack, Schonchin John, and Hooker Jim prepared for an attack in the vast, largely inaccessible volcanic area. But Captain Jack still counseled peace and negotiation, arguing that the government would ultimately win. However, more militant factions under Hooker Jim and Schonchin John outvoted him.

On January 13, 1873, troops moved into the Lava Beds to quell the Modoc uprising. On February 28, Captain Jack's cousin, Winema (married to a white man named Frank Riddle), and a peace delegation began talks with the rebellious Modocs. Hooker Jim and Schonchin John believed Captain Jack to be a coward for consenting to the talks, so they insisted that Captain Jack kill General Edward S. Canby, the head of the delegation. The Modoc militants also believed that American resolve would be damaged by the death of Canby.

Reluctantly, Captain Jack agreed to their terms only if the Modocs were refused amnesty and a return to their California homeland. At a meeting on April 11, Captain Jack shot Canby. The Reverend Eleazar Thomas was also killed, and Albert Meachum, the Indian superintendent, was severely wounded. Winema and her husband managed to escape with the remaining members of the peace party. Quickly, the government fielded more troops and heavier weapons.

The rugged lava rock terrain worked to the Modocs' advantage at first, but dissension among the Modoc leaders and harsh conditions weakened their position. Captain Jack surrendered in late May. After a military trial with Hooker Jim testifying for the prosecution, Captain Jack, Boston Charley, Black Jim, and Schonchin John were hanged on October 3, 1873. Since the administration of President Ulysses S. Grant had instituted a Peace Policy toward Indians, the American people were stunned by the uprising and the consequent inhumanity and insensitivity of the pursuit and hanging of the Modocs.

In the final analysis, white prejudice, Indian betrayal, greed, and an opportunistic press made a deplorable situation far worse. Employing more than a thousand soldiers to fight a Modoc force that never numbered more than fifty-three, the Army incurred losses of seven officers, thirty-nine soldiers, two scouts, and sixteen civilians. The Modoc dead numbered eleven women and seven men. An enormous human and financial cost was endured to capture and remove 155 Modocs to Indian Territory.

A melodrama entitled "Captain Jack" was staged for a brief time in 1873 but it failed to fully capitalize on the tragic bloodletting. A second group of grisly entrepreneurs were more successful. On the day after Captain Jack's execution, robbers exhumed his grave, embalmed his body and put it on display in a carnival sideshow that toured profitably across many Eastern cities.

In 1909, fifty-one of the Oklahoma Modocs were permitted to return to their reservation in Oregon.

Carson, Christopher "Kit"

One of the most controversial figures in the history of the American West, Christopher "Kit" Carson (1809–1868) has been lauded as a great frontiersman and hero by some, and condemned as a mass murderer by others. The chief point of contention is his role in the last great Navajo war, which led to the forced relocation of roughly 8,000 Navajos from their

traditional homeland to the wastelands of Bosque Redondo in eastern New Mexico. For the Navajo, this trek is known simply as the Long Walk, and its memory is alive and well—and painful—in their oral tradition.

Kit Carson was born on Christmas Eve, 1809, in Madison County, Kentucky. As a boy, he dreamed of heading west to the great Rocky Mountains where he hoped to carve out a niche for himself. In 1826, young Kit took off for Santa Fe and soon became a mountain man and fur trapper. He eventually found employment as a hunter at Bent's Fort in southeastern Colorado and earned a reputation as a reliable and experienced frontiersman. In the mid-1840s, Carson served as a guide to John C. Frémont, who was exploring the Rocky Mountain West for the U.S. government. Frémont recorded and subsequently published an account of his travels. The charismatic and rugged Carson was a central character in the report and soon gained notoriety and fame throughout the land. His reputation was further enhanced by his role in the Bear Flag Revolt during the Mexican–American War.

Between 1854 and 1861, Carson was Indian agent to the Utes, with whom he developed a positive rapport. When the Civil War broke out, Carson took a commission as colonel in the First New Mexico Volunteers. He fought off invading Texans in the Battle of Valverde and helped in expunging the Confederates from the New Mexico Territory. In 1863, Carson was reassigned and ordered to fight the Mescalero Apaches who were raiding the settlements of encroaching whites. The famed mountain man successfully brokered an agreement with the Indians, leading to their relocation near the watchful eye of Fort Sumner. Next, General James H. Carleton commanded Carson to conduct a campaign against the Navajos in eastern Arizona and western New Mexico. Hoping to return home to his family in Taos, a reluctant Carson nevertheless took the commission.

Though Carson was hesitant to wage war on the Navajo, he was relentless in carrying out his assigned duty. He launched an all-out assault against his adversaries, who quickly realized that they had to conduct a guerrilla-like war against Carson's formidable army. The Navajo hoped to disrupt the invaders by making quick lightning strikes before retreating back into the canyons and mesas spread across their homeland. Carson was not discouraged. If he could not fight them head-on, he would carry out a protracted war of attrition by

Scout Christopher "Kit" Carson was renowned as a frontiersman, but also has a controversial legacy for his treatment of Native Americans. (Library of Congress)

destroying their crops and livestock and burning their homes and possessions. His scorched-earth strategy worked. The Navajos, on the run, were forced deep into Cañon de Chelly. As winter set in, the fugitives had no food or shelter; many starved or succumbed to the elements. Finally, in January 1864, most of the Navajos surrendered, accepting Carson's terms and their removal to Bosque Redondo. Carson was not present during the Long Walk to eastern New Mexico, but his roundup led directly to it. Like the Trail of Tears, the death and despair that marked the forced trek and the Navajos' confinement at Bosque Redondo were compounded by the psychological impact of being torn away from their homeland.

After his campaign against the Navajo, Carson went on to lead 1,000 troops, accompanied by Ute and Apache scouts, in an assault on the Kiowa and Comanche of the Great Plains. Soon, however, Carson's health began to decline, and he returned home to his family in Taos, New Mexico. On May 25, 1868, Kit Carson died.

Carson's reputation only grew after his untimely death. In the late nineteenth century he became the subject of countless dime novels. These sensationalist and, more often than not, fictitious books portrayed Carson as a near superhero. Though he was still celebrated, this pulp Kit Carson was a fearless Indian killer and scalper, rather than the trusty mountain man and guide described in John Fremont's report. In the 1960s and 1970s, Carson's image was further revamped. With the mounting Indian activism of the era, Kit was targeted for his role in the Indian wars and, more specifically, the campaign against the Navajo. Today, Carson remains a point of contention between scholars, who hope to restore his legendary status as an American icon and Western hero, and the Navajos, who can never forget the tears and suffering that he brought to their ancestors.

Casas, Bartolome de las

The first Catholic priest ordained in the New World (1512), Bartolome de las Casas is considered by many, along with Antonio de Montesinos and Juan Quevado, to be among the first Indian rights activists. His *The Devastation of the Indies: A Brief Account*, first published in 1552, chronicles Spanish depredations and was translated almost immediately following its publication into every major European language. Though its original audience was intended to be Charles V of the Holy Roman Empire and Charles I of Spain, to whom de las Casas appealed to end these atrocities, it was later used by other European powers in attempts to discredit Spain's colonial claims. It caused a major public outcry, both against the conquistadors and soldiers as well as against de las Casas himself for exposing them.

Las Casas was born in Seville, Spain, in 1484, the son of merchant Pedro de las Casas who had

made enough money to finance his son's study of Latin. Pedro and three of his brothers were on Columbus's second voyage. Of their time there, scholars only know that Pedro was given an Indian youth as a slave, whom he subsequently bestowed on his son. Bartolome gave the boy back to Spanish authorities so that he might return home. In 1502, at the age of eighteen, de las Casas himself journeyed to the Indies with Nicolas de Ovando's twenty-five hundred soldiers. After returning to Europe to be ordained as a deacon in Rome, he returned, meeting such figures as Hernán Cortéz and Pedro de Alvarado, some of the most notorious leaders of the invasion. De las Casas went with Diego de Velasquez and Panfilo de Narvaz as a chaplain during the invasion and genocide in Cuba, where soldiers engaged in horrific slaughter while Columbus lay ill. De las Casas was rewarded, along with the others, with Indians and land for his service as a priest just as the soldiers were for their "work." In 1514, de las Casas shocked his parish by preaching against Spanish behavior toward the Indians.

Thus, Las Casas began a crusade that would gradually grow until he was granted an audience with the king in 1520, both to testify regarding his views and to defend himself in regard to the charges pressed against him by other Spanish colonists. Charles ruled in de las Casas's favor, agreeing that the time for military conquest was over and that Natives could be converted and saved according to peaceful means along with a nonviolent agricultural colonization. However, this did not change the actual conditions. De las Casas returned to the New World later that year to start a missionary community in Venezuela that he planned to be self-sustaining, but it failed due to the propagandizing of his enemies, which caused an Indian uprising. He became a Dominican monk, writing his plan for peaceful conversion in his *The Only Method of Attracting Everyone to the True Religion*. He also began in the monastery *Apology for the History of the Indies* and *The History of the Indies*.

Finally, in 1537, Pope Paul III issued a bull according human status to American Indians; as humans, they had the right to have their lives and property protected under church law. King Charles also backed an enterprise by de las Casas and the Dominican order to put the plan proposed in *The Only Method* to work in missions in Guatemala. The king issued his New Laws in 1542, making Indian slavery illegal and outlawing the inheritance of

land and slaves (known as *encomiendas*) given in the earlier years of colonization. In Spain at the time, de las Casas had contributed to the passage of the New Laws, reading part of his *Devastation* to the court.

The Devastation of the Indies: A Brief Account is a plea for human rights. The Spaniards, arriving on slow wooden ships, distant from home and king, were free to do anything they pleased in violation of morality and law. Their actions, in part, stem from Spain's similar experiences under Moorish dominance for centuries. Papal bulls had also given permission to invade the lands and enslave the people "in the name of Christ" and justified war with resisting populations. De las Casas, as a Christian Spaniard, cannot tolerate the evils being perpetuated by his fellow Spaniards in the name of his God. De las Casas testifies to the poverty, humility, and peacefulness of the inhabitants of Hispaniola, which was shortly reduced from his estimate of 3 million to 200 in less than fifty years at the hands of the Spaniards. He adds that Cuba, San Juan, and Jamaica, along with numerous other small islands, had been almost entirely depopulated and devastated.

De las Casas recounts horrors that may even exceed those of the German Holocaust of the Jews. Part of the legacy of the Spanish is a program of genocide in the Americas that killed an estimated 100 million over the last 500 years (Stannard, 1992, 150–151). Certainly, even with 6 million Jews killed during World War II, the holocaust in the Americas has outdone it in numbers and scope. The Spaniards killed not only Indians in combat, but also the elderly and the children, pregnant women and those in childbirth, not just "stabbing and dismembering them but cutting them to pieces as if dealing with sheep in the slaughter house" (de las Casas, 1992, 33). The Spaniards wagered over who could cut an Indian in two with one pass of the sword, cut off an Indian's head most efficiently, or empty his belly of bowels the quickest. De las Casas reports infants being taken from their mothers, thrown off cliffs or into rivers, smashing their heads against the rocks. He indicates that other Indians were put to death by hanging them from gallows with their toes dangling above the ground, a blaze lit beneath them to honor "the memory of Our Redeemer and His twelve Apostles" (de las Casas, 1992, 34), their tongues depressed with sticks to suppress their screams as they slowly cooked to death.

Bartolome de las Casas (1474–1566), a Spanish historian, and the earliest European crusader for human rights in the New World. (Bettman/Corbis)

He also reports on the practice of "dogging," that is, of hunting, typically Indian children, but also adults, for sport and amusement and for the purpose of feeding the Spaniards' war dogs. He reports the rape of Indian women for the purpose of increasing her sale value as a pregnant slave and for the purpose of degrading the men. Michele de Cuneo, an Italian nobleman who accompanied Columbus on his second voyage:

While I was in the boat I captured a very beautiful Carib woman, whom the said Lord Admiral gave to me, and with whom, having taken her into my cabin, she being naked according to their custom, I conceived desire to take pleasure. I wanted to put my desire into execution but she did not want it and treated me with her finger nails in such a manner that I wished I had never begun. But seeing that . . . I

took a rope and thrashed her well, for which she raised such unheard of screams that you would not have believed your ears. Finally we came to an agreement in such manner that I can tell you she seemed to have been brought up in a school of harlots (Quoted in Stannard, 1992, 84).

De las Casas also relates the horrors experienced by the survivors in Spanish slavery, many of whom died in transport being brought from other areas of the New World once the population of the earliest contact was devastated. Throughout the area of the Americas invaded by the Spanish, de las Casas cites the deaths of numerous others, many of them children, through malnutrition and starvation, abuse, overwork, disease, and suicide. Some Spaniards practiced cannibalism by choice and forced the Indians they enslaved to engage in it as well. Children were sometimes killed to save them from the slow, tortuous death of enslavement that often began before the age of three. De las Casas details Spanish atrocities against the Aztecs brought by Cortes and throughout the Americas, all in the name of gold more than God, also indicting Germans for similar behavior, though they were in the Americas in fewer numbers. De las Casas died in July 1556 and was buried in the chapel of the convent of Our Lady of Atocha in Madrid, regretting he had not been able to do more.

Catlin, George

George Catlin (1796–1872) was born July 26, 1796, at Wilkes-Barre, Pennsylvania. He died December 23, 1872, at Jersey City, New Jersey. Catlin married Clara Gregory in 1828 and had four children: Elizabeth, Clara, Louise, and George, Jr. Catlin was a self-taught artist who painted in the American Romantic tradition. He is famous for his paintings, sketches, and artifact collection of Plains Indian life. He is less well-known for his landscape and miniature paintings as well as his Central American, South American, and Pacific Coast Indian paintings. Along with his artwork, Catlin published books about Plains Indian life, as well as his experiences while living among the Indians and traveling in Europe. Catlin also promoted justice for the Indian. Like others in the 1830s and 1840s, Catlin advocated that a large reservation be established for the remnants of the "Indian race." Catlin's work and Indian Gallery, displayed in Europe for over thirty years, helped establish the Plains Indian as the "typical" North American Indian in popular imagination.

Catlin's mother, Polly Sutton, survived the 1778 Wyoming Valley Massacre. His father, Putnam Catlin, was a lawyer and landowner as well as Revolutionary War veteran. Growing up in the Susquehanna Valley, New York, Catlin collected Indian curiosities and formed a brief friendship with an Oneida family—On-O-Gong-way, his wife, and daughter—who camped on the family farm.

While largely homeschooled, Catlin did attend the Classical Academy in Wilkes-Barre and the Gould and Reeve Law School in Connecticut. Upon graduation from law school in 1818, Catlin worked as a lawyer until 1820, when he decided to become an artist. His initial endeavors were miniatures of locals and some oil-on-canvas paintings of notables, such as Sam Houston. In 1827, Catlin expanded his repertoire by painting Niagara Falls, as well as the Erie and Welland Canals. It was during his efforts to establish his artistic career that Catlin met a delegation of western chiefs, in Philadelphia, who were heading to Washington for treaty negotiations. This meeting gave Catlin the impetus to travel to the West to paint the last remaining "uncivilized" Indians.

During 1830, Catlin arrived in St. Louis, where he became a protégé of General William Clark. From 1831 to 1836, Catlin visited and painted various Plains nations, such as the Pawnees, Otos, Kansas, Poncas, Assiniboines, Ricarees, Dakota, Mandans, Blackfeet, Crows, the Five Civilized Tribes, Osages,

Comanches, Picts, Kiowas, and Wicos, as well as the Ojibwas of Minnesota. In 1837, Catlin opened his Indian Gallery in New York City. Catlin offered to sell his collection of approximately 500 paintings and thousands of artifacts to the U.S. federal government, which declined his offer. Afterward, he transported the collection to England in 1839. On February 1, 1840, he opened the gallery at the Egyptian Hall, Piccadilly, which drew thousands, including commoners and royalty. As interest in the display waned, Catlin utilized showmanship to keep the crowds coming. Initially employing English cockneys to play Indians, Catlin hired a group of Canadian Ojibwas and later a group of Iowas to recreate aspects of their culture for entertainment and education. Realizing that England was tiring of the exhibition, Catlin moved the entire gallery, including the Iowas, to Paris with great fanfare. Tragedy soon resulted. Catlin's wife, son, and four of the Iowas died in France of disease. After hiring Ojibwa performers, eight became ill with smallpox which resulted in two deaths shortly after reaching Belgium. The remainder were hospitalized in Brussels at Catlin's expense. The direct result of these misfortunes forced Catlin to mortgage his collection, which was sold to cover debts. His daughters were taken in by wealthy in-laws.

During the 1850s, Catlin set out to paint the Indians of Central and South America, as well those along the West Coast of the United States. He eventually completed 600 new Indian paintings. In 1871 Catlin returned to New York to display his work. Unable to secure funds, he accepted free living space at the Smithsonian Institution, where he lived in poverty until his death in Jersey City in 1872.

Catlin's paintings, sketches, and writings are a wonderful resource on Plains Indian culture at its pinnacle. Significant collections of his work are located at the Smithsonian Institute and the American Museum of Natural History.

Catlin is also credited as the first Euro-American to visit the stone quarries near present-day Pipestone, Minnesota. The soft red stone, used to make sacred pipes, is known as Catlinite.

Cherokee Phoenix and Indian Advocate

By the 1820s, the Cherokees were an immensely literate people, possessing a written constitution that emulated that of the United States, a written language (developed by Sequoyah), and a bilingual newspaper, *The Cherokee Phoenix and Indian Advocate*. *The Cherokee Phoenix*, the first Native American newspaper, is still published today. During the years before the Trail of Tears (beginning in 1838), the newspaper acted as an official organ of the Cherokees' government and as a key institution in the battle against removal.

Sequoyah's written Cherokee language was introduced in 1821, after twelve years of experimentation. He developed the language with an eye to its social and political uses, making it easy to learn

The Cherokee Phoenix, first published in 1828, was the first Native American newspaper. (Library of Congress)

(many Cherokee acquired it in two weeks) and to use in the preparation of documents, including newspapers.

In 1828, the Cherokee Tribal Council initiated a weekly newspaper, printing bilingual editions in Cherokee and English.

The missionary Samuel Worcester, whose name became affixed to what is perhaps the best-known case in American Indian law (*Worcester v. Georgia*, 1832), was a community activist among the Cherokees. Worcester collaborated with Stephen Foreman on a translation of *The Bible* into Cherokee, and, with aid from the American Board of Commissioners for Foreign Missions, he worked to procure type fonts and a press for the *Cherokee Phoenix*. Worcester played a role in having type cast in Sequoyah's symbols, hiring a printer, and choosing Elias Boudinot as the newspaper's first editor.

When *The Cherokee Phoenix* began publishing at New Echota on February 21, 1828, Worcester also was a major editorial force. The newspaper quickly acquired an international circulation but also experienced financial problems due, in part, to Boudinot's salary of \$300 a year, a relatively high wage at the time. A number of prominent Cherokees, including John Ross, Stand Watie, and John Ridge, spoke on behalf of the newspaper to raise money for what they regarded as an important voice in crucial times.

By 1832, however, Boudinot, Ridge, and others split with Ross as they began to support removal. Ross at first asked them to curtail their editorials in favor of removal. When they refused, he forced Boudinot's resignation. Charles Hicks, Ross's brother-in-law, then became editor. Hicks was strongly opposed to removal, but he restricted his views to editorials. The newspaper continued to publish views on both sides of the issue, including letters from Boudinot.

The Cherokee Phoenix continued to publish as pressure for removal grew. It shared news reports with a hundred other newspapers, but shortages of ink and the illnesses of printers and editors caused publication to become erratic. Georgia officials made obvious their desire to close the paper.

Financial problems persisted; on May 31, 1834, the paper ceased publication when the Cherokee Nation ran out of money as the federal government reneged on treaty obligations. When money again became available, the newspaper's staff planned a move to Red Clay, Tennessee, out of concern that the Georgia Guard would prevent its publication at New Echota. However, "Hours before the move, Elias Boudinot's brother, Stand Watie, joined the Guard in a raid on the offices of the Phoenix. They dumped the soft lead type on the ground and stamped it into the red Georgia clay with their feet, effectively silencing the voice of the Cherokee Nation. Watie and the Guard then removed the press and set fire to the building" (Worthy, n.d.).

The newspaper was revived after the Cherokees' forced march to Indian Territory, now Oklahoma. The original site of the newspaper's office in New Echota became a tourist attraction when a state park opened in the area in 1962. Today, the newspaper may be read in Cherokee and English on the Internet.

Clark, George Rogers

George Rogers Clark (1752–1818) enjoyed a brief burst of fame between 1778 and 1782, due to his exploits in Illinois and Ohio during the Revolutionary War. By 1782, however, his fragile reputation was on the wane, and ten years later he was in full disgrace.

The second son of John and Ann Rogers Clark—his younger brother, William, accompanied Meriwether Lewis on the Lewis and Clark Expedition—George Rogers grew up in Virginia, where his parents first owned a small farm near Charlottesville, before inheriting a four-hundred-acre plantation in Caroline County. Despite this seeming prosperity, the family was neither elevated nor educated. With only a minimal period at a private school at age eleven, Clark remained essentially illiterate his entire life, causing him problems in later military positions that required frequent and comprehensible paperwork.

The way up the economic ladder in Clark's Virginia led through Indian Country: Up-and-comers surveyed, inevitably Native American land, for the purpose of speculation. In 1772, at age twenty, George left on his first surveying mission. After involving himself in 1774 in Lord Dunmore's War—a blatantly illegal attempt to seize Ohio—Clark formally took up surveying in 1775 as a deputy surveyor of Kentucky, a "colony" of Virginia already carved out of Native lands. Clark earned a small wage but garnered a living through land speculation (*Indian Historical Bureau*, 2; *James*, 1: 9, 28).

In 1776, as war heated up with England along the seacoast—and with Native America in "the

west" for control of land—Clark led a delegation to Virginia, securing 500 pounds of gunpowder for Kentucky "defense." Thereby called to the attention of Patrick Henry, then governor of Virginia, Clark was secretly commissioned to seize, if he could, western territories in Illinois from the purported control of the British before Virginia's rival, Pennsylvania, could manage the same feat. The resultant and daring Illinois campaigns of 1777–1779 are, today, the lynchpins of Clark's fame, although his murderous depredations against the Shawnees of Ohio in 1780 and 1782 were at least as famous among his contemporaries.

Avoiding Vincennes at first, because the British Fort Sackville was garrisoned there, Clark sneaked up at night on Kaskaskia, Illinois, a French settlement that was not expecting trouble, taking it on July 4, 1778, deeply frightening the inhabitants. The next day, Clark hiked over to Cahokia, demanding and receiving it as well. That October, Clark likewise seized Vincennes with ease, although he promptly lost it with equal ease in December to British Lieutenant Governor Henry Hamilton. After a cold February march back to Vincennes, Clark resealed the town and its fort in March 1779. These "victories" look more impressive on paper than they did on the ground, for, in truth, the French inhabitants of Illinois rolled quickly with the punches, placating whichever commander held the upper hand at the moment. Furthermore, neither Clark nor Hamilton was in any position to raise the armies for a real contest. Clark had, at most, 175 men, and Hamilton, but thirty-nine, after his seventy-five French militiamen defected ("Account . . .," 1908, 492, 502; Barnhart, 1951, 149, 181; Clark, 1966, 518, 528).

Throughout his time in Illinois, Clark deliberately terrorized the French settlers, the Illinois Native Americans, and the British, boasting later of his policy of terror (Clark, 1966, 475, 479, 481). In retaking Fort Sackville in 1779, he staged horrifying tortures, including the live, slow scalping of a party of Natives taken prisoner as its members entered Vincennes without knowing of recent events. These atrocities were performed in full view of the besieged small garrison of Fort Sackville, specifically to effect its immediate surrender. A horrified Hamilton (reviled by the Americans as "the famous Hair Buyer General") left a vivid description of a blood-covered Clark sluicing off the gore while boasting of his escapade to the now captive British officer ("Account . . .," 1908, 501; Barnhart,

Colonel George Rogers Clark confers with Native Americans at Cahokia in the Illinois Territory. The group surrendered to Clark and his men in 1778, and Clark continued with his successful attempt to acquire, without conflict, immense tracts of land for the United States. (National Archives and Records Administration)

1951, 182–183; Clark, 1966, 534, 541; Mann, 2005, 114–116).

Establishing Fort Jefferson on a flood plain at the confluence of the Mississippi and Ohio Rivers (only to abandon it in 1780) Clark headed back to Kentucky to raise an August attack on the Shawnees in Ohio, then clearly Native American territory. Clark was frankly racist in his attitudes, admitting that he awaited but a “sufficient excuse to put all the Indians & partisans to death” (ISHL, 1903, 144) and viewed their “extirpation” (Barnhart, 1951, 189) as his “divine” mission (Clark, 1996, 539). Taking 1,000 men (against 300 Native defenders), Clark ploughed into Shawnee lands, destroying around 1,000 acres of crops and all the housing he could find, including Old (also called

Little) Chillicothe and three Piqua clan towns on the Big Miami River, his men plundering towns, murdering and mutilating straggling Natives, and pulling bodies out of graves to scalp for state bounties. As a quickly combined “Union” force (a pan-Native alliance in Ohio) bore down on him, Clark beat a hasty retreat home (Mann, 2005, 124–127).

By the end of 1780, Clark was so acclaimed in the back settlements that George Washington handed him the all-important campaign to roust the British from their western headquarters in Detroit. Due to a fraught rivalry that erupted into a recruiting and supplying competition with Colonel Daniel Brodhead, commander of the Western Department headquartered at Fort Pitt, Clark was unable to raise enough men for the effort or to keep those he had raised from deserting. Setting out in a scattered way from Fort Henry (Wheeling, West Virginia) on July 20, 1781, by the end of August, Clark’s troops had been entirely defeated by the Ohio Union (Mann, 2005, 143–146).

Clark was placed in the military command of Kentucky in 1781, where he failed not only to support outlying posts but also to report back to Virginia, whose governor, Benjamin Harrison, blamed the problem on Clark’s raging alcoholism (ISHL, 1926, 132), but which was equally the fault of Clark’s illiteracy. Consequent of his failures, the massive August 19, 1782, defeat of the Kentucky militia by the Ohio Union at Blue Licks was blamed on Clark. Partially to regain his prestige and partially to make one last grab at Ohio before a signed Treaty of Paris prohibited continued invasion, Clark led a second, unauthorized invasion of Shawnee lands in November 1782, attacking and looting an evacuated Chillicothe (modern-day Piqua), along with Willistown, Pigeon Town, two Piqua clan towns, and a British trading post. He destroyed 10,000 bushels of corn, the Shawnees’ entire winter supply (Mann, 2005, 174–179).

After the Revolution, in recognition of his military services, Clark was “paid” 8,059 acres of Native land in Ohio and 73,962 acres of Chickasaw land farther west (Lutz, 1969, 250, 251–252). He also was tapped as an Indian agent during the U.S. attempt to seize Ohio by treaty (thus to remit all congressional land warrants issued as soldiers’ pay during the Revolution). In 1786, Clark negotiated a strong-armed treaty with the Shawnees, which was immediately repudiated, and then led an attack on the Wabash Miami nations.

Clark's star was, however, decidedly declining; Virginia held him personally liable for paying war supply debts it claimed he had incorrectly managed. (In fact, Clark had properly submitted receipts, as he had always claimed.) As Clark struggled with these woes, James Wilkinson, a Spanish double agent, conspired to depose him from his position as Indian agent, subsequently taking over Clark's post. Now in serious trouble, Clark tried some skullduggery of his own, in a scheme to create a Spanish colony in Mississippi. Continuing his new career as a foreign agent, Clark attempted in 1793 to drag the United States into Franco-Anglo hostilities. He died in Louisville in 1799, his reputation in tatters.

Cochise

Often thought of as the greatest of Apache leaders, Cochise was born between 1800 and 1813 somewhere in the Chiricahua Mountains of southeastern Arizona (Sweeney, 1991, 6). Not much is known of his early life, but historians have written (Sweeney, 1991, 14) that at about age fifteen the young man had been physically and mentally prepared for the first of the four raids he undertook as a novice warrior. Raiding was as necessary to the Apache people as breathing. Survival depended on raiding, as did the quality and skills of the leader.

The young Chiricahua Apache learned all the rituals associated with raiding. He came to understand the special language spoken by the raiders, why he and his people had to travel by night, where waterholes were, and how to avoid the many taboos that adversely affected a raid's success. After four grueling trips under the watchful eyes of experienced warriors, his conduct satisfied the men, and he was accepted as one of them.

Cochise married at least three times. With his second wife, Dostehseh, the daughter of the powerful Mimbres Apache chief, Mangas Coloradas, he fathered two sons: Taza and Naiche. Taza never married and died an untimely death in Washington, D.C., as he sought peace after his father's demise. Naiche, born about 1856, was the last leader of the free Chiricahua Apaches and became Geronimo's colleague. Theirs was a cooperative relationship: Geronimo deferred to Naiche in all matters other than warfare and healing; Naiche reciprocated similarly when it came to warring.

Cochise was a complex individual whose great intelligence has never been disputed. For years he outsmarted and outfought the most competent Indian fighters the U.S. Army sent after him. He has

open a hole in the tent and escaped. Fifty shots were fired at him as he fled. His brother, two nephews, and two others couldn't get away. Cochise never forgot the lesson: Under the disguise of friendship, he had been tricked and nearly imprisoned by those he trusted.

The next day, Cochise and others approached the Army camp waving a white flag of truce. Their intention was to lure Bascom out of his tent and take him hostage to trade later for the relatives. "Tell the boy soldier I have Americans to trade for my people," Cochise said (Arnold, 1951, 7). When the plan failed, Cochise sacked a mail station, captured three white men, killed and burned eight other men, and held several hostages. He contacted the Army again and offered to exchange his collection of captives for his relatives. Bascom refused, killed Cochise's family, and the Apache wars started. Cochise's fury then knew no bounds (Thrapp, 1967, 18).

In June 1862, Cochise participated in the Battle of Apache Pass. Believing that the troops, under command of Brigadier General James Carleton, had come to punish them (the soldiers were actually on their way eastward to drive Confederate forces back to Texas), the Apaches prepared an ambush that failed when two mountain howitzers lobbed several shells at them (Sweeney, 1991, 198–200). Even though the Indians retreated this time, in the eyes of the American government they had become the principal stumbling block to white settlement and, importantly, to establishing business enterprises, such as a railroad, in southeastern Arizona.

Tom Jeffords, a government mail contractor, risked his life by riding into the Dragoon Mountains in search of Cochise. His mission was to convince the Apache to allow his mail carriers through without killing them. Jeffords later told an historian:

Cochise had killed fourteen men in my employ. I made up my mind that I wanted to see him. I located his camp . . . went into his camp alone, fully armed. I told him I was there to talk with him personally and that I wanted to leave my arms in his possession . . . to be returned to me when I was ready to leave, which would probably be in a couple of days (Sonnichsen, 1991, 13).

Impressed by Jeffords' bravery, Cochise honored the request to let the mail riders live as they crossed his territory, and remarkably the two men became close friends for the rest of their lives.

In 1863, the Americans murdered Mangas Coloradas (Sweeney, 1998, 455–465), Cochise's father-in-law, causing great grief and creating an even stronger desire for revenge against all enemies, Mexican or American. Twelve years and 5,000 deaths later, President Ulysses S. Grant sent General Oliver O. Howard to the southwest to explore peace with Cochise through a treaty.

At the conclusion of the lengthy talks, Cochise and Howard agreed on three main points: the site of a reservation in southeastern Arizona, adequate food and clothing to be furnished by the government, and the appointment of Tom Jeffords as their agent at the new site. Cochise promised a truce that would keep the roads open without danger (Sweeney, 1991, 363) and that would allow settlers and others, such as miners and merchants, to enter southern Arizona safely. He kept his word.

Cochise became progressively ill and died on June 8, 1874, two years after being placed on the reservation. Agent Jeffords was unable to keep some of the Chiricahuas from resuming their former ways; so in 1876 the government, after much ado, abolished the reservation. Cochise's followers were marched to San Carlos, Arizona, a desolate spot. Intolerable at best, this site was one of the motivating factors that caused earlier problems to reemerge, resulting in continuing hostilities between the government and the Chiricahua Apaches that continued until Geronimo's final surrender in September 1886.

Cody, William Frederick

William "Buffalo Bill" Cody (1846–1917) lived during a time of significant change on the Great Plains. Non-Natives were settling the West in great numbers, the stagecoach and the Pony Express made daily trips across the country, and the railroad was cutting through Indian lands. One of the Indians' primary sources of food, the buffalo, was being hunted to extinction. As a boy, Cody herded cattle, rode for the Pony Express, and drove the stagecoach. As a young man, he killed buffalo for the railroad men. The latter half of the nineteenth century saw many major Indian wars in the West, and William Cody played an important part as a civilian scout for the Army during much of this time. He later recruited many Indians for his famous Wild West Show.

William Frederick Cody was born on February 26, 1846, in Scott County, Iowa. He was one of eight children and a son of Isaac and Mary Ann (Laycock) Cody. The family moved to Kansas in 1853 and Cody's father died in 1857. At eleven years of age, Cody decided to find work to support his mother and siblings. He pursued a job with Majors and Russell (later Russell, Majors, and Waddell), a freighting firm in Leavenworth, Kansas. He was first hired as a messenger boy and later helped to herd oxen. He claimed to have shot his first Indian while returning to Fort Kearney in Nebraska with a group of bullwackers (ox team drivers). He was heralded the "youngest Indian slayer of the Plains."

During this time he met James "Wild Bill" Hickok. They would remain good friends until Hickok's death in 1876. In 1859, Russell, Majors, and Waddell started the Pony Express, and Cody was hired as a rider. He rode for the company on and off until it went out of business in October 1861. In 1862, he joined the Ninth Kansas Volunteer Cavalry as a civilian guide and scout. He later became one of the Red Legged Scouts (the name coming from the red leggings they wore), an informal (some say vigilante) militia acting on the side of the Union. In 1863, he joined the Seventh Kansas Cavalry, also as a civilian scout. He married Louisa Maude Frederici on March 6, 1866. They first settled in Salt Creek Valley, Kansas. During their marriage they had four children: Arta born in 1866, Kit Carson (named after the famed Kit Carson) in 1870, Orra in 1872, and Irma in 1883. After a failed attempt at running a hotel, Cody returned to scouting. It was during this time that he met George Armstrong Custer.

In 1867, with a partner, Cody tried his hand at establishing a town near Fort Hays in anticipation of the coming of the railroad. Named Rome, it flourished until the Kansas Pacific Railroad established a town nearby and Rome slowly declined. Cody was then hired to kill buffalo for the workmen who were building the railroad. They required twelve buffalo daily to feed the employees. He claims to have killed 4,280 buffalo in eighteen months, and it was at this time that Cody was christened "Buffalo Bill." His job hunting buffalo ended in the spring of 1868 when the building of the track was done.

Cody immediately returned to scouting. In 1869 he was appointed chief of scouts for the Fifth Cavalry that was going up against the Dog Soldiers, a band of Cheyennes. On July 11, 1869, General Eugene A. Carr, Major Frank North, three companies of the Fifth Cavalry, and two companies of Pawnee soldiers, with William Cody as chief scout, surprised the Dog Soldiers' encamped near the South Platte River at Summit Springs, Colorado. This battle is significant because it broke the back of the Dog Soldiers and virtually ended their raids on the Colorado settlers. Cody claims to have killed many Indians during his career as a scout. One of these, Chief Tall Bull, he claims to have ambushed and killed for his horse in 1869 at Summit Springs. Another, Chief Yellow Hair (also called Yellow Hand), he killed in 1876 at War Bonnet Creek (Hat Creek) and then claimed to have cried, "The first scalp for Custer." In 1872, Cody won the Medal of Honor for gallantry in action on April 26, 1872, in the battle at Loup Fork on the Platte River in Nebraska. In the fall of 1872 he was elected to represent the Twenty-Sixth District in the legislature of Nebraska, thus adding the title "Honorable" to his name.

During this time, Cody was being urged by a friend to represent himself on stage. He declined at first but eventually agreed and started on his career as a performer. In 1873, he organized his own theatrical company known as the Buffalo Bill Combination, which included Wild Bill Hickok that first season. Cody moved his family to Rochester, New York, to be closer to the show. In April 1876, his only son died of scarlet fever. Heartbroken, Cody closed the show early and returned to scouting for the Fifth Cavalry. Shortly thereafter, he received word that General George Custer had been killed in the Battle of Little Bighorn. In 1877, Cody went into the cattle business with his friend, Major Frank North. Cody's ranch was near North Platte in

Nebraska, and in 1878 his family moved from Rochester to settle there.

In 1883, Cody started a new venture, which he called Buffalo Bill's Wild West Show. In it he depicted all of the history that he had experienced during his life on the Plains: the buffalo hunt, the first settlers, the Pony Express, the Deadwood stage, the wagon trains, the soldiers and scouts, and the Indians. It was highly successful in the United States, and in 1887 he took his show to England where he played before the Queen. He made several more trips to London and other European cities.

Cody returned from one of his European tours in November 1890 to find continuing warfare in Sioux Country. Because of his intimate knowledge of the Badlands of North Dakota, he was immediately summoned to Chicago by General Nelson Miles. He was also asked, because of his prior friendship with Sitting Bull, to go to him and try to quell the imminent uprising. Before Cody could reach Sitting Bull, however, the order was rescinded by President Benjamin Harrison. Sitting Bull was killed on December 15, 1890. On December 29, 1890, the massacre occurred at Wounded Knee, at which Miniconjou Chief Big Foot and about 300 Indian men, women, and children were killed by U.S. soldiers. Shortly thereafter, Cody negotiated with the government to take 100 Indians, including prisoners from Wounded Knee, to tour with his show.

Buffalo Bill's Wild West Show ran from 1883 to 1913. For the most part it was a great success. Nevertheless, due primarily to an extravagant lifestyle that included numerous affairs and much drinking, William "Buffalo Bill" Cody ended up penniless and bankrupt. Cody died on January 10, 1917, while visiting his sister in Colorado. His wife Louisa died in 1921. They are buried together on Lookout Mountain in Colorado.

In his second autobiography (published after his death), Cody expresses his sentiments about Indians:

I . . . hope that the dealings of this Government of ours with the Indians will always be just and fair. They were the inheritors of the land that we live in. They were not capable of developing it, or of really appreciating its possibilities, but they owned it when the White Man came, and the White Man took it away from them. It was natural that they should resist. It was natural that they employed the

William "Buffalo Bill" Cody was a scout and showman.
(Library of Congress)

only means of warfare known to them against those whom they regarded as usurpers. It was our business, as scouts, to be continually on the warpath against them when they committed depredations. But no scout ever hated the Indians in general.

Cohen, Felix

Felix Cohen (1907–1953) was the author of the *Handbook of Federal Indian Law* (1942), a basic reference book in its field for decades. Cohen also served as associate solicitor of the Interior Department, and chaired the Department's Board of Appeals. He played an instrumental role in drafting the legal infrastructure of the Indian Claims Commission, founded in 1946. Cohen was especially active in securing for American Indians the right to vote and receive social security benefits.

In addition to the *Handbook of Federal Indian Law*, Cohen also authored a number of other books, including *Ethical Systems and Legal Ideals* (1933) and *Combating Totalitarian Propaganda: A Legal Appraisal* (1944). Elegant of speech, erudite of pen, and possessing a humane heart, Cohen sailed headlong into the political gauntlet that had once favored allotment and in his time sought termination of Native American nations as collective bodies.

Cohen was born in New York City and earned an AB degree in 1926 (summa cum laude) from City College, where, as a student, he edited *The Campus*, a student newspaper. Cohen earned a Ph.D. from Harvard in 1929 and an LLB from Columbia Law School in 1931. He was the son of Morris Raphael Cohen, a legal philosopher, writer, and professor at City College. The younger Cohen became well-known in the field of law well beyond cases concerning American Indians. In 1951, he coauthored a textbook, *Readings in Jurisprudence and Legal Philosophy*, with his father. The book contained the usual descriptions of European legal precedents, from Aristotle to the English Common Law, but also included a chapter titled

"Law and Anthropology," which described the legal traditions of tribal peoples in North America, including the Sioux and Cheyenne.

Cohen also was a student of Native American societies and a social critic. On one occasion, Cohen compared the Native American influence on immigrants from Europe to the ways in which the Greeks had shaped Roman culture: "When the Roman legions conquered Greece, Roman historians wrote with as little imagination as did the European historians who have written of the white man's conquest of America. What the Roman historians did not see was that captive Greece would take captive conquering Rome [with] Greek science [and] Greek philosophy . . ." (Cohen, 1952, 180).

Cohen wrote that American historians had too often paid attention to military victories and changing land boundaries, while failing to see that in agriculture, government, sport, education, and our views of nature and of other people, the first Americans also had helped shape their battlefield conquerors. American historians have seen America mainly as an imitation of Europe, Cohen asserted. In his view, the real epic of America is the yet unfinished story of the Americanization of the white man.

It is likely that Cohen honed his definition of these ideas through his friendship with Mohawk culture bearer Ray Fadden of Onchiota, New York. For many years in the 1940s, Cohen had a cabin at Buck Pond, within walking distance of the Fadden home. John Kahionhes Fadden, Ray's son, recalled his father and Cohen walking in the woods and having long conversations.

Cohen resigned from government service in 1948 to practice American Indian law in the New York City–Washington, D.C., firm of Riegelman, Stasser, Schwartz, and Spiegelberg. Cohen often represented the interests of the Montana Blackfeet, Oglala Sioux, All-Pueblo Council, and San Carlos Apaches. Cohen also served as a visiting professor of law at Yale University and City College. He also taught at Rutgers Law School and the New School for Social Research.

Cohen died of cancer October 19, 1953, at his home in New York City. At his funeral, which was held in Washington, D.C., pallbearers included Felix Frankfurter, an associate justice of the United States Supreme Court; Senator Hubert H. Humphrey; John Collier, former commissioner of Indian Affairs; and Oliver LaFarge, author and president of the Association on American Indian Affairs.

Collier, John

John Collier (1884–1968), an idealistic reformer, became commissioner of Indian affairs in 1933 during the Democratic Franklin Delano Roosevelt administration. The Indian Reorganization Act (IRA), passed by Congress in 1934, was his creation and the centerpiece of the Indian New Deal. The IRA ended the disastrous allotment policy that had dispossessed Native tribes of tens of millions of acres of reservation lands. Yet the Indian New Deal left a mixed heritage with respect to the aspirations of many American Indians. Never completely successful, it was criticized and underfunded by its detractors in Congress, and even opposed by many Indian nations and tribes. The legacy of Collier's Indian reform program poses some interesting questions: How did Collier become a passionate admirer of Indian culture and an advocate of cultural pluralism, and how successful was his program of Indian reform? His biography may provide answers to these questions.

John Collier was born in Atlanta, Georgia, in 1884. His father was a lawyer and banker who went on to become mayor of Atlanta. His mother, a New Englander, instilled in her son a love of literature and nature. The family eventually fell on hard times, and both parents died when Collier was a teenager. As a youth he began regular restorative trips to the southern Appalachian Mountains, and a love of the outdoors continued throughout his life. His later interest in folk cultures began during these outings. Collier entered Columbia University in 1902 and later studied at Woods Hole Marine Laboratory in Massachusetts. He soon turned from the study of biology to an interest in social issues. According to Collier's biographer, Kenneth R. Philp, a book by the Russian anarchist, Prince Peter Kropotkin, *Mutual Aid*, caught the young man's imagination and began his interest in the community life of precapitalist societies. It was a harbinger of his later interest in American Indians.

Upon leaving college, he at first took a job as a newspaper reporter. By 1907, however, he had

become a reform social worker who for the next twelve years devoted himself to the welfare of European immigrants on Manhattan Island. In this endeavor he shared the interests of early American sociologists in the problems of immigration and urbanization. They, like Collier, believed that the machine age had undermined the old sense of community found in preindustrial societies and left the individual isolated. Crime and social problems were the result.

Collier became civic secretary for the People's Institute, an immigrant betterment organization, and editor of the Institute's bulletin. The Institute sponsored regular forums on relevant social issues for Jewish and Italian immigrants, along with the establishment of school community centers. Collier was a vigorous opponent of the Americanization policy that pressured immigrants to give up their native languages and cultures.

By 1912, Collier had become a frequenter of Mabel Dodge's weekly salons in New York City where leading intellectuals of the day gathered to share radical ideas. Dodge was to play a pivotal role in Collier's entry into American Indian advocacy a few years later. As a writer, poet, lecturer, and social reformer, Collier continued his social activism, establishing a training school for community workers and becoming editor of the publication of the National Community Center Conference. In 1916, when funding for the New York operations dried up and political difficulties arose, he moved with his family to Los Angeles, California, to become the director of the state's adult education program. After taking up the new work, he lectured extensively and established public forums similar to those of the People's Institute. His two main themes were the cooperative movement and the "Bolshevik experiment" of the Russian Revolution, both of which he admired. Collier's radical social work roots were to cause him problems later as Commissioner of Indian Affairs when he lobbied Congress for an Indian New Deal.

By the beginning of the twentieth century, Anglo-America had been persuaded that Indians were a vanishing race; therefore, the assimilation of the survivors through Americanization and Christianization was made to seem a task of philanthropy. In reality, American Indians had passed the nadir of their population decline and were no longer "vanishing," either physically or culturally. It was at this juncture that the missionary-oriented Indian Rights Association called on the Indian Office to place a ban on Indian ceremonial dancing.

John Collier was the U.S. Indian Affairs Commissioner from 1933 to 1945. (Library of Congress)

In the early 1920s, Indian commissioner Charles H. Burke banned Indian religious dances, and Secretary of the Interior Albert Fall sponsored legislation that would legitimize the seizure of 60,000 acres of Pueblo lands and the individualization of tribal economic assets.

In 1920, Collier interrupted a wilderness trip to Mexico to visit the Taos pueblo in New Mexico at the urging of his old friend Mabel Dodge. For two years he resided at the pueblo where he and others from the art community gathered around the fireplace in Mabel Dodge's home to discuss the meaning of Indian life. He came away determined that Pueblo culture, and Indian life in general, must be preserved. After his stay at Taos, Collier returned to California to accept a lecturer position at San Francisco State College.

A strong believer in cultural pluralism, Collier took up the protest from the Pueblos against the persecution by the Office of Indian Affairs and its Christian "reformers." The controversy over the Pueblo land grants, part of the larger struggle aimed at stopping reservation land dispossession and pauperization stemming from the 1887 General Allotment Act, led to the founding of the American Indian Defense Association (AIDA) by Collier in May 1923. The political agitation by the AIDA, along with the 2-million-member General Federation of Women's Clubs and the Indian Rights Association, led to the resignation of Secretary of the Interior Albert Fall from the Harding administration.

The year 1928 saw the issuance of the government's *The Problem of Indian Administration*, better known as the Meriam Report. For Collier it con-

firmed the horrible legacy of the allotment policy and the fact that major reform was needed in Indian administration. When Franklin D. Roosevelt was elected in 1932, the new president chose Harold Ickes as his Secretary of the Interior. Ickes was a Chicago progressive and former director of the American Indian Defense Association. Collier was then tapped to become the new commissioner of Indian affairs.

By 1934, the new commissioner had drafted a bill that became the framework for the Indian Reorganization Act. It was rough sailing for Collier, however, and Congress ended up dropping key provisions from the bill and amending others. The section of Title II having to do with promoting Indian arts, crafts, skills, and traditions was deleted by Congress, as was the section in Title III having to do with land alienation and the Indian heirship problem. Title IV, dealing with law and order, was dropped entirely. Not to be outdone, Collier launched his Indian New Deal anyway through a series of administrative reforms and edicts to the Office of Indian Affairs. A singular feature of the Indian New Deal was the exclusion of Christian missionaries from the Collier administration and the inclusion of anthropologists in their place. This represented a policy shift from cultural assimilation to cultural pluralism.

The new commissioner's critics, including a number of Indian tribes and reservation superintendents, viewed self-government under the IRA with suspicion, as socialistic and un-American. Collier, on the other hand, proposed that Indian tribes become chartered corporations with the powers of a community or county, a form of limited self-government. The new tribal councils would act as advisory bodies to the Secretary of the Interior. The IRA self-government provisions were seen by Collier as a form of indirect rule by the federal government and a progressive advance in U.S. Indian policy. By the 1920s and 1930s the European powers had come to favor this form of colonial administration since direct rule, especially by the French, had been such an abysmal failure. From today's perspective, Collier's reform may be criticized as a form of neocolonialism, but, taken in the context of the times, his ideas resulted in a progressive shift in federal Indian policy.

Despite the accomplishments of the IRA, World War II drained funds from the reform program and turned Congress and the country to other priorities. Discouraged, Collier resigned on January 10, 1945,

after twelve years as the head of Indian affairs. For the next twenty-three years he continued an active public life. During his tenure as commissioner, Collier helped found the first pan-American conference on Indian life held at Patzcuaro, Mexico, in the spring of 1940. He headed up a National Indian Institute in 1943 that undertook an important Indian personality research study, founded the Institute of Ethnic Affairs in 1945, and took an active interest in America's newly acquired trusteeships in the Pacific after the war. He published a major work in 1947, *Indians of the Americas*, which was used in anthropology courses for many years. In the same year he became professor of sociology and anthropology at the City College of New York, a position he retained until 1955. His memoir, *From Every Zenith*, came out in 1960, and he died at his Taos residence in 1968 at the age of eighty-four.

How should one evaluate the Collier legacy? In the first place, the IRA resulted in only a partial and imperfect restoration of Indian sovereignty. Furthermore, for all his democratic idealism, Collier's administrative style as commissioner has been criticized as authoritarian and paternalistic. In some cases he manipulated tribal elections to favor IRA acceptance. He also imposed Anglo-American model constitutions and charters on traditionally oriented tribes that undercut the political leadership of chiefs and the old band and treaty councils. The Navajo Nation never forgave him for the ruthlessness of his pursuit of the livestock reduction program on their reservation. The Lakota and some other tribes with allotted lands split into factions as a result of the IRA, the bitter legacy of which manifested itself in the occupation of Wounded Knee on the Pine Ridge Reservation in 1973.

It may be that religious freedom was his most lasting accomplishment. In his memoirs Collier depicts ceremonial tribal dances as the core of Indian religion. "Through the dances are united body and soul, and self with the community, and self and tribe with nature and with God." Upon taking office as commissioner he immediately reversed the old Bureau policy of religious persecution by issuing Circular No. 2970, "Indian Religious Freedom and Indian Culture." He also issued an order curtailing missionary activity on the reservations. Yet the issue of Indian religious freedom was excluded from the Indian Reorganization Act. Religious persecution continued in less obvious ways and was not specifically addressed by Congress until the passage of the

American Indian Religious Freedom Act in 1978 and the Native American Graves Protection and Repatriation Act in 1990. The repatriation of human remains is still not resolved, and the question of sacred lands has scarcely been addressed by public policy.

Coon Come, Matthew

As president of the Canadian Assembly of First Nations and as grand chief of the nine Cree councils, Matthew Coon Come (b. 1956) has become one of the late twentieth century's major Canadian Native leaders, especially in the campaign to halt exploitation of the James Bay region by Hydro-Quebec.

Coon Come was born in 1956 in a hut along the Mistissini trapline that his parents worked in northern Quebec. This was a seasonal encampment for the Crees, where they hunted and fished near James Bay. Coon Come didn't see a non-Native until he was six years of age. The first non-Native he saw was the Indian Affairs agent who arrived by float plane to take him to a residential school. Coon Come attended residential schools in Moose Factory, La Tuque, and Hull. He later studied political science, law, economics, and native studies at Trent and McGill Universities.

Coon Come's Cree elders recognized him as a natural leader. He was asked to coordinate inland Cree communities' negotiations with Canada that enabled the James Bay Crees to escape the Indian Act and gain the first ever aboriginal self-government legislation in Canada. Coon Come also served two

terms as chief of the Mistissini First Nation, helping to acquire for his community a new arena, an adult education center, a bank, new administrative offices, new health facilities, and major improvements to its housing and community infrastructure.

Coon Come married Maryann Matoush in 1976; they later had three daughters and two sons. At age twenty-one, Coon Come became deputy chief for the Cree Nation of Northern Quebec. Later, he became the grand chief for roughly 12,000 Crees. He was a vocal opponent on behalf of aboriginal peoples in the province during the Quebec separation movement. He later became grand chief of the Crees' Grand Council in Quebec as a whole. He was first elected as grand chief of the Grand Council of the Crees and chairman of the Cree Regional Authority in 1987. Coon Come soon became known throughout Canada for his efforts to end federal policies that favored the abolition of aboriginal peoples' human rights and legal self-determination.

Coon Come was reelected by the James Bay Cree People through four successive terms as grand chief, during which he became known for his international work to protect aboriginal peoples' traditional ways of life. Coon Come brought these issues to the 1992 Earth Summit in Brazil, when he formed a coalition with other indigenous peoples and environmental organizations to defend the traditional use of Native lands worldwide.

During the early 1990s, Coon Come fought Hydro-Quebec's James Bay II proposal to dam eight major rivers that flow into James Bay in northern Quebec, at a cost of up to \$170 billion, to provide electricity for urban Canada as well as several states in the U.S. Northeast. The area is virtually unknown to most Euro-Americans but has been home for thousands of years to roughly 10,000 Crees, many of whom would be forced from their homelands by flooding and toxic contamination.

Coon Come's Crees also had opposed construction of James Bay I, completed in 1985, which dammed or diverted five large rivers and flooded 4,000 square miles of forest. Rotting vegetation in the area had released about 184 million tons of carbon dioxide and methane gas into the atmosphere by 1990, possibly accelerating global warming around the world and saddling Quebec electric rate payers with a debt of \$3,500 per person. Rotting vegetation also caused an acceleration of microbial activity that converts elemental mercury in submerged glacial rock to toxic methyl mercury, which rapidly diffused throughout the food chain. Methyl

mercury poisoning can cause loss of vision, numbness of limbs, uncontrollable shaking, and chronic neurological disease. By 1990, some Cree elders had twenty times the level of methyl mercury in their bodies that the World Health Organization considers safe. A 1984 survey of people residing in Chisasibi showed that 64 percent of its people had elevated levels of this toxin in their bodies. The Quebec government responded to these findings by telling the Crees not to eat fish, one of their main sources of protein.

The flooding also caused one-quarter of the Crees' caribou herds, about 12,000 animals, to drown in the first phase of the project. However, the human problems brought on by James Bay I were not limited to the flooding of forestland and increasing discharge of toxins. The arrival of many non-Natives, drawn by large-scale construction projects (including road building), was linked by Coon Come and other Cree leaders with rising levels of substance abuse, violence, and suicide in their communities. All of these changes contribute to the breakdown of traditional family patterns and ways of making a living.

Coon Come and the Crees enlisted international support in their ultimately unsuccessful legal battle against the first phase of the James Bay project. In their efforts to stop the second phase, the Crees forged alliances with environmental groups around the world, with special emphasis on the Northeastern United States, where a large proportion of the project's power would be sold. In 1993, New York State dealt a grievous blow to the project by withdrawing from agreements to purchase power from Hydro-Quebec.

The James Bay projects, as previously planned, were not single dams across single rivers that flood valleys between mountains. They were massive earth-moving projects across an area as large as the state of Oregon. According to Coon Come:

A project of this kind involves the destruction and rearrangement of a vast landscape, literally reshaping the geography of the land. This is what I want you to understand: it is not a dam. *It is a terrible and vast reduction of our entire world.* It is the assignment of vast territories to a permanent and final flood. The burial of trees, valleys, animals, and even the graves [of the Crees] beneath tons of contaminated soil. All of this serves only one purpose: the generation of more electricity to get more revenue and more

temporary jobs and to gain political power [emphasis added] (Coon Come, 1992, 82).

In 1994, Coon Come was awarded the Goldman Environmental Prize for his activism against the James Bay projects. It carries a \$60,000 stipend. In November of that year, Hydro-Quebec announced that it was shelving the second phase of the James Bay project indefinitely, a major victory for the Crees. The project later was revived, but in a scaled-down form to accommodate the Crees.

Cooper, James Fenimore

The twelfth of the thirteen children of Elizabeth Fenimore and William Cooper, the Father of American Literature was born James Cooper (1789–1851) in Burlington, New Jersey, on September 15, 1789. He added Fenimore to his name in 1826, as his literary career was taking off.

When James was one year old, his father William, a land speculator, moved the family to a large tract of land around Otsego Lake in upstate New York. Although the Iroquois were not actually done using the land themselves, this land transfer is usually presented as a sale, because the Iroquois had been too devastated by U.S. genocidal attacks during

James Fenimore Cooper authored the classic *Last of the Mohicans*, among many other works. (Library of Congress)

the American Revolution to put up a struggle. His land deed in hand, William next set up Coopers-town, with himself as its local gentry, becoming a Federalist judge. The backwood setting around Cooperstown was to serve Fenimore's pen well in his famous *Leatherstocking Tales*. Critics regard *The Pioneers* (1823), with its unethical Judge Temple and townlet of Templeton, as Cooper's borrowing from his family history, while the generous Elizabeth Temple is often regarded as a tribute to Fenimore's beloved elder sister, Hannah, who died at twenty-three after falling from her horse.

Cooper's youth was troubled. He was obviously bright, but his passionate and forthright nature, which was to anger those around him throughout his life, kept him from following an easy path. He spent time in a boarding school in Albany before entering Yale College in 1803, where he lasted only until 1805, when he was summarily expelled for blowing up a fellow student's door. For his grand finale, he planned to run away to sea in 1806, but his father's pretensions would not allow a son of his to become an ordinary sailor. Instead, William purchased a commission for Fenimore in the fledgling

U.S. Navy, a career from which Fenimore drew heavily in his sea novels.

In 1810, Cooper met Susan Augusta De Lancey, a child of wealth from Westchester, New York, falling in love with alacrity and marrying by year's end. Between 1811 and 1824, the (from all accounts) happy couple produced five daughters—Elizabeth (1811), Susan Augusta (1813), Caroline Martha (1815), Ann Charlotte (1817), and Maria Francis (1819)—as well as two sons—Fenimore (1821) and Paul (1824)—of whom Elizabeth and Fenimore died as toddlers.

Within five months of marriage, Fenimore resigned his naval commission, on the plea of marriage, but the dates of the marriage (New Year's Day in 1811) and resignation (May 6, 1811) struck Fenimore's enemies as suspicious, especially in light of the De Lancey family's Tory stand during the American Revolution. By mid-1811, the War of 1812 was obviously looming with England, so Cooper's enemies darkly charged him with cowardice, disloyalty, and/or desertion, but the death of William Cooper in 1809, as well as Susan's champagne tastes, probably factored the most heavily into the decision.

Far from authoring books, the young Fenimore anticipated life as a wealthy country squire, after inheriting the family estate following the early and unexpected deaths of *all* of his elder brothers. This turn of events was only superficially fortunate. William had left the estate in deep legal trouble over the true ownership of the land (which was then being contested by other settlers, not the Iroquois). In addition, the War of 1812 caused a major economic depression in the United States, deflating the value of the estate even more significantly. On top of that, Cooper not only inherited the family estate, but also the responsibility of caring for the now widowed families of his deceased brothers. Clearly, he needed to find a source of income.

At first, in 1819, he attempted to invest in whaling, financing a ship, *The Union*, but after soaking up Cooper's investment, the venture failed to produce much revenue. By 1820, Cooper was nearly desperate. He knew he needed to scare up a regular source of income, so he was on the lookout for opportunities, although it is unlikely that writing crossed his mind. In fact, family stories claim that he loathed and avoided writing chores.

A charming family legend has Cooper's career as an author starting on a dare. In those days before videos, Ipods, televisions, or radios, families read aloud to each other for entertainment. With his wife

lying on the couch, feeling unwell, Cooper began reading a new book to her. After the first couple of chapters, Fenimore threw the book down in disgust, declaring, "I could write you a better book than that myself!" His wife erupted in laughter at the thought of a man whom wild elephants could not drag to the writing desk composing a whole book. Always passionately stubborn, especially when challenged, Fenimore stuck by his declaration until he had no choice but to put up or shut up; so he put up, immediately writing the opening chapters of his first novel, *Precaution* (1820). A rather dreadful imitation of his favorite authors, Jane Austen, Sir Walter Scott, and Amelia Opie, *Precaution* soon slid into obscurity, but Fenimore's new career had been born.

Cooper's writing improved dramatically once he began writing according to his own lights, not someone else's. His next novel, *The Spy: A Tale of the Neutral Ground* (1821), established patterns he was to use thereafter. Harvey Birch, his protagonist, was a man of marginal social status and lowly calling, for at the time spying was despised as unworthy. The novel was set during the American Revolution and ran violently about in the backwoods while posing large political questions. Here was Cooper's material in spades: warfare, political illegitimacy, lower-class actors, thrills, chills, and a lot of violence. The novel was a blockbuster of sorts, held up as proving to Europe that Americans could produce world-class literature. While praising Cooper's efforts, W. H. Gardiner, a literary reviewer for the *North American Review*, famously urged Cooper in 1822 to turn his talents to the "howling wilderness" and "the long struggle of civilization, encroaching on the dominion of barbarism" (Gardiner, 1822, 254–255).

Seeing the possibilities, Cooper immediately took this advice, but he did not rush headlong into his topic without research. For a while, he cast about, looking for a good source on Native North America. Two contenders came to his attention. First, there was John Heckewelder, the Moravian missionary who had been adopted by and lived with the Lenápes for forty-nine years, counting many as close friends. Heckewelder had produced *History, Manners, and Customs*, along with many other writings, both published and unpublished. He is still regarded as the best primary source for his place, time, and topic of all early Indian ethnographers. Second, there was General Lewis Cass, known to Ohio Native oral tradition as The Butcher and to his settler contemporaries as a man who wanted to be president. As part of orchestrating his political ambitions, he had pro-

duced a pamphlet on Natives, *Inquiries*, that was really no more than a racist creed viciously promoting genocide. Cass has since fallen into the deep oblivion he deserves.

At first, as Cooper confessed to his bookseller, Charles Wiley, that he felt as bewildered by the choice between the open-minded, Native-boosting Heckewelder and the racist murderer Cass as "an ass between two locks of hay," adding that Cass "condemns all that his rival praises, and praises all that his rival condemns" (Cooper, 1959, xxv). However, studying both sources and drawing on his own sense of political justice, Fenimore soon realized that Heckewelder was the informed author of the two.

Using Heckewelder while slighting Cass was a step that Cass never forgave or forgot. Writing anonymously for the conservative *North American Review*, Cass did his best to smear Cooper's and Heckewelder's reputations. Unfortunately, since Cass's reviews are easily pulled up today, most literary critics still read them, without also reading (or often even knowing) the entire history of Cooper's choice or that he was politically attacked for it. Literally, to the end of his life, Cooper defended his choice of Heckewelder, praising him in the 1850 preface to his collected *Leatherstocking Tales* as "ardent" and "benevolent" (Cooper, 1982, x). Also, literally to the end of his life, Cooper was hounded and attacked by political enemies, Cass among the number with his coterie in tow, including Henry Rowe Schoolcraft, whose racist and fraudulent "studies" Cass promoted over Heckewelder's.

Using Heckewelder's ethnographic information, Cooper created his most famous works, the five so-called *Leatherstocking Tales*: *The Pioneers* (1823), *The Last of the Mohicans* (1826), *The Prairie* (1827), *The Pathfinder* (1840), and *The Deerslayer* (1841). Ironically (since he was very class conscious), the *Leatherstocking Tales* powerfully feature Hawkeye, or Natty Bumppo, a natural man living on the far fringes of settler society whose closest friends were Lenápes and whose standards of morality were far above those of the undoubtedly white cohorts around him. Although the racist attitudes that permeated Cooper's milieu dribbled in around the edges, Cooper broke ranks with settler expectations of "savages" to present humanized Native Americans, whom he showed as deserving of civil and land rights. At the time, his thematic commentaries on race and class sat on the liberal end of the political scale, angering conservatives and hawks.

In addition to his “Indian stories” (which include some not in the Leatherstocking Tales series), Cooper added lively sea adventures to the pantheon of American fiction, including *The Pilot* (1823), *Red Rover* (1828), *The Water Witch* (1830), and *The Sea Lions* (1849). In his time, these were as celebrated as his Leatherstocking Tales. Never one to suffer yokels gladly, Cooper also bitingly satirized American provincialism, managing to offend, and quite deeply, many in his American audience with such offerings as *The Monikins* (1935), about a country of monkeys trying to imitate British culture. The damage was not ameliorated by his forays into didactic writing with such painful offerings as *The American Democrat* (1838), in which he unwittingly contradicted the libertarian values of his own novels, and *A Letter to His Countrymen* (1834), which dispensed with satire in favor of diatribe against rusticity. In a less bitter mood, Cooper penned naval histories of some worth.

All of this writing was accomplished in a boggling supernova of creativity that few today could match, even using computers. Cooper pumped out books, sometimes two a year, covering a wealth of subjects. Between 1820 and 1850, he produced thirty-six novels, sixteen nonfiction works, a volume’s worth of reviews, countless letters, and journals. The youth who detested writing was long gone.

In 1826, as his name and fame were rising, Cooper took his wife and children for a seven-year sojourn in Europe. European, especially French, readers held Cooper in high esteem, so that, even after his enemies and his own sharp commentary had nicked his reputation at home, it continued to fly high in Europe. The Coopers toured extensively, polishing their manners to a sheen that was taken for arrogance once they came back home.

Upon returning to the United States in 1833, Cooper saw, and ferociously criticized, the sudden drop in the elegance of the customs and manners around him. As critics flailed away at him over this new affront, he also launched two one-man crusades: one to force ethics and standards of truth on American journalism, whose political right was libeling him with breathtaking abandon; the other to force his New York neighbors to respect his property rights, which they were violating flagrantly in a de facto seizure of his land. Cooper was a veritable dynamo in these causes, ultimately winning all of his lawsuits (seventeen by one count).

The victory was Pyrrhic, however, in that it cost Cooper financially just when he could least afford it.

By this point, Cooper was almost entirely dependent on royalties to keep him solvent, and the sales of his books were falling, with the international depression of 1837 driving them down as much as the shameless attacks by his political enemies. However, not even his enemies could entirely destroy the general public’s appreciation of his adventure yarns. Cooper’s book sales in the 1840s roughly matched those of the 1820s; so while his finances limped, they never crashed.

Cooper died on September 14, 1851, in Cooperstown, hailed on both sides of the Atlantic as America’s premier author. Although his critical reputation took a nosedive in the late nineteenth and early twentieth centuries, a new generation of critics at the beginning of the twenty-first century is beginning to appreciate the intricately layered and often surprisingly progressive commentaries, especially on race relations, lacing his best novels.

Copway, George

Born a Mississauga-Ojibwa in 1818 near the Trent River in upper Canada (Ontario), George Copway (Kahgegahbowh) died in Lac-des-Deux-Montagnes (Oka), Quebec, in 1869. Copway worked as an interpreter, teacher, and preacher for the Methodists, as well as an author, lecturer, herbal doctor, Union Army recruiter, and Catholic convert. He is best remembered for his autobiographical and historical work on the Ojibwas as well as numerous writings that appeared in newspapers throughout Canada and the United States.

By his own account, Copway lived a traditional life with his parents until they encountered Methodist missionaries. He enrolled at the Rice Lake School and in 1830 his dying mother convinced Copway to convert to Methodism. After his 1831 conversion, his teacher James Evans convinced Copway by 1834 to work among the Lake Superior Ojibwas under the auspices of the American Episcopal Methodist Church. He served at these missions until 1838, at which time he was permitted to enroll in the Ebenezer Manual Labor School in Illinois. After graduating in 1839, Copway returned to Canada and married Elizabeth Howell, a white woman, in 1840. The couple spent from 1840 to 1842 working at Methodist missions in Wisconsin and Minnesota.

Although not born in the United States, George Copway, also known as Kahgegahbowh (He Who Stands Forever, or Stands Fast) spent much of his life there as an early Indian missionary and writer. (Library of Congress)

From 1842 to 1846, Copway worked for the Wesleyan Methodist Canadian Conference in Canada West (Ontario). In 1846 Copway was briefly imprisoned and expelled from the church after being accused of embezzlement by the Rice Lake and Saugeen Indian bands.

In 1847 he moved to the United States, where his autobiography was published and he entered the lecture circuit. During his lectures, Copway spoke of his conversion and the Indian's plight as well as advocating the creation of an Indian state on the northeast side of the Missouri River. This territory, called Kahgega after himself, was submitted to Congress but was never discussed. In 1850 and 1851, he published three more books, a newspaper titled *Copway's American Indian*, and an epic poem, *The Ojibway Conquest*. (The poem actually was written by

Julius Clark.) Copway's literary and speaking career brought him into contact with historian Francis Parkman, ethnologists Lewis Henry Morgan and Henry Rowe Schoolcraft, as well as authors Henry W. Longfellow, James Fenimore Cooper, and Washington Irving. His fame brought Copway to the 1850 World Peace Conference in Frankfurt Germany, although by this point it was becoming obvious that his lecture career was winding down. It was during this time 1849–1850 that Copway lost three of four children to disease.

By the late 1850s, the New York papers advertised his lectures, but a brief arrest for not paying his rental of a hall indicated that he was having difficulty making a living. He volunteered in 1858 to convince the remaining Florida Seminoles to relocate to Indian Territory in Oklahoma. By 1864, Copway worked as a Union Army recruiter in Canada, where he managed to enlist a few Indians. In 1867, Copway surfaced in Detroit working as an Indian healer. The following year, Copway's wife Elizabeth and their last surviving child abandoned him. Venturing to Oka, Quebec, he enjoyed some success and influence among the Iroquois and Algonquins as a healer. After informing a Sulpician priest that he was a pagan healer and wished to convert to Catholicism, his influence among the Iroquois declined. He was baptized on January 17, 1869 as Joseph-Antoine and died several days later.

Since the 1970s renewed interest in Copway's work has been spurred by scholars and Natives alike seeking an authentic Native voice. Copway's works are by no means unproblematic. They are in English, his second language, probably heavily edited by his wife, written with a Western audience in mind by an individual attempting to fit solely into the white world.

Cornplanter

Cornplanter (John O'Bail, ca. 1735–1836) was a major Seneca leader during the late eighteenth century who figured prominently in the shifting alliances that accompanied the American Revolution. He became a personal friend of George Washington through the Tammany Society, a fraternal order that adopted some Native costumes and rituals and which observed the fusion of European and Native American cultures in America.

Cornplanter's father was a white trader, John O'Bail (sometimes Abeel). Some sources contend he was Irish; others say he was Dutch. All agree, however, that he was one of the biggest sellers of liquor to the Senecas. O'Bail had been heard to boast that his trade had a profit margin of 1,000 percent. While some Englishmen detested O'Bail, they relied on his intelligence about the French, gathered from Indians with whom he did business.

Cornplanter was raised by his Seneca mother; he knew his father only slightly, having met him a few times as a child. In 1780, Cornplanter led a raiding party in the Schoharie Valley that took a large number of prisoners, his father included. Cornplanter released his father, who still made his living by bartering guns, rum, and other goods for furs. Cornplanter invited O'Bail to join his Seneca family in his old age, but the elder O'Bail chose to return to his European-American family at Fort Plain, New York.

As an ally of the French in the French and Indian War (1754–1763), Cornplanter's warriors raided several British settlements. He may have been part of the French force that defeated British General Edward Braddock and his aide George Washington at Fort Duquesne (now Pittsburgh).

During the American Revolution, the Iroquois Grand Council could not reach consensus on alliance. Cornplanter generally favored neutrality. Joseph Brant spoke eloquently about the necessity of going to war in alliance with the British, stating that neutrality would lead to disaster and that the Americans or the British might turn on the Confederacy with a vengeance. Red Jacket and Cornplanter argued against Brant. They insisted that this quarrel was among the whites; interfering in something they did not fully understand was a mistake. As the meeting broke up in a furor, Brant called Cornplanter a coward. The people gathered at Irondequoit divided into two camps and discussed the issue of going to war. In general, the Senecas were disposed to neutrality. However, the words of Brant stung the ears of the Senecas, who could not bear to be called cowards. Finally, after lengthy discussion, the Senecas were swayed along with other wavering groups to take up the British cause.

After the Revolution, Cornplanter secured for his people a tract of land along the Allegheny River. He brought in Quaker teachers and helped sustain a prosperous agricultural community that included large herds of cattle. Cornplanter signed several treaties on behalf of the Senecas, including those concluded at Fort Stanwix in 1784 and others at various locations in 1789, 1797, and 1802. Through his many associations with Euro-Americans (including a trip to England), Cornplanter sometimes wore English clothing and displayed English mannerisms. On one occasion, fellow Senecas tore off Cornplanter's English clothes, greased his body, and dressed him in traditional attire.

In April 1786, the Tammany Society welcomed Cornplanter and five other Senecas to Philadelphia. In a remarkable ceremony, the Tammany sachems escorted the Senecas from their lodgings at the Indian Queen Tavern to Tammany's wigwam on the banks of the Schuylkill River for a conference. Within a few days, Cornplanter and the Senecas proceeded to New York City to address Congress.

In Philadelphia on May 1, 1786, St. Tammany's Day was marked with the usual celebrations and feasts, after which a portrait of Cornplanter was presented. More than a dozen toasts were given,

Seneca chief Cornplanter took part in negotiating the treaties signed at Fort Stanwix in 1784 and Fort Harmar in 1789. However, he did not actually sign either document. (Getty Images)

including: "The Great Council Fire of the United States—May the 13 fires glow in one blended blaze and illumine the Eagle in his flight to the stars," "Our great grand sachem George Washington, Esq.," "Our Brother Iontonkque or the Corn Plant—May we ever remember that he visited our wigwam and spoke a good talk from our great-grandfathers," and "The Friendly Indian Nations—our warriors and young men who fought, bled and gave good council for our nation."

Later in his life, Cornplanter lost some of his prestige among the Senecas because of his easy agreement to land cessions. He retained enough influence, however, to bring the Senecas to the American side in the War of 1812. Shortly before he died in 1836, Cornplanter had a dream that indicated his friendship with all Euro-Americans had been mistaken. After the dream, he destroyed all the presents that had been given him by non-Indians.

Cornplanter's people occupied the 1,300-acre piece of land along the Allegheny River that had been given them by George Washington until the

midtwentieth century, when the Army Corps of Engineers decided that the land better suited the public convenience under water. The scope of the Army's engineering projects had grown grandiosely since Washington himself helped survey the mountains that now comprise West Virginia, long before the pursuit of electricity became a legally valid reason for the state to seize land. In 1964, the bones of Cornplanter's people were moved from their land to make way for rising waters behind the Kinzua Dam. In the valleys at the Western Door, Senecas still ask sardonically if George Washington had ever asked Cornplanter if he knew how to swim.

Costo, Rupert

From the 1930s to the 1950s, Rupert Costo (Cahuilla, 1906–1989) was active in national and tribal politics, serving both as a vocal critic of the Indian New Deal in the 1930s and as tribal chairman of the Cahuillas in the 1950s; later, Costo became an important figure in Native American publishing.

As a football player in the 1920s at Haskell Institute and Whittier College (where he played with the future President Richard M. Nixon), Rupert Costo early in life demonstrated his athletic and intellectual aptitudes to the Indian and non-Indian world.

During the 1930s, California was a major center of opposition to Collier's Indian New Deal, and Costo was one of the principal leaders of the opposition. Costo believed that the Indian New Deal was a device to assimilate the American Indian; he believed that the Indian Reorganization Act was

being used to colonize Native Americans because, in his view, genocide, treaty making and treaty breaking, substandard education, disruption of Indian culture and religion, and the Dawes Allotment Act had failed. Costo knew that partial assimilation already had taken place in Native societies through the use of "certain technologies and techniques," but he knew that total assimilation, which meant fading into the general society with a complete loss of culture and identity, was another thing altogether. Costo called the IRA, "The Indian Raw Deal" (Mails, 1990, 146).

For most of his working life, Costo was employed by the state of California in the Highway Department as an engineer. Upon his retirement, Costo and his wife, Jeannette Henry Costo (Eastern Cherokee,) founded the San Francisco-based American Indian Historical Society in 1964. The organization was often in the forefront of American Indian issues such as the protection of American Indian cemeteries and American Indian human remains, as well as the correction of American Indian textbooks. The Costos sought to develop publications that accurately reflected the historical role of Indians in American society.

Initially, the American Indian Historical Society published three journals: *Wassaja*, a national Indian newspaper; *The Indian Historian*, a respected academic journal; and the *Weewish Tree*, a national magazine for young Indian people. Rupert Costo coedited all three publications with his wife. In 1970, the society founded another publication arm, the Indian Historian Press, an American Indian-controlled publishing house that published fifty-two titles. Some of the well-known titles were Rupert Costo, ed., *Textbooks and the American Indian* (1970) and Donald A. Grinde, Jr. (Yamasee), *The Iroquois and the Founding of the American Nation* (1977).

Through his editorial column in *Wassaja*, Costo advocated increased sovereignty for Native American nations in order to enhance land and water rights. He also worked tirelessly for the protection of American Indian civil, social, and religious rights.

At the end of his life, Costo endowed the Rupert Costo Chair in American Indian History at the University of California, Riverside. Costo and his wife also established the Costo Library of the American Indian at the University of California, Riverside, one of the most comprehensive collections of American Indian books in the United States. In 1994, the University of California, Riverside, renamed its Student Services Building as Costo Hall

in honor of the outstanding contributions of both Costos to the university.

Council of Energy Resource Tribes

The Council of Energy Resource Tribes (CERT) was founded in 1975 by representatives from twenty-five Native American tribes and nations that own substantial reserves of energy and other natural resources. The Denver-based CERT, by 2005 a consortium of fifty-seven American and Canadian Indian polities, works to help Native Americans recognize, protect, and exploit energy-related wealth on their lands. A. David Lester has been CERT's executive director nearly since the nonprofit group's inception. CERT pursues a cooperative relationship between private industry, particularly in the energy sector, and American Indian governments. CERT also has become a notable lobbying force for Native American energy interests within the federal government, including Congress and the Interior Department.

Native lands in the CERT consortium produce 380 billion cubic feet of natural gas annually and contain 2 trillion cubic feet of proved gas reserves. Properties overseen by CERT also hold 30 percent of the United States' coal reserves, 5 percent of its oil, and significant amounts of uranium. CERT is governed by the elected tribal leaderships of fifty-three federally recognized Indian tribes in the United States and four Canadian bands. Its members have been working toward self-management of their energy resources, from negotiating agreements, to protecting the environment, to verifying revenue payments.

CERT played a role in the North American Energy Summit that was held April 14–16, 2004, in Albuquerque, New Mexico. This event included state, provincial, Native, and national leaders from three countries and involved diverse interests seeking to develop a secure, affordable, and environmentally responsible energy system. The conference included presentations by Governors Bill Richardson

of New Mexico, Bill Owens of Colorado, Janet Napolitano of Arizona, Frank Murkowski of Alaska, Dave Freudenthal of Wyoming, John Hoeven of North Dakota, and Mike Rounds of South Dakota, as well as Canadian Premiers Ralph Klein (Alberta), Gary Doer (Manitoba), and Joseph L. Handley (Northwest Territories).

Summit participants considered a number of topics: capitalizing on renewable energy resources; improving energy efficiency; determining the future of nuclear energy and fossil fuels; providing a reliable and efficient electricity grid; financing infrastructure and making it more secure; and achieving needed international collaboration. The Summit also included an Energy Futures Expo, which featured cutting-edge technologies, systems, and alternative-fuel vehicles.

CERT has supported legislation that would allow Native American governmental entities to submit "tribal energy resources agreements" covering energy and right-of-way leases to the Interior Department that, when approved, may enable agreements to proceed without prior secretarial approval. This stripped-down version of the current process could accelerate energy development on Native American lands. While the proposal has widespread support from Republicans, some Democrats fear it could dilute environmental restrictions on oil and gas drilling on Indian land and weaken the Interior Department's trust responsibilities. In addition, the hydroelectric language in the energy bill would create a licensing process that favors power providers to the detriment of Native governments, their treaty rights, and the general public, according to a position paper Senate Democrats released at a 2004 Native American forum on Capitol Hill. Instead, the Democrats favor proposals to promote transmission development on Indian lands and creating tax incentives for renewable energy that are favorable to Native governments.

Tex Hall, as president of the National Congress of American Indians, has gone on record in support of CERT's assertion that incentives will be required for Native cooperation in exploitation of energy resources residing on Native lands. Hall would like to see the Congressional Budget Office analyze how much money the energy bill would allocate for development of Native American energy resources. He also wants the U.S. Department of Energy to provide a number of \$1-million to \$2-million grants for wind energy demonstration projects on land with significant potential, such as the Blackfeet nation in

Montana or Hall's own Mandan, Hidatsa, and Arikara nation in North Dakota. Federal utilities, military bases, and government agencies also should include preferences for energy supplied by Indian tribes and nations in their procurement contracts, Hall believes.

Through its representatives in Washington, D.C., CERT also has lobbied the U.S. government for simplification of many arcane tax laws and regulations that discourage the development of energy resources on Native lands. The organization also has been pressing Congress to pass a measure that would allow private producers of energy to receive credits on their federal tax returns for tax payments to a given state for Native energy development. In addition to making the exploration and production of new oil wells on tribal lands more attractive, such a change would encourage more production through the exploitation of existing wells, Lester has said.

CERT has encouraged Global Energy Decisions to inventory energy resources. This consulting firm has produced a wall map portraying the West's production, transmission, consumption, and land use patterns. The map contains references to coal mines, oil and natural gas wells, pipelines, railroads, power plants, and transmission lines, as well as public lands (Indian reservations, national parks, national forests, and Bureau of Land Management districts).

In addition to its energy-related activities, CERT also plays a major role in raising money for Native American education. By 2005, CERT had raised nearly \$6 million through its American Spirit Award Dinner. On June 21, 2005, CERT and the Morongo Band of Mission Indians hosted the twenty-fifth annual American Spirit Award Dinner at the \$250 million Morongo Casino, Resort and Spa. The dinner was part of a three-day Indian Energy Solutions 2005 conference focusing on current Indian energy policies, economic development, market trends, alternative and renewable energy, and Native utility formation. More than 500 energy industry officials, state and federal elected leaders, Native representatives, and press attended the event.

The CERT Tribal Internship Program provides students with opportunities to work alongside senior CERT staff, Native leaders, and energy companies on technical and scientific issues, policies, and projects. Past projects have focused on reservation water quality studies, cooperative planning on environmental issues with state and local govern-

ments, hazardous waste operations training, and biodiversity.

CERT also operates a Tribal Institute for Sustainable Energy and publishes *Red Earth Magazine Online*.

Crazy Horse

Crazy Horse (Tashunka Witco, Oglala Lakota, ca. 1842–1877), a daring military strategist, was a major Lakota leader in the last half of the nineteenth century, during the final phases of the Plains Indian wars. Alone among Native American leaders at this time, he never signed a treaty with the United States. Crazy Horse also repudiated the idea of reservation life until his violent death in a hand-to-hand struggle with Anglo-American captors at the age of about thirty-five. Crazy Horse never wore European-style clothing, and his photograph was never taken. To Oglala Lakota and to many other Native people generally, his memory has become the essence of resistance to European colonization. Alvin Josephy, Jr. wrote, "To the Sioux, he is the greatest of all their leaders" (1961, 259).

"Crazy Horse" is an old name among the Oglalas that had been handed down generation to generation for several centuries. Crazy Horse's ancestors kept historical records for the Oglalas on buckskin, a method of historical record keeping related to the winter counts of other Sioux tribes. Crazy Horse married a Cheyenne, and thus cemented the alliance that bound both during the final phases of the Plains Indian wars. He also was a son-in-law of Red Cloud.

Crazy Horse was born about 1842 on the site of what would later become the city of Rapid City, South Dakota. His father was an Oglala spiritual leader, and his mother was a Brûlé Sioux. As a youth, Crazy Horse was called the Light-Haired One or Curly, for his relatively light, wavy hair, which was unusual among the Lakota. He received the name "Crazy Horse" from his father after a battle with the Arapahos in 1858, at about sixteen years of age.

Crazy Horse was described as having been of average height, with a complexion that was lighter than most other Lakota. He was known to wander away from his village, with the detachment of a poet, after a battle. After attaining "shirt wearer" rank in 1865, he attended leadership meetings but rarely spoke. Introverted and eccentric, Crazy Horse was shot in the face and relieved of the shirt of rank in 1870 following an attempt to steal another man's wife.

From an early age, Crazy Horse was a master of the psychological aspects of Plains warfare. He often rode into war naked, except for a breechcloth around his loins, "his body painted with white hail spots, and a red lightning streak down one cheek. . . . His battle cry was 'It's a good day to die!'" (Waters, 1992, 152). Crazy Horse was never seriously injured in battle, and he made a point of never scalping anyone he killed.

In 1874, Crazy Horse and other Lakotas learned that George Armstrong Custer had led an expedition into their sacred Black Hills and found gold at French Creek. Hordes of prospectors followed, ignoring the fact that the Black Hills had been guaranteed to the Lakotas by the Fort Laramie Treaty of 1868. Crazy Horse and others rejected government edicts that sought to keep them on the Great Sioux Reservation, arguing that all the land guaranteed to them under the 1868 treaty was theirs to use.

Several allied Native peoples, including bands of Lakotas and Cheyennes, converged at the Little Bighorn in southeastern Montana in the spring of 1876. On June 17, Crazy Horse and an estimated 1,500 warriors engaged a force under General George Crook in the valley of the Rosebud in Montana. The fight was a standoff, but Crazy Horse prevented Crook from a planned rendezvous at the Little Bighorn with two other armies.

The Indian camp at the Little Bighorn, perhaps containing as many as 5,000 people and including roughly 2,000 warriors, was scattered along the river for about three miles. The elite Seventh Cal-

vary under Custer had expected only 1,000. Even after his scouts told him that the camp was much larger than he expected, Custer decided to attack the Indians on their home ground. That decision resulted in his death, as well as the demise of his entire force of about 225 men. A furious, hour-long assault led by Crazy Horse and Gall dismembered Custer's force.

After the battle of the Little Bighorn, Native peoples who remained free of reservations were hounded relentlessly by reinforced U.S. Army troops, who turned Custer into a martyr. The Lakota who had defeated Custer were pushed onto the Great Sioux Reservation, band by band. As he watched his people suffer due to the destruction of their buffalo-based economy, Crazy Horse's defiant will began to soften. On May 5, 1877, Crazy Horse and his contingent of 800 Oglalas, in 145 lodges with 1,700 ponies, formed a parade two miles long as they marched into the Red Cloud Agency to surrender. They gave up their horses and guns. Red Cloud met the Oglalas en route and guided them to Fort Robinson, near the agency.

Shortly after the surrender, Crazy Horse's wife Black Shawl became sick with tuberculosis. He asked permission to take her to Spotted Tail's people at the Brûlé Agency, forty miles away, but was denied. He escaped from Fort Robinson anyway. Several dozen soldiers chased Crazy Horse to the Brûlé Agency but failed to catch him. Instead, the Brûlé Indian agent and Spotted Tail himself convinced Crazy Horse to return to Fort Robinson.

Crazy Horse agreed to surrender and return; fifteen miles from the Brûlé Agency, however, he was surrounded by forty of Spotted Tail's Army scouts. Crazy Horse was taken prisoner and escorted back to Fort Robinson. He had heard a rumor that he would be killed or taken in chains to Fort Augustine, Florida, to be imprisoned for life. At Fort Robinson on September 5, 1877, as Crazy Horse was being led toward a stockade, he rebelled at the sight of the prison and tried to escape. Little Big Man and several other Indians grabbed Crazy Horse, as Private William Gentles ran his bayonet through Crazy Horse's body.

On his deathbed, Crazy Horse recalled why he had fought:

I was not hostile to the white man . . . We had buffalo for food, and their hides for clothing and our tipis. We preferred hunting to a life of idleness on the reservations, where we were

driven against our will. At times, we did not get enough to eat, and we were not allowed to leave the reservation to hunt. We preferred our own way of living. We were no expense to the government then. All we wanted was peace, to be left alone. . . . They tried to confine me, I tried to escape, and a soldier ran his bayonet through me. I have spoken (Johansen and Grinde, 1997, 88–89).

After Crazy Horse's assassination, about 240 Lakota lodges, occupied by people who had supported him, migrated to Canada where they joined Sitting Bull's people in exile. With the Crazy Horse band, Sitting Bull's camp grew to about 800 lodges, before their eventual return and surrender a few months later.

Crook, George

Major General George Crook (1828–1890) was one of the best-known officers of the post-Civil War United States Army. His career spanned the Indian wars of the Pacific Northwest in the 1850s, the Civil

George Crook spent most of his distinguished military career on the frontier and is closely associated with many significant battles, although he also defended Indian rights in the Standing Bear trial of 1879. (Library of Congress)

War, and the campaigns against the Apaches and the northern Plains peoples during the 1870s and 1880s. Crook's military record was good, but inconsistent and well supplied with controversy. His greatest military glory came in the Southwest during the early 1870s with the offensive against the western Apaches and Yavapais. At the time of his sudden death of heart failure in 1890, Crook was among the leading figures of the American military, respected as a fighter, but he was also recognized as an Indian rights advocate.

Crook was born on September 8, 1828, on a farm near Taylorsville, Ohio. He entered West Point in 1848, studied with mediocre success, and graduated thirty-eighth in a class of forty-three in 1852. The young officer saw his first action in the Pacific Northwest and made a favorable impression on his

superiors. Although Crook was “a soldier of the West,” the four years spent in the Union Army shaped his character extensively, bringing him rank (major general of volunteers), experience, and vision. In 1871, as a lieutenant colonel, he received the assignment as the commander of the Department of Arizona. There Crook orchestrated an aggressive offensive by deploying several small converging detachments, which combined regulars and indigenous enlisted men. Troops struck against the parties and camps of Yavapais and western Apaches wherever they could be found and forced them onto reservations. For his exploits Crook won the star of a brigadier general, surpassing several outraged colonels in the process who proved eager to exaggerate Crook’s failures in the future.

After the Arizona campaign, Crook took the field against the Sioux and Cheyennes in 1876 and 1877, suffered a defeat at Rosebud, and managed only mediocre results in other engagements. On the Plains, Crook proved militarily inefficient, uncompromising, and often frustrated. He returned to Arizona in 1882 and again took the offensive aggressively, this time against the Chiricahua Apaches, taking his troops across the international border into Mexico in 1883. Temporary peace was followed by another war. Again Crook sent his troops after the Chiricahuas, but, following a failed peace conference in March 1886, he found his policies in disfavor at Washington. Crook resigned and witnessed General Nelson A. Miles bringing an end to armed conflict in Arizona and New Mexico later that same year. Miles and Crook rushed to claim the glory for ending the Indian conflict in the Southwest and debated over Miles’ decision to exile the Chiricahuan Apaches, many whom had served in the U.S. Army, as prisoners of war into Florida.

During the decades spent in the Trans-Mississippi West, Crook grew increasingly critical of the nature of American conquest and colonization. He saw the reason for armed conflicts in the greed and ruthlessness of white invaders. Anger toward white settlers and an ambivalent federal government filled Crook with a passion for understanding indigenous cultures. He believed that through paternalistic guidance Native Americans could learn to live under the new white order. Individualism, the cash economy, and hard work were the main instruments of Crook’s Indian policy. Crook also appeared in the forefront enlisting indigenous men into the Army. He usually got good results, but discovered that most military officials and policy makers did

not favor indigenous soldiers doing the white regulars job. Increasingly stubborn and uncompromising, Crook became an eccentric outsider in his own army, straining his relations with the Commanding General Phil Sheridan.

Crook was and remains a mystery. He certainly was ambitious, egoistic, eager for recognition, and vengeful toward those he saw as his enemies. Through his skillful aides and political connections, including President Rutherford B. Hayes, Crook was able to promote a public image of himself as a taciturn, honest, civilian-clothed man of action. Certainly, Crook was at times an innovative commander who obtained good military results through heavy dependency on indigenous soldiers, but equally often he met failure, most notably in the Sioux War of 1876–1877. His personal life is inadequately known (he was married for twenty-four years and had no children), and even his professional achievements are clouded in debate. Perhaps Crook was the greatest Indian fighter and thinker in the post-Civil War U.S. Army, or he might have been the ablest self-promoter of mediocrity.

Cruz, Joseph de la

A veteran of twenty-five years as president of the Quinault nation, Joseph Burton de la Cruz (1937–2000) gained a national reputation by serving as president of the National Tribal Chairmen’s Association (1977–1981) and as head of the National Congress of American Indians (1981–1985). De la Cruz stepped down from the Quinaults’ leadership in 1994 (having held the position since 1970) to make way for Pearl Capoeman Baller, the tribe’s first female chief in modern times.

At home on the Quinault nation along the Pacific coast of Washington State, de la Cruz played an active role in founding many tribal enterprises, including forestry management, land restoration, housing construction, and seafood processing. Between 1985 and 1988, de la Cruz also became

influential in fisheries management on an international level, as a mediator between the United States, Canada, and Native nations in the Pacific Salmon Fisheries Treaty.

De la Cruz's niece Jennifer Scott's most vivid memory of her uncle was of the day he defiantly drove his truck onto the Chow Chow Bridge near the Washington coast to block logging trucks from entering the Quinault Indian Reservation, in protest of Bureau of Indian Affairs land use practices. "I'll never forget him sitting there on that bridge," Scott said (McGann, 2000). But that action, which helped the Quinaults win compensation for their timber, was only one of many that de la Cruz took for Native Americans. De la Cruz worked for decades to improve Native American health care, to help secure fishing rights, and to obtain other manifestations of sovereignty and economic self-sufficiency.

Randy Scott, a Quinault Indian Tribe lobbyist, called de la Cruz the father of a self-governance policy by which Native American governments exercised line item appropriations from the government instead of getting money through the federal bureaucracy. This policy placed direct, day-to-day control over services such as police, health, land use, and education in the hands of Native governments rather than the Bureau of Indian Affairs (McGann, 2000).

While he headed the Quinaults, de la Cruz was instrumental in incorporating them into the provisions of the Boldt decision, which enforced Native fishing rights in Washington State and provided a national example for such litigation. Asserting that many visitors were not respectful of the area's ecosystem, he also ordered the closure to non-Natives of twenty-six miles of ocean beach on the Quinault Reservation north of Aberdeen.

"Joe was involved in so many issues it's hard to say what his biggest accomplishment was, there's too many to choose just one," said Pearl Capoean-Baller, current president of Quinault Indian Nation. "Everybody turned to Joe de la Cruz. He was there to protect rights for all tribes, not just Quinault. Joe was one of the greatest Indian leaders in the United States, and he worked endlessly for the Quinault people" (McGann, 2000).

On April 16, 2000, at the age of sixty-two, Joe de la Cruz suffered a heart attack and died at Seattle-Tacoma International Airport while en route to an Oklahoma conference. De la Cruz was survived by his wife, Dorothy; his daughters Gayle de la Cruz, Tina de la Cruz, and Lisa Kyle; and his sons

Joe de la Cruz and Steve de la Cruz; as well as seven grandchildren and two great-grandchildren.

"His whole life was dedicated to Indian welfare and Indian concerns," said Bernie Whitebear, of United Indians of All Tribes in Seattle. "The self-governance conference that he was going to was really appropriate. He died with his boots on. A lot of the advances that the tribes are witnessing today in regard to self-governance are a result of his early involvement in that area," Whitebear said. "He was a leader in the indigenous people's efforts throughout the world, including Canada and South America" (McGann, 2000).

Curtis, Charles

Charles Curtis, a man of one-eighth Native blood, served as a member of the U.S. House of Representatives, a U.S. senator, and as vice president of the United States. Born on Indian land that later was incorporated into North Topeka, Kansas, Curtis was the son of Oren A. Curtis, an abolitionist and Civil War Union cavalry officer, and Helen Pappan, who was of Kaw and Osage ancestry. Curtis's mother died when he was three; he was thereafter raised on the Kaw Reservation and in Topeka by his maternal grandmother. Following an attack on Kaw Indians at Council Grove by Cheyenne militants, Curtis departed the Indian mission school on the Kaw Reservation in 1868 and returned to Topeka, Kansas, where he attended Topeka High School. For several years as a young man, Curtis was a jockey; he also worked odd jobs until he met A. H. Case, a Topeka lawyer. Studying the law and working as a law clerk, Curtis was admitted to the Kansas bar in 1881.

Entering politics as a Republican, Curtis was elected county prosecuting attorney in 1884 and

Charles Curtis, right, with Calvin Coolidge and Mrs. Coolidge. (Library of Congress)

1886. From 1892 to 1906, he served eight terms in the U.S. House of Representatives. He authored the Curtis Act of 1898 that dissolved tribal governments and permitted the institution of civil government within the Indian Territory, in an attempt to force the assimilation on American Indian peoples. The Curtis Act brought the allotment policy to the Five Civilized Tribes of Oklahoma, who had been exempted from the Dawes Allotment Act of 1887. The Curtis Act empowered the Dawes Commission, which had been created in 1893, to extinguish tribal title to lands in Indian Territory. Once tribal title was eliminated, the Dawes Commission allotted reservation lands to individuals. Curtis's endeavors to foster detribalization, allotment, and assimilation were opposed by many of the tribal leaders of Indian Territory. In essence, the Curtis Act paved the way for

Oklahoma statehood in 1907 by destroying tribal land titles and governments there.

Curtis served in the U.S. Senate from 1907 to 1913 and from 1915 to 1929 as the first U.S. senator of American Indian ancestry. During his tenure in the Senate, Curtis was Republican party whip (1915–1924) and then majority leader (1924–1929). As chairman of the Senate Committee on Indian Affairs in 1924, Curtis sponsored the Indian Citizenship Act that made American Indians U.S. citizens but protected their indigenous property rights. After an unsuccessful campaign for the presidential nomination, Curtis ran on the ticket with Herbert Hoover in 1928, serving as vice president from 1929 to 1933. He was a deft politician who used his Indian background for personal advantage, even though his political adversaries called him “the

Injun." Although a fiscal conservative he supported veterans' benefits, farm relief, women's suffrage, and national prohibition.

The Hoover-Curtis ticket's bid for a second term in 1932 was defeated by Franklin Delano Roosevelt. Upon his retirement in 1933, Curtis had served longer in the Congress than any other active politician of his time. After leaving public office, he headed the short-lived National Republican League and practiced law in Washington, DC. Curtis was also president of a gold mining company in New Mexico. In 1936, he died of heart disease.

Deganawidah

The Haudenosaunee (Iroquois) Confederacy was formed by the Huron prophet Deganawidah (called the Peacemaker in oral discourse, ca. 1100-1180). Deganawidah enlisted the aid of Aiowantha (sometimes called Hiawatha) to spread his vision of a united Haudenosaunee confederacy. Deganawidah needed a spokesman because he stuttered in a culture that relied on verbal elocution. Oral history attributes the Peacemaker's stuttering to a double row of teeth. The Confederacy originally included the Mohawks, Oneidas, Onondagas, Cayugas, and Senecas. The sixth nation, the Tuscaroras, migrated into Iroquois country early in the eighteenth century.

As Hiawatha despaired at his inability to unite the contentious Iroquois, the prophet Deganawidah entered his life and changed the nature of things. Together, the two men developed a powerful message of peace. Deganawidah's vision gave Hiawatha's oratory substance. Through Deganawidah's vision, the Iroquois formulated their Constitution.

In his vision, Deganawidah saw a giant evergreen (Great White Pine), reaching to the sky and gaining strength from three counterbalancing principles of life. The first axiom was that a stable mind and healthy body should be in balance so that peace between individuals and groups can occur. Second,

Deganawidah stated that humane conduct, thought, and speech were requirements for equity and justice among peoples. Finally, he foresaw a society in which physical strength and civil authority would reinforce the power of the clan system.

Deganawidah's tree had four white roots that stretched in the four directions of the earth. From the base of the tree a snow-white carpet of thistle down covered the surrounding countryside. The white carpet protected the peoples who embraced the three double principles. On top of the giant pine perched an eagle. Deganawidah explained that the tree was humanity, living within the principles governing relations among human beings. The eagle was humanity's lookout against enemies who would disturb the peace. Deganawidah postulated that the white carpet could be spread to the four corners of the earth to provide a shelter of peace and brotherhood for all mankind. His vision was seen as a message from the Creator to bring harmony into human existence and to unite all peoples into a single family guided by his three dual principles.

With such a powerful vision, Deganawidah and Hiawatha were able to subdue the evil Tadodaho and transform his mind. Deganawidah removed evil feelings and thoughts from the head of Tadodaho and said "thou shalt strive . . . to make reason and the peaceful mind prevail." The evil wizard became reborn into a humane person charged with implementing the message of Deganawidah. After Tadodaho had submitted to the redemption, Onondaga became the central fire of the Haudenosaunee and the Onondagas became the firekeepers of the new Confederacy. To this day, the Great Council Fire of the Confederacy is kept in the land of the Onondagas.

After Tadodaho's conversion, the clan leaders of the Five Nations gathered around the Council Fire at Onondaga to hear the laws and government of the Confederacy. The fundamental laws of the Iroquois Confederacy espoused peace and brotherhood, unity, the balance of power, the natural rights of all people, and the sharing of resources. It also made provisions for the impeachment and removal of ineffective or inappropriate leaders. Moreover, the blood feud was outlawed and replaced by a Condolence Ceremony. Under this law, a grieving family could forego the option of exacting clan revenge (the taking of the life of the murderer or a member of the murderer's clan). Instead, it could accept twenty strings of wampum (freshwater shells strung together) from the slayer's family (ten for the dead

person and ten for the life of the murderer). If a woman was killed, the price was thirty wampum strings. Through this ceremony, the league reconciled conflict while reducing interpersonal violence. Deganawidah gave strict instructions governing the conduct of the league and its deliberations. Tadodaho was to maintain the fire and call the Onondaga chiefs together to determine if an issue brought to him was pressing enough to call to the attention of the Council of the Confederacy. If the proposed issue merited Council consideration, it would assemble, and Tadodaho would kindle a fire and announce the purpose of the meeting. The rising smoke penetrating the sky is a signal to the Iroquois allies that the Council is in session. The Onondaga chiefs and Tadodaho are charged with keeping the council area free from distractions.

Deloria, Jr., Vine

In the 1960s, a thirty-one year old Hunkpapa Sioux from the Standing Rock Reservation with a long family heritage of social, political, and spiritual leadership descended on the national scene as executive director of the National Congress of American Indians (NCAI). Vine Deloria, Jr. (1933–2005) served three years as executive director of the NCAI, an experience that profoundly impacted his view of the *tipi sapa*, or sacred black lodge his great-grandfather saw in a vision a century earlier. Shocked by what he saw in Indian Country—and how American Indians were perceived—Deloria realized new tactics were

needed if tribal people were to survive the "chaotic and extreme individualism" of America (Deloria, 1985, 20). Over the next four decades, Deloria's prolific pen would profoundly impact the way Americans and the world viewed American Indians.

Little known outside national tribal leadership and scarcely known among the masses in Indian Country, Deloria "seized the nation by its lapels" with a series of provocative and insightful books in the late 1960s and 1970s. Until that time many Indians were viewed "as ciphers rather than as contemporary people facing issues such as education, jobs, healthcare and civil rights." While Indians were suitable for wall decorations, adorning the nation's coinage, and serving as foils in Western movies, they were viewed as neither modern nor political. "Indians were an unknown quantity," Deloria once observed. "There was a huge gap in how we were perceived by the average citizen and who we actually were" (Porter, 2002, 9).

Deloria poignantly outlined his intellectual and theoretical views in a 1969 book that shook the foundations of academia and religious institutions, challenging worldwide perceptions of American Indians. *Custer Died for Your Sins: An Indian Manifesto* set Deloria on the road to national prominence, calling for Indian self-determination within a political and cultural construct that was unique and separate from the larger American political and social constraints. Peoplehood was impossible, Deloria proclaimed, "without cultural independence, which in turn is impossible without land" (Deloria, 1969, 180).

The social and historical context within which Deloria came into prominence took root in the eighteenth century. "As long as any member of my family can remember," Deloria stated in 1969, "we have been involved in the affairs of the Sioux tribe." His intellectual and leadership abilities in the struggle for Indian rights came from carrying "on the leadership qualities of his father, grandfather, and great grandfather" and "stem[med] not only from his formal education and academic position but also from an extraordinary family heritage" (Hoover, 1997, 28). In reflecting on his family, Deloria once wrote that his great grandfather (Saswe), grandfather (Philip), and father (Vine, Sr.) "created a family heritage that has been a heavy burden but that could not have been avoided once Saswe chose the red road [of leadership]" (Deloria, 2000, 84).

Vine Deloria, Jr., was born on March 26, 1933, in Martin, South Dakota, on the Pine Ridge Reservation. After attending elementary school in Martin,

Deloria graduated from St. James Academy in Fari-bault, Minnesota, before serving a three-year stint in the U.S. Marine Corps and attending Iowa State University, where he earned a bachelor's of science degree in 1958. He then earned a master's degree in theology from Augustana Lutheran Seminary in Rock Island, Illinois, in 1963. While he considered following his father's—and grandfather's and great-grandfather's—footsteps into the ministries of the Episcopal Church, Deloria chose a different path that centered on tribalism and traditional religious expressions.

In 1964, Deloria accepted a position with the United Scholarship Service in Denver, Colorado, to develop a scholarship program for American Indians to attend elite eastern preparatory schools. Later that year at the Sheridan, Wyoming, convention, he found himself elected executive director of the NCAI, a position he later said he was naïve enough to accept. Expected “to solve problems presented by tribes from all over the country,” Deloria found the work challenging because of “unscrupulous individuals” who made tasks difficult to solve and accentuated the “great gap between performers and publicity” (Deloria, 1968). Financial concerns always threatened the NCAI and it was more than once on the verge of insolvency. When he left as executive director in 1967, Deloria realized “other tactics would have to be used to further the cause for Indian rights” (Deloria, 1969, 270–273).

Part of the new tactic was training Indian attorneys who could help tribes understand their rights and responsibilities. With this in mind, Deloria returned to school in 1967 and earned a law degree from the University of Colorado in 1970. While still in law school, Deloria wrote *Custer Died for Your Sins*, a book that became his best seller and one that parlayed his family heritage and legacy of leadership into national prominence. From 1970 to 1972, Deloria taught at Western Washington State College, from 1972 to 1974 at the University of California/Los Angeles, and from 1978 to 1990 at the University of Arizona, where he established an Indian policy studies program within the political science department and an American Indian studies program in 1982. Between 1990 and 2000 he was a professor at the University of Colorado, Boulder, where he retired from academia.

Putting action together with his desire to help tribes understand their rights, Deloria was one of three Indian attorneys to establish the Institute for the Development of Indian Law in 1970. This organi-

zation provided training and training materials for tribes and educational institutions around the country. He also served in organizations such as the Citizens Crusade against Poverty, the Council on Indian Affairs, the National Office for the Rights of the Indigent, the Indian Rights Association, and the Intertribal Bison Council. He was also a founding trustee on the board of the National Museum of the American Indian. As the preeminent scholar of protecting sacred lands, enforcing treaty rights, and repatriating cultural patrimony and burial remains, Deloria won numerous awards both in and outside of Indian Country.

Among the accomplishments of Vine Deloria, Jr. is a truly extraordinary event that shifted the foundation of an entire academic discipline and, in the process, created a more favorable view of American Indians and Indian tribes. The event was the publication of *Custer Died for Your Sins*, in which Deloria indicted anthropologists and put them on alert that American Indians refused to be imprisoned in their words and writings. In the process, Deloria gave voice to a whole generation of American Indians for the development of a distinct academic discipline of American Indian studies in which Indians themselves would define what was important.

In 1989, the American Anthropological Association convened a session entitled “Custer Died for Your Sins: A Twenty-Year Retrospective on Relations Between Anthropologists and American Indians.” Its purpose was to explore what changes had occurred in Indian–anthropologist relations since *Custer* was first published. Out of this session came *Indians and Anthropologists: Vine Deloria Jr., and the Critique of Anthropology*, which initiated “a new period in relations between American Indian people and anthropologists in particular, between Indians and non-Indians in America generally, and between colonized peoples and the metropolis globally” (Biolsi and Zimmerman, 1997, 4).

Easily the “most influential polemicist” of the latter half of the twentieth century, Deloria “exceeded all others with similar motives” by using the social upheavals of the sixties as his forum to “represent a voice of outrage on behalf of Native Americans” (Hoover, 1997, 31). Those tutored under, and influenced by, Deloria's scholarship have built into their thinking new ethics and morality because of *Custer* and Deloria's subsequent writings. Anthropologist Murray L. Wax once credited “the shape-shifting Deloria—lawyer, priest, political scientist, prophet, educator, and satirist”—with shifting the

Vine Deloria, Jr., a Native American scholar, author, and activist, influenced two generations of leaders, Native and non-Indian. He died in 2005. (AP Photo)

orientation of the anthropologist from a “detached observer” to a “committed and engaged participant, linked to the local community” (Wax, 1997, 59).

Deloria acknowledged progress was made. “Scholars better understand their skills and the degree to which they can assist Indians,” Deloria opined. “We have certainly not found paradise, but we have seen considerable light brought to bear on problems, and we can now make choices we could not make before.” Nonetheless, the social sciences continue to be “a deeply colonial academic discipline.” America has a “state religion,” Deloria observed, “and it is called science,” which controls the process of information about and interpretation of American Indians and their cultural patrimony. Scholars hiding behind the cloak of science will again “raise their voices” against American Indians in the future, Deloria predicts, because the real battle is “over control of definitions: Who is to define what an Indian *really* is?” (Deloria, 1997b, 210–212).

Long committed to the belief of getting “knowledge into the hands of ordinary people,” Deloria spent a lifetime helping tribes and tribal people understand the basis of their existence, stressing the legal and moral basis of tribal political and social life. In *Tribes, Treaties, and Constitutional Tribulations* (1999), he provided an analysis of the U.S. government and how each branch relates to Indian tribes. In *Of Utmost Good Faith* (1971), Deloria provided an anthology of Indian legal papers, including Supreme Court rulings, treaties and agreements, legislative acts, and tribal speeches. In *American Indians, American Justice* (1983), *American Indian Policy in the Twentieth Century* (1985), *Behind the Trail of Broken Treaties* (1974), and *The Nations Within* (1984), Deloria provided a legal and historical framework of tribes in the United States. In *We Talk; You Listen: New Tribes, New Turf* (1970) and *God Is Red* (1973), he expounded on his theoretical framework that tribalism was the only alternative to modern life.

Deloria's recent books focused on the ideological foundations of Western science and its fallacies. *Red Earth, White Lies* (1995), *For This Land* (1999), *Spirit and Reason* (edited by his wife Barbara Deloria in 1999), and *Evolution, Creation and Other Modern Myths* (2002) all assailed Christianity and the religion of Western science while advocating a return to tribal ways. Tribal philosophies, Deloria theorized, were superior to both Western scientific interpretations and religious dogmas. Believing the real battle for survival was ideological, Deloria spent a lifetime educating Indians and non-Indians on spiritual matters that define ideology. For these efforts, *Time* magazine recognized Deloria as one of the ten most influential religious thinkers of the twentieth century.

In toto, Deloria's writings provide an insightful, scholarly and, at times, witty view of the nature of tribes and their dealings with the United States, demonstrating how and why at a philosophical level tribalism and tribal ways are superior to mainstream Western American ways. Tribal groups, Deloria once observed, "recognize the value of relations," which creates "a society of responsibility." To belong to a tribe, one had to "feed the poor," "take care of the orphans," and "provide for the elders." In short, tribalism was relational rather than institutional and hierarchal. American Indians, Deloria wrote in 1997, must "redefine their understanding of leadership to reflect traditional Indian ways." The key to returning to traditional leadership is to return to tribal ways, including the use of storytelling to help young people "feel they belong to something of their own" (Deloria, 1997a, 2, 4).

Deloria passed away November 13, 2005, at age seventy-two, in Golden, Colorado, after surgical complications. University of Colorado professor Charles Wilkinson called him "probably the most influential American Indian of the past century. He was also a wonderful human being, brilliant, bitingly funny, and profoundly warm and compassionate, always willing to lend a hand or raise a spirit" (Johansen, 2005, 7-B).

Deskaheh

Born in 1872, elevated to the position of *royaner* (hereditary chief) of the Cayuga nation under the name Deskaheh in 1917, Levi General died June 27, 1925. He is buried at the Cayuga Longhouse in Sour Springs. Deskaheh is well-known for his unsuccessful efforts between 1921 and 1925 to stop Canadian interference in Six Nations affairs by obtaining international recognition, through the League of Nations, of Haudenosaunee (Iroquois) sovereignty.

After 1918, the Canadian government, particularly the Department of Indian Affairs and its director Duncan Campbell Scott, refused to recognize the sovereignty of the traditional Six Nations' gover-

nance system at Grand River, Ontario. Adamant that the 1784 Haldiman Treaty had confirmed Haudenosaunee independence, Deskaheh traveled to England in 1921 with a petition for King George V. The petition was received by the colonial secretary, Winston Churchill, who returned the document to Canada.

Deskaheh and his American Lawyer, George Decker, then traveled to Geneva in 1923, where they convinced the Netherlands to lay Iroquois grievances before the League of Nations. Deskaheh, as a representative of the Six Nations, approached the Dutch based on a seventeenth-century mutual aid agreement.

On April 26, 1923, the Netherlands requested that the Iroquois petition be placed before the League of Nations Council. Following Britain and Canada's response, written largely at Scott's direction, the secretariat of the League presented the petition but failed to place it on the agenda for discussion. At this point the Netherlands withdrew its support. Much to the shock of Canada, Deskaheh twice requested, on August 7 and September 4, 1923, that the League grant the Six Nations formal membership as a state. Without the support of a member nation, however, Deskaheh's application was referred until September 27, when Ireland, Panama, Persia, and Estonia requested that the petition be presented to the League and the case for Iroquoian independence be brought before the International Court. Nonetheless, by 1924 Britain convinced Deskaheh's supporters to cease interference in an internal Canadian matter.

Meanwhile, in Canada, a federal order-in-council dissolved the Six Nation's Confederacy Council and created a democratically elected government subject to the Indian Act. Once elected, members of the democratic council, at the direction of their Indian Agent Colonel Morgan, proclaimed that Deskaheh was not an official representative. Also in 1924, in a dispute over land tenure between the traditional Council and Indian Affairs, an Ontario court ruled in *Garlow v. General* that Deskaheh's lands and possessions be confiscated and sold at auction. Colonel Morgan, after the Brant County sheriff refused to interfere because his authority did not extend to the Six Nations, auctioned Deskaheh's goods.

In the fall of 1924, Deskaheh returned to England to petition the king, an effort that failed. Deskaheh finally left Europe in January 1925, gave

his last speech on Iroquois and Indian rights on March 10, and, after learning that his healer had not been allowed to cross the border, died on June 27. His funeral, three days later, was well attended by Haudenosaunee and the ever-watchful Royal Canadian Mounted Police. Canadian officials hoped that with the "troublemaker's" death the sovereignty issue would disappear. At the funeral, according to Iroquois customs, his brother Alexander General was elevated to *royaner* with the name of Deskaheh.

During his visits to Europe, many reporters, diplomats, and visitors were disappointed that Deskaheh failed to live up to their stereotype of a typical Indian chief. Much to Deskaheh's credit he refused to lower himself by playing Indian. Instead, he usually wore a simple brown suit and kept regular company with his lawyer, although photographs do exist of him in traditional garb.

While seeking to promote his people's sovereignty, Deskaheh's petitions and speeches form a wonderful corpus of material on indigenous rights and their trammeling by colonial powers. The most readily available materials by Deskaheh are the *Redman's Appeal for Justice* and his final speech on March 10, 1925.

Dodge, Henry Chee

Henry Chee Dodge (Hastiin Adiits'a'ii, "Man Who Interprets," ca. 1857–1947) was an influential leader

of the Navajo Nation for more than half a century, serving as the reservation government's chairman from 1923 to 1928 and from 1942 to 1946. Fluent in both English and Navajo when few were, Dodge played an influential role as a translator and political leader, working to expand the size of the Navajo Nation.

Dodge was born shortly before the Navajos' Long Walk to Fort Sumner, and his mother and father died when he was very young. Indian Agent W.F.M. Arn took an interest in young Dodge upon his return from the Long Walk, because he believed him to be the son of a former Indian Agent Henry Dodge. His father probably was more likely a captive Mexican, however. Upon returning from Fort Sumner, Dodge attended school for a short time in Fort Defiance. By 1882 he was serving as the official agency interpreter, and, having shown courage several times, he was put in charge of the Navajo police force and named head chief by the Indian agent. Dodge also made the first of eight trips to Washington, D.C., accompanying a delegation of Navajos to Grover Cleveland's inauguration in 1884. On his last trip in his eighties, he asked for more schools, hospitals, land, and irrigation facilities for the Navajos.

In 1890, Dodge invested in a partnership and bought the Round Rock Trading Post, which he comanaged. In 1892, when Agent David Shipley was surrounded and beaten at Round Rock while recruiting students for the Fort Defiance Boarding School, Dodge helped rescue and defend him for three days until soldiers came to the rescue. During the 1890s, Dodge also became a successful rancher at Crystal, New Mexico, and by 1907 he was a wealthy prominent Navajo headman.

In 1914, Dodge wrote the Secretary of the Interior stressing the need for more schools so that Navajo children could learn to speak English. He also stated that the allotment of the Navajo reservation would hurt most Navajos and that state governments had no interest in helping Navajos. In 1940 Dodge criticized day schools and the teaching of the Navajo language and asked for more boarding schools.

In 1922, Dodge was appointed a member of a three-man Navajo business council to sign oil leases by the U.S. government, and in 1923 a twelve-member Navajo council was elected and chose Dodge as chairman. He worked to get the money from the oil leases to benefit all Navajos, even those

living off the reservation, rather than just those from the region where the oil was located.

Indian agents for the Navajo called for stock reduction because of overgrazing as early as the 1880s. The increasing Navajo population and their livestock impinged on their neighbors, including the Pueblo Indians. Dodge worked to get more land for the Navajo by cooperating with the demands of the federal government. In the 1920s, Jacob Morgan rose to prominence as Dodge's opponent, representing young assimilated Christian Navajos educated in boarding schools. Morgan questioned whether Dodge was really a Navajo and as a fundamentalist Protestant opposed Dodge's sympathy toward Catholics, the Native American Church, and traditional Navajo religion. Another strike against Dodge was his practice of the Navajo tradition of polygamy for wealthy Navajos, having over his lifetime eight wives, four of whom were sisters, and six children.

Dodge's son Thomas, an attorney, became tribal chairman in 1932, and in 1935 he was appointed assistant superintendent for the Navajo agency in an attempt to gain Navajo support for the Indian Reorganization Act, which the Navajos voted against. When John Collier became Commissioner of Indian Affairs in 1933 he pressured Thomas to implement stock reduction to protect Navajo lands from eroding away and filling up the newly built Boulder (now Hoover) Dam on the Colorado River. Increasing Navajo discontent toward stock reduction and the council's complicity led Thomas to resign the chairmanship in 1936.

Riding the antistock reduction sentiment of most Navajos, Morgan became tribal chairman in 1938 but was defeated by Dodge in 1942. Dodge's son Ben and his daughter Annie Wauneka, a respected health educator, also served on the Navajo tribal council.

Dull Knife

The harrowing march of Dull Knife and his Cheyenne compatriots from U.S. Army captivity toward their homeland in present-day Wyoming is described in Mari Sandoz's *Cheyenne Autumn* (1953). Dull Knife (ca. 1810–1883), as he was called by the Lakota, also was called Morning Star by the Cheyennes. Dull Knife, with Little Wolf, led the trek after their exile to Indian Country (Oklahoma today) late in the 1870s and 1880s.

Dull Knife and Little Wolf were among the Cheyennes who allied with the Lakota and other Native nations who defeated George Armstrong Custer at the Little Bighorn on June 25, 1876. The Army, reinforced with fresh troops, then pursued the Lakota and their allies. By 1877, U.S. Army troops chased Dull Knife into the Bighorn mountains near the head of the Powder River. The Cheyenne were then arrested and sent to Oklahoma, where, during the next several months, many of them died.

During mid-August 1878, the Cheyennes asked Indian Agent John Miles to let them leave Oklahoma for home. Miles, on superiors' orders, refused. The Cheyennes, who lacked food, took matters into their own hands, escaping homeward on foot. Early the next day 300 surviving Cheyennes started a march to their homelands in the Powder River Country, several hundred miles away. The next day, cavalry caught up with them on the Little Medicine Lodge River. The Cheyennes refused to surrender and continued their trek, repelling other attacks. They crossed the Arkansas and South Platte rivers. At White Clay Creek, Nebraska, they split into two groups. Dull Knife led 150 people to Red Cloud Agency, where they surrendered. Little Wolf and another 150 people hid in the Nebraska Sand Hills.

Little Wolf's band surrendered to Lieutenant W. P. Clark and an Army unit of Cheyenne and Lakota scouts the following March.

Back in Nebraska, Dull Knife's band arrived at the Red Cloud agency and found it abandoned, so they marched to Fort Robinson. Dull Knife's band lived at the fort two months. Officers at the fort then were ordered by superiors to force the Cheyennes back to Oklahoma. Dull Knife refused to go. Captain Wessells, the commanding officer, locked the Cheyennes in a freezing barracks with no food or water for three days. They refused to surrender.

On January 9, 1879, the Cheyennes broke out again. Fifty of them died that evening under fire by

Dull Knife and fellow chief Little Wolf led several hundred of their people in an epic march from Oklahoma toward their homelands in Montana during 1878. (National Archives and Records Administration)

troops; twenty more died of wounds and exposure. Most who survived, fewer than 100 survivors, were directed back to Fort Robinson under guard.

Dull Knife, his wife, and son then escaped once again, traveling eighteen nights on foot, resting by day, to Pine Ridge. They ate bark and their own moccasins to survive. At the Pine Ridge agency, Bill Rowland, an interpreter, housed the family. Thirty-one other warriors also escaped Fort Robinson. Troops followed them to Hat Creek Bluffs, where they called upon the warriors to surrender. The Cheyennes answered the command with their last three bullets. More shooting followed, killing twenty-eight Cheyenne. The last three survivors

stood up, using their empty rifles as clubs, and charged the 300 soldiers, who killed them.

John Ford, the well-known director of Westerns, released a film version of *Cheyenne Autumn* in 1964, his last Western film. Some reviewers believed that Ford's film was an apology for the excessive cruelty displayed toward Native peoples in his earlier films (Crowther, n.d.). Set in 1887, the film recounts the defiant migration of 300 Cheyennes from their reservation in Oklahoma territory to their original home in Wyoming. They have done this at the behest of Chiefs Little Wolf (Ricardo Montalban) and Dull Knife (Gilbert Rolands), played as "peaceful souls who have been driven to desperate measures because the U.S. government has ignored their pleas for food and shelter" (Crowther, n.d.). In the *New York Times*, reviewer Bosley Crowther described the film as a cinematic elegy—not only for the beleaguered Cheyennes, but for John Ford's fifty years in pictures" (Crowther, n.d.).

The bones of the dead Cheyennes later were turned over to the U.S. Army Medical Museum for scientific study. On October 8, 1993, the remains were returned to a delegation of sixteen Cheyennes in Washington, D.C., for reburial under the Native American Graves Protection and Repatriation Act of 1990.

Dumont, Gabriel

Born in 1837 at Red River, Rupert's Land (Manitoba), Gabriel Dumont (Métis) died May 19, 1906, at Bellevue (St.-Isidore-de-Bellevue), Saskatchewan.

Dumont is best-known for his role as a military leader in the 1885 Riel Rebellion. Prior to 1885, he was a community leader, bison hunter, ferry operator, store owner, and farmer. After 1885, Dumont worked seasonally in Buffalo Bill's Wild West Show (1886–1888), and became a symbol for Quebec nationalists (1888–1889). He returned in 1893–1894 to Batoche, Saskatchewan. Dumont married Madeline Wilkie at St. Joseph (Wahalla, North Dakota) in 1858. Madeline died in North Dakota in the spring of 1886. The couple had no children.

Dumont grew up on the Plains with his parents and extended family. He was involved in the 1851 battle between the Métis and Yankton Dakota at Grand Coteau. Dumont rose to the position of hunting leader in the Fort Carleton region (Saskatchewan) by the 1860s. In 1872, Dumont opened a ferry service and store on the Fort Carleton Trail. He was elected head of a council of eight in 1873. This council sought to govern the St. Laurent Métis community until the Northwest Territorial government established itself. In 1874, the North West Mounted Police (NWMP) investigated the council after the Fort Carleton Hudson's Bay Company factor charged the Métis government with sedition. While the NWMP cleared the council of the allegations, it ceased to function.

From 1877 to 1884, Dumont supported Métis petitions that requested land surveys and grants, representation on the Northwest Territories governing council, as well as assistance for schooling and farming. In 1878–1879, the river lot and square lot systems were surveyed in St. Laurent. Dumont and others demanded a resurvey according to the traditional river lot system. The Métis river lot system, drawn from their French heritage, consisted of narrow strips of land that fronted a river and extended inland. The house constructed beside the river at the front of the lot, allowed for easy access to the river and gave the Métis access to farm land as well as a wood lot at the back. The square lot system, derived from the standard grid pattern township surveys, would arbitrarily cut across the river lots. The proposed solution to the issue, through the subdivision of the square lots into smaller sections that could then be pieced together to match the river lots, was complicated, confusing and appeared unnecessary to the Métis since they already had a viable system of land allotment. Instead, after delaying the decision, the Canadian government in Ottawa offered an awkward method

of legal subdivision of the square lots to mimic the river lot layout.

By 1884, survey and treaty issues in Saskatchewan created a tense atmosphere in which non-Native immigrants, Indians, and Métis were dissatisfied with the Canadian government. While discussing further petitions in March 1884, Dumont suggested that Louis Riel, based on his success in negotiating with the Canadian government during the 1869–1870 Red River Incident, be asked for assistance. Dumont and four others returned with Riel from North Dakota in July 1884. After eight months of lobbying Ottawa, Dumont and Riel concluded in February 1885 that Métis concerns would never be addressed. Dumont's unwavering support of Riel convinced many Métis to support the declaration of a provisional government and armed rebellion.

Hostilities commenced at Duck Lake when a Métis force led by Dumont defeated approximately 100 NWMP and 200 English-speaking settler volunteers who were attempting to arrest rebel leaders. Dumont forced Major-General Frederick Middleton to halt his advance toward Batoche for two weeks after a battle at Fish Creek. Following this engagement the Métis withdrew to defensive positions at Batoche, where they were defeated after a four-day battle (May 9–12). Dumont fled to the United States on May 27 upon hearing of Riel's surrender. American authorities arrested and later released Dumont after crossing the border. While in North Dakota, Dumont attempted to raise money and a force to liberate Riel from the Regina, Saskatchewan, jail.

While working in Buffalo Bill's Wild West Show, Dumont met members of New York's French community and began speaking about the 1885 rebellion. After giving a single lecture in Quebec, which shocked the nationalist French Canadian audience with its anticlerical tone, Dumont's planned speaking tour was cancelled. He remained in Quebec until the 1890s and dictated his rebellion experiences during the winter of 1889. In 1893, Dumont applied for scrip in Winnipeg, and resettled at his Batoche homestead. His death, while visiting a favorite nephew (Alexis Dumont) in 1906, passed unnoticed by Canada.

Dumont's role in the 1885 rebellion has been represented by scholars as either secondary or equal to that of Riel. Historians basing their work on Dumont's dictation of his experiences have focused on Riel's interference in military matters to explain why the Métis lost. According to Roderick C.

Macleod (2004), documents and events indicate that neither Dumont nor Riel sought a far-reaching military campaign and engaged Canadian forces only when they entered Métis lands. Moreover, the Métis would have eventually been defeated regardless of Dumont's military acumen.

EchoHawk, Larry

Nationally distinguished for his work as a lawyer, legislator, and attorney general, Larry EchoHawk (Pawnee, b. 1948) started out on this path when the Shoshone-Bannock tribes of the Fort Hall Reservation hired him as their chief general counsel in the late 1970s. Over the next few years he won a seat in the Idaho Legislature, held the post of prosecuting attorney for Bannock County, and in 1991 was elected as attorney general of the state of Idaho. In 1994 he ran for governor of the state but lost. Since that time he has served as a law professor at Brigham Young University.

EchoHawk was born to a full-blooded Pawnee father and a German mother who raised him in Farmington, New Mexico. His father was an alcoholic. In elementary school he learned that Indians were dirty, savage heathens. He wasn't quite sure what to think of the fact that his legendary great-grandfather had fought on the side of the cavalry during the Indian Wars. During this time he struggled with his identity. At age fourteen he joined the Mormon Church. After reading the Book of Mormon he no longer felt inferior and found renewed pride in his heritage. He began to set goals and soon

excelled in high school athletics. As a child he had never expected to attend college, but when Brigham Young University (BYU) offered him a football scholarship in 1966 he accepted.

At BYU, EchoHawk excelled both on and off the football field. He was named to the Western Athletic Conference All-Academic football team in 1969 and prepared, upon graduation, to become a coach and educator. His older brother, John EchoHawk, persuaded him to change his career plans. John was soon to become the executive director of the Native American Rights Fund. He told Larry that attending law school would give him the power to change people's lives. Larry believed him and obtained his JD from the University of Utah in 1973.

After graduation, Larry spent a few years in Oakland working for California Indian Legal Services. In 1977 the Shoshone-Bannock tribes hired him as their attorney. He spent nine years in this position. In the 1980s he served two terms in the Idaho House of Representatives, during which he was named the best freshman legislator. In 1991 he made a bid for the position of state attorney general. Political analysts in Idaho figured he faced three disadvantages: He was a Mormon, a Democrat, and an Indian. On the national scene, however, his prospects looked quite promising. During the campaign he became the first Native American to head a state delegation at a national political convention. He prevailed and became the first American Indian in U.S. history to win a statewide election to a state constitutional office. However, not everyone viewed this as an unqualified victory for Native peoples.

Larry EchoHawk upset Idaho tribal leaders when he proposed an antigambling amendment to the state constitution. EchoHawk insisted early on that he was carrying out his obligations to uphold the state's laws. His Mormon upbringing undoubtedly was another reason for his opposition to tribal gaming. This stance cost him the support of Idaho tribes, who argued that tribal sovereignty and congressional legislation provided the necessary legal authorization for their casino operations. However, these local issues did little to stop EchoHawk's rise to national prominence. *Newsweek* named him one of twenty People to Watch in the West. In 1992 he served as a principal speaker at the Democratic national convention. EchoHawk's political fortunes began shifting two years later. Although he easily won the Democratic gubernatorial nomination, several Idaho tribes were reluctant to support him. Even though he had led his opponent in all the polls, on

election day EchoHawk experienced his first loss in politics.

Since 1994, EchoHawk has served as a professor at the Brigham Young University J. Reuben Clark Law School. He has also become a stake (administrative office) president in the Mormon Church. In recent years he has called for greater tribal sovereignty and changed his stance on Indian gaming, finding it important to the economic development of tribes.

Edwards, J. R.

"Junior" Edwards (Mohawk, 1958-1990) was killed during the early hours of May 1, 1990, during the culmination of firefights over commercial gaming that wracked the Akwesasne Mohawk (St. Regis) Reservation. Mathew Pyke also was killed that night, before police agencies from the United States and Canada occupied the area the next day. The body of Edwards, thirty-two, was found roughly six hundred yards from where Pyke had been killed, along the River Road in an area of Akwesasne called Snye. Edwards had been killed by a blast to the stomach.

Harold Edwards Sr., father of Edwards, said that the young man had been an innocent victim most of his life. The younger Edwards lived alone in a house owned by his father near Snye, drew welfare, and "at times, drank too much." While the younger Edwards did not overtly support gambling interests (the senior Edwards said his four other sons were gambling supporters), he was impressionable, and he sometimes associated with gaming sympathizers.

Edwards laid the blame for his son's death with the people who had brought the guns to Akwesasne. "Whoever killed my son, I don't blame them as much as the people bringing in the weapons in the first place," he said. "It's some other people who are bringing them in, and giving them to the Warriors,

and then they go crazy. I want the police to get the people who are bringing in the guns and the dope, even if they have to search every house to do it" (Johansen, 1993, 94).

Edwards' murder remains unsolved. Doug George-Kanentiio, an Akwesasne newspaper editor and antigaming activist, was charged with the murder by Quebec authorities, but was exonerated before a trial by a judge who said the charge was baseless.

Eliot, John

A Puritan missionary, translator, and writer in early colonial New England, John Eliot (1604–1690) became known as the Apostle to the Indians and is

among the most famous early Anglo-American colonists. Little is known about Eliot's early life in England. Born in Widford, Hertfordshire, in August 1604, he was raised in Nazing, Essex. After enrolling at Jesus College, Cambridge, in 1618, Eliot received his baccalaureate in 1622. Eliot worked as Thomas Hooker's assistant at a Puritan academy in Essex until its closure in 1630. In 1631, Eliot arrived in Boston on the *Lyon*, a ship that also carried well-known colonists Margaret Winthrop and her stepson John Winthrop Jr. Eliot immediately took a position at the Boston church, moving in 1632 to become the teaching elder at the church in Roxbury, a position he held until 1688, two years before his death. Eliot outlived nearly every prominent first-generation Massachusetts Puritan (Cogley, 1999, 46).

Eliot is best-known for his mission work among the Algonquian-speaking peoples of Massachusetts. Around 1646, he began learning the Wôpanâak (Massachuset) language of southern New England. At this time, Eliot began the instruction of indigenous peoples in Christianity. In 1647,

A Puritan missionary, translator, and writer in early colonial New England, John Eliot became known as the Apostle to the Indians. (Library of Congress)

he began publishing a series of promotional tracts in England, aimed at generating financial support for proselytizing in the Massachusetts Bay colony. After some initial success with conversions among the Massachuset people, Eliot decided to establish “praying towns “ where Christianized Natives could become fully assimilated to English and Christian ways of life in an atmosphere that he believed to be the key to lasting conversions.

In October 1650, Eliot and several proselytes chose the site of Natick along the Charles River as the site of the first praying town, a place where Christian Natives would live away from the influence of their unconverted friends and relatives. In total, the Puritans set up fourteen praying towns, which resembled the “reduction” type missions used in New France and Latin America, meant to remove Native people from their traditional cultures. In the praying towns, Natives adopted English dress and hairstyles, took up agriculture, and abandoned their traditional ways of life. Eliot preached to the Massachuset peoples in their Native language but stressed literacy as one of the keys to “civilizing” them. With the help of Native translators, Eliot translated and compiled what became the Indian Library, a series of pamphlets and devotional literature in the Wôpanâak language. Eliot’s *A Primer or Catechism* appeared in 1654, and his translation of the entire Bible in the Native language—the first *Bible* printed in the Americas—was published in 1663. One of Eliot’s famous booklets, *The Indian Dialogues* (1671), which consisted of fictional dialogues between Christian and non-Christian Natives about the benefits of conversion, illustrates the significance of literacy in the praying towns, as well as the divide in Native society that resulted from Eliot’s missionary zeal.

George Tinker, an Osage religious studies scholar, suggests that Eliot’s well-intentioned explicit goal—assimilating the indigenous population into English/Christian lifeways—was a significant aspect of European cultural genocide in the Americas. According to Tinker, the praying towns separated indigenous peoples from their families and community networks and were thus a major cause of social breakdown and alienation. According to Tinker, the creation of new economic, social, and government systems in the missions led to indigenous dependency on the English (Tinker, 1993, 21–41). Tinker writes: “In spite of his good intentions toward Indian peoples and his hopes for their conversion to Christianity, Eliot must be held histori-

cally accountable for the resulting cultural genocide of these peoples” (Tinker, 1993, 40).

Eliot’s praying towns became weakened and were subsequently dismantled during Metacom’s uprising (King Philip’s War) against the English (1675). A census of the towns in 1674 reveals a population of 1,100 Christian Natives (Lepore, 1998, 370). During the bloody uprising, many indigenous peoples rejoined their communities to fight against the colonizers. John Eliot’s mission work continued outside the praying towns, as he continued publishing and preaching up to his retirement in 1688.

Emathla, Charley

Born a Creek in Georgia, Charley Emathla (Creek and Seminole, ca. 1790–1835) moved to Florida during the late 1820s, where he would become identified with the Seminole as an opponent of Osceola. Although many of the Georgia Creeks were forcibly relocated west of the Mississippi, Emathla settled on a small farm near Fort King (near Tampa, Florida) with a herd of cattle. He subsequently assumed a leadership role among the Seminoles. As a signatory of the Treaty of Payne’s Landing in 1832, Emathla agreed to relocate to Indian Territory (later called Oklahoma). While accompanying a Seminole delegation to inspect the new lands promised in Indian Territory, he also signed the 1833 Treaty of Fort Gibson.

In June 1835, Indian Agent Wiley Thompson imprisoned Osceola, a leader of the Seminoles who opposed relocation. Having decided to resist the plans of Emathla and his supporters to leave for Oklahoma, Osceola pretended to change his posi-

Emathla, a Creek chieftain, was killed by Seminole Chief Osceola. (Library of Congress)

tion. He asked Emathla to intercede for him. Emathla, convinced of Osceola's sincerity, agreed to help. Osceola was released only after he promised to use his influence in favor of emigration.

Instead, Osceola met with other chiefs who were hostile to the move, and all agreed that death was the only appropriate penalty for any Seminole who sold his stock or otherwise prepared to leave. At this news, four hundred and fifty Indians who had agreed to emigrate fled to Fort Brooke for protection. Emathla continued to defy Osceola and openly sold his possessions. As Emathla was returning from the sale with his money, on December 18, 1835, he was ambushed and killed by Osceola's band. Some accounts say that Osceola threw the cattle money over Emathla's dead body as he awaited burial. Others say that he scattered the money to the four winds.

Osceola's faction then killed Agent Thompson on December 28, while another party massacred a military command under Major Francis Dade, after whom Dade County, Florida, is named. Their actions provoked the Second Seminole War (1835–1842).

Engels, Friedrich and the “Mother-right gens”

Karl Marx discovered the work of Lewis Henry Morgan during the late 1870s. Morgan's work contributed to American feminists' and European socialists' beliefs that one could improve society by looking back to the original state of humankind—the same sort of mirror on antiquity that Benjamin Franklin, Thomas Jefferson, and Thomas Paine had used in their analysis of American Indian societies a century earlier. In the nineteenth century as in the eighteenth, the image of the Indian served to provide antagonists to the European status quo with an alternative example of how societies ought to be organized and operated. The Iroquois Confederacy, a center of diplomatic activity in the eighteenth century, became the focus of Morgan's work in the nineteenth and so retained its pivotal position in the communication of these images between cultures.

Engels inherited Marx's copious notes on Morgan's *Ancient Society* (1877) and, after Marx's death in 1883, authored *The Origin of the Family, Private Property and the State* in 1886. Studying Morgan's account of “primitive” societies, with the Iroquois being his cornerstone, Engels provided what he believed to be an egalitarian, classless model of society that also provided justice between the sexes. In his work, Engels cited approvingly Morgan's assertion that “Democracy in government, brotherhood in society, equality in rights and privileges, and universal education, foreshadow the next higher plane of society to which experience, intelligence, and knowledge are steadily tending. It will be a revival, in a higher form, of the liberty, equality, and fraternity of the ancient gentes” (Grinde and Johansen, 1991, 230).

Engels' tone seemed to indicate that he had seen the future reflected in the past, and it worked. In this future, just as in Iroquois society, “Everything runs smoothly without soldiers, gendarmes, or police; without nobles, kings, governors, prefects, or judges;

Friedrich Engels was strongly influenced in his work on societal theory by Native American models. (Library of Congress)

prisons, without trials. All quarrels and disputes are settled by the whole body of those concerned . . . not a bit of our extensive and complicated machinery of administration is required. . . . There are no poor and needy. . . . All are free and equal—including the women" (Grinde and Johansen, 1991, 230).

Without making a specific citation, Engels evoked an image of Native American (likely Iroquois) society that was strikingly similar to Franklin's, a century before him: "All of the Indians of North America not under the dominion of the Spaniards are in that natural state, being restrained by no Laws, having no Courts, or Ministers of Justice, no Suits, no Prisons, no Governors vested with any Legal Authority. The Persuasion of Men distinguished by Reputation of Wisdom is the only Means by which others are govern'd or rather led—and the State of the Indians is probably the first State of all Nations" (Grinde and Johansen, 1991, 231).

Likewise, Jefferson wrote that American Indians had never "[s]ubmitted themselves to any laws, any coercive power or shadow of government. The only controls are their manners, and the moral sense of right and wrong. . . . There is an error into which most of the speculators on government have fallen, and which the well-known state of society of our Indians should have corrected. In their hypothesis of the origin of government, they supposed to have commenced in the patriarchal or monarchical form. Our Indians are evidently in that state of nature which has passed the association of a single family, and not yet submitted to authority of positive laws, or any acknowledged magistrate" (Grinde and Johansen, 1991, 231).

The "error" was the same one Marx and Engels had made in the first edition of *The Communist Manifesto*. Beholden to their own times and perceptions, Marx and Engels in 1848 had yet to shed their Eurocentric notions that history had begun with patriarchal, monarchical governments. Imagine how the discovery of societies that operated differently must have fascinated Marx, Engels, and the early feminists—much as it earlier had intrigued some of the United States' major architects, whose intellectual heritage we can trace back, in remarkably similar words, to Montaigne, Locke, Rousseau, among others, as well as to the American Indian confederacies (among other non-European societies), which provided the raw observational material for the philosophers and the instigators of Enlightenment-era revolutions.

Having rediscovered the "mother-right gens," Engels could scarcely contain himself: "It has the same significance for the history of primitive society as Darwin's theory of evolution has for biology, and Marx's theory of surplus value for political economy. . . . The mother-right gens has become the pivot around which this entire science turns" (Grinde and Johansen, 1991, 231).

Episcopal Church

The Episcopal church, a Protestant denomination, played a major role in the implementation of the Peace Policy to assimilate Indians into American society during the late nineteenth century.

The Episcopal Church of the United States of America was established in 1783 as the church for American Anglicans after the achievement of independence from Great Britain. The key features of this denomination are its governance by a General Convention selected by members and the reliance on bishops to define the work of the church in their individual geographic areas, known as dioceses.

International Anglican missionary organizations were of little consequence in the United States because the church developed its own organization for foreign and domestic missions in 1820. Episcopal mission work with Indians had the twin goals of Christianization and assimilation of Native Americans achieved through the development of Indian clergy and reservation-based schools. The emphasis on education also was a part of the church's foreign missions and its outreach to freedmen in the post-Civil War South.

Approximately two-thirds of the Episcopal church's Indian work has been and remains in South Dakota, with missions to the Navajo the most prominent of its other efforts. The focus on the Sioux of South Dakota was the result of the work of Bishops H. Benjamin Whipple of Minnesota in the 1860s and William Hobart Hare, who was named Bishop of the Niobrara District in 1873 and made responsible for all Episcopal missions to the Sioux within the Great Sioux Reservation.

The Right Reverend Mr. Whipple gained national recognition for his humane response to Indian needs following Sioux attacks on Minnesota towns in 1862. His comments helped people to distinguish between active participants and innocent Indian neighbors in the face of the general tendency to classify all Indians as hostile. Episcopal missionaries fostered by Whipple in the years before this conflict accompanied the Indian communities when they were removed to new reserves along the Missouri River. These events made it logical for the administrators of President Grant's Peace Policy to assign the Episcopal church a major role among the Sioux in the trans-Missouri West.

The church responded to the new U.S. policy by creating the Niobrara jurisdiction to administer its work with the Sioux. William Hobart Hare, who was

serving as secretary for the committee overseeing foreign missions, was consecrated Bishop of the Niobrara in 1873 after Bishop Whipple rejected the extension of his ongoing responsibilities to a new region.

Bishop Hare continued the effort of Bishop Whipple to develop Indian clergy to minister to Native people. In addition, he elevated the role of the Episcopal church among the Friends of the Indians. His invitation to Herbert Welsh, an artist and social reformer, and Henry Pancoast, a lawyer, in 1882 provided a stimulus to the creation of Indian Rights Association. Hare's writings appeared in national publications and his voice was heard during meetings of the Lake Mohonk Conference. His advocacy for assimilation included support for the breakup of the Great Sioux Reservation into smaller reserves and the allotment of Indian land into individual holdings. His term of service ended with his death in 1909.

The onset of the twentieth century ended the heroic age of Episcopal missionary work among Indians. Financial support from the federal government for sectarian schools began to decline in the late nineteenth century; local and denominational sources of funds could not make up the difference. Furthermore, national attitudes toward race turned against assimilation around the start of the twentieth century. A shift toward racism occurred in the wake of American imperial ventures overseas and the onset of segregation in the South. At the same time, growing national support for cultural pluralism reduced support of assimilation by emphasizing the need to respect cultural differences. Government policies that reduced or eliminated the use of tax dollars for mission schools hit the Episcopal church's missionary work harder than the later passage of the Indian Reorganization Act of 1934, which sought to restore the traditional spiritual perspectives of Indians.

The evaluation of the missionary efforts of the Episcopal church in the early twenty-first century is mixed. Data suggest many American Indians are rejecting Christianity and turning more to traditional expressions of spirituality. Within the church are now a number of Indian clergy; in the years since the consecration of Harold Jones as the first bishop of Indian heritage, the number of Native bishops has grown. A series of face-to-face meetings connect Bishop Jones directly to the efforts of the Indian clergy created by Bishops Whipple and Hare.

The national archives of the Episcopal church are located on the campus of the Episcopal Theological

Seminary of the Southwest in Austin, Texas. Each diocese has its own archives whose locations have been determined locally.

Erasmus, George Henry

George Henry Erasmus, born in 1948 in Rae-Edzo, North West Territories, is widely known as a Canadian crusader for Native rights and self-government. Erasmus, who holds seven honorary doctorate degrees, came into public prominence in Canada during the early 1970s as the leader of the Indian Brotherhood of the North West Territories. He went on to become the president of the Dene Nation, the national chief of the Assembly of First Nations, and cochair of the historic Royal Commission on Aboriginal Peoples. All his life he has fought for the rights of Native peoples to control their own lives and their own lands.

A Dene raised in Yellowknife, Erasmus witnessed the impoverished plight of his people and has fought to break the cycle of alcoholism, poverty, and dependence on government handouts by advocating political sovereignty. Erasmus became a leader in the NWT Indian Brotherhood, and, at twenty-eight, he became president of the Dene Nation, a position he held for seven years. He voiced crucial environmental and land title concerns on behalf of the Dene people during the Berber pipeline inquiry in 1974, when a pipeline was being proposed to carry oil through the Mackenzie River Valley in the North West Territories. In 1975, Erasmus advocated for the historic Dene Declaration, which declared the sovereignty of the Dene Nation.

In 1985 Erasmus was elected as national chief of the Assembly of First Nations, Canada's largest Native organization. The Assembly of First Nations was born out of the National Indian Brotherhood and represents 630 First Nations communities in Canada. His goals were to unite the First Nations of

Canada with the Métis and Innuits and to negotiate with the provincial and federal governments on behalf of all Native peoples in the country.

As national chief, Erasmus participated in the First Ministers Conferences on constitutional matters directly affecting aboriginal peoples of Canada. He became known there as Canada's eleventh premier. At the final conference, in 1987, the federal and provincial governments unanimously failed to recognize the inherent right of self-government for aboriginal peoples. Despite this roadblock, Erasmus and the Assembly of First Nations won support from some of the provinces and accomplished a heightened awareness of issues affecting Native peoples. Under Erasmus the public profile of the AFN rose to new heights.

Erasmus was reelected as national chief in 1988 and served until 1991. During this time he brought many aboriginal issues to the attention of the Canadian public. In one speech he expressed the frustration and anger of Native peoples toward government inaction. He warned that, if politicians did not seek peaceful solutions with his generation of leaders, the next generation may resort to violent political action. In 1990, his warning was realized in the Oka Crisis, a violent political standoff between Native peoples and the government over a proposed golf course expansion on Mohawk burial grounds.

In 1991, Erasmus was appointed as cochair to the Royal Commission on Aboriginal Peoples along with Judge René Dussault to hear from aboriginal peoples in Canada and recommend solutions to ongoing problems. After five years of hearings and studies, the Commission recommendations included that a distinct body of aboriginal government should exist within the Canadian government, that aboriginal nation governments should be given province-like power, and that the Department of Indian and Northern Affairs should be abolished and replaced with a Department of Aboriginal Relations and a Department of Indian and Inuit Services. Critics in the Canadian government rejected the recommendations as too costly and unrealistic.

Despite government inaction on issues he advocates, Erasmus is a highly respected leader. He was made an officer of the Order of Canada in 1999, after being appointed as a member in 1987. He has also been the Canadian delegate to the World Council of Indigenous Peoples.

In 1998, Erasmus became the head of a new organization, the Aboriginal Healing Foundation. The multimillion-dollar fund for the foundation was

the result of a contribution from the Canadian government as a statement acknowledging its role in inflicting damage on Native peoples through the residential school system. The purpose of the foundation is to address the legacy of physical and sexual abuse suffered by the students of the residential schools.

Erdrich, Louise

Louise Erdrich is an international writer of fiction, poetry, and nonfiction, and she presently resides in Minneapolis, Minnesota. As the oldest child, she was born in Little Falls, Minnesota on June 7, 1954, and named Karen Louise by her father, with an Anglicized form of her German grandfather's name [Ludwig Erdrich (1895–1962)]. Since she was a girl, her name was Americanized to Louis and feminized to Louise. Her parents are Rita Gourneau and Ralph Louis Erdrich, who still reside in Wahpeton, North Dakota. She is an enrolled member of the Turtle Mountain Band of Chippewas residing at the Turtle Mountain Reservation in North Dakota, just south of the international border between Canada and the United States. Members of this community include Anishinabe (Ojibway or Chippeway), and Cree/Métis people. Erdrich's father is a first-generation German American, and her mother is of

Anishinabe/Cree/Métis descent. This family history informs Erdrich's writings, and her stories come from these places and the families who reside there.

To date, Erdrich's life can only be described as meteoric and tragic, greatly influenced as she was by her marriage in 1981 to another German American (who was also of Irish descent), Michael Dorris (1945–1997). Dorris was raised by his mother and her two sisters, named Burkhardt, in Kentucky after his father apparently died in Germany as an American serviceman in 1945. Dorris was Erdrich's teacher and collaborator in the 1980s and 1990s, and eventually he became her literary agent. A writer as well as professor and chair of the Native studies program at Dartmouth College, Dorris was separated from Erdrich in the mid-1990s and subsequently committed suicide in April 1997. He left his three older adopted children and his three young daughters from his marriage with Louise.

Erdrich's literary works include both fiction and nonfiction, poetry, and children's books, as well as eleven collections of stories in the form of novels: *Love Medicine* (1984, republished with additional material in 1993), *The Beet Queen* (1986), *Tracks* (1988, with Michael Dorris), *The Crown of Columbus* (1991), *The Bingo Palace* (1994), *Tales of Burning Love* (1996), *The Antelope Wife* (1998), *The Last Report on the Miracles at Little No Horse* (2001), *The Master Butchers Singing Club* (2003), *Four Souls: A Novel* (2004), and *The Painted Drum, A Novel* (2005). Her poetry has been published in the following volumes: *Jacklight: Poems* (1984), *Baptism of Desire: Poems* (1989), and most recently *Original Fire: Selected and New Poems*. The last provides the images and part of the German family history, which finds its way into her *The Master Butchers Singing Club*. Her nonfiction writings include *Route 2* (1991, with Michael Dorris), *The Blue Jay's Dance: A Birth Year* (1995), and most recently *Books and Islands in Ojibwe Country* (2003). She has also published children's books: *Grandmother's Pigeon* (1996), *The Birchbark House* (1999), and *The Game of Silence* (2005). She illustrated the latter two works. Many other stories have been published in literary and other magazines and then often republished in the collections of fiction noted above. Erdrich has two clans on her mother's side of her family, both of which are significant. On her Anishinabe side, Erdrich is a Be-nays, a bird of the Great Blue Heron (Crane) Clan. In the Anishinabe clan system, the birds are spiritual leaders. On her mother's side of the family, she is also Cree/Métis of the Bear Clan. Erdrich has described her family

history in her autobiography of a birth year, *The Blue Jay's Dance*. Her great-grandmother on her mother's side was a "pure Canadian" named Virginia Grandbois (literally "Virginia of the large forest"). She reported on her family history that in 1782 "All land west of the Appalachians was still Indian territory and the people from whom I am descended on my mother's side, the Ojibwa or Anishinabe, lived lightly upon it, leaving few traces of their complicated passage other than their own teeth and bones. They levered no stones from the earth. Their houses, made of sapling frames and birchbark rolls, were not meant to last." There was no international border between Canada and the United States. In 1882 things had been altered: "The last of the Indian treaties were signed, opening up the West. Most of the Anishinabe were concentrated on small holdings of land in the territory west of the Great Lakes. The Turtle Mountain people wore trousers and calico dresses, drove wagons, spoke their own language, but also attended Holy Mass." More than one hundred years later, her maternal grandfather Patrick Gournau, a former tribal chair, passed away. Erdrich then went home to Turtle Mountain—always border country inhabited by the Anishinabe, Cree, and Métis—for the funeral at St. Ann's Church. She described the graveyard: "The graves of Ojibwa, Cree, and Mitchif Catholics, guarded by statutes of cast concrete and plastic, march up a windy hill. Our Catholic great-great-grandparents are buried behind the church, and the pagans, the traditionals, lie yet in another graveyard, where the uneven markers are crowded by sage and wild prairie rose." In the section entitled "Three Photographs," Erdrich provides a brief glimpse into the richness of the mother's family history. "Mary Lefavor," my grandmother—Ojibwa, French, and Scots [and certainty Métis/Cree], perhaps a descendent of the Selkirkers of Rudolph's land (Canada)—stand beside a fellow first communicant."

As a youngster growing up in Wahpeton, North Dakota, Erdrich was influenced by her father, who paid her a nickel for each story she wrote. Ralph Erdrich taught at the Bureau of Indian Affairs boarding school in the town, and thus none of the family's children were allowed to attend that school. Louise and her brothers and sisters went to the local schools in Wahpeton in what has been described as a fairly diverse community of German-Americans, Norwegian-Americans, and Native Americans residing along the banks of the Red River. After completing

high school, Erdrich worked at many small short-term jobs in the American West, and these experiences have found their way into her works of fiction. At the age of twenty-eight, she applied to Dartmouth College and became one of the first women admitted to the first coeducational class in the history of that college. (The same year [1972] Dorris came to Dartmouth and began the Native studies program.) After graduation, Erdrich returned home and spent some time teaching poetry in the local community. Returning to the East, she entered the graduate writing program at Johns Hopkins University in 1976, and, upon graduation, remained in the eastern United States writing poetry and working at various writing jobs. She returned to Dartmouth in 1979 to give a poetry reading and to renew her acquaintance with Dorris. For the next few years, Erdrich was a resident at New Hampshire's Macdowell Colony and then a visiting fellow and writer in residence at Dartmouth College. After her marriage, Erdrich moved from the writing of poetry to fiction, taking the images and the characters from her poetry and writing stories that were initially published in various literary magazines.

Her breakthrough came in 1981 when she won the Nelson Algren fiction contest with her story "The World's Greatest Fisherman," which is a central story in her first novel, *Love Medicine*. This work began her North Dakota series of fictional works, which have often been described as novels. In fact, her fictional works are in the form of interconnecting stories about aboriginal and nonaboriginal people that intersect for the most part with aboriginal places. Erdrich's writings can be roughly and rather arbitrarily divided into two phases, which include those published prior to 1996 and those published thereafter. The former were published in various forms of collaboration with Dorris before they were separated. The latter include those published since that time. All of her fictional collections have a dominant theme of Earth, Water, Air, or Fire.

Erickson, Leif

Two ancient Norse sagas, *Erik's Saga* and *The Greenlanders' Saga*, describe the lives of Leif Erickson and his father, Erik the Red. Erik the Red was a notorious outlaw, who, when banished from Norway for murder, moved to Iceland where he started a family. His oldest son, Leif, was born in Iceland at the end of the eighth century. When Leif was a child, Erik was once again tried for murder and banished. Leaving his family in Iceland, Erik set out to explore the western sea. One thousand miles to the west of Iceland, he encountered a large landmass with good pasturage along its southern coast and inner fjords. He spent three years in this new land before returning to Iceland. Upon his return, he organized a group of colonists, including his family, to establish a colony in the new land, which he called Greenland.

Despite its name, Greenland has a harsh and unforgiving climate. When the settlers arrived, they found only a few wind-stunted trees and more than 80 percent of the land covered with ice year-round.

As leader of the Greenland settlement, Erik chose the best farm site for himself. He established a farm, Brattahlid, on the southern tip of the island. Erik's four children grew up at Brattahlid, where they learned the skills necessary to survive in the far north. Eventually, Leif married and had a son. After his father's death, Leif took over management of Brattahlid.

To survive in Greenland, the medieval Norse exploited all possible means of subsistence. They trapped, gathered wild plants, fished, and hunted. When wild resources were scarce, their farms helped sustain them. Considering the difficulty of life in Greenland, it is easy to understand why the Norse Greenlanders continued to search for other lands to colonize.

Around the year 1000, Leif outfitted a ship with more than thirty oarsmen and set out to explore lands to the west of Greenland. The sagas contain such a detailed description of this voyage that they have allowed modern scholars to retrace Erickson's path. His ship most likely traveled north up the western coast of Greenland, then crossed the Davis Strait to Baffin Island. Leif and his men rowed a small boat ashore on the Baffin coast, but, finding the land unsuitable, they returned to the ship and headed south to Labrador, and ultimately to a land Erickson named Vinland, which scholars believe was located on the Canadian island of Newfoundland.

Erik's Saga tells us that Erickson and his men found Vinland so appealing and hospitable that they built a large sod house there where they spent the winter. The sagas recount that Erickson named the land Vinland, meaning "land of wine," because he found grapes growing there. This element of the sagas has been hotly debated, however. Although the ruins of a Norse settlement that conforms closely to saga accounts have been discovered on Newfoundland, the ruins lie nearly 1,000 miles north of today's vines. Several theories have been offered to explain this inconsistency. The historian Helge Ingstad has suggested that the name *Vinland* is derived not from the Old Norse term for "wine," but from a similar Norse word meaning "meadow." According to this theory, the story about the grapes was a late addition to the sagas, inserted to explain the origin of Vinland.

Though they likely intended to do so, the Norse Greenlanders were not able to establish a permanent Vinland settlement. This was due at least in part to conflict between the Norse and the Native Newfoundlanders. Artifacts excavated at the L'Anse aux

Meadows Norse settlement site in Newfoundland indicate that Beothuk Indians and Dorset Eskimos occupied the area at the time of the Norse settlement. The sagas tell of conflicts between the Norse and the Natives. The Norse, who feared the Natives, were known to attack with little provocation. This resulted in vengeance attacks by the Natives, who vastly outnumbered the settlers.

Although archaeologists cannot prove that the ruins at L'Anse aux Meadows are the remains of Leif Erickson's Vinland settlement, it is clear that the Norse visited North America 500 years before Columbus. Yet Columbus and the Norse saw their discoveries in a completely different light. Unlike Columbus, the Norse did not know that they had discovered a new continent, and they received neither fame nor lasting wealth from their discovery.

Eskiminzin

A leader of the Arivaipa Apache band in the late nineteenth century, Eskiminzin guided his people through the turbulent first years of American colonialism in southern Arizona. Known by various names, including Es-kin-in-zin and Skimmy, "Eskiminzin" is an approximation of the Apache name, Haské Bahnzin (Anger Stands Beside Him). Haské Bahnzin lived a remarkable and difficult life, not only as a leader of a Native community threatened from every corner, but also as a farmer, warrior, husband, diplomat, rebel, father, and prisoner.

Although Haské Bahnzin was born into the Pinal band of western Apaches, he married into the closely related Arivaipa band, or *tcéjiné* (Dark Rocks People), who farmed and gathered along Arivaipa Creek and the San Pedro River in southern Arizona. Even decades after his death, Haské Bahnzin was remembered as a generous man, who welcomed rel-

atives to gather in the San Pedro Valley. Despite the abundance of the land, Apache lifeways were not entirely tranquil. Haské Bahnzin certainly participated in the violence of war and raiding that pitted Apaches against the Mexican and American empires throughout the 1800s.

In February of 1871, after an especially harsh winter, Haské Bahnzin arrived at Camp Grant, a U.S. Army installation on the San Pedro River, asking for peace. Several months later, more than 400 Apaches had surrendered to the Army and were living peacefully at *gashdla'á cho o'aa* (Big Sycamore Stands There), five miles from Camp Grant. Nearby Chiricahua Apaches continued raiding and Tucson leaders mistakenly believed those camped at *gashdla'á cho o'aa* were responsible. In a surprise attack on *gashdla'á cho o'aa*, the Tucsonans and their Tohono O'odham allies killed more than 100 Apaches and took close to thirty children as slaves. Haské Bahnzin lost most of the Arivaipa band, as well as his own wife and children, in the Camp Grant massacre.

In the wake of the massacre, Haské Bahnzin returned to a life in the mountains. During the months that followed, people accused him of committing murders and attacks; however, none of these accusations have been convincingly proven. In 1872, he and his fellow tribesmen returned to Camp Grant, this time to have peace talks with government authorities, Tucson businessmen, and Tohono O'odham leaders. From these discussions, Eskiminzin agreed to move north and settle along the San Carlos River.

Life at San Carlos was not altogether uneventful for Haské Bahnzin. In 1874, he was arrested as a prisoner of war. Later released, he began a farm and continued to mediate among Apaches and government officials. John P. Clum, an Indian agent at San Carlos, befriended Haské Bahnzin and took him across the continent to Washington, D.C., in 1876. He made the trip east again in 1888 to meet President Grover Cleveland.

In 1877, Haské Bahnzin moved to *nadnliid cho* (Big Sunflower Hill), now the town of Dudleyville, in the San Pedro Valley. There he settled down to a successful life as a farmer and rancher. Shortly after he built a home, three or four additional Apache families joined him, also erecting houses and fences and cultivating the land. However, later that year, an Indian agent warned Haské Bahnzin that 150 armed citizens were coming to kill him. With the memory of the massacre at Camp Grant, he fled. He later said Tucsonans stole 513 sacks of grain, 523 pumpkins,

and thirty-two cattle. After his escape, Haské Bahnzin was asked if he might return to San Pedro but replied, "I would not be safe there and would feel like a man sitting on a chair with some one scratching the sand out from under the legs" (Clum 1929, 22).

Haské Bahnzin went back to San Carlos and tried to begin a new life. Several years later, he was arrested due to vague accusations of aiding Apache fugitives. Sent to Mount Vernon Barracks, Alabama, in shackles, he was eventually released with the help of his old friend, John Clum. But only a year after gaining his freedom, on December 16, 1895, Haské Bahnzin died of chronic stomach pain in obscurity and poverty. The site of his grave remains unknown today.

Franklin, Benjamin, Native American Influences

Beginning nearly two generations before the Revolutionary War, the circumstances of American diplomacy were such that opinion leaders of the English colonies and of the Iroquois Confederacy were able to meet to discuss the politics of alliance and the nature of confederation. Beginning in the early 1740s, Iroquois leaders strongly urged the colonists to form a federation similar to their own. The Iroquois' immediate practical objective was the unified management of the Indian trade and prevention of fraud. The Iroquois also stressed that the colonies should have to unify as a condition of alliance in the continuing "cold war" with France.

At a 1744 treaty council in Lancaster, Pennsylvania, Cannasatego (tadadaho, or speaker, of the Iroquois Confederacy) told colonial delegates: "Our wise forefathers established Union and Amity between the Five Nations. This has made us formidable; this has given us great Weight and Authority with our neighboring Nations. We are a powerful Confederacy; and by your observing the same methods our wise forefathers have taken, you will acquire

Benjamin Franklin achieved worldwide renown as a writer, scientist, statesman, and diplomat. (National Archives and Records Administration)

such Strength and power. Therefore whatever befalls you, never fall out with one another" (Van Doren and Boyd, 1938, 75).

Franklin probably first learned of Canassatego's advice as he set his words in type. Franklin's press issued Indian treaties in small booklets that enjoyed a lively sale throughout the colonies. Beginning in 1736, Franklin published treaty accounts on a regular basis until the early 1760s, when his defense of Indians under assault by frontier settlers cost him his seat in the Pennsylvania Assembly. Franklin subsequently served the colonial government in England.

While Franklin first read the Iroquois' urgings to unite as a printer of Indian treaties, by the early 1750s he had become directly involved in diplomacy. Early in a distinguished diplomatic career that would later make him the United States' premier envoy in Europe, Franklin attended a 1753 treaty

council at Carlisle, Pennsylvania. At this meeting with the Iroquois and Ohio Indians (Twightees, Delawares, Shawnees, and Wyandots), Franklin absorbed the rich imagery and ideas of the Six Nations at close range. On October 1, 1753, he watched the Oneida chief, Scarrooyady, and a Mohawk, Cayanguileguoa, condole the Ohio Indians for their losses against the French. Franklin listened while Scarrooyady recounted the origins of the Great Law to the Ohio Indians.

Even before the 1754 Albany Conference, Benjamin Franklin had been musing over the words of Canassatego. Using Iroquois examples of unity, Franklin sought to shame the reluctant colonists into some form of union in 1751, when he engaged in a hyperbolic racial slur (subsequent evidence shows that Franklin had a healthy respect for the Iroquois): "It would be a strange thing," he wrote in 1751, "if Six Nations of Ignorant savages should be capable of forming such an union and be able to execute it in such a manner that it has subsisted for ages and appears indissoluble, and yet that a like union should be impractical for ten or a dozen English colonies . . ." (Smyth, 1905, 3: 42).

At about the same time, Franklin became an early, forceful advocate of colonial union. All of these circumstantial strings were tied together in the summer of 1754, when colonial representatives, Franklin among them, met with Iroquois sachems at the Albany Congress to address issues of mutual concern and to develop the Albany Plan of Union, a design that echoes both English and Iroquois precedents and that would become a rough draft for the Articles of Confederation a generation later.

Geronimo

The legendary war leader and medicine man Geronimo was born a Bedonkohe Apache in the 1820s at a site near the upper Gila River on the Arizona–New Mexico border (Debo, 1976, 7–9). Named Goy-athlay or Goyahkla, he was the chief's grandson and, although not specifically groomed to become a chief, his future activities would haunt American history. "Geronimo" is Spanish for St. Jerome, the Catholic saint of lost causes, whom Mexican troops were said to have invoked when faced with raiding parties led by him.

Young Geronimo followed established customs: He learned how to run far and fast, how to carve bows and arrows, how to hunt small game, and, importantly, how to survive. He served an apprenticeship on four hostile expeditions, becoming a horseholder for his mentor, taking care of the warriors' horses, fetching water and wood, cooking, and acting as a sentinel. Once he was accepted into the warriors' circle, Geronimo married Alope, his long-time love. Three children were born into their marriage.

Because the Bedonkohe were a small group, they frequently allied with the Mimbres Apaches under the leadership of the great Mangas Coloradas who, in 1850, led a trading venture to Janos, Mexico; Geronimo participated. While the men were away, Mexicans stole up to the encampment and killed everyone, including Geronimo's mother, Alope, and the three children (Debo, 1976, 35). His burning hatred of Mexicans never abated and motivated revenge killings for the rest of his life.

Geronimo may have participated in the Battle of Apache Pass in 1862, and certainly took part in other conflicts during those years. Other Apache leaders, such as Mangas Coloradas, Cochise, Juh, and Victorio, overshadowed Geronimo but he became more and more skilled at warfare and lived among Cochise's followers. In May 1871 he had a hand in a

fierce Arizona battle where Lieutenant Howard B. Cushing was killed (Thrapp, 1991, 548).

In 1877, Geronimo, by now notorious, joined Victorio's band on the Ojo Caliente Reservation in New Mexico. He was arrested there and put in irons by the agent, John Clum. With his followers he was moved to the San Carlos Apache Reservation, beginning a series of breakouts and surrenders that continued until the final capitulation in 1886. One year later, 1878, Geronimo was once again in Mexico and a party to raids conducted by Juh, chief of the Nednhi Apaches. The group, including Geronimo, settled for a time on the San Carlos Reservation. Breaking out in late 1881, Juh and Geronimo took their followers south into the Sierra Madre Mountains of Mexico, where they remained for one year. A sensational raid back to San Carlos, planned by Juh and Geronimo, occurred in 1882 when they extracted the Native leader Loco (at rifle point, it was said) along with several hundred of his people, and then fought with them during several skirmishes with Mexican troops. Geronimo voluntarily surrendered in early 1884 but left San Carlos about seventeen months later, by which time his reputation as a fearsome war leader had solidified. Led by Cochise's son, Naiche, and Geronimo, the group remained free until late March of 1886 when increasing military pressure caused the Apaches to yield to the Americans, instead of the Mexicans, who had promised to kill them on sight. During the arranged submission to General George Crook at Cañon de los Embudos, a site just south of the international border, Geronimo spoke twice. His poignant words have been recorded and are now summarized:

There is one God looking down on us all. We are all children of the one God. God is listening to me. The sun, the darkness, the winds, are all listening to what we now say. I surrender myself to you . . . Once I moved about like the wind. Now I surrender to you and that is all . . . (Debo, 1976, 262).

However, a Tombstone, Arizona, liquor dealer named Tribolett entered the Apaches' encampment and supplied enough whiskey to intoxicate Geronimo and others (Debo, 1976, 264). Worried that the Apaches' absence from the Southwest would cause a drop in his profits—5,000 thirsty soldiers would be removed from the area if the Indians surrendered—Tribolett was only acting in his own self-interest. Also, he lied to Geronimo and said the

Geronimo was a legendary Apache war leader and medicine man. (National Archives and Records Administration)

soldiers would kill them at dawn unless they fled immediately.

Believing Tribolett and drinking their fill, the Naiche/Geronimo people left Embudos and remained free for the next six months, continuing to raid across the Southwest but U.S. military activity in the same region took its toll. The water holes were guarded, the wild animals killed, and the hunt for the Apaches continued relentlessly. The Indians were hungry, sick, and weary of running when, in September 1886, Geronimo sent word to Fort Bowie that he was ready to surrender. By this time General Crook had been replaced by General Nelson Miles, who agreed to meet Geronimo, Naiche, and their followers in Skeleton Canyon, Arizona. On September 4 the Apaches put down their guns for the last time. Miles quickly separated Naiche and Geronimo from their followers (Debo, 1976, 293).

The next morning, six Apaches were missing, having escaped during the night. Everyone else

remained with Naiche and Geronimo at Fort Bowie until September 8 when, along with a military guard, they rode their horses to Bowie Station and boarded a train for Florida. At Jacksonville, the men were separated from their women and children and transferred to a shuttle that took them to Pensacola. Put into boats, the seventeen warriors landed on Santa Rosa Island and were marched to Fort Pickens while their families joined other imprisoned Apaches at Fort Marion, 300 miles to the east. The promise by the American government that the Apaches would be reunited with their previously incarcerated friends and relatives was disregarded.

Fort Pickens had been abandoned for years and was in disrepair, a condition the Apaches were ordered to fix. Geronimo labored beside the warriors, weeding the parade ground, yanking grass out of the walls, cutting trees, digging latrines and cisterns, and walking on the beach under guard to collect firewood (Stockel, 1993, 105). The men cooked over fireplaces inside cavernous casemates with sandy floors, and slept on bags of old straw. Aided by their loyal friend, interpreter George Wratten, the men communicated with their families through letters including one from Geronimo to his wives and children.

How are you at Fort Marion? How do you like it there? Have you plenty to eat, and you sleep and drink well? Send me a letter and tell me all the news. I am very satisfied here but if I only had you with me again I would be more so . . . As sure as the trees bud and bloom in the spring, so sure is my hope of seeing you again . . . Do what is right no matter how you may suffer. Write me soon a lovely letter (Skinner, 1987, 151).

In response to the many deaths at Fort Marion, on April 27, 1887, the prisoners of war were put on trains to be transferred to Mount Vernon, Alabama, about twenty-seven miles north of Mobile. Joined in May 1888 by the men from Fort Pickens, families were at long last together again. Geronimo became a justice of the peace, earning about \$10 per month to enforce discipline. With proper instruction from the military, the former terror of the Southwest became mellow and sympathetic, conducting his office in a professional manner. He even cooperated with missionaries, allowing an organ to be placed in the breezeway between the two parts of his cabin.

As a consequence of public pressure regarding the continuing large number of deaths among the Alabama prisoners of war, the government relocated the surviving Apaches to Fort Sill, Oklahoma, in 1894 where they began the slow climb back to health. Under the guidance of Dutch Reformed missionaries, many Apaches adopted the Protestant religion, but Geronimo resisted until one day in the summer of 1902 when he sat in the front row of a camp meeting, listening intently and carefully considering the minister's message. In January 1903 he sat through another sermon, jumped up at its conclusion and said, "The Jesus road is good. Go right into it (Stockel, 2004, 192)." After studying catechism and participating in the requisite religious exercises, Geronimo became a Christian.

Early in February 1909, at about age eighty, he rode his horse into the nearby town of Lawton and convinced a white man to purchase a bottle of whiskey for him. Drunk, he fell on the way back to Fort Sill and lay under a tree. A heavy rain soaked him to his skin, resulting in pneumonia. Found by a military patrol early the next morning, Geronimo lived for three more days. He is buried in the Apache Prisoner of War Cemetery at Fort Sill.

Gorman, R. C.

Rudolph Carl Gorman is one of the best-known Navajo (Diné) painters, famous for his paintings, lithographs, serigraphs, painted pottery, and sculptures of graceful female figures. He is a member of the *Clauschii'* (Red Bottom People) Clan and born into the *Dibé lizhíni'* (Black Sheep People) Clan. Born

R. C. Gorman was a famous Navajo painter and sculptor. (Dave G. Houser/Corbis)

on July 26, 1931, in Chinle, Arizona, he was the eldest son of Carl Nelson Gorman, a Navajo code talker, and Adella Katherine Brown. His mother and maternal grandmother, Zonnie Maria Brown, raised him at Black Mountain, Arizona, along with his five siblings. Gorman learned Navajo traditions, songs, prayers, and respect for the land from Brown. He also followed in the footsteps of his father, who was one of the first painters to break away from the 1930s studio school. Like him, R. C. Gorman developed his own unique artistic style and opened the door to a generation of painters who followed him.

Gorman began painting at age three and was later encouraged by a teacher at the Presbyterian Mission School, Jenny Lind, to pursue a career. He attended Northern Arizona University from 1950 to 1951 and from 1955 to 1956, studying literature and art, but never received an undergraduate degree. Between his periods of study, he served for four years in the U.S. Navy during the Korean War. He

later studied art in Mexico (1958), where studying the works of Diego Rivera and Rufino Tamayo changed his vision and style. In 1962 he moved to San Francisco to promote his artistic career, before moving permanently to Taos in 1968. Gorman steadily gained an international reputation over the last fifty years; his works have been widely collected and can be seen in over 100 museums in the United States, Asia, and Europe.

Gorman painted in a number of genres (watercolor, etchings, acrylics, oils, paper casts, silk-screens, stone lithographs), depicting several highly stylized subjects and producing abstracts: landscapes, nightscapes, animals, spiritual beings, and people. His distinctive themes reflect important places and beings in Dinétah, the Navajo homeland, as well as times of the day and seasons reflecting and commenting on central Navajo values. His best-known works are of the female figure, often portraits of friends and relatives who are generously

proportioned, barefoot, and draped in flowing traditional dresses, robes, and blankets common to the Navajo and Rio Grande pueblos. They are all women of strength and action. "I revere women. They are my greatest inspiration," he told an Associated Press interviewer in 1998 (Navajo Nation, 2005). This sentiment is appropriate for a member of a matrilineal society; Gorman depicts what is at the heart of Navajo society and culture: women. Gorman uses his grandmother as the focus of many of his early paintings and prints. Art lovers and many art critics say that his figures have mystique, character, strength, and lyricism and that he represents Native women in a positive manner, almost universalistic in intent. Other critics, however, dismiss Gorman's subject matter and painting style, with its warm, flowing lines and saturated colors, as unusually commercial, market driven, and stereotypical. They also dismiss Gorman himself as being interested in selling quantities of paintings rather than in pursuing innovative work. Gorman, in turn, satirically dismisses these later critics in his books and essays, poking fun at the pretentiousness of art criticism and connoisseurship.

Gorman in his later life was a prolific author and penned essays on Mexican art, petroglyphs, and cave paintings. He wrote an autobiography (Gorman, 1992) and a series of books on cooking and art, and he documented his genre in a series of books with several coauthors. He also revealed in his self-defined life style that some have called "bohemian"—complete with headbands and custom-tailored Hawaiian shirts (Obituary, 2005).

During the later half of his life, Gorman made his home in El Prado, New Mexico, near Taos and owned a gallery there, R. C. Gorman Navajo Gallery, in Taos, as well as the Nizhoni Gallery in Albuquerque, which sold his posters, lithographs, and publications. His great success as a businessperson provided him with the means to help others. In 2003 he gave his extensive library of over 1,200 books and a large collection of his art to Diné College to fulfill its guiding principle, *sa'ah naaghíí bik'eh hózhóón*, and to help preserve Diné culture, language, and history. The College of Ganado and Northern Arizona University presented him with honorary doctorates of humane letters.

Gorman passed away on November 3, 2005, at age seventy-four. In remembering him, Navajo Nation President Joe Shirley, Jr. called him the "Picasso of the Southwest" and "a child of the Navajo . . . He afforded us the opportunity to talk

about ourselves to the world. When they talked about him, they talked about us" (Navajo Nation, 2005, 1).

Great Lakes Intertribal Council

The origins of the Great Lakes Intertribal Council (GLITC) are rooted in the collective American Indian response of the early 1960s toward the federal policies of the 1950s. In 1945 the National Congress of American Indians (NCAI) was founded to help American Indian groups make effective use of the Indian Reorganization Act of 1934. By 1960, however, the NCAI had concentrated its efforts against Congress's 1950s termination policy and the related Voluntary Relocation Program of the Bureau of Indian Affairs (BIA). In response to that policy and in collaboration with the late Sol Tax (1907–1995), then an anthropology professor at the University of Chicago, the NCAI organized a forum open to any and all American Indians in an effort to redress the intent and collective effect of these policies.

In June 1961 the American Indian Chicago Conference (AICC) was hosted on the campus of the University of Chicago, culminating with the consensual document, "The Declaration of Indian Purpose." While reflecting the moderate perspective that American Indians should work within the existing federal system, it emphatically opposed the federal policies of the 1950s, upheld sovereignty,

asserted treaty rights as interpreted by Supreme Court Justice John Marshall, and spoke up on behalf of unrecognized and underserved American Indian groups. The AICC Declaration was later presented to President John F. Kennedy in a ceremony on the lawn of the White House.

Organizations such as the NCAI and the model for intertribal cooperation afforded by the AICC motivated Indian groups throughout the United States to form cooperative, regional organizations and associations to provide administrative support and to promote social, economic, and political ties. It was in the wake of the AICC that the GLITC emerged as a community action agency under the auspices of the recently established federal Office for Economic Opportunity (OEO). Still in its formative stage, the GLITC responded to the request of the OEO to serve as a vehicle for the delivery of services and programs to its member reservations and the rural Indian communities of Wisconsin.

As part of President Lyndon B. Johnson's War on Poverty, the OEO, although a new and innovative agency committed to grassroots development, found it difficult to overcome former bureaucratic tendencies. Generally speaking, however, the OEO provided the GLITC and its membership with a useful if sometimes frustrating lesson in dealing with federal agencies besides the BIA, as well as beneficial instruction in accessing sources of nongovernmental funding.

Operating under a mission statement to support its membership "in expanding sovereignty and self-determination," the GLITC now functions as a consortium of federally recognized American Indian groups that advocates for and provides services and assistance to its membership in Wisconsin, Michigan, and Minnesota. The consortium includes the Bad River Band of Lake Superior Chippewa (Wisconsin), Lac Courte Oreilles Band of Lake Superior Chippewa (Wisconsin), Lac du Flambeau Band of Lake Superior Chippewa Indians (Wisconsin), Red Cliff Band of Lake Superior Chippewa (Wisconsin), Sokaogon Chippewa Community (Mole Lake, Wisconsin), St. Croix Band of Lake Superior Chippewa (Wisconsin), Forest County Potawatomi Community (Wisconsin), Oneida Nation (Wisconsin), Ho-Chunk Nation (Wisconsin), Stockbridge-Munsee Band of Mohican Indians (Wisconsin), Menominee Indian Tribe (Wisconsin), and the Lac Vieux Desert Tribe (Michigan).

The GLITC is administered by a board of directors composed of a respective chair for each member,

along with representatives designated by each chair. The board conducts its business at regularly scheduled meetings once every other month at sites selected at previous meetings, usually held on a rotating basis at one of the membership headquarters. The day-to-day administrative and financial operations of the GLITC are conducted at the central office located in Lac du Flambeau, Wisconsin, where services are also coordinated.

As the respective local governing bodies of the GLITC membership have developed effective administrative capacities and continued the push for self-determination, they have also assumed increased responsibility for the administration and delivery of services to their own communities. The role of GLITC has therefore shifted from the direct delivery of services to its membership to supplementing and assisting local governing bodies in the administration and delivery of services, including health, aging, education, and economic development, and to political action including policy advocacy and intergovernmental relations. This is in keeping with the GLITC's mission to expand the sovereignty and self-determination of Native peoples as a collective entity comprised of independent members who are committed to gather in a self-governed forum to address, discuss, and resolve issues that require intertribal attention.

Handsome Lake

Before he became a visionary, Handsome Lake (Sganyadaí:yoh, Skaniadario, 1734–August 10, 1815) led the life of a typical, well-born Seneca man with family connections to other high-status individuals. His brother (called his half brother by many non-Native scholars) was the Seneca Gaian't'waka (Chief Cornplanter), while his nephew was Sagoyewatha (Red Jacket), the famed Seneca women's speaker to the men's Grand Council. Tradition states that Sganyadaí:yoh was born into the Wolf Clan at

Conawagas, a Seneca town on the Genesee River in New York located outside modern-day Avon. A sickly child, he was unlikely to have been nominated to any lineage title due to his poor health. However, the women of the Turtle Clan took pity on him and adopted him into their clan, promising titles. Sganyadaí:yoh means “beautiful” (i.e., handsome) “lake,” a reference to Lake Ontario. The term is not a personal name, but a position title of one of the Haudenosaunee Grand Council lineage (hereditary) chiefs of the Senecas.

Evolution of a Leader

As a youth, he became beloved of all, especially the women, whom he tirelessly protected, and the children, for whom he always had a story and a pouch filled with nuts bathed in maple syrup. A young woman quickly singled him out as husband material and asked her mother to arrange their marriage. As a responsible married man, he became even more popular, renowned for his good heart and strength of character. When a lineage sachem of the Wolf Clan died, the Wolf Clan Mothers quickly nominated him as successor, with the joyful permission of the Turtle Clan Mothers. To the astonishment of the Wolf and Turtle men, Handsome Lake assumed the title of the fabled sachem, Sganyadaí:yoh.

Before this stunning promotion, however, Sganyadaí:yoh was a “young man” (sometimes mis-termed “warrior” in non-Native texts), also a position to which men were appointed by the women. Sganyadaí:yoh was selected to participate in the French and Indian War (1754–1763), fighting with the British–League alliance against the French. Immediately after this war, he took part in the Pontiac resistance movement that opposed the British. As more Europeans poured onto the continent, squeezing the original inhabitants, the resultant crowding made for internecine Native strife over who was to occupy the ever dwindling lands of the East. Sganyadaí:yoh fought with his Seneca brothers against the Cherokees and Choctaws of the South, as the Haudenosaunees and the Algonquins were forced by the non-Native invasion to compete for land.

When the American Revolutionary War broke out in 1776, the Continental Army, knowing that it would not be able to fight on two fronts, urgently courted all eastern Native nations, begging them to remain neutral in this “family fight” with their “bad father,” King George III. In the summer of 1777 at the

annual meeting of the men’s Grand Council in Oswego, Sganyadaí:yoh sided with his brother, Gaiant’waka, in calling for neutrality. Eventually, however, after numerous lethal and unprovoked depredations against them by the colonial militias, the Senecas decided to go to war against the colonists. Sganyadaí:yoh submitted to the consensus, once more fighting for his people.

One morning in 1799, listening to his daughter sing a medicine song as she shelled the beans, Sganyadaí:yoh felt his consciousness slipping away. Staggering to the longhouse door, he collapsed into the arms of his relatives as his spirit wandered out of his body, floating out of the cabin and on to Sky World. Thinking her father dead, his daughter called her uncle Gaiant’waka and the rest of the village. Everyone was saddened by the news. His daughter dressed him in his burial robes, and notice went abroad that he was to be raised up (i.e., his lineage title was to be conferred upon a successor). Just then, a sachem and nephew of Sganyadaí:yoh, Taa’wonyas (the Awl Breaker), examined the body and refused to believe that Sganyadaí:yoh’s spirit had departed for good.

Handsome Lake as Visionary

Around noon the next day, Sganyadaí:yoh came out of his coma, telling his rejoicing relatives that his spirit had been visited by the Four Messengers of Sky World bringing to him the “four words” (or “matters”): *onega*, *gutgont*, *onoityeyende*, and *yondwiniyas swayas*. These four matters became the cornerstone of the Gaiwí:yo, and they consisted of prohibitions on the people. *Onega* means alcohol, the use of which was forbidden. *Gutgont* (okton) was the use of the negative spirit power, which, in the hands of the inept, did harm. (It is commonly, though inaccurately, given in English as “witchcraft.”) It, too, was outlawed. *Onoityeyende* was said by some to be the practice of poisoning enemies in secret, although others more benignly rendered it “love medicine,” while *yondwiniyas swayas* was “cutting the child off in the womb” or the use of birth control techniques, including abortion. These, too, were prohibited by the Gaiwí:yo.

In addition to this foundation, many more teachings came to Sganyadaí:yoh, including the condemnation of Christian missionaries. Notwithstanding this overt unfriendliness to Christian missions, Sganyadaí:yoh incorporated many Christian pre-

cepts, values, and attitudes into his Gaiwí:yo, including monotheism, sinfulness and public confession, and the submission of wives to husbands. How many of these ideas he consciously borrowed is unknown, although it is known that Sganyadaí:yoh had learned the mores and precepts of Christianity from his nephew, Henry Obail (Obeal), who had studied the Christian Bible under the Quakers in Philadelphia. However, unlike Jesus, Sganyadaí:yoh made no pretense of being a messiah or “son of God,” but rather claimed to be the speaker of “the Creator.”

Given the oppressive nature of his message for Haudenosaunee women—who had always controlled their own fertility, held their own councils, filled the majority of the positions as shamans, and owned all the fields and ran the clans—it is not surprising that the Clan Mothers blocked consideration of the Gaiwí:yo by the men’s council for almost fifty years. Its initial reception by the people in general was quite negative. Handsome Lake was particularly opposed by Sagoyewatha (the women’s speaker) and by his brother, Gaian’t’waka, who heckled his teachings and put as many obstacles in his way as possible. Sagoyewatha, speaking for the Clan Mothers, denounced Sganyadaí:yoh as an imposter passing off assimilation as tradition. Stung, Sganyadaí:yoh replied that the four messengers had just revealed to him that Sagoyewatha was scheming to sell off more Iroquoian land (an attack on the Clan Mothers, who owned the land).

From that point, tensions escalated between the Clan Mothers and the followers of Sganyadaí:yoh. Around this same time, the federal government of the United States granted the Quakers the de facto power to run the New York reservations in an early program of forced assimilation. Under this program, some people gradually became so culturally desensitized to Christian proselytizing that they stopped recognizing it at the base of the Gaiwí:yo, accepting the teachings as familiar. Others regarded the Gaiwí:yo as the lesser of two evils. It was clear that the missionaries and the occupying government would forcibly prevent the older religions from being practiced, whereas the Gaiwí:yo did retain numerous traditional elements that would otherwise have been lost, such as the annual round of ceremonies, many of the older oral traditions, a masculinized version of the clan kinship, the old marriage rites, the principle (although vitiated) of reciprocity, and ecological concepts with their attendant respect for nature.

The U.S. government had reorganized the councils, installing a new system so that new elections took place. Sganyadaí:yoh was reelected to his position on the Seneca council in 1801. His election emboldening him, Sganyadaí:yoh set out to destroy his critics, actually accusing Sagoyewatha (and by implication the Clan Mothers) of witchcraft. This foolhardy accusation quickly dashed much of his growing popularity. Along with his stance against birth control, this tactic greatly outraged the women and their numerous male supporters. Sganyadaí:yoh began losing face among the people. The strength of the reaction to his attack on Sagoyewatha caused Sganyadaí:yoh to backpeddle on the issues of birth control and witchcraft, emphasizing instead popular issues related to land rights and alcohol issues.

In 1802, Sganyadaí:yoh was among a delegation of Onondaga and Seneca representatives visiting the Capitol to meet President Thomas Jefferson. He lobbied hard for an end to the sale of liquor to the Haudenosaunees, as well as for an end to fraudulent land-grabbing. He was far more successful with the administration on temperance than on land retention. Jefferson prompted his Secretary of War (the department charged with Indian affairs) to write Sganyadaí:yoh a rather patronizing letter of support on behalf of the president on the issue of his temperance work. Sganyadaí:yoh was clearly acceptable to the Euro-American overlords, if not to the Clan Mothers and their supporters.

One of the women’s supporters was Gaian’t’waka, at whose town (Cornplanter’s Town) Sganyadaí:yoh had been living. The people at Cornplanter’s Town did not care how many letters of support he had from presidents and Quakers. By 1810, his detractors had become so numerous, and the situation so tense, that Sganyadaí:yoh was forced to move to Cold Spring, where he continued alienating people. Early in 1812, he moved to Tonawanda, taking along his chief supporters and his family, among whom was his grandson Sos’heowa, grandfather of Ely S. Parker, the first Indian Commissioner of Indian Affairs. Sos’heowa was to become Sganyadaí:yoh’s successor on the Grand Council upon his death in 1815.

Handsome Lake’s Final Years

During his four years at Tonawanda, he reflected on the great hostility that many had shown his teachings; being kicked out of two towns in rapid

succession preyed on his mind. Many say that he turned away from his own teachings during this time. It is certain that he had grown reluctant to tell about his visions or teach any more, distancing himself and, at times seeming to disclaim, his own revelations.

In his fourth year at Tonawanda, Sganyadaí:yoh was invited by the Onondagas to describe his “third call,” a death song. He was hesitant to comply with this invitation, because his third call was his quivering song. His spirit guides returned to him, however, and advised him to go. Based on this vision, he predicted his death just as he set off for Onondaga. As word spread of his death vision, many joined his trek. Sganyadaí:yoh became increasingly depressed as he approached Onondaga; he seemed almost smitten by fear. Before the assembly he was to address, he broke down, unable to sing and denying that a spiritual meeting was in progress at all. “We are just sitting around the fire,” he said (meaning that it was just a family gathering) and refused to teach. To cheer him up, the people played lacrosse, but Sganyadaí:yoh declined to watch and, again insisting that he was about to die, left the field.

His supporters took him to an Onondaga longhouse, forbidding all others to enter and swearing themselves to secrecy concerning events that took place within the longhouse. However, an Onondaga was hiding within and reported that, once inside, Sganyadaí:yoh fell into terrible distress, accusing himself of having been laggard in spreading his message and wishing that he had dared to tell *all* of the visions he had been given. (What those untold visions were, he did not reveal.) His spirit then fell quiet, leaving him once more; four days later, his body-soul followed. At eighty-two, Sganyadaí:yoh was dead.

The Longhouse Religion after Handsome Lake's Death

A half century after his death, Sganyadaí:yoh's legend outstripped his critics' complaints. Elders called a council to gather up his words, which Keepers (oral traditionalists) then committed to memory and knotted into wampum. (Sganyadaí:yoh had, himself, knotted wampum of his Gaiwí:yo.) He began to be called Sedwa'gowa'ne, meaning “our great teacher.” In 1848, a recital of the the Gaiwí:yo by Sos'heowa was taken down on paper for the first time at a mourning council in Tonawanda and translated for

Lewis Henry Morgan by Donehogä'wa (Ely S. Parker). In 1851, it was published in *The League of the Haudenosaunee*. In 1861, the Grand Council heard (accepted) the Gaiwí:yo as legitimate. At the turn of the century, Gawaso Wanneh (Arthur Parker), himself a descendent of Sganyadaí:yoh, published another transcription. In 1994, Chief Jacob Thomas provided yet another version of the Code.

Between Sganyadaí:yoh's death in 1815 and 1900, the Longhouse Religion flowered, garnering many supporters. By the turn of the twentieth century—a nadir for all Native groups—Gawaso Wanneh observed that the teachings of Sganyadaí:yoh were on the wane and that “true believers” numbered only a few hundred (Parker, 1919, 251). By the midtwentieth century, however, the Gaiwí:yo was being recited with great frequency on the New York reservations, and, with the general Native renaissance of the 1970s, many young New York Haudenosaunees began looking into it as a way back to their roots.

Harjo, Chitto

A full-blooded Muscogee (Creek) leader who valued communal land holdings and traditional ways above influences of the U.S. government, Chitto Harjo (1846–1909/1911) opposed the dissolution of Creek government allotment dictated by the Dawes Commission and the Curtis Act of 1898. He set himself and his allies against progressive mixed-blood Creeks and land speculators.

Chitto Harjo was born as Bill Harjo in 1846 near present-day Boley, Oklahoma, in what was then exclusively the Muscogee (Creek) nation after the removal of his parents with the Muscogee people from their Georgia and Alabama homelands beginning in 1832. Harjo's name derives from the Muscogee words for "snake" (pronounced "chit-toe") and a word often used as a title for Creek war leaders that translates loosely to "recklessly brave" or "brave beyond discretion" (pronounced "hah-joe"). His followers came to be called the Crazy Snakes, members of the Crazy Snake Movement (McIntosh, 1993).

Beyond his service on the federal side during the Civil War, little is known of Harjo's life until 1899 when he was selected as the speaker of the traditional ceremonial town known as Hickory Ground, a Creek ceremonial center still active in the early twenty-first century. Muscogee tradition dictates that a town's chief (or *meeko*) not speak for himself, but designate someone of status who has the oratorical skills to explain what the chief is thinking or feeling. This status as speaker both confirmed and heightened his status as a leader of, and speaker for, traditional people.

After the 1898 passage of the Curtis Act, which vastly magnified the powers of the federal government over American Indian affairs, Harjo vocalized the sentiment of many traditional Muscogee people that the U.S. government should uphold the 1832 treaty with the Creeks, which provided the terms for removal and also guaranteed the Creeks eternal sovereignty over their nation. The Curtis Act, however, enacted the process by which the tribe's government and courts would be abolished, as well as distributing the collective Creek land holdings to individual tribal members and then opening up the surplus land for sale.

After Hickory Ground's *meeko* became ill during a trip to Washington, D.C., Harjo assumed a leadership role and urged resistance to allotment and Muscogee national dissolution. As the Muscogee

(Creek) Web site noted in 2005, Harjo's efforts "epitomized the view of all Muscogee people that they possessed an inherent right to govern themselves," and for Harjo "it was unimaginable that the Nation could be dissolved by a foreign government" (Muscogee (Creek) Nation, 2005, 38). In 1900, Harjo began traveling to ceremonial grounds throughout the Creek nation, openly advocating the formation of a new government and establishing new laws, some of which included the prohibition of commerce of any kind with European-Americans. Violators were subject to physical punishment by Snake enforcers.

Alarmed by the rebellious faction, the principal chief of the Creek nation, Pleasant Porter, alerted the federal government to the Crazy Snake movement and its anarchic implications. Subsequently, Harjo and about 100 of his followers were arrested by federal troops in January 1901 and imprisoned in Muskogee, but they were freed by a judge who cautioned the Snakes to cease their activities. Harjo continued his outward opposition to allotment, however, and was arrested again in 1902 with nine other Snake leaders. The group was promptly sent to federal prison at Fort Leavenworth, Kansas.

After finishing his two-year sentence, Harjo returned to Indian Territory where he reiterated, "We do not want our lands divided and each one given one hundred and sixty acres. This is the only land left to the Indians, and once he gives up this small strip of fertile land he will be no more" (1904). In 1905, Harjo traveled to Washington to meet with President Theodore Roosevelt but had no success in convincing Roosevelt to stop allotment. By 1906, a select U.S. Senate committee arrived in Tulsa, Oklahoma, to hear how the Creeks and Cherokees felt about allotment. Harjo made an eloquent but unheeded plea to the Senators, urging that the federal government not carve up the earth that was paid for by the relinquishment of Creek lands in Georgia and Alabama (Mann, 2001, 228).

Oklahoma statehood in 1907 ended any hope that the Crazy Snake movement would have any lasting effect on Creek politics, because its government was officially abolished upon creation of the forty-sixth state. Continuing to oppose the entire process of allotment, by 1909 Harjo and the Crazy Snakes created such fright throughout the lower Creek nation that all sorts of crimes were being attributed to them. In March of that year, Harjo was wounded in a shootout with law officers who had

Chitto Harjo, or Crazy Snake, was a Muscogee (Creek) chief. (Library of Congress)

come to arrest him at his home. He escaped, however, and his disappearance led to disagreement about his final resting place. Of several reports, consensus seems to exist that he made it to the Choctaw nation, where he either died soon thereafter from his wounds or lived for about two more years before being buried in the mountains of southeastern Oklahoma.

Harjo, Joy

Joy Harjo, a Muscogee Creek, poet, writer, musician, and teacher, was born in 1951 in Tulsa, Oklahoma, to a full-blooded Creek father and a Cherokee-French mother. She graduated from the University of New Mexico in 1976, having majored in creative writing, and attended the University of Iowa Writers Workshop in 1978 as part of her master of fine arts degree in creative writing. Her poetry is noted for emotional and mythic intensity in describing and connecting oral tradition to contemporary society, with a focus on identity, justice for the oppressed, and a relationship between landscape and history. Harjo's poetry challenges the contemporary Western concepts of linear time and history with the oral traditional concept of the "spiral" memory of storytelling.

In Joy Harjo's first book of poetry, *The Last Song* (1975), she explores the unwritten aspects of American Indian history. She describes the illusion of history as a past event, depicting it rather as still alive and heavily influencing the contemporary life of American Indians. She describes the past and present connections between people, animals, landscape, and language without the constraints of a linear time line. In her next book of poetry, *What Moon Drove Me to This?* (1980), Harjo continues to explore the issue of American Indian identity, with a concentration in mixed-blood ancestry. *She Had Some Horses* (1983) marks a break from an individual perspective to a more collective consciousness about injustices for oppressed people and cultures.

Secrets from the Center of the World (1989) is a chapbook focused on landscape and place, with photographs taken of Southwest landscapes by Stephen Strom. Harjo received an American Book Award and the Delmore Schwartz Memorial Award for her fourth collection of poetry, *In Mad Love and War* (1990). *The Woman Who Fell from the Sky* (1994), which received the Oklahoma Book Arts Award, focuses on the oral traditional story motif in contemporary times. *Reinventing the Enemy's Language* (1997) is a collection of nonfiction essays by Native women, coedited with Gloria Bird. *A Map to the Next World: Poetry and Tales* (2000) and *How We Became Human: New and Selected Poems* (2002) are collections of

poetry that continue to incorporate the oral tradition, with more attention to the movement into new worlds as in many traditional indigenous creation stories. Other written works by Harjo include a children's book, *The Good Luck Cat* (2000) and a screenplay for *Origin of the Apache Crown Dance* (1985).

Joy Harjo is also a saxophone musician who performs her poetry with her band, Poetic Justice. The music in *Letter from the End of the Twentieth Century* and *Native Joy for Real* (2004) is a mix of various sounds: reggae, country, rhythm and blues, jazz, and traditional American Indian song. Her many honors include the American Indian Distinguished Achievement in the Arts Award, the Josephine Miles Poetry Award, the Mountains and Plains Booksellers Award, the William Carlos Williams Award, and fellowships from the Arizona Commission on the Arts, the Witter Bynner Foundation, and the National Endowment for the Arts.

As of 2006, Harjo was an associate professor at the University of New Mexico. Harjo has also been a professor at the University of Colorado at Boulder (1985) and the University of Arizona at Tucson (1988).

Harrison, William Henry

William Henry Harrison (1770–1841) initiated the pivotal expansionist pattern of treaty negotiations of nineteenth-century America. As the builder of Presi-

dent Thomas Jefferson's plan for Indian removal beyond the Mississippi River, Harrison negotiated six treaties between 1803 and 1810, clearing the way for American expansion into the Northwest Territories at a far faster rate than anyone expected. By the end of the War of 1812, much of this territory was prepared for statehood, which swiftly followed for Indiana and Illinois.

Harrison's efforts began in September 1802, when he formed a council at Vincennes with members of the Delaware, Eel River Miami, Kickapoo, Piankashaw, Pottawatomi, and Wea nations to ascertain who owned various lands not covered in the Treaty of Greenville (1795). In a letter to encourage the participation of the various tribes, Harrison likened the Greenville Treaty to a tree whose branches he hoped to see spread over the land under which the European-Americans and the Native Americans could live in "its shade till the end of time" (Esarey, 1922, 52). The attending tribes did not consider this council in any way indicative of a treaty or an agreement of any kind with the United States government, let alone binding. However, Harrison did. Once the council had been held, the minutes note that the purpose was to "adjust" the treaty of Greenville, and, in treaty-like language, the minutes went on to transfer land in and around Vincennes to the United States and to exchange land along the Saline River to the tribes for the exclusive right of salt making. The Delawares objected to the discussions and left. No formal treaty was drafted based on this council.

In a letter dated February 27, 1803, Jefferson sent secret advice to Harrison, wherein the president outlined his plan and vision for the settlement of the Northwest Territory, including how Harrison could help achieve those ends. In this correspondence, Jefferson made no attempt to veil his intentions when he wrote to effect that the U.S. government should promote the Indians, in particular their leaders, to do business with government trading factories (houses) and to run up debt and "be glad" to see them fall into debt. Jefferson believed that, once these important leaders found themselves steeped in debt, they would be willing to "lop them off" by selling their lands to the willing U.S. government. Thus, Americans would encroach farther toward a borderland with the Indians, and the Indians would therefore either have to join with the Americans, becoming "citizens," or be forced to move out of the area completely to some unnamed western location beyond the Mississippi River. Jefferson notes disturbingly,

William Henry Harrison, the ninth U.S. president, was elected largely on his reputation as an Indian fighter. (Library of Congress)

"The former is certainly the termination of their history . . ." He ends with a troubling refrain: "[For] their interests and their tranquility it is best they should see only the present [stat]e of their history . . ." (Esarey, 1922, 71–73). Harrison was only too eager to attend to Jefferson's ideas, making sure he obtained treaty after treaty.

The first Treaty at Fort Wayne (1803) sought to secure land ownership for the U.S. government that Harrison believed was not covered in the previous Greenville Treaty. Many leaders of the invited nations—Delawares, Miamis, Shawnees, and Weas—looked on the proceedings with suspicion. To them, the 1795 Treaty of Greenville forever secured the lands north of the Ohio. It was supposed to be a done deal. Suddenly, it appeared not to be. Some tribal leaders refused to attend at all, but others who did come walked out in disgust. Harrison was of the opinion that government Indian Agent William Wells, who was married to a Miami woman, was intriguing behind his back to make things difficult, encouraging the tribal leaders

to dissent. Following a series of setbacks and delays, by June 7 the treaty was secure and those present agreed to give up the lands in question, which were to be found on opposite sides of the territory. One section extended southwest of Fort Recovery in Ohio to just above the Ohio River on the eastern side, and the other section began just above Vincennes up to the Little Vermillion River in what would become Illinois. These two sections began a buffer zone that would cut the Indians off from the Ohio River. This treaty constituted little victory and little gain, but it was the beginning of an aggressive landgrab over the next seven years.

When a couple of Sac Indians arrived in St. Louis in 1805, Harrison wasted little time in sitting them down to negotiate a treaty to obtain a large portion of northwestern Illinois. The Sacs knew little of what they had signed, nor did they become a party to the agreement, but Harrison saw it as another gain. As these men returned to Saukenauk, the major Sac village along the Rock River, they related what had happened with Harrison. The manipulation of these men who did not even represent the tribe infuriated Black Hawk and caused the whole of the nation to be at odds with the United States into the 1830s. But it would not be until the end of the War of 1812 that Americans could take possession of this land.

The most offensive of the treaties was the second Treaty of Fort Wayne, in September 1809. Here, large portions of land filled out the remaining gaps of the buffer zone. By then, a human wall of white settlement would stand in the way of Native American access to the Ohio River. The remaining tribes would dwell in a smaller and smaller area.

Harrison's family background influenced his ends to promote himself in any way possible. Coming from one of the first families of Virginia, Harrison's father lost the family's money, forcing William Henry to end his medical education and seek a military career during the early 1790s. He became an aide to General Anthony Wayne.

It has been said that the treaty of Fort Wayne of 1809 is what tipped off the war in the west in 1812. Tecumseh met with Harrison in 1810 to protest angrily over what he knew Harrison and the U.S. government were doing by negotiating the treaties.

During the War of 1812, Harrison left office as governor to become first a militia general, then a general in the U.S. Army. His campaigns were mainly in the Old Northwest Territories and Ohio, as well as into Canada. His enemies were not just the

British, but also the Indians. The successes he made would one day become the rallying point for his presidential ambitions.

Haudenosaunee Confederacy, Political System

At no time were Native people in America more influential in the politics of Europe than during the middle of the eighteenth century, and at that time no confederacy was more influential than that of the Haudenosaunee. The Haudenosaunee (Iroquois) Confederacy, sometimes known as the League of the Iroquois, controlled the only relatively level land route between the English colonies and French settlements ringing the Saint Lawrence Valley; the Confederacy maintained alliances with virtually every Indian nation bordering on its clusters of settlements. In this context, as France and Britain wrestled for hegemony in North America, some of the people who would do the most to shape the new United States, Benjamin Franklin the most prominent among them, cut their diplomatic teeth maintaining alliances with the Iroquois and their Native allies.

Thus, in the service of British interest, future revolutionaries such as Franklin were absorbing the Native ideas they would later use to counterpoise British tyranny in the colonies.

Peace among the formerly antagonistic Haudenosaunee nations was procured and maintained through the Great Law of Peace (*Kaianerekowa*), which was passed from generation to generation by the use of wampum, a form of written communication that outlined a complex system of checks and balances between nations and genders. A complete oral recitation of the Great Law can take several days; encapsulated versions of it have been translated into English for more than 100 years, and they provide one reason why the Iroquois are cited so often today in debates regarding the origins of United States fundamental law. While many other Native confederacies existed along the borders of the British colonies, most of the specific provisions of their governments have been lost.

To understand the provisions of the Great Law, one must understand the symbols it uses to represent the Confederacy. One was the traditional longhouse. The Confederacy itself was likened to a longhouse, with the Mohawks guarding the "eastern door," the Senecas at the "western door," and the Onondagas tending the ceremonial council fire in the middle. The primary national symbol of the Haudenosaunees was the Great White Pine, which serves throughout the Great Law as a metaphor for the Confederacy. Its branches shelter the people of the nations, and its roots spread to the four directions, inviting other peoples, regardless of race or nationality, to take shelter under the tree. The Haudenosaunees recognized no bars to dual citizenship; in fact, many influential figures in the English colonies and early United States were adopted into Iroquois nations.

Each of the five nations maintained its own council, whose leaders were nominated for qualities of "good mind" by the clan mothers of families holding hereditary rights to office titles. The Grand Council at Onondaga, drawn from the individual national councils, also could nominate sachems outside the hereditary structure, based on merit alone. These sachems, called pine tree chiefs, were said to have sprung from the body of the people as the symbolic Great White Pine springs from the earth.

Rights, duties, and qualifications of sachems were explicitly outlined, and the women could remove (or impeach) a sachem who was found guilty of any of a number of abuses of office, from

Map showing the territory of the six nations of the Iroquois Confederacy in 1771. The Iroquois were the dominant Native American diplomatic power in northeastern North America until the mideighteenth century. (North Wind Picture Archives)

missing meetings to murder. An erring chief was summoned to face charges by the war chiefs, who acted in peacetime as the peoples' eyes and ears in the council, somewhat as the role of the communication media was envisaged by Thomas Jefferson and other founders of the United States. A sachem was given three warnings, and then removed from the council if he did not mend his ways. A sachem guilty of murder lost not only his title, but also deprived his entire family of its right to representation. The women relatives holding the rights to the office were "buried" and the title transferred to a sister family.

The Great Law stipulated that leaders' skins must be seven spans thick to withstand the criticism of their constituents. The law pointed out that sachems should take pains not to become angry when people scrutinized their conduct in governmental affairs. Such a point of view pervades the writings of Jefferson and Franklin, although it was not fully codified into U.S. law until the Supreme Court decision *New York Times v. Sullivan* (1964) made it virtually impossible for public officials to

sue successfully for libel. Sachems were neither allowed to name their own successors nor carry their titles to the grave. The Great Law provided a ceremony to remove the title from a dying chief. The Great Law also provided for the removal from office of sachems who could no longer adequately function in office, a measure remarkably similar to a constitutional amendment adopted in the United States during the late twentieth century providing for the removal of an incapacitated president. The Great Law also included provisions guaranteeing freedom of religion and the right of redress before the Grand Council, and it forbade the unauthorized entry of homes—all measures that sound familiar to U.S. citizens through the Bill of Rights.

The Iroquois Confederacy is fundamentally a kinship state. The Iroquois are bound together by a clan and chieftain system that is buttressed by a similar linguistic base. However, the League of the Iroquois is much more than just a kinship state. Through the hearth, which consisted of a mother and her children, women played a profound role in

Iroquois political life. Each hearth was part of a wider group called an *otiiianer*, and two or more *otiiianers* constituted a clan. The word *otiiianer* refers to the female heirs to the chieftainship titles of the League; the fifty authorized names for the chiefs of the Iroquois passed through the female side of the *otiiianer*. The *otiiianer* women selected one of the males within their group to fill a vacated seat in the League.

Such a matrilineal system was headed by a “clan mother.” All the sons and daughters of a clan were related through uterine families that lived far apart. In this system, a husband went to live with his wife’s family, and their children became members of the mother’s clan by right of birth. Through practicing matrilineal descent, the Iroquois formed cohesive political groups that had little to do with where people lived or from what village the hearths originated.

The oldest daughter of the head of a clan sometimes succeeded her mother at her death upon the judgment of the clan. All authority sprang from the people of the various clans that made up a nation. The women who headed these clans appointed the male delegates and deputies who spoke for the clans at tribal meetings. After consultation within the clan, issues and questions were formulated and subsequently debated in council.

Iroquois political philosophy was rooted in the concept that all life is unified spiritually with the natural environment and other forces surrounding people. The Iroquois believed that the spiritual power of one person is limited, but, when combined with other individuals in a hearth, *otiiianer*, or clan, spiritual power is enhanced. Whenever a person died either by natural causes or force, through murder or war, the “public” power was diminished. To maintain the strength of the group, the dead were replaced either by natural increase or by adopting captives of war. This practice of keeping clans at full strength through natural increase or adoption ensured the power and durability of the matrilineal system as well as the kinship state.

Child rearing was an important way to instill political philosophy in the youth of the Iroquois. The ideal Iroquois personality was a person who was loyal to the group but who was also independent and autonomous. Iroquois people were trained to enter a society that was egalitarian with power more equally distributed between male and female, and between young and old, than in Euro-American society. European society emphasized dominance and

command structures, whereas Iroquois society was interested in collaborative behavior.

Because Iroquois society prized competence in a protector and provider more than material wealth, Iroquois children were educated to think for themselves and yet also provide for others. The Iroquois did not respect people who cowed to authority and who were submissive. Iroquois culture could be loosely called a “shame culture” because the emphasis was on honor and duty, while European culture was more guilt-oriented, since the emphasis was on an authoritarian hierarchy and advancement through the acquisition of property, status, and material possessions.

With this approach to authority, Iroquois society had none of Europe’s elaborate mechanisms to control and direct the lives of the citizenry. Instead of formal instruments of authority, the Iroquois governed behavior by instilling a sense of pride and connectedness to the group through common rituals. Ostracism and shame were the punishments for transgressions until transgressors had atoned for their actions and demonstrated that they had undergone a purification process.

To sanctify and support Haudenosaunee society, the Great Law of Peace outlined the ways the that councils could function within the Iroquois nations. The origins of the League of the Iroquois arise out of the desire to resolve the problem of the blood feud. Before the founding of the League, blood revenge caused strife. Whenever clans were reduced by murder or kidnapping, relatives were bound by clan law to avenge the death or abduction of their relatives. This resulted in endless recriminations among clans. As long as justice and the control of violence resided in the clans, there was no hope of peace and goodwill.

In establishing the Confederacy, the Iroquois built in checks and balances through the processes of consensus, removal, and public opinion. The Iroquois strictly adhered to the notion of federalism. The hereditary (“hereditary” in the Iroquois sense because the clan mothers “inherited the right” to appoint and remove peace chiefs of the Confederacy) Iroquois sachems were interested only in external matters such as war, peace, and treaty-making. The Grand Council could not interfere with the internal affairs of the tribe. Each tribe had its own sachems, but their power was limited in that they could deal only with their tribe’s relations with other tribes and had no say in matters that were traditionally the concern of the clan.

The procedure for debate in the Grand Council begins with the Mohawks and Senecas (the Mohawks, Senecas, and Onondagas are called the “elder brothers”). After being debated by the Keepers of the Eastern Door (Mohawks) and the Keepers of the Western Door (Senecas), the question is then thrown across the fire to the Oneida and Cayuga statesmen (the “younger brothers”) for discussion in much the same manner. Once consensus is achieved among the Oneidas and the Cayugas, the discussion is then given back to the Senecas and Mohawks for confirmation. Next the question is laid before the Onondagas for their decision.

At this stage, the Onondagas have a power similar to judicial review: They can raise objections to the proposed measure if it is believed inconsistent with the Great Law. Essentially, the legislature can rewrite the proposed law on the spot so that it can be in accord with the constitution of the Iroquois. When the Onondagas reach consensus, the *tadodaho* gives the decision to the *honowireton* (an Onondaga chief who presides over debates between the delegations) to confirm the decision if it is unanimously agreed on by all of the Onondaga sachems. Finally, the *honowireton* or *tadodaho* gives the decision of the Onondagas to the Mohawks and the Senecas so that the policy may be announced to the Grand Council as its will.

This process reflects the emphasis of the League on checks and balances, public debate, and consensus. The overall intent of such a parliamentary procedure is to encourage unity at each step. This legislative process is similar to the mechanisms of the Albany Plan of Union, the Articles of Confederation, and the U.S. Constitution.

The rights of the Iroquois citizenry are protected by portions of the Great Law, which states that, whenever an especially important matter is presented before the League Council threatening their utter ruin, the chiefs of the League must submit the matter to the decision of their people. The people of the League also can initiate impeachment proceedings and treason charges, and they can alert the Council to public opinion on a specific matter. The Iroquois people also have the power to remove sachems of the League’s Council.

Upon the death or removal of a Confederacy chief, the title of the chief reverts to the women in his clan. The women protect this title and determine who will assume the position of chief. As in the power of removal, the women have the first priority

in the installation of a new chief. When a position is vacant, the esteemed women of a clan gather and nominate a male member to be chief. Next, the men of the clan give their approval. After this process, the nomination is then forwarded to the Council of the League where the new chief is installed.

Public opinion is of great importance in the League of the Iroquois. Iroquois can have a direct say in the formulation of government policy even if the sachems choose to ignore the will of the people. The Great Law of Peace provides that the people can propose their own laws even when leaders fail to do so. The Great Law states that if the necessity arises to change the law, the case shall be considered and, if the new beam seems beneficial, the change, if adopted, shall be called “Added to the Rafters.” This provision resembles those for popular initiative in several states of the United States, as well as the mechanism by which the federal and many state constitutions may be amended.

Through the expression of public opinion and debate, the Great Law gives the Haudenosaunee people basic rights in a distinctive and representative governmental framework. The Great Law solved disputes by giving all parties an equal hearing. The Grand Council often functioned like a think tank. Above all, political thought was the activity that went on underneath the Great Tree. For the Iroquois, the more thinkers that were beneath the tree, the better. This process is in marked contrast to European hierarchical political and educational traditions.

The League of the Iroquois a family-oriented government whose Constitution has a fixed corpus of laws that is concerned with mutual defense. Through the elimination of the clan blood feud, the state was given exclusive control over legally sanctioned violence. This process brought peace through a fundamental social contract. The Iroquois are not inclined to give much power to authorities because of the basic psychological attitudes instilled in Iroquois people. Thus, unity, peace, and brotherhood are balanced against the natural rights of all people and the necessity of sharing resources equitably. Unity for mutual defense is an abiding concept in the League. The Iroquois image of unity is a bundle of five arrows tied together to symbolize the complete union of the nations and the unbroken strength that such a unity portrays (Section 57 of the Great Law of the Iroquois). With the strength of many comes peace for future generations.

The Iroquois League accords prestige to the peace chiefs and thus seeks to reduce conflict between war and peace chiefs and the generations. The middle-aged peace chiefs are the firekeepers, encircled by warriors and providers, by women, and finally by the public at large. Although individual nations have unequal representation, this is irrelevant since each tribe votes as one. At the level of the village, the tribe, and the Grand Council, consensus devices are used to obtain unanimity and to report up and down the governmental structure. The League is not able to centralize power in matters other than mutual defense, but it is effective in diminishing friction among the Five Nations. The kinship state with its imagery of a longhouse spread afar is clearly comprehended by the Iroquois people. Iroquois power rests on the consent of the governed and is not coercive in areas of military service, taxation, and police powers. To the colonial Americans chafing under British authority, such a government and attitude toward freedom was a powerful ideal that could be used in resisting British sovereignty and tyranny.

Hendrick

Tiyanoga, whom the English called Hendrick (ca. 1680–1755), was a major figure in colonial affairs between 1710, when he was one of four Mohawks invited to England by Queen Anne, and 1755, when he died in battle with the French as an ally of the British. In 1754, Hendrick advised Benjamin Franklin and other colonial representatives on the principles of Iroquois government at the Albany Congress.

Hendrick, a member of the Wolf Clan, knew both Iroquois and English cultures well. He converted to Christianity and became a Mohawk preacher sometime after 1700. In England, he was painted by John Verelst and called the Emperor of the Five Nations. Hendrick was perhaps the most important individual link in a chain of alliance that saved the New York frontier and probably New England from the French in the initial stages of the Seven Year's War, which was called the French and Indian War (1754–1763) in North America.

Well-known as a man of distinction in his manners and dress, Hendrick visited England again in 1740. At that time, King George presented him with an ornate green coat of satin, fringed in gold, which Hendrick was fond of wearing in combination with his traditional Mohawk ceremonial clothing. A life-long friend of English Superintendent of Indian Affairs Sir William Johnson, Hendrick appeared often at Johnson Hall, near Albany, and had copious opportunities to rub elbows with visiting English nobles, sometimes as he arrived in war paint, fresh from battle. Thomas Pownall, a shrewd observer of colonial Indian affairs, described Hendrick as ". . . a bold artful, intriguing Fellow and has learnt no small share of European Politics, [who] obstructs and opposes all (business) where he has not been talked to first . . ." (Jacobs, 1966, 77).

Hendrick was a Mohawk who developed a relationship with the English colonies represented by William Johnson. Hendrick helped keep the Six Nations in the interests of England in its war against France. He is known for his criticism of the English for their failure to defend the Six Nations against the French, and was killed at the Battle of Lake George in 1755. (New York Public Library)

Hector Saint Jean de Crevecoeur, himself an adopted Iroquois who attended sessions of the Grand Council at Onondaga, described Hendrick in late middle age, preparing for dinner at the Johnson estate, within a few years of the Albany Congress: "[He] wished to appear at his very best . . . His head was shaved, with the exception of a little tuft of hair in the back, to which he attached a piece of silver. To the cartilage of his ears . . . he attached a little brass wire twisted into very tight spirals. A girondole (nose ring) was hung from his nose. Wearing a wide silver neckpiece, a crimson vest and a blue cloak adorned with sparkling gold, Hendrick, as was his custom, shunned European breeches for a loincloth fringed with glass beads. On his feet, Hendrick wore moccasins of tanned elk, embroidered with porcupine quills, fringed with tiny silver bells" (Grinde and Johansen, 1991, 104).

By the time Hendrick was invited to address colonial delegates at the Albany Congress in 1754, he was well known on both sides of the Atlantic, among Iroquois and Europeans alike. Hendrick played a major role in convening the Albany Congress in large part because he wished to see his friend Johnson reinstated as the English superintendent of affairs with the Six Nations. Without him, Hendrick maintained that the Covenant Chain would rust. It was Johnson himself who conducted most of the day-to-day business with the Indians at Albany.

At the Albany Congress, Hendrick repeated the advice that the Onondaga chief Canassatego had given colonial delegates at Lancaster a decade earlier, this time at a conference devoted not only to diplomacy but also to drawing up a plan for the type of colonial union the Iroquois had been requesting. The same day, at the courthouse, the colonial delegates were in the early stages of debate over the plan of union.

Hendrick was openly critical of the British at the Albany Council and hinted that the Iroquois would not ally with the English colonies unless a suitable form of unity was established among them. In talking of the proposed union of the colonies and the Six Nations on July 9, 1754, Hendrick stated, "We wish this Tree of Friendship may grow up to a great height and then we shall be a powerful people." Hendrick followed that aspiration with an analysis of Iroquois and colonial unity, when he said, "We the United Nations shall rejoice of our strength . . . and . . . we have now made so strong a Confederacy" (Grinde and Johansen, 1991, 105, 107). In reply to Hendrick's speech on Native American and colonial unity, Acting Governor James DeLancey said: "I hope that by this present Union, we shall grow up to a great height and be as powerful and famous as you were of old" (Grinde and Johansen, 1991, 107). Benjamin Franklin was commissioned to compose the final draft of the Albany Plan the same day.

Hendrick died at the Battle of Lake George in the late summer of 1755, as Sir William Johnson defeated Baron Dieskau. The elderly Mohawk was shot from his horse and bayoneted to death while on a scouting party September 8.

Hiawatha

As an historical figure, Hiawatha (ca. 1100–ca. 1180) was a Mohawk who lived at a time of great turmoil among the Iroquoian peoples. A brutal civil war had split the Five Nations (Seneca, Cayuga, Onondaga, Mohawk, and Oneida) into polarized factions. Along with the Peacemaker (Deganawida) and Jigonsaseh (the Haudenosaunee [Iroquois] Confederacy's founding clan mother), Hiawatha helped establish the *Gayansshā'gowa* (Great Law of Peace). Hiawatha is also credited with inventing wampum (freshwater shells strung together), which became vitally important to the day-to-day operations of the Iroquois League. Evolving from the strings of the Condolence Ceremony into larger and more complex belts and based on Hiawatha's original vision of wampum as a container of messages that could be passed meaningfully from person to person, wampum knotting became a form of writing essential to the administration and record keeping of the Five, and later Six, Nations. The beautiful Condolence Ceremony, which wipes the tears from the eyes of the bereaved, makes daylight for them, and covers the graves, was his creation. Hiawatha's special message was one of compassion for human suffering and, as such, was an essential complement to the Peacemaker's message of the nonviolent resolution of disputes.

At the root of the Iroquoian civil war was the blood feud, a constant series of revenge killings that seemingly could never stop. Visionaries among the Iroquois such as Hiawatha, who lived among the Onondagas, tried to call councils to eliminate the blood feud, but they were always thwarted by the evil and twisted wizard, Tadodaho, an Onondaga who used magic and spies to rule by fear and intimidation. Failing to defeat Tadodaho, Hiawatha traveled to Mohawk, Oneida, and Cayuga villages with his message of peace and brotherhood. Everywhere he went, Hiawatha's message was accepted

with the proviso that he persuade the formidable Tadodaho and the Onondagas to embrace the covenant of peace.

Facing despair, Hiawatha met the prophet Deganawidah, who changed the nature of things among the Iroquois. Together, Hiawatha and Deganawidah developed a powerful message of peace. Deganawidah's vision gave Hiawatha's oratory substance. Through Deganawidah's vision, the Iroquois formulated their Constitution.

In his vision, Deganawidah saw a giant evergreen (White Pine), reaching to the sky and gaining strength from three self-counterbalancing principles of life. The first axiom was that a stable mind and healthy body should be in balance so that peace between individuals and groups could occur. Secondly, Deganawidah stated that good humane conduct, thought, and speech were requirements for equity and justice among peoples. Finally, he foresaw a society in which physical strength and civil authority would reinforce the power of the clan system.

Deganawidah's tree had four white roots that stretched to the four directions of the earth. From the base of the tree a snow-white carpet of thistledown covered the surrounding countryside. The white carpet protected the peoples that embraced the three double principles. On top of the giant pine perched an eagle. Deganawidah explained that the tree was humanity, living within the principles governing relations among human beings. The eagle was humanity's lookout against enemies who would disturb the peace. Deganawidah postulated that the white carpet could be spread to the four corners of the earth to provide a shelter of peace and brotherhood for all mankind. Deganawidah's vision was a message from the Creator to bring harmony into human existence and unite all peoples into a single family guided by his three dual principles.

With such a powerful vision, Deganawidah and Hiawatha were able to subdue the evil Tadodaho and transform his mind. In part by combing snakes from his hair, they removed evil feelings and thoughts from the head of Tadodaho and turned his mind toward reason and peace. The evil wizard became reborn into a humane person charged with implementing the message of Deganawidah. After Tadodaho had submitted to the redemption, Onondaga became the central fire of the Haudenosaunee and the Onondagas became the firekeepers of the new Confederacy. To this day, the Great Council Fire of the Confederacy is kept in the land of the Onondagas.

Hiawatha was a historical figure credited with helping to found the Iroquois Confederacy with Deganawidah (the Peacemaker). Both worked to create a confederacy between the Mohawk, Oneida, Onondagas, Cayugas, and Seneca nations. (North Wind Picture Archives)

After Tadodaho's conversion, the clan leaders of the Five Nations gathered around the Council Fire at Onondaga to hear the laws and government of the Confederacy. The fundamental laws of the Iroquois Confederacy espoused peace and brotherhood, unity, balance of power, the natural rights of all people, the impeachment and removal of the abusers of power, and the sharing of resources. Moreover, the blood feud was outlawed and replaced by a Condolence Ceremony. Under the new law, the bereaved family of a murder victim could accept twenty strings of wampum from the slayer's family (ten for the dead person and ten for the life of the murderer himself) in place of the traditional practice of exacting clan revenge. If a woman was killed, the price was thirty wampum strings. Through this ceremony, the control over legally sanctioned violence was enlarged from the clan to the League.

Hiawatha's wampum was long kept as a sacred item. One wide belt, said to have been made by Hiawatha himself, became the symbol of League unity. It contained thirty-eight rows of black wampum with a white heart in its center, flanked on either side by a white square. Everything was connected to everything else by white lines of wampum (white signifying *uki*, peace and goodness). Called the Hiawatha Belt, it was purchased by John Boyd Thatcher of Albany and deposited in the Library of Congress around the turn of the twentieth century.

The Hiawatha wampum belt symbolizes the structure of the Haudenosaunee Confederacy, with four connected squares representing the Senecas, Cayugas, Oneidas, and Mohawks. The tree of peace symbol in the center (an elongated triangle) represents the Onondagas, who tend the Central Council Fire. The belt is presently 10.5 inches wide and 21.5

inches long, but its frayed edges suggest it may have been longer in the past. The white squares and tree of peace symbol are made of purple wampum, against a background of white wampum. The Hiawatha Belt has been dated by the scholar William N. Fenton to the mideighteenth century, but this is probably not an origin date. Belts were repaired and thus replaced bead by bead over time; so they may be several centuries older than the scientific dating of existing belts indicates. A belt may have been repaired several times over the centuries, gradually changing as bead-making technology (such as the introduction of glass beads by Europeans) evolved.

In the nineteenth century, European-American ethnographers started “collecting” various Native oral traditions that, for the most part, they did not understand. Standards of scholarship were much lower at the time, and little heed was paid to the large cultural distinctions among Native American groups. Some very questionable material thus made its way into the Western chronicles, not the least of it from the fallible pen of Henry Rowe Schoolcraft. He freely made up, interpolated, and gutted traditions, mixing and matching them as he saw fit. Native sensibilities mattered little to him. One of his most fanciful and least grounded works, his *Algic Researches* (1839, 1856), contained a fractured “Myth of Hiawatha.” (“Algic” was Schoolcraft’s invented word for woodland cultures.)

Schoolcraft’s tale about Hiawatha bore no resemblance to the historical figure cherished in Haudenosaunee tradition. Schoolcraft turned him into an Anishinabe (Ojibway, also known as Chipewewa) and confused him with the Anishinabe culture hero Nanapush (also known as Manabozho). Schoolcraft knew the difference, but simply liked the sound of “Manabozho.” In addition, probably out of ignorance, Schoolcraft confused Hiawatha with Tarachiawagon, one name for the Peacemaker. Finally, Schoolcraft plagiarized Joshua Clark’s *Onondaga, or, Reminiscences of Earlier and Later Times* (1849), pretending that the research was his own.

The issue was only confounded further when Henry Wadsworth Longfellow used Schoolcraft’s mangled version of tradition as the basis of his epic poem, “The Song of Hiawatha” (1855). Longfellow himself plagiarized the Finnish poem *Kalevala* and lifted lore from the Icelandic epic *Edda* to write his dubious “Song,” creating an Iroquoian nightmare that not only cast Hiawatha as an Anishinabe-Finnish-Iclander, but also turned him into a Christian philosopher as well. Knowing nothing of the

true Hiawatha and hopelessly confusing him with the Peacemaker, Longfellow presented Hiawatha as a fey imitation Jesus. Longfellow’s “Song of Hiawatha” became wildly popular with nineteenth-century Euro-American readers.

Although these Western versions of the Hiawatha story are completely without foundation in Haudenosaunee oral tradition, some modern west-of-the-Mississippi Algonquins reenact Longfellow’s version of “The Song of Hiawatha” at powwows, to the extreme discomfort of Haudenosaunee onlookers. The Iroquoian Hiawatha of history needs to be firmly disengaged from these fantastic nineteenth-century misrepresentations. Hiawatha’s unflagging speakership for the Peacemaker, his message of compassion, his creation of the Condolence Ceremony, his invention of the Iroquoian writing system, and his combing the snakes from the hair of Adodaroh (Tadadaho) are what should be told about him.

Hooker Jim

In the 1850s, the Modocs traded in Yreka, California, and the traders and townspeople there gave the Indian leaders the colorful and sometimes unflattering names by which they became known. Hooker Jim (ca. 1825–1879) was a name given to a leader in the Modoc War of 1872–1873 who emerged as a rival to Kintpuash (Captain Jack). Although little is known of his early life, Hooker Jim’s name became a household word throughout the United States when hostilities broke out between the Modocs and the U.S. Army. In 1864, the Modocs and Klamaths ceded

most of their land and moved onto the Klamath reservation in southern Oregon. Deeply opposed to the relocation of his people, Hooker Jim persuaded his followers to return to their aboriginal homeland in northern California. These Modocs advocated the creation of their own reservation. In 1870, about 300 Modocs under Kintpuash reestablished a community in their former homeland on the Lost River.

In November 1872, the U.S. Army visited Kintpuash's encampment on the Lost River and ordered the Modocs to the Klamath Reservation. Kintpuash opposed the order, and increasing conflict with non-Natives led to the first battle of the Modoc War. Hooker Jim and his people were living on the opposite side of the river when some ranchers fired on them, killing a woman and a baby and wounding several men. Angered by these actions, Hooker Jim and Curly Headed Doctor raided a neighboring ranch and killed twelve whites. Hooker Jim and his people then fled southward to the Lava Beds, where Kintpuash and his followers were defending themselves.

Kintpuash still believed that a peaceful settlement might be negotiated. However, the Modocs balked at the demands of the Army to hand over the men who had killed the ranchers. At a peace conference set to discuss matters, Hooker Jim and others told Kintpuash that the only way he could prove that he was not a coward would be to kill General Edward R. S. Canby. On April 11, 1873, as the conference started, Kintpuash shot Canby, wounded Indian Superintendent Alfred B. Meachum, and killed a minister.

In the weeks after the abortive conference, Hooker Jim and Kintpuash argued about the appropriate course of action. Hooker Jim deserted the fight in the Lava Beds, surrendered, and subsequently showed the Army where Kintpuash was hiding. At Kintpuash's trial in July 1873, Hooker Jim provided testimony against Kintpuash to save himself. After the trial and the execution of four leaders, Hooker Jim and about 150 other Modocs were sent to Indian Territory. Hooker Jim later died at the Quapaw Agency in Indian Territory in 1879.

Jackson, Andrew

Mention "Andrew Jackson" to most Americans, and the phrase "Jacksonian Democracy" may spring to mind. To the descendants of Native Americans who survived the period, however, the first comparative analogy may be to the Bataan Death March of World War II. Among Native Americans, Jackson, the seventh president of the United States, is most closely identified with the Removal Act (1830), which forced at least 100,000 Native people off their traditional homelands into involuntary exile in "Indian territory," now Oklahoma. President Andrew Jackson called Indian removal the "most arduous" of his duties as president of the United States. "I watched over it [removal] with great vigilance," Jackson recalled after he left the presidency (Rogin, 1975, 206).

Jackson was born March 15, 1767, in the Waxhaws area on the border between present-day North and South Carolina, and died June 8, 1845, at The Hermitage, Davidson County, Tennessee. Jackson's career (first as an Army general, then as president) coincided with rapid westward migration into Native lands. The explosion of westward migration after roughly 1800 generated enormous profits in land speculation. Fortunes were made in early America, not usually by working the land, but by buying early and holding large parcels for sale after demand increased dramatically because of non-Indian immigration.

As a frontier lawyer in Tennessee, Jackson acquired immense holdings with which he began a mercantile establishment and bought a plantation, including "an expensive frame house at a time when most people in the same area lived in log cabins, and spent large sums on whiskey, horses, and expensive home furnishings imported from Europe" (Rogin, 1975, 55). Jackson also quickly acquired more than a hundred slaves, making him one of frontier Tennessee's largest owners of human capital. He traded actively in slaves, and occasionally wagered them on horse races in a display of expendable wealth.

Rogin quoted a contemporary source: "Were I to characterize the United States, it would be by the appellation of the land of speculators" (Rogin, 1975, 80). Land, once ownership had been wrested from original Native owners, became the largest "futures market" available at the time, its value determined by its hoped-for future use in a newly evolving non-Indian society. As an Army general and later as president, Jackson represented the values and interests of the land-speculation industry.

Jackson did not seek the removal of the Cherokees and other Civilized Tribes—the Cherokee, Choctaw, Chickasaw, Creek, and Seminole—because they did not know how to make productive use of the land. On the contrary, four of the five (the exception being the Seminoles, who had escaped to Florida) were called “civilized” by the immigrants precisely because they were making exactly the kind of progress that the U.S. government desired of them: becoming farmers, educating their children, constituting governments modeled on the United States. Immigrants, many of them Scot and Irish, had married into Native families. Some of them owned plantations and slaves. Andrew Jackson strongly encouraged removal because his slaves and plantation placed his interests squarely among those of the races and classes whose members benefited most from Indian removal.

By the time he emerged as an advocate of Indian removal, President Jackson’s name had scorched the memories of Native American peoples for decades as an Indian fighter. As a general in the U.S. Army, Jackson blazed a trail of fire throughout the South, refusing to retreat even when his superiors ordered him to relent. Between 1814 and 1824, before Jackson was elected president, he already had been the main agent for the United States in eleven treaties of cession. The land involved in these treaties included three-quarters of Alabama and Georgia, one-third of Tennessee, and one-fifth of Georgia and Mississippi (as well as smaller areas of Kentucky and North Carolina) (Rogin, 1975, 165).

In a battlefield confrontation with William Weatherford’s Creeks at Horseshoe Bend, Alabama, Jackson imprisoned assistants who advised retreat. For those who retreated in battle without authorization, the penalty levied by General Jackson was harsher: “Any officer or soldier who flies before the enemy without being compelled to do so by superior force . . . shall suffer death” (Tebbel, 1966, 75).

Having subdued the Creeks, General Jackson next received orders to quell what the War Department politely called “troubles” in Georgia, principally among the Seminoles. By 1818, Jackson’s troops were chasing them into Florida, which was still under Spanish jurisdiction (the area would be ceded to the United States in 1821). Having seized several Spanish forts along the way, Jackson withdrew. While he endured a debate in Congress over his cross-border expedition, Jackson also reaped popular acclaim from expansion-minded Americans that swelled his ambitions for the presidency.

Among Native Americans, President Andrew Jackson is most closely identified with the Removal Act which forced at least 100,000 Native people off their traditional homelands. (Library of Congress)

The Seminoles, most of whom were descended from Creeks, had elected to ally with the Spanish rather than the United States, an act of virtual treason to General Jackson. Furthermore, the Seminoles were giving shelter to runaway slaves. Inasmuch as the Seminoles and the escaped slaves had intermarried over generations, the pretext of Jackson’s raid was the recovery of “stolen property,” runaway slaves. After the United States purchased Florida from Spain, slave-hunting vigilantes invaded the area en masse, killing Seminoles as well as blacks. During the 1830s, when President Jackson proposed to remove the Seminoles from Florida to Indian Territory, they refused. Moving deep into the swamps of southern Florida (an area that, ironically, was being used as a removal *destination* for other Native peoples), the Seminoles fought 1,500 U.S. Army troops to a bloody stalemate during seven years of warfare. They were never defeated, and they never moved from their new homeland.

After Spain ceded Florida to the United States, General Jackson and other U.S. officials lost any remaining motive for treating the Indians as allies. From then on, they were defined as subjects, to be moved out as Anglo-Americans rushed into the Southeast. Jackson's policy—"move the Indians out"—became the national standard after his election as president in 1828. Alabama had already been created in 1819 from Creek and Cherokee territory; Mississippi was created in 1817 from Choctaw and Chickasaw country. These two states, along with Georgia, passed laws outlawing tribal governments and making Indians subject to state jurisdiction, after which open season was declared on remaining Native lands.

All of this activity violated treaties with the federal government. Confronted with this fact, President Jackson told the Indians that he was unable to stand by the treaties because they raised nettlesome issues of states' rights, an emerging issue in the decades before the Civil War. Instead, Jackson proposed that the Indians be moved westward.

In a message to Congress in December of 1830, in the midst of the nationwide debate over Indian removal, Jackson maintained:

What good man would prefer a country covered with forests and ranged by a few thousand savages to our extensive republic, studded with cities, towns, and prosperous farms, embellished with all the improvements which art can devise or industry execute, occupied by more than 12 million happy people, and filled with the blessings of liberty, civilization, and religion (Satz, 1975, 44).

Jackson, who as a general told his troops to root out Indians from their "dens" and to kill Indian women and their "whelps," struck the same themes on a slightly more erudite tone as president. In his second annual message to Congress, Jackson reflected on the fact that some white Americans were growing "melancholy" over the fact that the Indians were being driven to their "tomb." These critics must understand, Jackson said, that "true philanthropy reconciles the mind to these vicissitudes as it does to the extinction of one generation to make way for another" (Stannard, 1992, 240).

During the Jackson administration, the United States concluded nearly seventy treaties with Native American nations, more than any other presidential administration. The United States acquired more

than 100 million acres of Native American land during the years Jackson was in office, in exchange for roughly \$68 million (68 cents an acre) and 32 million acres west of the Mississippi River. Forty-six thousand Indians were compelled to leave their homelands and move west of the Mississippi during the same years (Satz, 1975, 97). By such means, observed de Tocqueville, "The Americans cheaply acquire whole provinces which the richest sovereigns in Europe could not afford to buy" (Satz, 1975, 98).

Their basis in U.S. law notwithstanding, Jackson thought that Indian treaties were anachronisms. "An absurdity," he called them, "not to be reconciled with the principles of our government" (McNickle, 1949, 192). He elaborated, before his election to the presidency, in a letter to President James Monroe (another advocate of Indian removal) in 1817:

The Indians are the subjects of the United States, inhabiting its territory and acknowledging its sovereignty. Then is it not absurd for the sovereign to negotiate by treaty with the subject? I have always thought, that Congress had as much right to regulate by acts of legislation, all Indian concerns as they had of territories, are citizens of the United States and entitled to all the rights thereof, the Indians are subjects and entitled to their protection and fostering care (McNickle, 1949, 193).

The confusions of convoluted grammar aside, it is not easy to decipher what General Jackson is saying. Is he declaring the Indians to be citizens? Legally, that was not widely the case until a century later. Is he personally abrogating the treaties, which were signed by parties who had addressed each other as diplomatic peers, nation to nation, barely two generations earlier? Whatever the nature of his rhetoric, the actions of the Jackson administration made clear, especially for the Native American peoples of the South, just what Jackson meant by "protection and fostering care."

Jackson, Helen Hunt

Helen Maria Fiske (1830–1885), who would become known later in life as Helen Hunt Jackson, was born October 15, 1830, in Amherst, Massachusetts, the daughter of Nathan Welby Fiske, a professor of languages at Amherst College. She was described as “a child of dangerous versatility and vivacity” (Mathes, 1990, 21). Variouslly portrayed as brilliant and something of a pest, the young Helen Fiske learned to read and write earlier than most children, drawing from collegiate surroundings, becoming a young woman “with candid beaming eyes, in which kindness contented with penetration,” a “soul of fire,” with the ability to “strongly love, to frankly hate” (Mathes, 1990, 22).

As a girl, Helen became close friends with the poet Emily Dickinson. Fiske, Dickinson, and Emily Fowler (who was briefly well known as an author in her later life) came to be known as the Amherst girls, a group of talented women born to Amherst faculty members. In her own time, Helen was a better-known poet than Dickinson, who spent much of her own life in obscurity.

At the age of eleven, Helen Fiske was sent to the first of several boarding schools where she spent her teenage years. By age nineteen, she had been orphaned; both of her parents died of tuberculosis. Early in her life, Helen determined to support herself as an independent woman, not an easy role in a society in which women were defined as men's property. She decided to make her living as a writer.

First known as a romantic poet, she later expanded her scope to include travel articles, short stories, novels, and books for children. Before becoming famous for her Indian reform work late in her life, she had been “an Army wife, mother, and

woman of society . . . a literary person, a poet and essayist, writer of travel sketches and short stories” (Banning, 1973, xix). She was, according to her biographer Evelyn I. Banning, a woman of contradictions. While some of her writings laughed at fashion, she dressed elegantly, often beyond the station of the junior Army officer, Edward B. Hunt, whom she married at the age of twenty-two. Before the treatment of the Ponca Indians tripped her sense of indignity, Helen Hunt Jackson had been a nearly apolitical person, having taken no published position on women's suffrage or slavery, even as she “burst the bounds . . . [of] the separate sphere assigned to women during the Victorian era” (Mathes, 1990, ix).

Within the fifteen years after she married Edward Hunt, Helen gave birth to two sons and lost both of them, one at the age of one year, the other at age nine. Her husband also died, leaving her nearly alone in the world. She assuaged her loneliness by writing poetry, becoming one of the best regarded poets of nineteenth-century America. Ralph Waldo Emerson often carried her poetry in his pocket to show to friends (Banning, 1973, xx). In 1875 she married William S. Jackson of Colorado Springs, whose name she carried when her Indian reform work became well-known. At the age of forty-nine, she took up the cause of “the Indian” with a fervor that consumed her attention and energies for the last few remaining years of her short life.

Jackson's attention was turned toward the condition of Native Americans during October of 1879, shortly after Judge Elmer Dundy had ruled in *Standing Bear v. Crook*. In Boston, Jackson heard a speech describing the travail of Standing Bear and his band of Poncas who, forced off their land in northern Nebraska, had escaped reservation life in Indian Territory. They had trekked 500 miles northward during the worst of a midcontinental winter to take shelter with the U'mahas (Omahas) near the city of Omaha where, in 1879, Judge Dundy ruled that Standing Bear must be regarded as a human being under the law of habeas corpus.

After the trial, a group of Ponca Indians, including Standing Bear, visited several cities, including Chicago, New York City, Philadelphia, Baltimore, and Boston. It was in Boston, however, that support was greatest; \$3,000 of the \$4,000 the Poncas thought they would need to pursue their land claim was raised there (Mathes, 1989, 46). Henry Wadsworth Longfellow played a crucial role in the success of the Poncas' efforts in Boston. The Poncas stayed in Boston several weeks from late October

A successful and prolific author, Helen Hunt Jackson is best remembered for *A Century of Dishonor* (1881) and *Ramona* (1884), books that helped to raise awareness of Native American rights and of their ill treatment at the hands of the U.S. government. (Library of Congress)

into December and were presented at numerous fund-raisers. In early December, more than 1,000 Bostonians gathered at Faneuil Hall to hear Standing Bear speak. After the speeches, more than half the audience crowded the stage to shake hands with him (Mathes, 1989, 47).

After hearing their story, Jackson collected funds for the Poncas and encouraged others to take an active part in their struggles. The mayor of Boston joined a fund-raising committee for the Poncas' legal campaign to win back their homeland. Jackson herself joined Standing Bear, Thomas Henry Tibbles, and Susette "Bright Eyes" LaFlesche on a tour throughout New England. Tibbles credited Jackson's support as being one of the major factors in the Poncas' ultimate victory (Banning, 1973, 150).

Jackson's acquaintance with the Poncas started her down a new literary road. Within two years of

first hearing the Poncas' heartrending story, Jackson published *A Century of Dishonor*. Three years later, with a pledge to write a novel that would become the Native American version of *Uncle Tom's Cabin*, she published the best-seller *Ramona*.

A Century of Dishonor is a factual sketch of broken treaties and corruption in the Indian Bureau; *Ramona* is a fictional account of the abuses suffered by the Mission Indians of California, based on Jackson's travels in that area shortly after *A Century of Dishonor* was published. Both books were among the best sellers of their time, one more indication of just how many non-Indians sympathized with the Native American victims of westward expansion.

Jackson's books may have been so immensely popular during the 1880s because many people in the expanding United States, finding a need to reconcile the taking of a continent with notions of their own civility, sought to deal with the "Indian Problem" in what they believed to be a civilized and humane manner. Thus, cultural genocide (a late twentieth-century phrase) was advanced in the modulated tones of civility, of doing what was believed to be best for "the Indian."

Jackson's books fueled a national debate over what would become of Native Americans who had survived subjugation by immigrant non-Natives. Most of her books combined condemnation of the government's earlier behavior with advocacy of popular solutions to the Indian Problem, such as religious instruction, boarding schools, and allotment.

After *A Century of Dishonor* was published, Jackson sent a copy of it to each member of Congress at her own expense. She then visited each representative personally to emphasize what she thought must be done to remove the stain of the dishonorable century she had described. Jackson died by the time Congress passed the General Allotment (Dawes) Act in 1887, officially adopting allotment (which she had believed would save Native Americans from extinction), at the same time turning it into a real estate vehicle for homesteaders and corporations (Indians would lose two-thirds of their remaining land base in the fifty years to follow).

Ramona, which was reprinted 300 times after Jackson's death, was adapted for stage and screen several times. "Every incident in *Ramona* . . . is true," Jackson wrote. "A Cahuilla Indian was shot two years ago exactly as Alessandro is—and his wife's name was Ramona, and I never knew this fact until *Ramona* was half written" (Mathes, 1986, 43).

By the middle 1880s, Jackson was suffering recurring bouts of malarial symptoms and other health problems, which gradually debilitated her. In 1885, on her deathbed, Jackson wrote of her work, "As I lie here, nothing looks to me of any value except the words I have spoken for the Indians" (Banning, 1973, 224). Her last letter, dated August 8, was written to President Grover Cleveland: "I ask you to read my *A Century of Dishonor*. I am dying happier in the belief I have that it is your hand that is destined to strike the first steady blow toward lifting the burden of infamy from our country and writing the wrongs of the Indian race . . ." (Banning, 1973, 225).

Jackson died on August 12, 1885. Upon hearing of her death, Susette LaFlesche, "shut herself into her room and wept all day long," according to her husband Thomas Henry Tibbles. "For weeks afterward she mourned the loss of this closest of her intimate friends, who had given herself wholeheartedly to save an unhappy race" (Mathes, 1986, 44).

Dickinson penned a verse in eulogy of Jackson:

*Helen of Troy will die,
but Helen of Colorado, never.
"Dear friend, you can walk"
were the last words I wrote her—
"Dear friend, I can fly"—
her immortal reply (Banning, frontpiece).*

Jigonsaseh

"Jigonsaseh" is the position title of the Head Clan Mother of the Iroquois League. Also rendered Jikonsaseh, Gekeasawsa, and Yegonwaneh, the word is variously translated as the New Face, the Fat Face, and the Fat-Faced Lynx. Her titles in English include the Peace Queen, the Mother of Nations, the Fire Woman, the Great Woman, and the Maize Maiden. The position was created when the Great Law of Peace, also called the Constitution of the Five Nations, was established by the Iroquois League in the twelfth century.

Coming out of the Mound Builder era, the Iroquoian people experienced much scattered fighting, as the old male-dominated, hierarchical order fought the newer, more democratic orders then evolving for control of society. The old order valued hunting over agriculture, whereas the new order placed its dependency on planting, especially of corn. The fighting from New York to Ohio became quite ferocious, so that families on both sides lost valued members daily. The Iroquoian peoples north of the Saint Lawrence River and Lakes Ontario and Erie had already developed a democratic government and an economy based on agriculture. Looking south, they trembled at the thought of the fighting spreading north to them.

In the midst of this turmoil, strong spirits returned to the people to aid them in their time of need. Sapling, the Elder Twin of the First Family, reappeared among the Iroquois at the Bay of Quinte as the Peacemaker (whose name, Deganawidah, is not to be spoken). At the same time, his First Family mother, the Lynx (also known as Hanging Flowers), Sky Woman's Daughter, came as the Peace Queen. Traditionally an Attiwenderonk, she also came down from the north to bring methods of corn planting to her southern sisters. Her followers became known as the Cultivators. The Peacemaker and the Peace Queen came separately, but soon met.

Knowing that he was unable to promulgate the peace by himself, the Peacemaker sought out allies in the south, the very first of them being that Great Woman, the Head Mother of the Cultivators. He approached her with respect, urging her to add his message of Peace to her message of Corn, and, after due consideration, she agreed. However, she also insisted that he include the strong political powers of women in his Great Law. In his turn, he agreed. The two forged an alliance, coordinating their efforts thereafter.

Creating the constitutional peace required extensive lobbying over decades, but eventually the Iroquoian nations grew so disgusted with fighting that they inclined their ears ever more openly to the ways of Corn and Peace. Traditions exist of Jigonsaseh traveling tirelessly about, exhorting the people even as she evaded death squads sent by the priests to kill her. The Cultivators were often frightened for her safety on these journeys, but every time they spotted her coming home, paddling her canoe to safety.

As Jigonsaseh and Peacemaker gained followers (including Hiawatha, a formerly formidable foe), the leaders of the older culture lost theirs. Finally, with the decision of the Senecas to join the peace, only one priest obstructed their way. He was Adodaroh, the deeply feared and powerful shaman of the Onondagas, whose snake and cannibal cult had terrorized the people into submission for many years. Now, however, even Adodaroh's [a.k.a. Tadodaho or Tadadaho] once trusted lieutenant, Hiawatha, opposed him.

Representatives of all five nations—the Mohawks, Oneidas, Onondagas, Cayugas, and Senecas—gathered at Onondaga to confront Adodaroh once and for all. Deeply angry, the old priest withdrew to an island that could be approached only by canoe. Twice, the Peacemaker and Hiawatha attempted parley, but twice the old man called up the winds to blow their canoe back to shore. Finally, Jigonsaseh gave the pair a powerful medicine song to calm the waters and call the ancestors. Singing her song, the Peacemaker and Hiawatha were able to approach Adodaroh, but, instead of killing or threatening him, they carried Jigonsaseh's message: If he would come over to the side of Corn and Peace, they would make him the first chairman of the Men's Grand Council of the League. Seeing his chance to retain status, the wily old man accepted their proposal.

At that point, Jigonsaseh stepped forward to announce the women's decisions regarding the people's representatives to the Men's Grand Council. She sanctioned each lineage chief, putting the horns of office on his head and announcing his election to office. Establishment of the Clan Mothers also occurred at this time, but the traditions leading to this development are obscure today. Early male anthropologists heard only the men's versions of the traditions, not realizing that there were equally important women's versions as well.

In Iroquoian culture, the names of those who attained greatness become the position titles for those who follow them in those positions. Thus the name "Adodaroh" became the position title for the Chairman of the Men's Grand Council, and the name "Jigonsaseh" became the position title for the Head Mother of the Women's Clan Council. Later Jigonsasehs continued the greatness of the first. In particular, the Jigonsaseh of the 1680s is greatly honored for defeating the Marquis de Denonville, who had been sent by Louis XIV of France along with a mighty army to destroy the Iroquois League.

After the Iroquois League was overrun by the Americans in the Revolutionary War, every attempt was made by settlers and their government to destroy Iroquoian culture. This included massive assaults on the rights and powers of women. The United States attempted to wipe out the office of the Jigonsaseh, abolishing it in 1848. The Iroquois secretly continued granting the office, however. The last recorded incumbent of the position was Gahahno (Caroline Mountpleasant), who held it until her death in 1892. The Mountpleasant family still exists, and many recognize its modern clan descendants' claim to the title.

Johnson, Emily Pauline

Born March 10, 1861, on the Six Nations reserve, upper Canada, Emily Pauline Johnson (Mohawk) died March 7, 1913, in Vancouver, British Columbia. Johnson, the first aboriginal woman to write in English about Native issues, was famous for her performances, poetry, and short stories. Since her death, Johnson's life has been claimed by a variety of political and cultural interest groups: academic, feminist, nationalist, Nativist, activist, artistic, and imperialist.

To the aboriginal community Johnson is a complex and contradictory figure. She critiqued Canada's racist policies and lamented the loss of Native culture, but she also sold Iroquoian artifacts to collectors and exploited her heritage. Her life and literary work exemplifies living with a mixed heritage in a society that reveled in the exotic while demanding assimilation.

Johnson's father, George Henry Martin Johnson, a nontraditional and proud Mohawk chief from the Wolf Clan, was a temperance advocate, a Christian, and a government interpreter. Her mother, Emily Susannah Howells, was an English-Canadian Quaker raised in the United States. Johnson was largely homeschooled, although she attended the reserve school and Brantford Collegiate Institute. After her father's death in 1884 and the family's relocation to rented accommodations in Brantford, Johnson turned to writing at age twenty-three. In 1886, as a sign of her bicultural heritage and identity, she began signing her work as E. Pauline Johnson and Tekahionwake (her great-grandfather's name). Johnson realized income from her work only after 1892. Her success began when Frank Yeigh, the president of the Young Men's Liberal Club of Toronto, invited Johnson to an evening of poetry. From this initial recital, Johnson undertook over 125 performances across southern Ontario between October 1892 and May 1893.

It was during these initial performances that Johnson began appearing in "traditional" Native costume during the first act and returned for the second in an elegant gown. Her Native costume was a buckskin dress purchased from the Hudson's Bay Company in Winnipeg. With the help of a younger sister, Johnson added a rabbit skin sleeve, bear claw necklace, hunting knife, wampum belt, Huron scalp, red wool blanket, and silver trade broaches. This costume, while reminiscent of representations of Hiawatha's Minnehaha, became Johnson's trademark. In this costume, Johnson criticized the Canadian Indian Act, offered alternative interpretations of Native life, and maintained that Canada's foundation rested on Indian and European cooperation.

From 1894 to 1909, Johnson toured Canada, the American Midwest and eastern seaboard, and she traveled three times to London, England. Although Johnson formed an important friendship with Squamish Chief Joseph Capilano and was briefly engaged to a Winnipeg insurance salesman, she

remained unmarried. In 1909, she retired to Vancouver after falling ill with breast cancer. She was buried in 1913 in Vancouver's Stanley Park.

During her lifetime, Johnson published four collections of poetry. Her first book, *The White Wampum* (London, 1895) emphasized Native topics. The second book, *Canadian Born* (Toronto, 1903), reflected Edwardian Canada's patriotic sentiments. Through the efforts of friends, Johnson's most popular volume, *Flint and Feather* (1912), as well as *Legends of Vancouver* (1912), was published shortly before her death. *Flint and Feather* remains the best-selling book of Canadian poetry. Johnson also published numerous poems, short stories, and travel narratives in a variety of magazines, such as *Mother's Magazine* (Chicago), *Boy's World* (Chicago), *Gems of Poetry* (New York), and *Week* (Toronto). Nonetheless, despite her fame and continued popularity, the English-Canadian literary canon has largely forgotten E. Pauline Johnson.

Johnson, William

Sir William Johnson was probably the most influential single Englishman in relations with the Iroquois and their allies during the French and Indian War. From his mansion near Albany, Johnson forayed on Indian war parties, painting himself like an Indian and taking part in ceremonial dances. He was a close friend of Hendrick (Tiyanoga), a Mahican-Mohawk leader, with whom he often traveled as a warrior. Joseph Brant fought beside Johnson at the age of thirteen. Because he successfully recruited a sizable number of Iroquois to the British interest, Johnson was made a baronet, with a £5,000 sterling award.

Johnson quickly learned the customs and language of the Mohawks. He had a number of children by Mohawk women, many of them with Mary Brant, a Mohawk clan mother and granddaughter of Hendrick. He generally was well liked among the Mohawks. Hendrick himself had a high regard for the Englishman and expressed his regard when he said, "... he has Large Ears and heard a great deal, and what he hears he tells us; he also has Large Eyes and sees a great way, and conceals nothing from us" (Johansen and Grinde, 1997, 185).

In June 1760, during the final thrust to defeat the French in North America, Johnson called for men to attack Montreal. About 600 warriors responded. Many Native warriors living in the Montreal area also responded to his call. Johnson reported he was sending gifts to "foreign Indians" who were switching their allegiance from the sinking French Empire. By August 5, 1760, the Native contingent had reached 1,330.

The defeat of the French and their departure from Canada at the end of the war upset the balance that the Iroquois had sought to maintain. Reluctantly, they attached themselves to the British, but they could no longer play one European power against another. The English now occupied all the forts surrounding Iroquois country. Johnson played a key role in pressing the crown to limit immigration west of the Appalachians, but land-hungry settlers ignored royal edicts, intensifying conflicts over land. In the meantime, Johnson became one of the richest men in the colonies through land transactions and trade with the Indians.

In his later years, Johnson agonized over whether to side with the British crown or the revolutionary patriots. At a meeting with the Iroquois on July 11, 1774, at his mansion near Albany, Johnson

William Johnson, British superintendent of Indian Affairs in the American colonies, 1755–1774. Johnson concluded the Treaty of Fort Stanwix with the Iroquois, persuading them to relinquish claims to territory along the frontiers of New York, Pennsylvania, and Virginia, clearing the way for European-American immigration in these areas. (National Archives of Canada)

addressed the Iroquois in the oratorical style he had learned from them, summoning them to the British cause in the coming American Revolution. Suddenly, he collapsed. He was carried to bed, where he died two hours later. The assembly of chiefs was stunned by his sudden death, but Guy Johnson, Sir William's nephew and son-in-law, stepped in to fill the breach left by his elder.

Joseph, Younger

Hinmaton Yalatik (Thunder Traveling to Loftier Heights) was more widely known as Chief Joseph (1840–1904) of the Wallamotkin band of the Nimipu (Nez Percé). He assumed the leadership of his people in 1871 upon the death of his father, Tu-ya-kas-kas (Old Joseph). Probably most famous for his leadership during the flight of the Nez Percé from the United States Army in 1877, Chief Joseph led his people in peace, war, captivity, exile, and confinement to the reservation.

Born in 1840 near Joseph Creek in the Wallowa Valley, Joseph was the second son of Tu-ya-kas-kas, the chief of seven villages in the Wallowa region of northeast Oregon. In 1843, Tu-ya-kas-kas accepted Christianity at the Spalding Mission in Lapwai, Idaho, baptized his entire family, and took the name of Joseph. While accepting Christianity, Old Joseph continued to adhere to Nez Percé religious traditions. During the first seven years of his life, Joseph likely received some rudimentary education at the mission, including Christian training and instruction. After the killings at the Whitman Mission in 1847, Tu-ya-kas-kas and his family refused to visit the missionaries at the Spalding Mission. This distancing from white missionaries did not mean isolation from other Indian communities. While maintaining their ties to their homeland, Joseph's Wallamotkin band traveled to see Nez Percé relatives and also traded, danced, hunted, and fished with many other Columbia Plateau Indian communities.

During the 1840s and 1850s white settlers arrived in the Pacific Northwest in ever-greater numbers and placed pressure on the United States government to "solve the Indian Problem." In 1855, Tu-ya-kas-kas and many other Nez Percé and Plateau people met with Territorial Governor Isaac Stevens at Walla Walla and concluded a treaty that

Chief Joseph is probably most famous for his leadership during the flight of the Nez Percé from the U.S. Army in 1877. (Library of Congress)

set aside reservation areas for Plateau communities and opened up broad swaths of land to white settlers. The provisions of the Walla Walla Treaty of 1855 kept nearly all of the Nez Percé land holdings intact as a reservation and therefore insulated them, including Tu-ya-kas-kas's people, from the initial onslaught of white settlement. Old Joseph certainly discussed the Walla Walla council and treaty with his family and probably communicated to Joseph, Ollokot, and his other children the nature of the agreement that existed between themselves and the United States government. Shortly after the conclusion of the treaty, hostilities broke out between Plateau Indian communities and the U.S. government. The Nez Percé remained neutral, but many of their relatives in other Plateau communities suffered great hardship during the so-called Yakama War.

During the 1860s, most white settlers elected to stay out of the Wallowa region and therefore did not pose much of a threat to Joseph's people. When

white miners discovered gold on the Nez Percé Reservation in 1860, the government renegotiated the 1855 Walla Walla Treaty with a small group of Nez Percé led by a lawyer. The lawyer and fifty-one Nez Percé men signed the 1863 treaty, but it did not include all Nez Percé bands and factions. The 1863 "thief" treaty provisions substantially decreased the size of the Nez Percé reservation and left Joseph's people outside the boundaries of the new reservation. From this point on, the Nez Percé were principally divided into treaty and nontreaty factions.

By 1871, the first white settlers began to arrive in the Wallowa region. Tu-ya-kas-kas died in August of 1871 and left the leadership of the Wallamotkin band to Joseph, his eldest surviving son. From the beginning of his role as leader of the Wallamotkin band, Joseph faced the great challenge of attempting to deal with increased white settlement and government efforts to remove his people to the smaller Nez Percé reservation. Despite the tumult of the times, Joseph married a young woman named Wa-win-te-piksat and started a family. Their first daughter, Kap-kap-on-mi, was born in 1865. Joseph had a total of four wives during his life while also raising nine children. All of the children except Kap-kap-on-mi died before they were two.

Joseph and his people consistently argued their case with settlers and the government, reminding all parties that Joseph's father never sold their land and was not party to any agreement that relinquished the Wallowa area to white settlement. Joseph based much of his reasoning and rhetoric on the tenets of the Washani religion, the religion of his people. For adherents of the Washani, ancestral lands were sacred, and they could not be sold or exchanged for goods. Most important, Joseph and other adherents of the Washani faith believed that their lives and the lives of their people were inextricably linked to the land. In other words, selling the land would be tantamount to selling themselves and their heritage.

Despite the vehement arguments of Joseph and his people, settlers in the Wallowa Valley failed to leave. In an attempt to resolve the problem, President Ulysses S. Grant created an executive order reservation, but the boundaries were incorrect and caused further difficulties. The executive order reservation lasted until June 1875. In 1876, the federal government sent General Oliver O. Howard to negotiate the removal of the nontreaty Nez Percé. In councils with Joseph, Ollokot, and other nontreaty leaders, Howard warned that they must move or face military action by the United States. In early

May 1877, Joseph reluctantly agreed to move to the reservation. The government placed the unrealistic deadline of June 15, 1877, on the nontreaty Nez Percé to collect their belongings and animals and move to the reservation.

After their arrival on the Camas Prairie in early June 1877, a group of younger men raided settler homes along the Salmon River. Joseph realized that this meant war and decided to move his people to more defensible positions. In this way, the flight of the Nez Percé began. After defeating the U.S. Army in three separate engagements, the nontreaty Nez Percé decided to elude pursuing forces by traveling to Montana over the LoLo Trail.

After traversing the trail, Joseph, his family, and the other nontreaty Nez Percé camped in the Big Hole Valley. On the morning of August 9, 1877, army units attacked the camp. Many Nez Percé people were killed, but warriors from the camp blunted the attack and eventually drove the Army back to entrenched positions. Joseph and the other nontreaty leaders rallied the survivors and they fled from Big Hole, turning north in an attempt to reach Canada and the camp of Sitting Bull. At the Bear Paw battlefield, the U.S. Army surrounded the remnants of the nontreaty people. Joseph, recognizing the suffering and death of his people, agreed to negotiate for an end to the fighting. He consented to a cease-fire and agreed to relinquish weapons to the Army, all with the understanding that the survivors would be returned to the Nez Percé reservation in Idaho.

The remaining 400 Nez Percé and Palouse survivors were quickly sent not to Idaho but to Fort Keogh (Montana), then to Fort Leavenworth (Kansas), and eventually to Indian Territory, where the U.S. government first placed them on the Quapaw Agency and then settled them on a piece of land on the newly created Ponca Agency. During the year and a half after their surrender, many people died from disease, malnutrition, and depression. The nontreaty Nez Percé called Indian Territory *Eekish Pah* ("hot place"). In 1885, the federal government allowed the exiled Nez Percé to return to the Pacific Northwest but divided the group into two; one group returned to the Nez Percé Reservation in Idaho and the second group, led by Joseph, was forced to settle on the Colville Indian Reservation in northern Washington State.

After 1885, Joseph and the other Nez Percé attempted to adjust to life on the Colville reservation. Joseph traveled to many places, including Washington, D.C., New York, and Seattle to speak

about his experiences and garner support for his people's return to the Wallowa Valley. On September 21, 1904, Chief Joseph died in front of his teepee in Nespelem, Washington, on the Colville Reservation. Nine months later, a large group of Nez Percé and Anglo-Americans joined to rebury Chief Joseph in a ceremony on the Colville Reservation. A large stone monument was placed on his grave and stands to this day as a memorial to Joseph's life.

Kicking Bird

Best-known as head of the peace faction during the Kiowa Wars of the 1870s, one of Kicking Bird's (Kiowa, 1835–1875) grandfathers was a Crow captive who had been adopted into the Kiowa nation. The Kiowas called him Watohkonk, meaning "black eagle," as well as Tene-Angpote, "eagle striking with talons" or simply "Kicking Bird." Kicking Bird's one wife was called Guadalupe. At the time of his death, Kicking Bird was a staunch proponent of education and had persuaded Thomas C. Battey, the Kiowa Indian agent, to build a school for Kiowa children.

Kicking Bird became a noted warrior as a young man. Growing older, he began to accept the counsel of Little Mountain (a principal chief of the Kiowas), who asserted that a peaceful approach to relations with the whites was better than military actions. In 1865, Kicking Bird signed the Little Arkansas Treaty, which established a Kiowa reservation that was further described in the Treaty of Medicine Lodge in 1867.

With the demise of Little Mountain in 1866, Kicking Bird became the Kiowas' major leader of the

peace party, with Satanta representing the war faction. To resolve this split in 1866, the Kiowas turned to Lone Wolf as the compromise choice for principal chief. However, Lone Wolf was unable to unite the opposing forces in his nation. During 1870, Kicking Bird was called a coward at a Sun Dance on the North Fork of the Red River. To disprove such allegations, he commanded a war party of about 100 men against a detachment of U.S. troops in Texas. During the resulting battle, Kicking Bird proved his valor by personally charging into a unit of about fifty soldiers, slaying one of them with his lance.

Kicking Bird still could not assuage his peoples' resentment regarding reservation conditions. Brian C. Hosmer wrote in a biography of him that, by late 1873, the war faction was raiding in Texas and Mexico. During these raids two young warriors, one the nephew and the other the son of paramount Chief Lone Wolf, were killed. Motivated by revenge and angered by the continued slaughter of the buffalo, Kiowa warriors attacked immigrants on the frontier. Kicking Bird kept his followers on the reservation, but some Kiowas, including Bird Bow, White Shield, White Horse, Howling Wolf, and perhaps Satanta and Lone Wolf, joined with Quanah Parker's Quahadi Comanches in the unsuccessful attack on Adobe Walls on June 27, 1874 (Hosmer, 2004).

Hosmer continued, describing the end of Satanta's career as a war chief in late 1874 and Lone Wolf's surrender early in 1875. Kicking Bird thus remained the only notable Kiowa leader.

In 1875, to influence the Kiowas, the Army gave Kicking Bird the title "principal chief." Hosmer wrote that, as chief and principal intermediary between the tribe and federal authorities, Kicking Bird was placed in charge of the hostile Indians captured during the uprising of 1874 and 1875. This position allowed Kicking Bird to protect some of his followers from danger, but it also placed him under the influence of the Army (Hosmer, 2004).

Kicking Bird's cooperation with the Army was seen as treason by some of the Kiowas. When officers from Fort Sill gave Kicking Bird a horse, Kicking Bird's reputation as a collaborator was further reinforced. Following Kicking Bird's sudden death on May 4, 1875, at Cache Creek (in Indian Territory), it was widely believed that a cup of coffee he had recently consumed had been poisoned (Hosmer, 2004). Several other Kiowas asserted that Kicking Bird was killed by witchcraft. According to Hosmer, Kiowa lore alleges that Mamanti used his medicinal powers to kill his long-time adversary. Mamanti

himself died shortly after hearing of Kicking Bird's death.

Kicking Bird was buried as a Christian at Fort Sill, Kansas, even though he had never been converted. His grave was marked by a simple wooden cross. After the cross decayed, the exact location of Kicking Bird's remains was forgotten (Hosmer, 2004).

LaDuke, Winona

Winona LaDuke (Mississippi Anishinabe, b. 1959), whose Ojibwa name, Benaysayequay, means "Thunder Woman," became one of the foremost environmental advocates in Native America during the last quarter of the twentieth century. She lectured, wrote, and pressed authorities for answers to questions on the Navajo uranium mines, on the Hydro-Quebec's construction sites at James Bay, and on the toxic waste sites on Native Alaskan and Canadian land along the Arctic Ocean. She became well-known to non-Indians as Ralph Nader's vice presidential running mate on the Green Party ticket for U.S. president in the national elections in 1996 and 2000. She also was named in 1995 by *Time* magazine as one of fifty Leaders for the Future.

LaDuke is a daughter of Vincent LaDuke, a Native rights activist in the 1950s, and Betty LaDuke, a painter. She was educated at Harvard University in the late 1970s, and in the early 1980s moved to the White Earth Ojibwa reservation in Minnesota, at Round Lake. LaDuke became involved in protests of environmental racism and in the recovery of the Native American land base. With \$20,000 she received as the recipient of the first Reebok Human Rights Award, she founded the White Earth Land Recovery Program, which took action to regain the land base on her home reservation. In the early

A leading Native American activist, environmentalist, and author, Winona LaDuke works to defend the social, political, economic, and environmental rights of Native Americans. She also ran for vice president on the Green Party ticket with Ralph Nader in 1996 and 2000. (AP/Wide World Photos)

1990s, the land area of the thirty-six-mile-square reservation was 92 percent owned by non-Indians.

The White Earth Land Recovery Project maintains many other programs. One, called *Mino-Miijim*, delivers wild rice and other traditional foods, such as hominy and buffalo meat, to elderly tribal members who are afflicted with Type 2 diabetes. The program was initiated by LaDuke and Margaret Smith, an elderly former teacher (eighty-seven in 2006). The program is meant to substitute traditional foods for high-fat fast foods and government commodities that contribute to diabetes. "Oh," a tribal member exclaimed to one WELRP intern who accompanied Smith on her monthly delivery route, "[h]ere come the good commodities" (Kummer, 2004, 148).

LaDuke had refrained from electoral politics until 1996, when the Green Party asked her to run

for vice president. At the age of thirty-seven, she said the campaign allowed her a voice to propose "A new model of electoral politics. . . . I am interested in reframing the debate on issues in this society, the distribution of power, and wealth, the abuse of power, the rights of the natural world . . . and the need to consider an amendment to the U.S. Constitution in which all decisions made today would be considered in light of the impact on the seventh generation from now. . . . These are vital subjects which are all too often neglected by the rhetoric of 'major party' candidates and media" (Johansen, 1996, 3). "Until we have an environmental, economic, and social policy that is based on consideration of the impact on the seventh generation from now," said LaDuke, "we will be living in a society that is based on conquest, not one that is based on

survival. I consider myself a patriot—not to a flag, but to a land” (Johansen, 1996, 4).

During the 1996 campaign, President Bill Clinton incorporated much of her language into his own speeches. LaDuke, however, acutely criticized Clinton for talking environmentally but ignoring environmental action, by doing such things as weakening the Endangered Species Act. LaDuke supported a constitutional amendment that would define air and water as common property, to be maintained free from contamination. “The rights of the people to use and enjoy air, water, and sunlight are essential to life, liberty, and happiness,” LaDuke wrote in *Indian Country Today* (October 14, 1996) (Johansen, 1996, 3).

LaFlesche, Susan Picotte

Daughter of Omaha principal Chief Joseph LaFlesche, Susan LaFlesche (Omaha, 1865–1915) became a government doctor on the Omaha Reservation during a time when cholera, influenza, tuberculosis, and other diseases were reaching epidemic proportions. She blazed a career of genius through a number of white schools, and then nearly worked herself to death serving the Omahas as a government physician.

In 1884, after two and a half years at the Elizabeth Institute for Young Ladies in Elizabeth, New Jersey, LaFlesche enrolled at the Hampton Normal

and Agricultural Institute in Hampton, Virginia. This vocational school had been started by General Samuel C. Armstrong to educate freed slaves. A number of Indians also attended, and the school played a role in the designs of Lieutenant Richard Henry Pratt, who started Carlisle Indian School. LaFlesche graduated from Hampton May 20, 1886 at the top of her class. Between 1886 and 1889, she attended the Women’s Medical College of Pennsylvania on a scholarship raised by her friends, many of whom were non-Indian, again graduating at the top of her class.

LaFlesche thus became one of a handful of Native American physicians in the nineteenth century, a group that includes Charles Eastman and Carlos Montezuma. She was the only Native American woman to become a medical doctor during that century. For five years, LaFlesche fought pervasive disease on the Omaha reservation, making some progress.

In December 1891, LaFlesche wrote that influenza “ragged with more violence than during the two preceding years. Some families were rendered helpless by it. . . . Almost every day I was out making visits. . . . Several days the temperature was 15 to 20 degrees below zero, and I had to drive [a horse-drawn buggy] myself” (Mathes, 1985, 73). During that winter, she treated more than 600 patients.

By 1892, the intensity of her work was costing LaFlesche her health. She was beset by a number of debilitating illnesses for the rest of her life, as she ministered to the ever-present ills of the Omahas. At one point she wearily departed for Washington, D.C., to testify for the Omahas because people had threatened to convey her bodily, her mission was of such importance to them.

Back on the Omaha reservation, LaFlesche waged a tireless campaign against alcoholism, recounting stories of how Indians craving liquor used their rent money and even pawned their clothes in winter to obtain it. She wrote of one Harry Edwards, who on a winter’s night in 1894, “fell from a buggy, was not missed by his drunken companions, and in the morning was found frozen to death” (Mathes, 1985, 75). From a medical point of view, LaFlesche believed that alcoholism was at the root of many of the physical, mental, and moral ills facing the Omahas and other American Indians.

In 1894, her health improving, LaFlesche married Henri Picotte, who was part French and part Sioux; she also began a new medical practice for Indians and whites at Bancroft, Nebraska. LaFlesche

practiced medicine there for the rest of her life, as her own health permitted. After LaFlesche's death on September 18, 1915, the *Walthill Times* added an extra page (in its September 24 issue) and filled it with warm eulogies to her. Friends recalled that hundreds of people in the area, Indian and Euro-American, owed their lives to her care.

The hospital that Susan LaFlesche built at Walthill has since been declared a national historic landmark. Since 1988, her memory has been celebrated at an annual festival there.

LaFlesche, Susette Tibbles

Susette LaFlesche (Bright Eyes, Inshta Theamba, Omaha, 1854-1903) became a major nineteenth-century Native rights advocate through the case of the Ponca Standing Bear [*Standing Bear v. Crook*, 1879], the first legal proceeding (decided in Omaha) to establish Native Americans as human beings under U.S. law.

LaFlesche was born near Bellevue, Nebraska, the eldest daughter of Joseph "Iron Eye" LaFlesche and Mary Gale LaFlesche, daughter of an Army surgeon. Like her sister Susan, Susette LaFlesche attended the Presbyterian mission school on the Omaha reservation. Both sisters were among the most brilliant students ever to attend the school. She also studied art at the University of Nebraska.

In the late 1870s, Susette traveled with her father to Indian Territory (later Oklahoma) to render rudimentary medical attention to the Poncas with Standing Bear, whose people had been forced to move there from their former homeland along the

Niobrara River in northern Nebraska. When the Poncas attempted to escape their forced exile and return to their homeland, they marched for several weeks in midwinter, finally eating their moccasins to survive, arriving at the Omaha reservation with bleeding feet. The Omahas, particularly the LaFlesche family, granted them sanctuary and sustenance.

Susette accompanied her brother Francis and Standing Bear on a lecture tour of Eastern cities in 1879 and 1880 to support the Poncas' case for a return of their homeland. Newspaper articles about the Poncas' forced exile by Omaha journalist Thomas H. Tibbles helped ignite a furor in Congress and among the public.

Tibbles, an editor at the *Omaha Herald*, was the first journalist to interview Standing Bear while the LaFlesche family sheltered the Poncas. Tibbles' accounts were telegraphed to newspapers on the East Coast. In the meantime, LaFlesche and Tibbles fell in love and married in 1882. Both also toured the East Coast with Standing Bear, "armed with news clippings on the Ponca story and endorsements from General [George] Crook, the mayor of Omaha, and leading Nebraska clergymen," raising support for the restoration of Ponca lands (Tibbles, 1880, 129).

In Boston, where support for Standing Bear's Poncas was very strong, a citizens' committee formed that included Henry Wadsworth Longfellow. While Susette LaFlesche was visiting Boston with Standing Bear, Longfellow said of her, "This is Minnehaha" (Tibbles, 1880, 130).

In Boston, Tibbles, LaFlesche, and Standing Bear first met Helen Hunt Jackson. The Poncas' story inflamed Jackson's conscience and changed her life. Heretofore known as a poet (and a childhood friend of Emily Dickinson), Jackson set out to write *A Century of Dishonor*, a best-selling book that described the angst of an America debating the future of the Native American peoples who had survived the last of the Indian wars. Jackson became a major figure in the Anglo-American debate over the future of Native Americans. Standing Bear and his people eventually were allowed to return home to the Niobrara River after Congress investigated the conditions under which they had been evicted. Standing Bear died there in 1908.

LaFlesche also coauthored a memoir with Standing Bear, *Ploughed Under: The Story of an Indian Chief* (1832). In ensuing years, LaFlesche and Tibbles also toured the British Isles. The couple lived in Washington, D.C., but eventually Susette returned to

Lincoln, Nebraska, where she died in 1903. She was buried in Bancroft, Nebraska. In 1994, Susette LaFlesche was inducted into the National Women's Hall of Fame.

Leupp, Francis Ellington

Francis Ellington Leupp (1849–1918) is remembered in American history for his involvement in Native American issues and government policy. He served as commissioner of Indian Affairs from 1905 to 1909. Before and after his tenure in this post, Leupp was well known as an advocate of educating Indians in Anglo-American values and culture as an alternative to their anticipated extinction.

Although originally trained as a journalist who had no prior government or national political experience, Leupp's background in journalism provided an avenue into American politics. Historian Frederick E. Hoxie noted that Leupp was a "product of an old New York family, schooled in public piety by Mark Hopkins at Williams College," a prestigious institution in Williamstown, Massachusetts (Hoxie, 1997, 162). After he received an education at Williams College, Leupp worked as an editorial assistant under William Cullen Bryant for the *New York Evening Post*. In 1889, Leupp left his management position at the *Post* and moved to Washington, D.C. Fascinated with the political environment in Washington, Leupp became involved in the Civil Service Reform League and worked as the editor for the league's newspaper.

Francis E. Leupp was the twenty-seventh commissioner of Indian Affairs and a member of the Indian Rights Association and the U.S. Board of Indian Commissioners. Leupp was a noted Indian reform advocate who wrote prolifically on the subject. (*Indian Craftsman*, April 1909)

While serving as the editor for the Civil Service Reform League, Leupp developed a close relationship with one of the league's strongest supporters, Theodore Roosevelt. Leupp's friendship with Roosevelt proved critical for his future career in American government and politics. Both men shared common interests in the civil reforms of the late nineteenth century, and both closely followed numerous heated debates over Indian affairs.

When Herbert Welsh, founder of the Indian Rights Association, needed a new Washington lobbyist, Roosevelt strongly recommended Leupp for the position. At the insistence of Roosevelt, Welsh appointed Leupp to a three-year term as the association's lobbyist (Prucha, 1979, 34). Hoxie noted that Leupp "spent his three-year term hounding administrators who ignored the civil service rules, appearing at hearings on appropriations, and investigating charges of corruption and mismanagement" (Hoxie, 1997, 162). Involvement with the Indian Rights Association provided Leupp with an expertise in government policy and Indian affairs that in turn opened the door for future government appointments.

In 1896, President Grover Cleveland appointed Leupp to the Board of Indian Commissioners. When Roosevelt became president of the United States in 1901, Leupp continued to advocate Indian rights and worked closely with the Roosevelt administration on Indian policy. In 1905, Roosevelt replaced former President William McKinley's appointee, William A. Jones, with Leupp to be the new Commissioner of Indian Affairs, a position Leupp held until 1909. During his first five months as commissioner, Leupp visited Native communities across North America to look for "trouble spots" that needed his immediate attention. Leupp used this time to conduct field research for a book titled *Outlines of an Indian Policy* (1905), in which he laid out his agenda for Indian assimilation and acculturation.

During Leupp's tenure as commissioner, few issues demanded more of his time and attention than Indian education. According to Leupp, educating Indians in Anglo-American values and culture preserved Indian people from "extinction." Although Indians had always valued education, the traditional education Indian pupils received in their tribal communities did not satisfy the government's educational goals for Indian people. Unlike his predecessors, Leupp did not entirely approve of off-reservation boarding schools such as the Sherman Institute or Phoenix Indian School, but instead advocated and supported the use of reservation day schools. Leupp's philosophy of Indian education largely came from his previous experience with Indian people.

During the late nineteenth century, Leupp traveled to the Hopi Reservation in northeastern Arizona. During his visit with the Hopi, Leupp noticed how efficiently a Hopi woman and her daughters took care of their house, cooked, and washed dishes. Leupp commented that the Hopi woman "performed these housewifely duties as well as they would have been performed in most of the white settler's cabins in the Southwestern desert" (Leupp, 1910, 133). From this observation, Leupp concluded that Indian pupils who attended schools in close proximity to home influenced their parents and family to a much greater degree in comparison to those students who attended off-reservation boarding schools.

In spite of his many contributions, Leupp's tenure as commissioner is marked with controversy. A major supporter of Indian land allotment, Leupp firmly held that the government should control the

sale and ownership of Indian land. Under Leupp's allotment policy, Indian people across North America lost millions of acres of land. In addition to allotment, Leupp adamantly opposed Indian isolation at the expense of Indian wishes and desires. Leupp argued that Indians who lived on reservations should not be isolated from their white neighbors. In Leupp's opinion, Indian isolation hindered Indian "progress" and slowed down the economic development of the West.

Little Crow

Little Crow (Cetan Wakan, Santee, or Mdewakanton Sioux), also known as Taoyateduta ("His Red Nation"), was the leader of Dakota resistance to white invasion during the U.S.–Dakota War of 1862. Born about 1810 in the Bdewakantunwan village of Kapoza (where St. Paul, Minnesota, is today), Taoyateduta came from a line of Dakota chiefs, including the first Little Crow (his great-grandfather), Cetanwakanmani (his grandfather), and Wakinyantanka (his father). Despite the fact that he was tutored well in Dakota leadership and had earned an impressive war record, when his father was suffering from a fatal accident in 1846, he indicated his support for one of Little Crow's half brothers as his successor when he passed his medals on to him. His family believed Taoyateduta had spent too many years away from Kapoza to effectively assume the chieftainship. Undaunted by this, when the waters thawed that spring, Taoyateduta returned to challenge his half brother and in the process was shot by

Mdewakanton Santee Sioux Chief Little Crow, who had previously been hospitable and accommodating toward white settlers, led a bloody Minnesota Sioux uprising in 1862 after many of his people nearly starved in U.S. captivity. The uprising was followed by the largest mass hanging in U.S. history. (Library of Congress)

a bullet that traveled through both wrists before passing into his body. Through this act of bravery, he earned the support and sympathy of the villagers, and, when he recovered from his injuries, his chieftainship was secured.

The midnineteenth century was a difficult time to assume Dakota leadership because the contest over Dakota lands and resources had reached full intensity. From the time the first treaty was signed by Cetanwakanmani in 1805, the pressure to cede Dakota lands and abandon Dakota ways only intensified. A series of land cessions in 1837, 1851, and 1858 severed large chunks for white settlement and eventually confined the Dakota to a narrow strip of reservation land bordering the Minnesota River. Taoyateduta was faced with the difficult challenge of attempting to negotiate justice in the face of repeated treaty violations by the U.S. government, continued

white incursions on Dakota land, and constant colonization efforts organized among missionaries, traders, and Indian agents that served to deeply factionalize the Dakotas and undermine Dakota leadership. He consistently sought peaceful solutions to these problems and attempted to maintain good relations with whites in southern Minnesota, tolerating the Christianizing and civilizing efforts and addressing grievances through negotiation. Given the invading settler population, however, peaceful relations were impossible to maintain as long as the Dakotas were committed to maintaining their lands and way of life.

Taoyateduta's peaceful efforts ceased when he agreed to lead the Dakotas in war at the outbreak of the U.S.–Dakota War of 1862. The Dakotas had been pushed beyond their limits in the hot summer of 1862 when they were facing starvation as a consequence of another U.S. treaty violation. When a small group of Dakota warriors killed five white settlers near Acton Township on August 17 and the Dakotas faced the likelihood of a severe backlash, they knew they could not continue to live under those circumstances. The young warriors pleaded with Taoyateduta to lead them in war, and, though he initially refused to engage in what he knew was a futile effort, he reluctantly agreed when they called him a coward. In his famous speech, he finally conceded, "Braves, you are little children—you are fools. You will die like the rabbits when the hungry wolves hunt them in the Hard Moon. Taoyateduta is not a coward: he will die with you!"

On the morning of August 18 the Dakotas began their attack on the Lower Sioux Agency, killing most of the whites they encountered and taking others, primarily women and children, as prisoners. These actions set the Minnesota frontier settlements into a panic, and terrified white settlers fled to the nearby towns and Fort Ridgely. When news of the war spread to St. Paul, Governor Alexander Ramsey commissioned Henry Sibley to lead a regiment of 1,400 men on an expedition against the Dakotas. Once the white forces were mobilized, the Dakotas moved to a defensive position and the war was quelled.

After the final battle was fought at Wood Lake on September 23, 1862, and the release of the 269 white and mixed-blood prisoners was subsequently arranged, Taoyateduta left his Minnesota homeland heartbroken. He fled the state, as did thousands of others, to either Dakota Territory or Canada. After spending time farther west attempting to rally

indigenous support for continued resistance efforts, Taoyateduta traveled to British Canada to try to build an alliance against the Americans. Without success, in the summer of 1863, he returned to Minnesota with only a small group of Dakotas.

On July 3 Taoyateduta was shot while picking raspberries with his son, Wowinape, by Nathan and Chauncey Lamson, who received bounty payments for their deed. Unfortunately, attacks on him did not end with his death. His body was dragged through the town of Hutchinson, and white boys celebrated the Fourth of July by placing firecrackers in his ears and nose. After he had been scalped, mutilated, and dismembered, his remains were displayed and kept at the Minnesota Historical Society for 108 years before they were finally returned to his family and laid to rest in Flandreau, South Dakota.

From the start of the war to the time of his death, Taoyateduta fought unceasingly for the Dakotas' right to exist in their homeland. He embodies the spirit of indigenous resistance in a struggle that persists today.

Little Turtle

Miami leader Little Turtle was responsible for one of the biggest disasters in U.S. Army history. When he realized the futility of continuing to fight, he renounced war and became a loyal ally of the American government.

Little Turtle (Michikinikwa) was born near the Eel River in the vicinity of present-day Fort Wayne, Indiana, around 1752. His father was a chief of the Miamis, but, because his mother was a Mahican, tribal custom dictated that he could not inherit a leadership position. Nonetheless, Little Turtle displayed fine leadership and warrior qualities as a young man, and he was eventually made a Miami chief by the tribal elders. He was pro-British by nature, and in 1780 his warriors attacked and destroyed a French-Illinois expedition under Colonel Augustin de la Balme. After the American Revolution, he became a leading spokesperson for resistance to white encroachment north of the Ohio River and helped to form a loose confederation of Miami,

Shawnee, Potawatomi, and Ojibwa Indians. In 1787, Congress guaranteed the Indians that their hunting grounds would be respected. Within a few years, however, a rash of illegal settlements precipitated a fierce border war between the Indians and the frontierspeople. By 1790, when it was apparent the Indians would not accept the squatters, the American government resorted to punitive measures.

The U.S. government initially chose General Josiah Harmar, who had assembled a force of 1,100 poorly trained Pennsylvania and Kentucky militia, stiffened by 300 army regulars, to deal with the Indians. Little Turtle by this time was principal war chief of the Miamis, and he ordered his braves to

Little Turtle, chief of the Miami tribe, led militant opposition to the influx of settlers in the Ohio country in a conflict known as Little Turtle's War. However, after his defeat at the Battle of Fallen Timbers in 1794, Little Turtle became an ally of the United States. (North Wind Picture Archives)

feign retreat, luring the Americans deeper and deeper into the countryside. Harmar met no opposition until he reached Little Turtle's village, where the Indians ambushed and mauled two reconnaissance expeditions in October 1790. Having lost 262 men and accomplished nothing, the white militia withdrew to Kentucky. This victory assured Little Turtle's subsequent leadership over the Maumee Valley tribes, and they united in time to face an even greater onslaught.

In September 1791, the government dispatched General Arthur St. Clair with a force of 2,300 raw regulars and 300 Kentucky militia against the Indians. Little Turtle commanded a force of similar size, assisted by the Shawnees Blue Jacket and Tecumseh. Desertion soon reduced St. Clair's force to 1,500 men, and, encouraged by this weakness, Little Turtle abandoned his usual defensive tactics in favor of a direct assault. This tactic was something that Native Americans had never tried before. On the morning of November 4, 1791, his warriors stormed the American encampment while the soldiers were breakfasting and routed them. St. Clair, gravely ill, roused himself from bed and attempted to rally the survivors before the entire army was annihilated. A bayonet charge enabled 500 men to escape destruction but at tremendous cost, with over 600 soldiers killed and 300 wounded, and Little Turtle's losses appear to have been negligible. In November 1792 he also defeated a party of Kentuckians led by John Adair. Fearing that the dreaded "long knives" would attack again, however, Little Turtle spent the next two years shoring up tribal solidarity and soliciting help from the British.

As feared, the Americans appeared once more, this time with General Anthony Wayne at their head. Wayne spent almost two years training and equipping his force of 2,000 men and advanced carefully, building forts along the way. Little Turtle respected his professional and energetic preparations, calling him "the chief who never sleeps." The Indians harassed his line of supply with impunity, but when they rashly attacked Fort Recovery in July 1794 and were rebuffed, many grew sullen and returned home. Little Turtle took stock of "Mad Anthony" and counseled other chiefs to seek peace. "We have never been able to surprise him," he warned. "Think well of it. Something whispers to me, listen to peace." Little Turtle was ridiculed and lost command of the Indians to Blue Jacket. On August 20, 1794, Wayne crushed the confederation at the Battle of Fallen Timbers, in which Little Turtle commanded a few Miamis and

played a small role. The following year, Little Turtle was a signatory to the Treaty of Greenville, whereby the Indians gave up most of the land that comprises present-day Ohio. Containing his bitterness, he declared, "I am the last to sign the treaty; I will be the last to break it."

From that time on, Little Turtle remained a friend of the United States, and in 1797 he traveled to Washington, D.C., to meet with President George Washington and Tadeusz Kosciuszko, who presented him with a brace of pistols. He was sincere in his quest for peace and made additional land concessions with Governor William Henry Harrison, who built a house for him on the Eel River. He also took the white scout William Wells as his son-in-law and kept the Miamis out of Tecumseh's tribal coalition. Little Turtle succumbed to illness at Fort Wayne on July 14, 1812 and received a military burial.

Louis, Adrian

An enrolled member of the Lovelock Paiute, the poet and writer Adrian C. Louis was born in 1946 in northern Nevada, where he grew up the oldest of twelve children. After spending the late 1960s in San Francisco's Haight-Ashbury section, he graduated from Brown University with an MA in creative writing. Louis taught from 1984 until 1997 at Oglala Lakota College at Pine Ridge in South Dakota. Since 1999, he has been an English professor in the Minnesota State University system, in which he currently teaches and directs the creative writing program at Southwest Minnesota State University in Marshall, Minnesota.

A cofounder of the Native American Journalists Association (NAJA), Louis has produced much diverse work, including his early writing as a jour-

nalist and an editor for four tribal newspapers; a book of short stories, *Wild Indians & Other Creatures*; a novel, *Skins*; and twelve volumes of poetry: *Evil Corn*; *Bone & Juice*; *Ancient Acid Flashes Back*; *Skull Dance*; *Ceremonies of the Damned*; *Vortex of Indian Fevers*; *Blood Thirsty Savages*; *Days of Obsidian*, *Days of Grace*, with Jim Northrup, Al Hunter, and Denise Sweet; *Among the Dog Eaters*; *Fire Water World: Poems*; *Sweets for the Dancing Bears*; *Muted War Drums*; and *The Indian Cheap Wine Séance*.

Louis has received numerous awards and accolades. *Fire Water World* won the 1989 Poetry Center Award from San Francisco State University. Louis was named Writer of the Year for poetry in 2001 by Wordcraft Circle of Native Writers and Storytellers for *Ancient Acid Flashes Back*. He is the recipient of a Pushcart Prize and was elected to the Nevada Writers Hall of Fame in 1999. He has been granted fellowships by the Bush Foundation, the National Endowment for the Arts, the Wurlitzer Foundation, the South Dakota Arts Council, and the Lila Wallace-Reader's Digest Foundation.

Louis' most acclaimed work, *Skins*, focuses on the lives of two brothers, Rudy and Mogie Yellow Shirt, inhabitants of the Pine Ridge Reservation. Rudy is a tribal police officer surviving the death of his marriage and the dismal poverty and alcoholism among his Oglala people on the reservation. He also suffers from internalized racism, stereotyping his own people rather than truly helping them as he once sought to do. In 2002, director Chris Eyre produced *Skins* as a feature film starring Graham Greene, Eric Schweig, and Gary Farmer.

Louis' poetry is highly esteemed and focuses on much the same sort of real, hard-core, reservation-life issues found in *Skins*. He writes of his personal and the collective struggle with alcohol; the stark South Dakota landscape; government programs; poor nutrition, health, and dental care; reservation litter; and racism. His work interrogates the meaning of individual growth for Native peoples; it searches out definitions of the self in this complex and devastated world and questions what "betterment" exactly is. Louis's poetry reaches beyond the Indian world, however, showing commonality between the historical and contemporary plights of American Indians and the current situation of Iraqi people. It mourns his wife's slow loss to Alzheimer's at the same time it celebrates his love for her. Louis's poetry looks death and life in the eye squarely and challenges them both.

Luna, James Alexander

Artist James Luna (Luiseño, from the La Jolla reservation in California, b. 1950) creates both installation art and performance art pieces that use humor and irony to question social and cultural issues, Indian identity, stereotypes of American Indians, and representations of Native Americans. Because of his unique style of art and critical subject matter, Luna has broad worldwide recognition, which is unusual for Native American artists. On the other hand, his work is not well-known by collectors who seek Native American art adhering to the stereotypes and misrepresentations of Indians, which he addresses as subject matter in his work.

His work explores issues such as socioeconomic problems that plague Native Americans, as well as the roots of those problems and their manifestations, such as substance abuse and cultural conflict. In his artwork, Luna often creates artificial environments within galleries or museums, where he reproduces an image of, or performs a representation of, a stereotype of Native Americans. His intent is to present or perform the work in such a way as to demonstrate the ridiculous nature of the stereotype or perception, showing how Native Americans are misrepresented. Further, he seeks to involve the audience in this experience so as to have them confront their beliefs and challenge their cultural perspectives and boundaries.

Luna uses a variety of media in his performances and installations, including everyday objects, audio, video, and slides. His performance art depends on interaction between the audience and artist. The performance is the artwork. Unlike

painting or sculpture, there is no actual object; this type of art must be experienced. When the performance is over, only the idea or concept of the work remains; this is the nature of performance art.

His installations utilize the same types of media to present a concept, only without his presence. In either case, the result is the same; because he uses material and/or actions that provoke a response, the viewer must choose to interact or ignore the work. Either way forces the viewer to think about the concepts to which he is drawing attention.

Installation and performance art are considered temporal, because they exist only in the moment, because one cannot collect or display conceptual works of art created through performance or temporary installation. This makes the work more provocative because it is a concept, not an object; to some this is a radical idea. However, Luna has created works that, despite the fact that they no longer exist, continue to provoke a reaction through photographic documentation.

Luna's best-known work is *The Artifact Piece*, which was both a performance and an installation. The first performance of this work took place in 1987 at the San Diego Museum of Man. In this work, he put himself on display in the museum for several days. He lay perfectly still on a bed of sand with only a sheet covering him, in a typical museum display case surrounded by exhibit labels and situated among two other cases that displayed his belongings. He was presented as though he were dead, an artifact. Visitors were not made aware that he was presenting himself as a living specimen. They were often shocked when they realized he was alive and returning their gaze all the while listening to their comments.

This work referenced and critiqued the way Native Americans have been and still are, in many cases, exhibited by museums. The point of the work was to call attention to what academics call "museumification," where Natives have been and in some cases continue to be interpreted for the public, in museums and galleries, as objects of the past and not as people of the present. This work was very successful, and it is cited and referenced by many publications, in many different fields, from art history to American Indian studies, some of which are listed in "References and Further Reading."

Luna's work is informed by both academic and personal experience as a contemporary Native American. He is formally trained as a painter, with a bachelor of fine arts in studio arts from the Univer-

sity of California at Irvine and a master of arts in counseling from San Diego State University. Luna currently works as an academic counselor at Palomar Community College in addition to his work as an artist

Lyons, Oren

Oren Lyons (Onondaga, b. 1930), whose Onondaga name is Joagquisho, became known worldwide during the last half of the twentieth century as an author, publisher, and crisis negotiator, as well as a spokesperson for the Haudenosaunee in several world forums. He is also an accomplished graphic artist as well as a renowned lacrosse player and coach. In 1990, Lyons organized an Iroquois national team that played in the world Lacrosse championships in Australia. In addition, Lyons is a professor of Native American Studies at the State University of New York at Buffalo.

Lyons was educated in art at Syracuse University (1954–1958). After his graduation from college, he enjoyed a successful career as a commercial artist at Norcross Greeting Cards in New York City for more than a decade (1959–1970). Lyons began as a paste-up artist at Norcross; in a dozen years at the firm, he worked his way up to head planning director for seasonal lines.

In 1970, Lyons ended his career in the greeting card industry and returned home to the Onondaga territory, where he was condoled (installed) as a faithkeeper on the Iroquois Grand Council. Lyons also was part of a negotiating team from the Iroquois Confederacy that helped resolve the 1990 standoff between Mohawks and authorities at Kanesatake (Oka), Quebec. The Confederacy's negotiators came to occupy a crucial middle ground between the war-

riors and Canadian officials during the months of negotiations that preceded the use of armed force by the Canadian Army and police at Kanesatake and Kahnawake. The Iroquois negotiators urged both sides to concentrate on long-term solutions to problems brought to light by the summer's violence. They recommended a fair land-rights process in Canada, the creation of viable economic bases for the communities involved in the crisis, and the recognition of long-standing (but often ignored) treaty rights, including border rights.

Lyons has been involved in a number of other Iroquois rights issues, most notably the return of wampum belts to the Confederacy by the State of New York. He has spoken on behalf of the Haudenosaunee in several international forums, including the United Nations. One of Lyons's main credits as a writer is his lead authorship of *Exiled in the Land of the Free* (1992).

As a faithkeeper, Lyons has been active in bringing together religious peoples of differing traditions. On April 28, 1997, for example, he took part in an interfaith service at Saint Bartholomew's Church in New York City with leaders from Christian, Jewish, Buddhist, Sikh, Jainist, Islamic, and Hindi clergy in support of the United Nations. One aim of the service was to diminish international tensions based on religious differences.

Lyons has faced harsh attacks by independent merchants in the Iroquois Confederacy regarding his belief that some of their profits should go back to the nations in which they do business. This criticism reached a peak in the late winter of 1998, when Lyons and other supporters of the traditional council burned and bulldozed four smoke shops on Onondaga territory. Lyons and other members of the council have long maintained that sovereignty is a collective right to be exercised by a governing body, not a license to make profits because merchants on Native American territories may avoid paying New York state sales tax.

"Who represents the sovereignty of the United States?" Lyons and coauthor John C. Mohawk asked in *Cultural Survival Quarterly* (1994, 58). "Is it the New York Yankees? Bloomingdales? The *Los Angeles Times*? William F. Buckley?" Just as private enterprises do not speak for the United States, wrote Lyons and Mohawk, private Iroquois businesspeople cannot exercise national sovereignty as individuals, especially when it is used as a cover for socially debasing activities such as smuggling illegal drugs. Lyons has also been a longtime opponent

of Native American dependence on gambling for economic development: "Gaming has run its course before and each time it goes bust," Lyons has said. "Poor people are the ones who gamble. It's like chewing on your own wrist" (Slackman, 1996, A-8). When freebooting smugglers used some of their profits to establish gambling houses at Akwesasne (St. Regis) in the late 1980s, for example, Lyons and Mohawk argued that owners of the casinos and bingo halls were crippling Mohawk sovereignty rather than exercising it. "Common sense dictates," they wrote, "that the gambling operators are the greatest threat to Mohawk sovereignty" (Lyons and Mohawk, 1994, 59).

Lyons has sounded environmental warnings in a number of international forums. The venues differ, but the message is always similar: "We were told that there would come a time when we would not find clean water to wash ourselves, to cook our foods, to make our medicines, and to drink," Lyons says. Today Lyons peers into the future with great apprehension. "We were told that there would come a time when, tending our gardens, we would pull up our plants and the vines would be empty. Our precious seed would begin to disappear. . . . Can we withstand another 500 years of 'sustainable development?' I don't think so" (Lyons, 1992). "It is not too late," Lyons told the United Nations General Assembly. "We still have options. We need the courage to change our values to the regeneration of families, the life that surrounds us" (Lyons, Address, 1992).

MacDonald, Peter

Peter MacDonald (Navajo, Hoshkaisith Begay, b. 1928) was elected chairman of the Navajo Nation four times before being removed from office by the Tribal Council in 1989 for accepting bribes and then going to a federal prison for helping incite a riot that led to the death of two of his supporters. After becoming tribal chairman in 1971, MacDonald led the Navajo government in taking advantage of the Indian self-determination movement to take over many of the governmental functions previously exercised by the U.S. government's Bureau of Indian Affairs (BIA). He also helped found the Council of Energy Resource Tribes (CERT) in 1974 and served as its chair. CERT worked to help tribes benefit more from the exploitation of their natural resources, including mining of coal and uranium.

Hoshkaisith Begay lived a traditional Navajo youth herding sheep. In his autobiography he describes attending the BIA school at Teec Nos Pos in northeastern Arizona where he received the name Peter MacDonald. He later ran away twice from the boarding school at Shiprock, New Mexico, because of the teasing, taunting, and regimentation, becoming a sixth-grade dropout. MacDonald noted that the hostile attitude toward Navajos in the BIA was emotionally devastating. Students were taught that Navajos were "superstitious savages . . . we were forced to go to church without being given an understanding of the Christian religion. We were made to feel that our parents, our grandparents, and everyone who had come before us was inferior. . . . We were constantly told that we were truly inferior to them and that we would always be inferior" (MacDonald, 1993, 49). At age fifteen (having lied about his age earlier to get a job), he was drafted into the Marine Corp where he was trained as a code talker. World War II ended before MacDonald could go into battle, however.

After being honorably discharged in 1946 and working for a short time, in 1948 MacDonald enrolled at Bacone, a Baptist Indian junior college in Oklahoma on the GI Bill. There he earned a general equivalency diploma (GED), then majored in sociology, and took courses in Christianity and

Indian history. He went to the University of Oklahoma, working nights in the state mental hospital. The BIA encouraged MacDonald to enter a trade school when his GI Bill funds ran out. Instead, he worked two years to save enough money so that he could return to the University of Oklahoma in 1955, where he earned an electrical engineering degree in 1957.

MacDonald then went to work at Hughes Aircraft, where in a few years he became director of its Polaris missile project. He also received a taste of a corporate executive's upper-class lifestyle. Despite his success at Hughes, MacDonald took a leave in 1963 and was soon appointed director of the Navajo Division of Management, Methods and Procedures. Two years later he was placed in charge of a large War on Poverty program under the federal Office of Economic Opportunity. The Office of Navajo Economic Opportunity ran Head Start programs, community development, alcoholism rehabilitation, and many other programs that directly or indirectly affected almost every Navajo. This experience gave him the name recognition necessary to run for Navajo Nation chairman in 1970, winning by a landslide.

While he successfully negotiated better contracts for the Navajos' energy resources and worked to have Navajos run more of the programs formerly administered by the BIA, MacDonald also became enmeshed in a bitter land dispute between the Hopi and Navajo Nations. His feuding with Arizona's powerful Senator Barry Goldwater hurt the Navajos in this dispute. A strong leader, he sought to pack the tribal court with judges who would rule the way he wanted and to dictate the council's agenda.

Signs of hubris appeared in his second term when, represented by F. Lee Bailey, MacDonald was tried and acquitted of taking bribes. Some of his opponents called him "Mac Dollar." In 1982, MacDonald lost the election, partly because of his lack of success in resolving the Navajo Hopi land dispute. However, he was again elected chairman in 1986. In 1989 he was placed on administrative leave by the tribal council, and a period of political turmoil ensued that led to his going to a federal prison. He was released after being pardoned by President William Clinton in 2001.

Major Ridge

Major Ridge (ca. 1771–1839) was one of several Cherokees who opposed John Ross and his supporters during the years leading to their removal from their homelands in the late 1820s and 1830s. As a leader of the Treaty Party, Ridge favored cooperation with the administration of Andrew Jackson, which forced the Cherokees' removal to Indian Territory, later called Oklahoma.

Nunna Hidihi (also Nungo Hattarhee, "Man on the Mountaintop Who Sees Clearly" or "*The Ridge*") was born at Hiwassee in the Old Cherokee Nation (present-day Tennessee) about 1771. He was the son of a Cherokee man named Ogonstota and Susannah Catherine, a Scot-Cherokee woman of the Deer Clan. Shortly after his birth, Ridge's family moved to what would become northern Georgia. Having little formal education, Ridge gained most of his academic skills from his parents and neighbors. He was the uncle of Elias Boudinot and Stand Watie.

As a young man, Ridge's considerable oratorical skills facilitated his election to the Cherokee Council when he was only twenty-one. He became speaker of the Cherokee Council within a few years after that. Ridge also became a prosperous farmer and in 1792 married Princess Schoya (Susie Wickett), a full-blooded Cherokee. They had a son, John Ridge, who is sometime confused with his father.

The elder Ridge received the title "major" during the Creek War of 1813–1814 while serving under General Andrew Jackson at the Battle of Horseshoe Bend. He also joined Jackson's forces during the First Seminole War in 1818, leading a Cherokee contingent against the Seminoles.

Early in the 1830s, Major Ridge, his son John, and Elias Boudinot became leaders in the pro-removal Treaty Party. On December 22, 1835, Ridge was one of the signers of the Treaty of New Echota, which exchanged the Cherokee tribal land east of the Mississippi River for lands to the west. Like a number of other leaders (Indian and white), Ridge

Major Ridge was one of several Cherokees who favored cooperation with the administration of Andrew Jackson, which forced the Cherokees' removal to Indian Territory, later called Oklahoma. (Library of Congress)

believed that the policy of removal was the best way to preserve the Cherokees in the face of rapidly expanding white encroachment. The treaty was of dubious legality, however, and was rejected by Chief John Ross and a majority of the Cherokee people. Despite its flaws, the U.S. Senate ratified the treaty.

After Major Ridge signed the Treaty of New Echota, he was reputed to have said it was his death warrant. Four years later, following the Trail of Tears, Major Ridge, John Ridge, and Boudinot were dragged from their homes and stabbed several times by a group of executioners, many of whose children and relatives had suffered fatalities during the Trail of Tears during the winter of 1838–1839. Many Cherokees believed that the treaty and Major Ridge were responsible for their losses.

Ridge's nephew Stand Watie, the future Confederate general in the Civil War, also had been targeted for assassination but escaped.

Mangas Coloradas

Mangas Coloradas was a Chiricahuan Apache leader during the mid-1800s. Born in approximately 1790 in southwestern New Mexico near today's Silver City, he lived through periods of Spanish and Mexican peace establishments, chronic war that followed their collapse, and the first phases of American conquest. From the 1830s to his death in 1863, Mangas Coloradas was the most prominent leader of the Chiricahuas in their struggle for regional dominance with the Mexicans and, starting in the late 1840s, with the Americans. He met a treacherous end at the hands of American soldiers, being shot as an unarmed prisoner.

Chiricahuas consisted of four major bands: the Chihennes, Chokonens, Bedonkohes, and Nednhis, which were further divided into multiple local groups. There was no single tribe in political terms, but all were related, sharing strong linguistic and cultural bonds. Mangas Coloradas probably was born as a Bedonkohe and married to the Chihenne band. For the first decades of his life he was known as Fuerte and only later received the name Kan-dazis-tlishishen, or Mangas Coloradas ("Red/Pink Sleeves"). Born into a prominent family, he matured during the period of Spanish peace establishments, during which rations and gifts were distributed to the Apaches. Economic and political unrest provoked by the collapse of Spanish power caused this system to crumble. Struggling Mexican regimes no longer could afford to pay off the Chiricahuas. Escalating warfare became epidemic during the 1830s and continued to devastate both the Chiricahuas and the Mexicans until the 1880s. Due to the policies of extermination and treacherous acts of genocide, the Mexicans of Sonora especially gained Mangas Coloradas' hatred.

Character was the single most important factor in Mangas's rise to prominence. Mangas apparently excelled as a fierce fighter, a courageous leader, a generous statesman, a wise diplomat, and a loving family man—all traits valued in Chiricahua society. From the 1830s onward his power and prestige

among the many Chiricahuan bands were exceptional. He not only controlled his own local group, which was a hybrid mix of Bedonkohes and Chihennes, but also attracted a wide following of fighting men and led many times a combined force of Chiricahuas from all bands. He gained even more influence by marrying his children wisely. For example, one daughter wedded the Chokonon leader Cochise, while others married prominent Navajo, White Mountain Apache, and Mescalero Apache men. During his life, Mangas Coloradas had at least four wives and perhaps as many as fifteen children. Overall, he was exceptionally well-connected with the many Apache divisions of the Southwest. Mexicans recognized him as the "general" of the Chiricahuas, the most prominent man of the militarily powerful people, whose cooperation and approval were vital for any significant peace initiative to succeed. He was also synonymous with Apache power and cruelty among many Mexicans, and the American invaders knew his reputation when they arrived in the late 1840s. General Stephen Kearny's army, John R. Bartlett's boundary commission, and General Edwin V. Sumner, New Mexico's military commander, all treated him as the most prominent Chiricahuan man.

At first, Mangas Coloradas advocated peaceful relations with the Americans, who shared a common enemy with him: the Mexicans. The Americans were rich in trade commodities and thus useful as partners. A lack of mutual respect, racial hatred, and economic greed, however, brought war, and, despite peace agreements, several violent incidents caused deterioration in the American-Chiricahua Apache relations throughout the 1850s and early 1860s. During the last years of the prominent chief's life, American invaders started to inundate much of his country in the roles of miners, ranchers, and farmers. Mangas himself was engaged in destructive war with the Americans during the early 1860s and was killed by them in 1863 after he had arrived for peace negotiations, was captured, and handed over to the American military. While he was a prisoner, soldiers taunted him and burned his feet, and, when Mangas Coloradas responded, he was shot down and killed, his body thrown in a ditch after being decapitated for "scientific purposes." Military reports contained a fabricated story of an escape attempt.

During his lifetime, Mangas Coloradas saw Chiricahuan power dwindle under the double pressure of Spanish/Mexican and American colonization. When he was born, the Chiricahuas were the

dominant group, but his death signaled the beginning of the end for Apache power. In a little longer than two decades, all the surviving Chiricahuas would be exiled to Florida as prisoners of war.

Mankiller, Wilma

After a childhood in rural Oklahoma and a youthful period in the San Francisco area, Wilma Pearl Mankiller became the first woman to lead a major Indian nation in the United States.

Mankiller was born in Rocky Mountain, Oklahoma, on November 18, 1945, a daughter of a Cherokee father and a Dutch-Irish mother, one of eleven children. After spending her early years close to her people, at the age of eleven she and her family moved to San Francisco as a part of the relocation program implemented by the Bureau of Indian Affairs.

Mankiller had a difficult time adjusting to Hunter's Point, the impoverished, predominantly African American neighborhood in which her family lived. Having completed her high school education, she began to create opportunities to work for the good of Indian people. When the issue of American Indian civil rights began to gain the national spotlight in the late 1960s, Mankiller's position in the Bay Area enabled her to play a vital role in the Red Power Movement. After marrying an Ecuadorian, Hugo Olaya, and having two children, she became director of the American Indian Youth Center in East Oakland, California. Although caring for her family kept her from being present on Alcatraz Island herself when American Indian activists occupied the former federal prison in 1969, Mankiller raised money to support the protestors and visited them on Alcatraz.

Mankiller and Olaya divorced in 1977, the same year she completed her bachelor of arts at Union College. Mankiller then returned to Oklahoma, continuing her career of advocacy by addressing two of the most relevant issues to reser-

vation communities: water and housing. At the same time, she did graduate work, earning her master's degree in community planning at the University of Arkansas in 1979. She worked for the Cherokee Nation as an economic stimulus coordinator and became the tribe's program development specialist in 1979. However, an automobile accident that year left Mankiller seriously injured and hospitalized for a lengthy period. Her health problems were compounded when she was diagnosed with systemic myasthenia gravis, a glandular autoimmune disorder requiring surgery and extending her period of recuperation. Despite her health problems, she was able to return to active political life, founding and directing the Cherokee Community Development Department in 1981.

Mankiller's activities as an advocate for treaty rights and better services earned notice. She moved

into the political structure of the Cherokee Nation during 1983 when the principal chief of the nation, Ross O. Swimmer, asked her to be his running mate. Despite receiving hate mail and death threats because of her gender, she became the first woman elected deputy principal chief. After Swimmer resigned to become head of the Bureau of Indian Affairs in December 1985, Mankiller was appointed to serve out the two years remaining in his term. Once in charge of the more than 100,000-member Cherokee Nation of Oklahoma, Mankiller concentrated on the most vital issues facing her people: unemployment, education, health care, and economic development. Her successes made her very popular with her constituents, and she became the first woman elected to lead the Cherokee Nation in 1987, when she was voted to the position of principal chief, capturing more than 80 percent of the vote. Despite continued health problems requiring a kidney transplant, she was reelected in 1991 and served as the leader of the Cherokee Nation until the end of her second term in 1995, choosing not to run for reelection due to persistent health concerns.

Even after Mankiller stepped down from her role as head of the Cherokee Nation, she continued being politically active. She continues to live in the capital of the Cherokee Nation, Tahlequah, Oklahoma, with her Cherokee second husband, Charlie Soap. Over her career, she has received numerous honors, including a special White House ceremony at the end of her term as principal chief, a Humanitarian Award from the Ford Foundation, induction into the National Women's Hall of Fame in 1993, and the nation's highest civilian honor, the Presidential Medal of Freedom, in 1998. In addition, she has published two books: her best-selling 1993 autobiography, *Mankiller: A Chief and Her People*, and *Every Day Is a Good Day: Reflections of Contemporary Indigenous Women* (2004).

Manuelito

Manuelito, a Spanish name given him by Mexicans, is noted for his resistance to Mexican and American invasions of Navajoland, or *Dinétah*. During his lifetime, Hastiin Ch'iil Hajiin (his Native name) was committed to Navajo sovereignty and strove to maintain possession of Navajo lands.

Manuelito was born into the *Bit'ahni* Clan (Folded Arms People) near Bear Ears, Utah, around 1818. Following the teachings of the ancestors, Manuelito trained as a medicine man who followed *hózhó*, the path of harmony and balance to Old Age, the path that Navajos had been following for many generations. Manuelito's marriage to the daughter of the headman Narbona provided him with the wise leader's insight. In later years, Manuelito also found his wife Juanita to be a valuable companion.

Beginning in the late 1500s, Spaniards and then Mexicans came into the Southwest seeking their fortunes and establishing colonies. Navajos experienced cultural changes that made them herders and warriors. With the horse, Navajos ably impeded the foreigners' advances. Manuelito witnessed the shifting relationships of peace and conflict between Navajos and Mexicans. In the 1830s, Mexicans rode into Navajoland determined to break Navajo resistance and to capture women and children for the slave trade. Slavery had been known in the Southwest, but the slave trade intensified with Euro-American invasions. Slave raiders targeted Navajo women and children. In fact, raiding for Navajo slaves reached a peak during the 1830s. In a battle at Copper Pass in 1835 in the Chuska Mountains, warriors led by Narbona and Manuelito successfully defeated the Mexicans. At that time, Manuelito was a young man.

By the time the United States claimed the Southwest in 1846, Manuelito was a respected war chief, and the cycle of peace and conflict among Navajos, other tribal peoples, and the U.S. immigrants began anew. In 1851, the establishment of Fort Defiance in Navajoland preceded a war that would end in the Navajos' defeat. The conflict began over the pasturelands that lay outside the newly established fort. In 1858, General William Brooks asserted control of the pastures for U.S. Army use. In defiance, Manuelito continued to pasture his livestock on the disputed lands, whereupon Brooks ordered the livestock slaughtered. Soon afterward, a Navajo killed Brooks's black slave, and Brooks demanded that the Navajos produce the murderer for American justice. Eventually, Navajos

produced a body, most likely that of a Mexican captive. Enraged at what he considered Navajo arrogance, Brooks called for a war. In 1860 Manuelito and 1,000 warriors struck at Fort Defiance several times but were unable to take the fort.

The American Civil War turned the U.S. Army's attention away from Navajoland, and Fort Defiance was abandoned. After the war, European-American settlement again threatened the Navajos. Manuelito led the resistance and urged his people to have courage. Finding Navajos to be obstacles to white expansion, General James H. Carleton ordered their removal to a reservation near Fort Sumner, New Mexico, where the Navajos would learn the arts of civilization.

General Carleton enlisted Indian fighter Kit Carson for the campaign against the Diné. Carson and his men literally scorched Navajoland. They destroyed cornfields, peach trees, hogans, and livestock. By 1863 destitute Navajos began surrendering to the Americans. As prisoners, they endured a 300-mile journey to the internment camp. Some Navajo leaders went with their people, encouraging them to keep heart. Navajo bodies littered the trail. The old and sick were abandoned if they held up the march. Pregnant women were shot and killed if they could not keep up. Many drowned when they tried to cross the Rio Grande. At the prison, the Navajos barely survived.

Manuelito, however, vowed to remain free. The U.S. Army, fearing that he served as inspiration to others who eluded their enemy, wished to either capture or kill him. In 1865, Navajo leaders, including Herrera, met Manuelito and gave him the army's message to surrender. Manuelito refused, declaring that "his mother and his God lived in the West and he would not leave them." He would not leave his native home and the United States could kill if they pleased, but he would not leave.

Finally, in 1866, wounded and ill, Manuelito surrendered and was interned at the Bosque Rodondo prison. After four years, General Carleton reluctantly admitted that his plan was not working. There was talk of returning the Navajos to their former homes. On June 1, 1868, Manuelito and other leaders signed a treaty so that they could return to *Diné'tah*. The treaty stipulated a peaceful relationship between Navajos and the United States, defined a boundary for a reservation, and required education for Navajo children. Seventeen days later, over 8,000 Navajos began the journey home. About 3,000 Navajos had died during the war.

Manuelito was one of the most accomplished Navajo war leaders and was recognized as head chief of the Navajo from 1870 to 1884. (National Archives and Records Administration)

Upon return to *Diné'tah*, Manuelito remained an influential leader who articulated his concerns for the return of his people's land. He was appointed head of the first Navajo police who would keep order on the reservation. In 1874, he traveled with his wife and other Navajo leaders to Washington, D.C., to meet President Ulysses S. Grant. In 1894, Manuelito died from disease and alcoholism. His widow Juanita and his daughters carried on his messages about the importance of land for the coming generations.

Marx, Karl, and Native American Societies

Karl Heinrich Marx (1818–1883) was a philosopher, social scientist, historian, and revolutionary, regarded as one of the most important social thinkers of the nineteenth century, who developed Marxist theory along with Friedrich Engels (1820–1895). Their combined works constitute the basis of Marxism, a theory of philosophy (dialectical materialism), history (historical materialism), and economics that views the state as a device for the exploitation of the masses by the dominant class and that views class struggle as the catalyst for social change.

In his examination of the evolution of human society, Marx identified five basic historical developments or “regularities” in the modes of production: savagery (primitive), barbarism (nomadism), oriental despotism (slave), feudalism, and capitalism. He theorized the inevitable self-destructive end of capitalism through a proletariat revolution and rise of a superior communist society. The most extensive theoretical discussions of precapitalist societies by Marx and Engels are found in the *Grundrisse der Kritik der Politischen Ökonomie* (Outlines of the Critique of Political Economy), *Pre-Capitalist Economic Formations*, *The Origin of the Family, Private Property and the State*, and *Ethnological Notebooks*.

The Euro-centric presumption of an inevitable evolution of human society from primitivism to “civilization” forms the basis of the historical tension between indigenous and Marxist scholars. This critique links Marxism with other modes of Western thinking that view the “difference” of indigenous peoples and societies as deficient. Within this framework, indigenous societies are measured against Western norms of human “progress” and development. Other embedded assumptions—of human beings as superior to “nature,” of religion as the opiate of the masses, and of class as the dominant unit of social organization—have contributed to a long-standing division between Marxists and Native Americans. The seminal (if not only) works among indigenous scholars are *Marxism and Native Americans* (1983)

Karl Marx, the founder of modern communism, noted the egalitarian nature of Native American cultures in notes that later were used by Friedrich Engels. (Library of Congress)

and *Culture Versus Economism: Essays on Marxism in the Multicultural Arena* (1984).

On the notion of “progress” as both inevitable and good, the indigenous critique has been virtually unanimous, viewing this understanding as inherently dismissive of the “traditional” social, political, and economic structures of indigenous societies. Bedford writes, “Aboriginals object to the Marxist vision because it sees all history unfolding after the fashion of the European model. The Marxist commitment to industrialization as the precondition of proletarian revolution means destruction of non-industrialized societies” (Bedford, 2001, 104). In other words, while “Marxism may call for more equitable distribution of the social product, more democratic control over the processes of production,” capitalism is still viewed as “a necessary step toward the final solution” (Bedford, 2001, 103, 105). This notion also works to subsume indigenous peoples into the proletariat, imposing a Western class structure onto a complex and radically contingent indigenous social-political-economic-spiritual structure.

On the question of the superiority of human beings over nature and the profound anthropocentrism of Marxism, the indigenous critique is clear: The inherent trope of progress within Marxist thought pits humans against nature, wherein humans overcome their alienation from nature by consuming it (Deloria, 1983, 114–115). Or, as Grande notes, “both Marxists and capitalists view land and natural resources as commodities to be exploited; in the first instance, by capitalists for personal gain and, in the second, by Marxists for the good of all” (2004, 27).

Finally, on the issue of religion or spirituality, the tensions between the Marxist and indigenous worlds are self-evident. In several of his writings, Marx “follows the development of religion as an integral part of the repressive apparatus through its various permutations linked to the formation of caste, slavery, patriarchal monogamy and monarchy” (Rosemont, n.d.). In contrast, Vine Deloria, Jr., preeminent scholar on Native American “religious” traditions, documents the fundamental link between indigenous societies and the inherent “sacredness” of the world around them.

While the preceding critique represents the historical tenets of the Marxist–indigenous disjuncture, some scholars are beginning to revisit the presumed tension, bringing to the discourse a more nuanced reading of both Marxist and Native American thought. Bedford and Irving (2003) maintain that a close reading of Marx reveals that he is more ambivalent about the value of progress than his (indigenous) critics allow. Grande similarly notes that contemporary Marxist theorists recognize the limitations of their work and critique. She writes: “While any pedagogy with a root metaphor of ‘change as progress’ presents specific challenges to indigenous cultures rooted in tradition and intergeneration knowledge, revolutionary theorists do not categorically advocate change as *inherently* progressive. Rather, they are very definitive in their distinction between change that emancipates and change that merely furthers the dictates of market imperatives” (2004, 82).

This new strand of scholarship invites us to explore how Marxism may be deepened by its engagement with Native American social and political thought and how it might, in turn, deepen Native intellectualism.

Massasoit

The name “Massasoit” is a title meaning “Grand Sachem” or “Great Leader” that was bestowed on Ousa Mequin (Yellow Feather), sachem of the Pokanoket and the Grand Sachem (Massasoit) of the Wampanoag Confederation.

Little is known about Massasoit (ca. 1590–1661/1662) prior to his contact with the Plymouth colony in 1621. He was born around 1590 in Montaup, a Pokanoket village near present-day Bristol, Rhode Island, and rose to leadership over eight large villages. The first documented contact of Massasoit with the English occurred in 1619. In that year, he met with Captain Thomas Dermer following the latter’s voyage with Tisquantum (Squanto) to New England. William Bradford, the second governor of the Plymouth colony, described the Pokanoket sachem as “a very lust [sic] man in his best years, an able body, grave of countenance, and spare of speech. . . . His face was painted with a deep red like mulberry and he was oiled both head and face” (Josephy, 1994, 211).

Massasoit, leader of the Wampanoag, was able to maintain peaceful relations with English settlers in the area of Plymouth, Massachusetts. He and other Native Americans shared planting and fishing techniques with the colonists and fostered trade and amity between the races. (Library of Congress)

Traditionally, Massasoit is remembered for his alliance with the Pilgrims and his efforts to aid the Plymouth Colony. A calculating and skilled diplomat, he established personal relationships with the principal leaders of the Plymouth colony, including William Bradford and Edward Winslow. Concern over the possibility of conflict with the neighboring Narragansetts led Massasoit to forge an alliance with the colonists at Plymouth in March 1621. The resulting treaty was mutually beneficial, providing security for the colonists and military aid for the Wampanoags in case of hostilities with the Narragansetts. Cemented even further by Edward Winslow's resuscitation of the critically ill sachem in 1632, the alliance also served to keep the Wampanoags out of the Pequot War (1636–1637) and enabled Massasoit to resist Puritan efforts to Christianize his people.

Expanding English settlements around Massachusetts Bay brought pressures on Massasoit to cede

land to the English. To this he relented, selling land in the 1650s to the colony in exchange for the maintenance of harmony. Until his death in 1661 or 1662, the Wampanoag under Massasoit and the people of the Massachusetts Bay and Plymouth colonies remained at peace.

McNickle, D'Arcy

Author of *The Surrounded*, two other novels, a biography, and three book-length studies, D'Arcy McNickle was a major figure both in American Indian literature and Native studies, as well as an activist and government worker on behalf of American Indians. William D'Arcy McNickle (Métis) was born on January 18, 1904, in St. Ignatius, Montana. He was an enrolled member of the Salish and Kootenai Tribes, or Flathead. His mother, Philomena Parenteau, had fled Canada after the failed Métis revolt in 1855 and was formally adopted into the Flathead tribe. She later married local Irish rancher William McNickle. Their son D'Arcy began his education at the Catholic boarding school at St. Ignatius and then, against his mother's and his own desires, was sent to the Bureau of Indian Affairs (BIA) boarding school at Chemawa in Oregon for three years. At the age of seventeen, he began studies at the University of Montana, focusing on literature and languages such as Latin and Greek. Seeing in McNickle a talent for writing, one of his professors urged him to attend Oxford. McNickle financed his trip to England by selling his land allotment in 1925, but trouble with credit transfer prevented him from taking his degree. For a time, McNickle moved to Paris, where he wrote and played music before returning to New York in 1928.

McNickle married three times and had two daughters. In New York, he worked in various positions, among them one as an editor for *Encyclopaedia*

Brittanica and the *National Encyclopaedia of American Biography*, and intermittently took classes at the New School for Social Research and at Columbia. He continued to write, completing several short stories and his first novel, publishing *The Surrounded* in 1936. The novel focuses on the mixed-blood Archilde Leon, caught between his tribal culture and relatives on the one hand and the changes brought by colonization on the other. It is written much in the modernist tradition, at the same time highlighting cultural differences and values.

McNickle, disappointed with the lack of success of his novel and needing money, went to Washington, D.C., to work for the Federal Writers' Project and subsequently found a position with John Collier's administration at the BIA, where he worked for sixteen years. Charged with the implementation of the Indian Reorganization Act of 1934, McNickle strongly advocated federal protection of tribal lands and instituting democracy in tribal governments. Gradually, he began to see the need for intertribal political organizing to advance positive change through Indian agency. In 1944, he cofounded the National Congress of American Indians for these purposes. However, with the 1950s termination and relocation policies, McNickle left the BIA to take a job with the American Indian Development Corporation. McNickle sat on the United States Civil Rights Commission and received an honorary doctorate from the University of Colorado in 1966. The same year he took a position as a professor at the University of Saskatchewan, where he developed the newly established anthropology department.

Advancing a Native perspective but writing for a non-Native audience, McNickle published a number of books, including *They Came Here First: The Epic of the American Indian* (1949), *Indians and Other Americans: A Study of Indian Affairs* (with Harold Fey, 1959), and *The Indian Tribes of the United States: Ethnic and Cultural Survival* (1962), all drawing on anthropological methods he learned in his BIA fieldwork. In 1954, working with Apache visual artist Allan Houser, McNickle published *Runner in the Sun: A Story of Indian Maize*. This young adult novel may be the first book set in pre-contact America written by an American Indian. He retired from the university in 1971 and published *Indian Man: The Story of Oliver La Farge*, which was nominated for a National Book Award. In 1972, he helped found the Center for the History of the American Indian at the Newberry Library in Chicago, serving as its first director. Retiring to

Albuquerque to work on *Wind from an Enemy Sky*, he died of a heart attack in October 1977.

Means, Russell

Arguably one of the most well-known modern advocates of American Indian rights, Russell Means exhibits a spirited outspokenness that helped open a dialogue that changed the course of American Indian history in the late twentieth century. An Oglala Lakota, Means was born on November 10, 1939, on the Pine Ridge Reservation in southwestern South Dakota. Wishing to escape the limitations of reservation life, his mother, Theodora Louise Feather Means, moved the family to Vallejo, California, where his father, Walter "Hank" Means, found work as a welder at the navy shipyard on Mare Island. Hank's alcoholism contributed to an unstable family life for Russell and his teenage years were marked by school truancy, drug and alcohol abuse, and petty criminal activity.

In 1964, the twenty-six-year-old Means, recently fired from his job as a night watchman at the Cow Palace in San Francisco, accepted an invitation to accompany his father and a small assemblage of Indians living in the San Francisco Bay area on a symbolic takeover of the recently abandoned federal prison on Alcatraz Island. Russell later confided that his father's willingness to stand up for Indian treaty rights "made me proud to be his son, and to be a Lakota" (Means, 1995, 105).

Five years later, as a new cadre of urban Indians readied once again to occupy Alcatraz, Means was in Cleveland, Ohio, where he joined two Anishinabe Indians from Minnesota, Clyde Bellecourt and Dennis Banks, in their effort to develop the American Indian Movement (AIM)—arguably the principal

Russell Means, American Indian Movement (AIM) leader, speaks to a crowd of followers in South Dakota in 1974. (Bettman/Corbis)

agency for American Indian empowerment during the late 1960s and early 1970s. Means later acknowledged “here was a way to be a *real* Indian, and AIM had shown it to me. No longer would I be content to ‘work within the system.’ . . . Instead, like Clyde and Dennis and the others in AIM, I would get in the white man’s face until he gave me and my people our just due. With that decision, my whole existence suddenly came into focus. For the first time, I knew the purpose of my life and the path I must follow to fulfill it. At the age of thirty I became a full-time Indian” (Means, 1995, 153).

On Thanksgiving Day 1970, Means, Banks, and other AIM leaders joined local Wampanoag activists in Plymouth, Massachusetts, to observe a national day of Indian mourning at the 350th anniversary celebration of the arrival of the Pilgrims. Speaking at the base of a larger-than-life

statue of Chief Massasoit overlooking Plymouth Harbor, Means delivered an impassioned speech praising the ancestral Wampanoags who welcomed the Pilgrims and denouncing the white man’s culture. Within twenty-four hours, Indian activists seized the *Mayflower II* (a full-scale replica of the original *Mayflower*), painted Plymouth Rock red, and brought national attention to the American Indian Movement.

Following its success at Plymouth, AIM elected Means the first national coordinator of the movement. He participated in the AIM-sponsored protest at Mount Rushmore in June 1971 and in the Trail of Broken Treaties, which led to the seizure of the Bureau of Indian Affairs building in November 1972. On the evening of February 27, 1973, Means, along with Dennis Banks, organized the occupation of Wounded Knee, South Dakota, the most renowned episode in the history of American Indian Movement. The takeover of the community, the proclamation of an Independent Oglala Nation, and the subsequent seventy-one-day siege by the federal government led to the national attention—albeit short-lived—that Means and AIM desired.

In 1974, Russell Means, beset with legal fees and court cases in the aftermath of the Wounded Knee occupation, nevertheless began his career in politics when he ran unsuccessfully for the Oglala Sioux tribal chair against the incumbent, Dick Wilson, in a contested election marked by voter fraud. In 1976, Means was tried for and acquitted of the murder of Martin Montileaux in the Longhorn Saloon in Scenic, South Dakota. Two years later he entered the South Dakota State Penitentiary, ultimately serving only twelve months of his four-year conviction for participating in a riot in a Sioux Falls courthouse in 1974. He joined Larry Flynt in 1983 in the pornographer’s unsuccessful bid for the Republican presidential ticket in 1984. Hoping to force the Republican party to aid him in his struggles against the religious right in exchange for his withdrawal from the race, Flynt waged an outrageous campaign punctuated with publicity stunts. Disenchanted with the publisher’s sincerity in championing First Amendment rights, Means ultimately removed his name from the ticket.

A supporter of indigenous rights worldwide, Means traveled to Nicaragua in 1986 to aid the Miskito Indians in their struggle against the Sandinistas. The move cost him the support of some of his more liberal supporters in AIM and elsewhere who saw his actions as condoning the pro-Contra deal-

ings of the Reagan administration. Likewise, his 1986 speaking tour, sponsored by Reverend Sun Myung Moon's controversial Unification Church, further isolated Means from the Left. While the so-called Moonies used his lectures on Nicaragua as a venue to distribute literature about their church, Means saw the association as a vehicle to inform the public about the plight of the Nicaraguan Indians.

In 1987, Means accepted an invitation to enter the primary race for the Libertarian party's presidential candidate in 1988. The party's principles appealed to Means and he mounted an extensive national campaign, only to lose in the end to former Republican Congressman Ron Paul at the Libertarian party convention in Seattle. With residences in both South Dakota and New Mexico, Means tried in 2001 to enter the gubernatorial race in New Mexico as a candidate from the Independent Coalition party, only to drop out after a controversy over the filing deadline. Choosing instead to run, once again, for the presidency of the Oglala Sioux tribe, Means won the primary in 2002, but lost in the general election to incumbent John Yellow Bird Steele.

In addition to his activism and political aspirations, Russell Means developed a parallel career in the arts. In 1992, Means starred as Chingachgook in *Last of the Mohicans* and provided the voice of Chief Powhatan in Disney's *Pocahontas* in 1995. He also has had roles in ten other films to date as well as numerous guest appearances on television dramas and talk shows. His autobiography, *Where White Men Fear to Tread*, was published in 1995. He also has produced two music CDs and several works of art.

Russell Means remains active in issues of Indian self-determination and injustice in North America and abroad. Most recently, he has focused his efforts on a campaign to abolish Columbus Day. No stranger to controversy, Means's exploits have reaped both supporters and critics. There is no doubt, however, that his unrelenting presence on the national stage in the late twentieth century helped draw attention to issues of import to Indian peoples.

Metacom, and King Philip's War

Metacom (ca. 1637–1676) was the son of Massasoit, who had met the first immigrants from England in 1620 in what is now Massachusetts. The English called Metacom King Philip. He became grand sachem of the Wampanoags in 1662 and led his people and their allies in a devastating war with the English in 1675 and 1676, dying at its conclusion.

The efforts of Roger Williams, Puritan dissenter and founder of Rhode Island, helped to maintain a shaky peace along the frontiers of New England for nearly two generations after the Pequot War (1636–1637). In 1645, Williams averted another Native uprising against encroaching European-American settlements. By the 1660s, however, the aging Williams saw his lifelong pursuit of peace unravel yet again. This time, he felt more impotent than in the past: Wave after wave of colonists provided Native peoples with powerful grievances by usurping their land without permission or compensation, and yet Williams continued to believe that neither the Puritans nor any other Europeans had any right, divine or otherwise, to take Indian land. The final years of Williams's life were profoundly painful for a sensitive man who prized peace and harmony above all.

Massasoit, who had maintained peace with the newcomers since 1620, also was aging and becoming disillusioned with the colonists, as increasing numbers of European immigrants drove his people from their lands. Upon Massasoit's death in 1661, Alexander, one of Massasoit's sons, briefly served as grand sachem of the Wampanoags. However, visiting Boston in 1662, Alexander fell gravely ill and died as Wampanoag warriors rushed him into the wilderness. Upon his death, the warriors beached their canoes, buried his body in a knoll, and returned home with rumors that he had been a victim of the English. Metacom became grand sachem after Alexander's death.

Aged about twenty-five in 1662, Metacom distrusted nearly all European-Americans, Williams being one of the few exceptions. Metacom also was known as a man who did not forgive insults easily. It was once said that he chased a white man named John Gibbs from Mount Hope to Nantucket Island, about sixty miles, partially over water, after Gibbs insulted his father. Throughout his childhood, Metacom had watched his people dwindle before the English advance. By 1671, about 40,000 non-Native people lived in New England. The Native

Native American leader Metacom, also known as King Philip, led a Native alliance in King Philip's War (1676). In terms of numbers engaged and casualties sustained in proportion to population, this was one of the the bloodiest Indian wars of American history. (Library of Congress)

population, double that of the Europeans before the Pequot War, stood at about 20,000. European farms and pastures were driving away game and creating friction over land that the Indians had used without question for so many generations they had lost count of them. By 1675, the Wampanoags held only a small strip of land at Mount Hope, and settlers wanted it.

Metacom became more embittered by the day. He could see his nation being destroyed before his eyes. He and other people in his nation were interrogated by Puritan officials. Traders fleeced Indians, exchanging furs for liquor. The devastation of alco-

hol and disease and the loss of land destroyed families and tradition. These were Metacom's thoughts as he prepared to go to war against the English.

As rumors of war reached Williams, he tried to keep the neighboring Narragansetts neutral, as he had done in the past. This time, he failed. Nananawtunu, son of Mixanno, told his close friend Williams that, while he opposed going to war, his people could not be restrained. They had decided the time had come to die fighting, rather than to expire slowly as a people. Williams' letters of this time were pervaded with sadness, as he watched the two groups he knew so well slide toward war.

Shortly after hostilities began in June 1675, Williams met with Metacom, riding with the sachem and his family in a canoe not far from Providence. Williams warned Metacom that he was leading his people to extermination. Williams compared the Wampanoags to a canoe on a stormy sea of English fury. "He answered me in a consenting, considering kind of way," Williams wrote, "[saying] My canoe is already overturned" (Giddings, 1957, 33).

When Indians, painted for war, appeared on the heights above Providence, Williams picked up his staff, climbed the bluffs, and told the war parties that, if they attacked the town, England would send thousands of armed men to crush them. "Well," one of the sachems leading the attack told Williams, "let them come. We are ready for them, but as for you, brother Williams, you are a good man. You have been kind to us for many years. Not a hair on your head shall be touched" (Straus, 1894, 220–224).

Williams was not injured, but his house was torched as he met with the Indians on the bluffs above Providence on March 29, 1676. Williams watched flames spread throughout the town. "This house of mine now burning before mine eyes hath lodged kindly some thousands of you these ten years," Williams told the attacking Indians (Swan, 1969, 14). If the colony was to survive, Williams, for the first time in his life, had to become a military commander. With a grave heart, Williams sent his neighbors out to do battle with the sons and daughters of Native people who had sheltered him during his winter trek from Massachusetts forty years earlier. As Williams and others watched from inside a hastily erected fort, nearly all of Providence burned. Fields were laid waste and cattle were slaughtered or driven into the woods.

Colonists, seething with anger, caught an Indian, and Williams was put in the agonizing position of ordering him killed, rather than watching him tortured. The war was irrefutably brutal on both sides, as the English fought with their backs literally to the sea for a year and a half before going on the offensive. At Northfield, Indians hanged two Englishmen on chains, placing hooks under their jaws. At Springfield, colonists arrested an Indian woman, then offered her body to dogs, which tore her to pieces.

In August 1676, as the Mohawks and Mohegans opted out of their alliance with the Wampanoags, the war ended. The English had exterminated most of

the Narragansetts, and nearly all of Metacom's warriors, their families, and friends had been killed or driven into hiding. Metacom himself fled toward Mount Hope, then hid in a swamp. When English soldiers found him, they dragged him out of the mire, then had him drawn and quartered. His head was sent to Plymouth on a gibbet, where it was displayed much as criminals' severed heads were shown off on the railings of London Bridge. Metacom's hands were sent to Boston, where a local showman charged admission for a glimpse of one of them. The remainder of Metacom's body was hung from four separate trees.

In terms of deaths in proportion to total population, King Philip's War was among the deadliest in American history. About 1,000 colonists died in the war; many more died of starvation and war-related diseases. Every Native nation bordering the Puritan settlements—those whose members, in happier days, had offered the earliest colonists their first Thanksgiving dinner—was reduced to ruin. Many of the survivors were sold into slavery in the West Indies, which served the colonists two purposes: removing them from the area and raising money to help pay their enormous war debts. Metacom's son was auctioned off with about 500 other slaves, following a brief, but intense, biblical debate over whether a son should be forced to atone for the sins of his father.

Mills, William M.

Oglala Lakota William (“Billy”) Mills distinguished himself as a distance runner, capturing the gold medal in the 10,000-meter run at the 1964 Tokyo Olympics, and later proved himself to be an inspirational speaker and caring leader.

Born in 1938 on the Pine Ridge Indian Reservation in South Dakota, he was named Makata Taka Hela, which translates as “Love Your Country” or “Respects the Earth.” Mills was of mixed ancestry, a factor that caused him to feel marginalized at times as a youth. His sense of isolation was intensified when he was orphaned at the age of twelve. Athletics offered him an important release during this period.

Mills then attended Haskell Institute in Lawrence, Kansas, graduating in 1957. At the Indian boarding school, he participated in boxing and running. Eventually, he devoted himself exclusively to running, performing well enough to secure an athletic scholarship at the nearby University of Kansas. Mills blossomed under Jayhawk track coach Bill Easton. Indeed, while at the University of Kansas, he was named an all-American three times, was victorious in the Big Eight conference cross-country individual title in 1960, and contributed to two national NCAA outdoor team championships in 1959 and 1960.

After graduating in 1962 with a degree in physical education, Mills married and accepted a commission in the Marine Corps. Although he thought his athletic career had ended when he joined the service, Mills was able to continue running. After a year and a half of training, he qualified for the U.S. Olympic team.

Despite his collegiate success, many people were dubious of Mills’s prospects at the 1964 Tokyo Olympics. In fact, he had to borrow shoes because U.S. team officials felt their limited resources should be allocated to more promising competitors. His qualifying time in the 10,000-meter run was a minute slower than Australian Ron Clarke, who most observers expected would battle Tunisian Mohammad Gammoudi for the gold medal. Mills never doubted himself, however, as he set his sights on a victory in Tokyo. In what can only be described as a stunning upset, perhaps the most amazing in Olympic history, Mills surged past Clarke and Gammoudi on the last lap to become the first American to win a gold medal in the 10,000-meter run, setting an Olympic record at that

Lakota Indian Billy Mills at the 1964 Summer Olympic Games. Mills won the gold medal in the 10,000-meter race. (Bettman/Corbis)

distance. Mills also performed well in the marathon, placing fourteenth.

Mills continued running after the Olympics. Most notably, in 1965, he set U.S. records for the 10,000-meter and three miles, along with a world record in the six-mile run (27 minutes, 12 seconds), a time that has not since been surpassed.

Mills has lived a full life beyond athletics. He has been married to his wife Patricia for nearly forty years, and they have raised three daughters. After leaving the Marines, he worked as a life insurance salesperson. For much of the past thirty years, he has been an inspirational speaker, living in Sacramento. He has also taken a leading role in the empowerment of indigenous peoples. As the spokesperson for Running Strong for American Indian Youth, a division of Christian Relief Services, he has worked to help American Indian communities meet their basic needs—food, clothing, and

shelter—while implanting programs to build self-esteem and sovereignty.

Mills' life was the subject of the 1984 feature film, *Running Brave*, starring Robby Benson.

Over the past forty years, Mills has received numerous awards for his achievements as an athlete, leader, and humanitarian. In 1972, he was named one of the Ten Outstanding Young Americans by the Jaycees. Four years later, in 1976, Mills was inducted into the United States Track and Field Hall of Fame. He is also a member of the United States Olympic Hall of Fame, the National Distance Running Hall of Fame, the Kansas Hall of Fame, and the National High School Hall of Fame. In 2003 he became the first American Indian to receive the Alumni Distinguished Service Award from his alma mater.

Mohawk, John C.

John C. Mohawk, regarded as "one of the foremost Iroquois scholars and activists of his generation" (Mohawk, 2006), combined the roles and talents of university professor, international negotiator, and cultural revivalist.

A long-time professor in the State University of New York at Buffalo's American Studies Department, Mohawk also directed the department's indigenous studies program. Mohawk also was known as a skilled crisis negotiator who not only helped reconcile differences between Iroquois factions, but also, during 1980, played a role in negotiating U.S.-Iranian relations. As a cultural revivalist, Mohawk initiated and led the Iroquois White Corn Project, which produced and marketed traditional Seneca white corn to restaurants, part of a larger effort by Mohawk to help maintain small-scale sustainable agriculture.

Mohawk was born to Ernie and Elsie Mohawk, into the Seneca Turtle Clan. Having graduated from Gowanda High School, Mohawk earned an undergraduate degree in history at Hartwick College during 1968 and started graduate studies at the University of Buffalo two years later. "John was the heart of the Native Studies program at the University of Buffalo," said Bruce Jackson, a longtime UB professor in

American Studies. "Other people taught it, but he was the one who always provided the focus, the compassion and the guiding intelligence," said Jackson. "In addition, the students really loved him" (Mohawk, 2006).

"John had a wonderful connection with the elders [of] the Haudenosaunee (Iroquois), and they invested in him truly to hold the culture in place," said Barry White, a friend of Mohawk's for more than thirty years. "His dad, Ernie, was one of his major mentors in the thought and philosophy of the Iroquois, and people from across the Six Nations invested in him like he was a conduit for the transmission of their culture to the next generation" (Mohawk, 2006).

Mohawk was an editor of *Akwesasne Notes* between 1976 and 1983. In 1987, he helped found *Daybreak* magazine, and served as one of its editors until 1997. He also was an opinion columnist for *Indian Country Today*. Among Mohawk's best-known books are *Utopian Legacies* (2000) and *Exiled in the Land of the Free* (1992), which he co-edited with Oren Lyons.

Mohawk's ability to combine insights from the history of Europe and Native America was especially thought-provoking. In *Utopian Legacies*, Mohawk examined utopian elements in several European ideologies that became motors of oppression. "Nazism was a revitalization movement, complete with its own vision of utopia, its rationalizations for conquest and plunder, and an ability to disarm ordinary people's sense of morality and to plunge an entire nation . . . into an orgy of violence and murder," wrote Mohawk in his wide-ranging historical account of how utopian dreams often turn into searingly deadly realities. (Mohawk, 2000, 210).

To Mohawk, the legacy of utopianism is one of the defining tenets "perhaps the characterizing theme," of several Western European cultures (Mohawk, 2000, 13). Mohawk found utopian assumptions operating in some of the most powerful ideological forces shaping Christianity, Islam, and capitalism. He noted that the Christian creation story begins with the expulsion of the original human couple (Adam and Eve) from a notable Western utopia, the Garden of Eden.

In *Utopian Legacies*, Mohawk described how the abuses of capitalism spawned Marxism, its own antithesis utopia. "In pursuit of the perfectible socialist world," wrote Mohawk, "indigenous people east of the Urals were abused, dissenters were shipped to draconian gulags in Siberia, protests were

ruthlessly and brutally suppressed, [as] religious and traditional ethnic practices were outlawed" (Mohawk, 2000, 175). Following the general collapse of the Marxist utopian vision, Mohawk analyzed present-day "globalization," the pursuit of secular utopia through the accumulation of wealth. The expansion of capitalist culture to its present world-girding state has brought mass animal extinctions and steady rises in atmospheric levels of greenhouse gases. The Earth has thus become a victim of secular, industrial materialism and its appetite for fossil fuels.

Mohawk died suddenly at his home in Buffalo December 10, 2006, at age 61. Mohawk's wife, Yvonne Dion-Buffalo, who also worked in the UB American Studies Department, had died during 2005.

Momaday, N. Scott

Kiowa poet, novelist, artist, and educator N. Scott Momaday received critical acclaim in 1969 when he won the Pulitzer Prize for fiction for his novel, *House Made of Dawn*. The book helped to usher in a renaissance in Native American writing and placed Momaday at the forefront of the genre. In the years since *House Made of Dawn*, Momaday has published numerous books of poetry and fiction. The common theme of integrating cultural tradition into modern life unites his works. In addition to being a gifted writer, Momaday is an accomplished artist. He has exhibited his sketches, oils, acrylics, and etchings in numerous shows and used them to illustrate his books.

Momaday was born on February 27, 1934, in Lawton, Oklahoma, to Alfred and Natachee Scott Momaday. His father, a full-blooded Kiowa, and his mother, who was of French and Cherokee descent,

were both painters and teachers who instilled a strong sense of self in their son. At the age of six months, a Kiowa storyteller and tribal elder bestowed on Momaday the Kiowa name Tsoai-talee ("Rock-Tree Boy"). The name referenced a place along the Kiowa migration route known as Devil's Tower, and it forever linked Momaday to his ancestral past.

In 1936, Momaday and his family left Kiowa Country and moved to New Mexico, where they lived on the Navajo Reservation for seven years. In 1946, the family moved to the Jemez Pueblo in New Mexico after Momaday's parents accepted teaching positions at the local day school.

Growing up on the Navajo and Jemez Reservations left a lasting impression on Momaday and gave him a pan-Indian experience that has strongly influenced his writing. Living at Jemez in the mid-1940s, Momaday witnessed the changes that occurred after World War II ended. The Jemez population increased, modern conveniences became more commonplace, and returning veterans brought their off-reservation experiences home with them. Although some veterans adjusted to pueblo life, many others found the task difficult. Some left the reservation in a quest to find themselves and employment, while others remained but turned to alcohol or suicide to escape. Momaday never fell victim to the identity crises that so many Native Americans suffered after the war. He did absorb the experiences of his Navajo and Jemez neighbors, however, and he returned to those themes in his writing.

In 1958, Momaday received a BA in political science from the University of New Mexico. Unsure of his future, he accepted a teaching position on the Jicarilla Apache Reservation in New Mexico. While there, Momaday spent his free time writing, and in 1959 Stanford University awarded him the Wallace Stegner Creative Writing Scholarship for poetry. The scholarship gave Momaday an opportunity to work under respected poet Yvor Winters, who became a lifelong friend and mentor. Although he expected to return to the reservation teaching position after a year, Momaday's experiences at Stanford reshaped his career path.

In 1960, Momaday received his MA from Stanford and immediately began work on his Ph.D., which he completed in 1963. The following year, he accepted a teaching position at the University of California, Santa Barbara.

Momaday's literary breakthrough came in 1968 with the publication of *House Made of Dawn*, a classic

novel about the search for identity. The novel's main character, a Jemez man named Abel, leaves his reservation to serve in Europe during World War II. When he returns to the reservation after the war, however, Abel suffers an identity crisis. Like many returning veterans, Abel is caught between two worlds. He embarks on a journey during which a Navajo and a Kiowa help him recognize the importance of Indian culture and tradition. Only after he reconnects with his tribal heritage does Abel overcome the identity crisis that plagued him.

Since the publication of *House Made of Dawn*, Momaday has written numerous literary works that stress the importance of tradition and address the problems of Indians in modern society. Among them are *The Way to Rainy Mountain* (1969), which weaves Kiowa myths with tribal history and personal memories; *The Names* (1976), a memoir of childhood; *The Gourd Dancer* (1976), a collection of poems; and *The Ancient Child* (1989), a novel that connects Kiowa myth with Western legend. He has also held professorships at universities in the United States and Europe and continues to utilize his artistic talents.

Montezuma

The most celebrated American Indian living in Chicago early in the twentieth century was Indian-rights advocate, writer and speaker, political organizer, and surgeon Dr. Carlos Montezuma, a graduate of the University of Illinois (1884) and the Northwestern University's Chicago Medical School (1889).

Montezuma (Mochtezuma, Wassaja, Yavapai) was born around 1866 among the Yavapai ("Almost-People to the East")—one of the thirteen bands of Pai or Pa'a (the People)—in what would become central Arizona. His birth name was Wassaja (pronounced wass-jah), a word translated from the Yuman language into English that means signaling

or beckoning. In 1871, O'odham soldiers from the Salt River area, allied with General George Crook and the U.S. Army, captured Wassaja in the Ka Vee-cum Gahk-woot (Superstition Mountains) and turned him over to photographer Carlos Gentile. Gentile took young "Carlos Montezuma" east and brought him to the Reverend G. W. Ingalls of the American Baptist Home Mission Society. Ingalls selected the pastor of the First Baptist Church in Urbana, Illinois, to raise young Carlos.

Living primarily among non-Indians for five decades following his capture, Montezuma worked for the Office of Indian Affairs (OIA) after obtaining his license to practice in Illinois. He entered government service in September 1889 at Fort Stevenson, North Dakota. In July 1890 he transferred to the Western Shoshone Agency in Nevada, where he worked until December 1892 before spending a few months in Nespelem, Colville Agency, Washington, and about three years at the United States Indian Industrial School hospital in Carlisle, Pennsylvania. He resigned in January 1896 to enter private practice in Chicago, where he remained until 1922.

Montezuma traveled with the Carlisle football team to the southwestern United States in 1901 and became reacquainted with his Yavapai relatives, who in 1903 obtained 24,680 acres of the old Fort McDowell Military Reserve (a portion of their homeland near Phoenix). During the final two decades of his life, Montezuma journeyed repeatedly to Fort McDowell, where he became increasingly familiar with his Yavapai family. With Montezuma's assistance after 1906, his Yavapai relations successfully resisted U.S. government-sponsored efforts to remove them to the Pima Salt River Reservation and build a dam on the Verde River, in the middle of the their reservation.

In Chicago after 1896, Montezuma assumed a role that purposefully was in the tradition of leadership among many American Indian peoples—that of caring for less fortunate citizens, hosting Indian visitors to his community, and advocating for the rights of Native nations. Thus, he was uniquely situated to contribute to the formation of Indian organization. During the opening decade of the twentieth century he joined efforts to politically organize Indians: In 1904 he joined with Luzena Choteau (Wyandotte from Oklahoma) to help found the National Indian Republican Association, in 1909 with Thomas L. Sloan (Omaha) and Walter Battice (Sac and Fox from Oklahoma) to form the Indian Progressive Organization, in 1911 with Laura Cornelius (Oneida from

Wisconsin) and Henry Standing Bear (Lakota from Rosebud Reservation) to organize a meeting of Indians in Columbus, Ohio, that became the Society of American Indians. In addition to his groundbreaking work creating Indian organizations, Montezuma lobbied in Congress against OIA paternalism, fought for Yavapai land and water rights, drafted an Indian citizenship bill, gave numerous speeches—including one entitled “Let My People Go”—and published a newsletter.

Wassaja, Montezuma’s newsletter, was published monthly from April 1916 to November 1922. By means of *Wassaja*, as well as numerous newspaper columns, magazine articles, and lectures, Montezuma took his one-man campaign of Indian advocacy to the public. He sometimes expressed his thoughts in verse. Countering the “vanishing Indian” thesis (commonly repeated at the time) in a piece entitled “Changing Is Not Vanishing,” Montezuma wrote: “The Indian race vanishing? No, never! The race will live on and prosper forever” (Montezuma, 1987).

In 1922, suffering from the debilitating effects of diabetes and tuberculosis, Montezuma returned home to live with his relatives at Fort McDowell. He passed on January 31, 1923.

Mormon Church

The interest of the Mormon Church (Church of Jesus Christ of Latter-day Saints) in Native Americans can be traced to the Book of Mormon, which was published in 1830. This book of scripture referred to

Indians as Lamanites and said they were descendants of an Israelite civilization that rose and fell on the American continent. The book also contained prophecies about the Indians’ receiving great blessings once they joined the Mormon Church. The church has adopted and abandoned various programs over the years to carry out its perceived responsibilities to Native Americans.

Mormon missions to the Indians began in 1830. The earliest missionaries found some tribes receptive to their message, but Indian agents prevented them from making further inroads. Non-Mormons suspected that Mormons intended to enlist Indians in their bid to establish an empire in the West. This is one reason why Mormons were persecuted and eventually driven to Utah in 1847.

When they arrived in the Great Basin, the Mormons wanted land occupied by local tribes. They made peaceful overtures to Indian chiefs, but conflict erupted as converts to the church began settling in Utah by the thousands and encroaching on lands that Native Americans used for hunting and gathering. Some of the most tragic examples of this fighting were the Mountain Meadows Massacre (1857) and the Black Hawk War (1865–1868). Despite these clashes, the Mormons made some attempts to preach the gospel and teach farming to their Native neighbors. However, the cultural gap proved largely insurmountable and the federal government relocated the Utes, Shoshones, and Paiutes to reservations in the late nineteenth century.

Relations between Native Americans and the Mormons recommenced in the 1940s. The church launched Indian missions in the Southwest and northern Plains. The Mormon missionaries on these reservations did not preach but rather promoted economic development and provided instruction in farming and ranching. In the 1950s, the church launched two educational programs for Indian students. Indian Seminary was a church program that involved constructing facilities next to federal Indian schools. Seminary teachers offered a religion class that Indian students could take during their regular school day. By the late 1960s, the annual enrollment in Indian seminary exceeded ten thousand.

The second initiative, the placement program, by contrast, required Indian students to live in the foster homes of white Mormon families during the school year. Ultimately, 70,000 Native students participated, or about 10 percent of American Indian

baby boomers. To participate in the placement program, Indian students had to obtain parental permission and become a baptized member of the church. The Mormons argued they were offering these students an education superior to that offered in reservation schools.

This program proved so appealing that, at its height in 1970, annual enrollment reached 5,000. However, evaluating the ultimate successes and failures of the program is no easy task. Critics charged the program with cultural genocide. More often than not, the students were taught that their Indian traditions were sinful and that their salvation depended on embracing Mormon beliefs and lifestyles. For most of the students, these pressures to assimilate interfered with the development of their tribal and Indian identities. Many returned home after only a year or two. A smaller percentage earned decent grades in high school, went on to obtain college degrees, and returned to their reservations with valuable skills.

Many graduates of the placement program were attracted to Brigham Young University (BYU). The enrollment of Indian students at BYU swelled to more than 500 during the early 1970s. The story of George P. Lee (Navajo) illustrates recent policy changes within the church. Lee enrolled in placement for seven years, served a mission for the church, and then earned his doctorate at BYU. In 1975 Lee became one of the highest-ranking leaders in the church. By the mid-1980s, the church was shifting its resources and programs from Native Americans and their reservations to the peoples and lands of Central and South America. Lee felt that the church had abandoned its responsibilities for Native Americans and was excommunicated in 1989 when his criticisms became public.

National Congress of American Indians

Having served in World War II, many Native Americans became increasingly active politically after the war, demanding equal voting rights and an end to discrimination. Their wartime experience intensified a renewed sense of Native American identity, reinforced religious beliefs, and exposed many Native Americans to life outside the reservations.

In several states, Native Americans were denied the right to vote, in spite of laws to the contrary. In other political activities, Native Americans resisted the construction of dams that threatened to flood reservation lands and destroy Indian fishing rights.

By the mid-1940s, Native American leaders realized that many non-Natives were not much interested in Indian affairs, that bureaucratic inertia and hostility to the Indian Reorganization Act were weakening potential benefits, and that their tribal treaty rights were in jeopardy. Originally called the Wheeler-Howard Act of 1934, the Indian Reorganization Act was an attempt to conserve and develop Indian lands and resources. This authority extended to Native Americans the legal structure that enabled them to form businesses, establish a credit system, and provide for a vocational education.

In an attempt to safeguard these and other Native American assertions, in 1944 reservation leaders and other prominent Native American professional men and women from fifty tribes met in Denver, Colorado, to form the National Congress of American Indians (NCAI), the first major intertribal organization

When the NCAI was formed, its primary concerns included the protection of Native American lands, minerals, and timber resources, as well as improving economic opportunities, education, and health care for Native Americans. Among NCAI's founding members were D'Arcy McNickle, a Flathead and employee of the Bureau of Indian Affairs who held a seat on the first national council, and Napoleon Johnson, a Cherokee who served as the organization's first president. They were among the early NCAI leaders who asserted that membership should be restricted to "people of Indian ancestry." As problems mounted for Native Americans, however, membership policy was changed to include non-Indians, who were offered associate memberships if they demonstrated a genuine concern for Native American issues.

One of the few postwar innovations in Native American policy was established by Congress in 1946 when the Indian Claims Commission voted to compensate Native Americans for fraud or unfair treatment by the federal government. During the next twenty-two years, the commission heard 852 claims and awarded nearly \$818 million in damages to Native Americans. Otherwise, however, much of the news regarding Native American policy was bad during NCAI's early years.

Among its early platforms, the NCAI promised to "work toward the promotion of the common welfare of the aboriginal races of North America." It promised to educate non-Indians about Indian culture, preserve treaty rights, and lobby for Indian interests before the federal government. It had concern for the preservation of Indian culture and retaining the advances made under the Indian Reorganization Act, as well as pressing for the Act's fulfillment. The National Congress of American Indians became a strong lobbying force, working with other organizations, including the Indian Rights Association, to protect Native American interests before the U.S. Congress.

In 1947, part of a comprehensive study by the federal government for ways to remove waste, duplication, and inefficiency and to reduce public expenditures recommended ending the federal government's relationship with the Indian tribes. Headed by former President Herbert Hoover, this special study, which examined all phases of the national government, recommended the termination of Indian welfare by the federal government.

Anticipating this outcome and the recommendations of discontinuance of all specialized Indian activity and the Bureau of Indian Affairs, the NCAI dedicated most of its attention, for several years, to trying to correct what became known as the termination policy.

During the 1950s, the organization was a principal opponent against the termination policy, which sought to "emancipate the Indians" by terminating federal links to Indian communities and withdrawing federal support for tribal governments. The legislation called for Congress to initiate sixty separate termination bills, the last of which was to be implemented in 1962. Generally, the legislation called for the preparation of a final distribution of tribal assets to members and the removal of Indian land from federal protection.

The NCAI said that the policy of termination undermined reservation health and economic condi-

tions and accelerated the decline of traditional cultural practices. In the wake of these negative conditions, NCAI led several tribes to campaign successfully to reverse some elements of termination. In 1953, Congress passed a resolution that called for the government to transfer federal responsibilities for tribes to the states. It also allowed states to assert legal jurisdiction over Indian reservations without tribal consent. The NCAI effectively organized opposition to these measures, with the rallying cry of "self-determination rather than termination."

Many Native Americans criticized "relocation," another postwar government program. Under the policy that began in 1948, the Bureau of Indian Affairs provided transportation, job placement, vocational training, and counseling to Native Americans who wanted to leave reservations. As a result of Native American protests, led by NCAI, federal policies began to shift away from termination and toward self-determination and the principle of autonomy.

In the 1960s, as President John F. Kennedy promised a friendlier "new frontier" in Indian affairs, the NCAI played an important role in ensuring that the federal antipoverty programs would encompass tribal communities. Additionally, this decade also witnessed the birth of several pan-Indian protest groups, with the NCAI losing its leading role to the more flamboyant, militant organizations like the National Indian Youth Council (NIYC) and the American Indian Movement (AIM), best-known for its occupation of Wounded Knee (South Dakota) in 1973.

During the 1970s even as activism accelerated, American Indians continued to be the United States' poorest minority group by many measures, including net income and mortality from several diseases. They were considered worse off than any other group, according to virtually every socioeconomic statistic. The Native American unemployment rate was ten times the U.S. national average, and 50 percent of the Native American population lived below the federal poverty line. Indian life expectancy was only forty-four years, a third less than that of the typical American at the time. Deaths caused by pneumonia, hepatitis, dysentery, strep throat, diabetes, tuberculosis, alcoholism, suicide, and homicide were two to sixty times higher than among the United States population as a whole. Half a million Native American families lived in unsanitary, dilapidated dwellings, many in shanties or abandoned automobiles. The NCAI

sought solutions to these difficulties by approaching the U.S. government.

In the 1980s and the 1990s, the NCAI promoted political causes and education through the efforts of its Washington, D.C., office, as well as programs initiated at its annual convention.

The NCAI continues to be the oldest and largest Native American organization in the United States. It was born of hostile legislation and policies that were devastating to Native American tribal nations. It continues to dedicate itself to the restoration and exercise of tribal sovereignty and the continued viability of all tribal governments.

No longer are Indians a vanishing group of Americans. The 2000 Census recorded a Native American population of more than two million, five times the number recorded in 1950. However, nearly half of all Native Americans continue to live on reservations, which cover 52 million acres in twenty-seven states, while most of the others live in urban areas. As the Indian population grows, individual Native Americans have claimed many accomplishments and are widely perceived to be productive citizens. Although Native Americans continue to face severe problems relating to employment, income, and education, they will not abandon their Indian identity and culture, nor will they be treated as dependent wards of the federal government—all aims that mirror the goals of the National Congress of American Indians.

Historically, the NCAI's political activities have followed a moderate political course, bringing together and representing a wide range of Native Americans on a variety of issues. Recently, the NCAI sent petitions to Congress to force the removal of stereotypical names, such as "Redskins," from sports team logos, license plates, and other places, as Native Americans continue to battle discrimination.

Recently, NCAI has worked to secure funding for an initiative to encourage Native Americans to pursue degrees in the field of information technology and other fields of science and technology.

Working with other Native American groups, NCAI raised relief funds for Native Americans in the Gulf states, who were victimized by Hurricane Katrina. The NCAI continues to stress the importance of preserving Native American history and cultures, as well as to protect Indian welfare. The group continues to urge Native Americans to become assimilated into non-Indian culture by stressing their common characteristics and creating the organizational forms to unite all the tribes and to retain a pluralistic rela-

tionship with the larger society by working for self-determination.

While the NCAI has had its share of criticism, it has shown, historically, that it works for the betterment of Native Americans and that it continues to fight for full inclusion. It remains a powerful voice for the collective concerns and shared identity of American Indian nations and tribes.

National Indian Youth Council

The National Indian Youth Council (NIYC) is the second-oldest national Indian organization in the United States. (The oldest is the National Congress of American Indians.) Since the termination era during the 1950s, the NIYC has fought oppressive government policies. From the mid-1960s through the early 1970s, the NIYC primarily accomplished its aims through Northwest fish-ins, Red Power protest, and Indian nationalism. While its activities since then have made headlines less often, the NIYC continues its battles through long-term projects such as political research, antidiscrimination lawsuits, and employment services benefiting various indigenous communities. Frequently at the forefront of Indian affairs, the NIYC has promoted self-determination and sovereignty and helped create a new generation of Indian leaders.

The NIYC traces its roots to Indian youth councils and college student workshops of the late 1950s. The Southwestern Regional Indian Youth Council, originated by Kiva Club students at the University of New Mexico, provided leadership training for founders of the NIYC. Herbert Blatchford (Navajo), Melvin Thom (Walker River Paiute), and Clyde Warrior (Ponca) were among the hundreds of Indian college students from nearly twenty states

who attended these youth councils and participated in debates over termination and other government policies. Each summer at the Workshop on American Indian Affairs, future founders of the NIYC stretched their minds with powerful ideas and expanded their circles of friends and influence.

The American Indian Chicago Conference in 1961 set the stage for the emergence of the NIYC. Indian college students attended this conference, along with scholars, members of the National Congress of American Indians (NCAI), and tribal leaders. However, these students wished to voice their own opinions on federal Indian policy and other concerns. They formed a youth caucus, guided the conference's outcome, and argued that Indians needed to use their combined political power in pursuit of self-determination. Ten of them gathered that fall in Gallup, New Mexico, to officially organize the NIYC. In addition to Blatchford, Thom, and Warrior, the NIYC's founders were Bernadine Eschier (Shoshone-Bannock-Pima), Rickard Karen Jacobson (Tuscarora), Howard McKinley, Jr. (Navajo), Joan Noble (Ute), Edison Real Bird (Crow), John R. Winchester (Potawatomi), and Shirley Hill Witt (Akwasasne Mohawk). At this founding meeting, Indian women took two of the three positions within the presidency and four of the ten spots on the board of directors.

For the first few years, the NIYC founders decided to meet annually and discuss issues facing Indian students and youth across the nation. They began publishing a newsletter and by 1962 over 180 tribal councils had subscribed. In 1963 the NIYC and United Scholarship Service jointly published a new periodical, *Americans Before Columbus*. Bruce Wilkie (Makah) and Hank Adams (Assiniboine-Sioux) emerged as leaders in the NIYC. In early 1964 these two individuals played key roles in the NIYC's fish-ins in behalf of tribes in Washington State. This direct action proved so popular that by the end of 1964 membership in the NIYC reached three thousand.

The NIYC began receiving greater recognition in 1964. In May, leaders in the NIYC were invited to the Capital Conference on Indian Poverty in Washington, D.C. There they organized a youth session and stressed the need to aggressively seek funding for American Indians in the forthcoming War on Poverty. Eventually several members of the NIYC became Community Action Program directors. Before the year was over, Warrior helped Vine Deloria, Jr. become executive director of the NCAI. In

addition, the NIYC participated in the first-ever International Indian Youth Conference and received a Canadian delegation at its December meetings.

Over the next few years, the NIYC underwent several changes. Emerging in the vanguard of the Indian movement, Thom replaced Blatchford as executive director in 1965 and served until 1968. Warrior led the group from 1966 to 1968. Warrior and other orators in the NIYC denounced the colonialism of the federal government and lectured widely on the need to preserve Indian culture and identities. In 1967, the Carnegie Corporation and the Ford Foundation awarded the NIYC nearly \$200,000. This allowed the NIYC to hire a small staff, set up an office in Berkeley, California, and contract with the Far West Laboratory for Educational Research and Development.

Events in 1968 and 1969 transformed the NIYC. Stan Steiner's book, *The New Indians*, appeared early in 1968, describing how the NIYC helped radicalize Indian students and other youth. Soon after this, Thom and his staff took funds earmarked for education projects and spent them on preparations for the Poor Peoples' Campaign in Washington, D.C. These actions upset the foundations and contradicted the wishes of the NIYC's board of directors. The crisis worsened when Warrior died close to the time of the campaign in Washington. These developments created a leadership vacuum in the NIYC. The students who attended the NIYC's first-ever Institute of American Indian Studies in the summer of 1968 decided to take over the NIYC's board of directors. Before long, William Pensoneau (Ponca) became president and served until 1969. In the midst of this transformation, the NIYC's headquarters moved back to New Mexico. Gerald Wilkinson (Cherokee-Catawba) agreed to become executive director around this time and began working, initially without pay, at the new office in Albuquerque.

Wilkinson realized the NIYC needed to adapt to survive. Many of the Native students who had passed through the NIYC's leadership training programs began competing with the NIYC for funding and political influence. For instance, in 1969 Wilkie became executive director of the NCAI. NIYC members obtained internships in Washington, D.C., and staffed Indian desks in major departments and agencies of the federal government. At least 250 Indian students attended the NIYC's summer Institutes in American Indian Studies and helped set up similar programs on other college campuses. Members of the NIYC also became leaders of tribes and estab-

lished Indian advocacy organizations. Wilkinson recognized the need to build membership and funds. A direct mail campaign and a resumption of the NIYC's periodical helped boost membership to 15,050 chapters by the early 1970s.

The NIYC changed during the 1970s from a direct action activist organization to one that pursued long-term projects. For example, the NIYC participated in the Trail of Broken Treaties, but its priorities lay elsewhere. Wilkinson wasted little time in obtaining the services of lawyers. With their help, the NIYC sued the BIA for its discrimination against students at schools like Intermountain and Chilocco and urged the adoption of a student bill of rights. By mid-decade Wilkinson had assembled an office with twenty people, including several staff attorneys. Some of the court cases launched and won by the NIYC during these decades dealt with issues such as affirmative action, environmental issues, religious freedom, restoration of tribal constitutions, and voting rights. One way the NIYC survived during these years was through federal funds that allowed it to provide job training and placement. Notable leaders during these years included LaVonna Weller (Caddo), who became the first female president of the NIYC in 1972, and Lawrence Roberts (Oneida), who served as president from 1974 to 1988.

Since the 1980s, the NIYC has expanded the scope of its activities and continued to provide services to Indian people and organizations. In the 1980s new projects for the NIYC included voter registration campaigns among tribes in the Southwest, voter surveys, national directories of Indian elected officials, and polling data on the views of these political leaders. During these years the NIYC also hired a young attorney named James Anaya, who helped the NIYC to become a nongovernmental organization (NGO) at the United Nations and to provide assistance to indigenous peoples facing oppression throughout Latin America. Wilkinson's death in 1989 brought additional changes to the NIYC. Norman Ration (Navajo-Laguna) became executive director and helped the NIYC to better serve the urban Indian population of New Mexico. James Nez (Navajo) has assisted with this effort as NIYC president for quite some time. The two of them brought Witt back onto the board of directors. These and other individuals have helped the NIYC to expand and open offices in Farmington and Gallup, New Mexico. In the last few years the NIYC has won the right for Navajo Indians to vote in tribal elections at

polls in Albuquerque. Their most recent battles have been against low health-care funding for urban Indians across the nation.

National Museum of the American Indian

The National Museum of the American Indian (NMAI), part of the Smithsonian Institution, is the premier museum of Native American art and culture, containing the largest and most comprehensive collection of Native American art and artifacts in the world. With objects from North, South, and Central America, its holdings include approximately 800,000 objects, spanning 10,000 years of history through the present, from over a thousand Native or indigenous cultures.

The National Museum of the American Indian was created by an act of Congress (Public Law 101–185) in 1989 and signed into law by President George H. W. Bush. The acquisition of the vast holdings of the Museum of the American Indian became the foundation of the National Museum of the American Indian. The Museum of the American Indian, which was founded by George Gustav Heye

The National Museum of the American Indian opened on September 21, 2004, in Washington, D.C. The museum houses an 800,000 piece collection that honors the cultures of Native Americans from North, South, and Central America. (Jessica Sedgewick)

(1874–1957), contained the personal collections of Heye, who traveled extensively throughout the western hemisphere. With 800,000 objects and a photographic archive of 125,000 images, this collection was assembled over the period of fifty-four years, beginning at the turn of the twentieth century.

NMAI includes a smaller permanent museum, the George Gustav Heye Center located in lower Manhattan, a Cultural Resources Center that houses and cares for the collections in Suitland, Maryland, and a large permanent museum on the National Mall in Washington, D.C.

The George Gustav Heye Center, located in the Alexander Hamilton U.S. Customs House in New York City, opened in 1994. This branch of NMAI is an exhibition facility for both permanent and temporary exhibitions. It also houses a Resource Center

that utilizes computer technology to teach about Native life and links the museum to current Native communities. Also, the Heye Center houses a Film and Video Center that serves the Native filmmakers and community, educators, and the general public.

Built in 1999, the Cultural Resources Center is a research and storage facility for the objects and artifacts in the NMAI collection. It is state-of-the-art in terms of the care and storage of the collection and seeks to educate new generations of museum professionals. This facility serves as the center for various museum services, including community outreach, educational outreach, and technological development. It is also a culturally sensitive facility, recognizing that some objects in the collections may have family and community connections. This facility has both public and private areas for use by

Native and non-Native researchers and visitors from tribal communities, academe, and artistic and cultural organizations.

In September 2004, NMAI opened a second, larger, permanent museum on the National Mall in Washington, D.C., in front of the U.S. Capitol. This structure was built by two construction companies, one of which is a subsidiary of the Table Mountain Rancheria of Friant, California, a federally recognized American Indian tribe. The building is 351,263 square feet, 99 feet high and has a dome that rises 120 feet in the rotunda. The creation of the new museum included consultation and collaboration with 500 Natives from 300 communities. In keeping with the consensus of consultants from Indian Country, the building includes round interior spaces, exterior water features, east-facing entrances, and many interior details that reference Native symbols from various cultures. The grand opening took place on September 21, 2004, with an elaborate morning procession of Native Americans in full regalia traditional to each of their distinctive nations. The procession stretched from the Smithsonian Institution's Castle along the Mall toward the U.S. Capitol for the dedication of the new museum.

NMAI is distinctive in that the institution works collaboratively with Native communities to sustain cultural heritage. Through extensive educational programs and community outreach between people, the museum facilitates communication and education, in addition to connections with objects, artifacts, and art. Because its exhibitions are presented from a Native perspective and in a Native voice, NMAI is dedicated not only to preserving and exhibiting cultural artifacts from the past, but also to giving a voice to contemporary indigenous peoples. According to its mission statement:

The National Museum of the American Indian shall recognize and affirm to Native communities and the non-Native public the historical and contemporary culture and cultural achievements of the Natives of the Western Hemisphere by advancing—in consultation, collaboration, and cooperation with Natives—knowledge and understanding of Native cultures, including art, history, and language, and by recognizing the museum's special responsibility, through innovative public programming, research and collections, to protect, support, and enhance the

development, maintenance, and perpetuation of Native culture and community (NMAI, n.d., "Mission").

Native American Church of North America

The Native American Church of North America (NAC), or Native American Church of Jesus Christ, is the largest religious organization dedicated to the use of the fruit (or "button") of the peyote cactus as the central element of its worship. However, the use of peyote in North America far predates the organization of the NAC. Peyote buttons dating to 5,000 BCE have been found in Texas, and its use in Central America appears to be more ancient still.

Opposition by European-Americans to Native use of peyote also has a very long history. When the Spanish first reached many of the isolated inland tribes of Mexico, they discovered the Indians of the Cora tribe using a previously unknown substance in their nocturnal religious rites. In 1754, Spanish historian José Ortega described "a tray filled with *peyote* which is a diabolical root [*raiz diabolica*] that is ground up and drunk by them so that they may not become weakened by the exhausting effects of so

Members of the Native American Church prepare for a prayer meeting in Mirando City, Texas, in 1996. The Church's all-night ceremonies involve the use of peyote as a sacrament. (AP/Wide World Photos)

long a function." Anthropologists have estimated that peyote has been in use among Mexican Indians for approximately 7,000 to 10,000 years. Although Ortega saw peyote as a "diabolical root," the Cora Indians saw it as a "divine cactus." The Inquisition made its use illegal in 1620, but this did not stop the spread of its use.

Anthropologist Weston La Barre estimated that the ritual and curative use of peyote was transmitted from Mexican tribes to those residing in the United States around 1870. During the next fifty years, it was diffused among various tribes throughout the Western United States. Although peyote was one of many plants used in Central American Indian ceremonies, in North American usage it became the central sacrament. Whereas prior pan-Indian movements led by people like Neolin, Tenskwatawa, and Wovoka promised a return to the pre-European state through divine and/or military means, the use of peyote became a way of accommodating and accepting the facts of modern life

while keeping a connection with traditional Indian beliefs. Further, the peyote faith became a way for Indians to deal with the crisis caused by the destruction of their traditional cultures during the nineteenth century.

By the late nineteenth century, noted anthropologist James Mooney began to research its use among Indian peoples in Oklahoma and elsewhere, even going so far as to become an advocate for its use as an expression of freedom of religion. By 1906, the use of peyote had spread to an area covering the Great Plains from Oklahoma to Nebraska. The threat of Christian missionaries' call for congressional action to ban the use of peyote caused the peyote users of the Oto, Kiowa, and Arapaho tribes to unite several diverse peyote groups and, with Mooney's support, create the Native American Church in October 1918. Although it was not and still is not representative of all Indian peyote users in the United States, the NAC was formed as a defense measure against probable government action.

Although the organization of the NAC gave peyote users a pan-Indian identity, it did little to dissuade whites and proacculturation Indians from attacking the movement. The fact that the sacrament is a mild hallucinogen caused federal, state, and local government officials to oppose the use of peyote, ignoring the purely ceremonial usage among the Indian groups. Exercising their influence on government officials were Christian leaders who claimed peyote use was, like alcohol, only used to induce euphoria. Passage of the Indian Citizenship Act and with it the official granting of constitutional rights to Indians in 1924 did not end the persecution.

The NAC has traditionally infused its rites with Christian imagery and even theology. It has no professional, paid clergy. Members are free to interpret *Bible* passages according to their own understanding. Morality is basically Christian and stresses the need to abstain from alcohol and be faithful to one's spouse. Other prominent values include truthfulness, fulfilling one's family obligations, economic self-sufficiency, praying for the sick, and praying for peace. The peyote faith stresses personal revelation and visions; individual commitment to live a life of respect, generosity, and harmony; and a heavy emphasis on the sacramental aspect of worship. Each person must come to the peyote belief of his or her own volition through an overt decision of faith. Declaring this belief makes the communicant a part of the faith community, a community that shows common concern for other members. Some communities have also included the practice of baptism. However, the amount and type of Christian influence can vary widely among and within tribal groups.

One of the most notable evangelists of the peyote religion during the last half of the nineteenth century was the Comanche Quanah Parker, who traveled from tribe to tribe spreading the new faith. Although many converted, opposition came almost immediately from many sides, both Indian and non-Indian. Many Indians who had been educated and favored assimilation saw an Indian religion as a step backward. Many were still devoted to traditional Indian cultures and could not fit the new religion into their system. Both the state and federal government banned the use of peyote, and, although some overtures were made by the Peyotists, most missionary groups condemned the new faith, blaming the use of peyote for poverty, illness, and death on the reservations. Controversy still follows the peyote faith, even in the aftermath of the 1978 passage of the American Indian Religious Freedom Act.

In his 1970 masterwork, *Custer Died for Your Sins: An Indian Manifesto*, Vine Deloria, Jr., stated that the Native American Church "appears to be the religion of the future" and that "eventually it will replace Christianity among the Indian people" (Deloria, 1970, 113). However, the fact that the theology espoused by some members of the NAC has Christian roots has caused divisions. The continual participation of Indians in traditional religions, Christianity, and peyotism has revealed Deloria's declaration to be a bit overstated, but for those who blend traditional Indian religions and Christianity, the NAC remains a vital force in the communities of which it is a part.

Native American Museums

Native American museums and cultural heritage centers are among the most recent of the institutions that make up the history of contemporary museums. To understand and appreciate their significance, it is important first to explore the context in which they arose. The modern museum emerged as a product of the evolution of the private collections of royal and wealthy families at the time of the Renaissance, when increased inquiry into the natural and cultural world, spurred by Western voyages of discovery, expanded the range of what was thought to be exotic, unique, and of scientific value. The first public museums began to appear by 1800, with major national museums being created by the end of the

century. National museums were developed in part not only as a reflection on ideas about what a modern, civilized country should have, but also to house the arts and crafts from colonial activities in other parts of the world. In the latter case, these “trophy” collections demonstrated the need to bring “civilization” and Christianity to those benighted and uncivilized regions, while providing exotic materials for the amusement and enjoyment of the public and scientific materials for educational and research purposes. The explosion in the numbers of museums began in the late 1800s. In the United States, for example, there were about 300 museums before 1860, approximately 700 by 1900, more than 2,000 by the start of World War II, and an estimated 14,000 today, ranging from very large natural history museums to the far more numerous local historical society museums.

By the 1950s, thousands of American and foreign museums had amassed Native American collections. In many instances, these public and private institutional collections contained important sacred and patrimonial objects, as well as tens of thousands of human remains and hundreds of thousands of funerary objects. These materials were characteristically acquired, researched, exhibited, and preserved without tribal community consultation or involvement. Museum collections had emerged from the extensive “salvage” research and collecting of Native American objects, and bodies, from the late 1800s, at a time when scholars were convinced that Native Americans and their communities would soon be extinct. There was reason for alarm, since the pre-contact indigenous population in North America had dropped from an estimated seven million in 1492 to only a quarter million in 1900.

Scholars at that time believed that extraordinary efforts were required to collect Native American information and objects before all trace of these cultures disappeared. The resulting massive collection of work carried out through various means resulted in a large corpus of materials being available. As a result, local, regional, and national museums were, by the 1930s, in possession of the majority of all Native American objects that had survived daily use in communities from before the reservation period. Relatively few of the older cultural heritage objects remained in their original tribal communities. During this period, tribes were not politically involved in approving or denying collecting or other research activities by outsiders (although some individuals were involved, with the knowledge of their nations),

and rarely did they have the right to interfere in such collecting. Federal and state laws did not involve tribes in archaeological project approval and regarded all archaeologically found Native American materials, including human remains, as “resources” that could be acquired and owned by institutions such as museums. Moreover, museums rarely consulted tribal representatives about any planned exhibition, educational program, or other interpretation of Native American materials. Instead, Native American history and heritage were virtually always presented to the public by museums in the absence of a Native American perspective.

Individuals, communities, and governments create museums to collect significant objects; to research, exhibit, and educationally use those objects; and to preserve them for posterity. These same goals not only motivated Native American communities to begin to establish their own museums and cultural centers during the twentieth century, but also reflected tribal communities’ changing educational needs, the desire to promote pride and knowledge in their cultural heritage and history, and the need to maintain or acquire objects of heritage available to the community, including photographs and recordings. Although a few initial efforts began in the 1940s, the widespread development of Native American community museums and cultural centers began in the 1960s. New tribal efforts for self-determination, the protection of tribal sovereignty, and the pursuit of treaty rights were also occurring nationwide. This movement also mirrored renewed efforts by Native Americans to regain control over objects of heritage as well as human ancestral remains housed in nontribal museums.

Ultimately, the United States Congress passed legislation—the 1990 Native American Graves Protection and Repatriation Act (PL101–601)—which mandated that human remains and cultural objects that were culturally affiliated with federally recognized tribes be repatriated from government agencies and public museums to tribes. This complex law also has other elements, including tribal control over the disposition of human remains or cultural objects discovered on their lands or federal lands, and criminal penalties for commercial trafficking in legally restricted materials. The passage of this law spurred many tribal communities to begin work on museums and cultural centers that could house some of the cultural materials being returned to them. This change in federal law also marked the beginning of new relationships between nontribal museums and

tribal communities; specifically, some nontribal museums established new policies of consulting and collaborating with tribes prior to developing exhibits and other programs dealing with Native American materials and themes.

Some new tribal museums of the 1960s and 1970s were created because of specific cultural heritage projects. For example, the Makah Cultural and Research Center was established to house a large and very significant archaeological collection that resulted from a major excavation on their land. The Suquamish Tribal Museum was the product of a highly successful community oral-history project, and the Ak-Chin Him-Dak EcoMuseum was a part of a broader community revitalization process. These, as well as other tribal museums, were established either by tribal governments and operated through them or by tribally based organizations that usually had a relationship with their tribal governments. Today, tribal museums and cultural centers play a variety of roles and may serve both tribal and nontribal communities. Most house collections of objects and important community archival materials, develop exhibits and educational programs for their own and the broader community, and carry out research, as well as serving as points of inspiration for the work of tribal artists. Some new tribal museums are destination points for tourists, while others focus primarily on their own community and dedicate their efforts to the recovery, maintenance, and perpetuation of their heritage. Many tribal museums, for example, sponsor language programs as well as traditional arts and crafts programs, special seniors programs for the education of community youth, projects such as community oral history, and also publish educational, historical, and research materials. In some instances, tribal museums also serve as the oversight agency for the tribal government for researchers working in the community.

The National Congress of American Indians estimates that there are more than 230 tribal museums and cultural centers in the United States, while other estimates, using different definitions, place the number at less than 200. Canadian bands and tribes operate tribal heritage institutions in Canada, and entirely new museums and centers are being developed each year in both countries. A new federal grant program in the United States has been created just for tribal museum program enhancement, and a recent project led to the creation of cultural learning centers, often functioning as gallery and museum spaces, in many tribal colleges in the United States.

Many of the newest tribal museums, including the Mashantucket Pequot Museum in Connecticut, the Huhugam Heritage Center in Arizona, the Tamastlikt Cultural Institute in Oregon, and the planned Aqua Caliente Cultural Museum in California are all examples of state-of-the-art facilities with stunning architectural designs and enhanced environmental systems and approaches. These, along with other tribal museums, are also establishing new models for curating cultural materials, often involving culturally sensitive approaches for storage, access, and conservation treatments. Comparable efforts by indigenous communities in other countries have made this movement among the newest museological phenomena in the world, and an effort that is already having an impact in the broader museum community.

Neolin (Delaware Prophet)

Also known as the Delaware Prophet, Neolin came to prominence during the period just before and during Pontiac's Rebellion against the English in the early 1760s. His visions, preaching, and calls for Native people to return to pre-contact traditions became one of the unifying features of Pontiac's Rebellion.

Moved off their lands in eastern Pennsylvania in the wake of the fraudulent Walking Purchase, most Len-pe (also rendered Leni-Lenápe, or Delaware) were forced to move west. One of the results of this upheaval was that beginning in the

1740s, a series of “prophets,” individuals conveying religious messages, began appearing among the Lenape and other Native peoples in western Pennsylvania, eastern Ohio, and the Great Lakes region. Neolin was only the latest (and far from the last) in a long line of prophets when he came to the attention of British authorities in the early 1760s.

Neolin’s religious experience began when he entered into a trance or dream in which he undertook an arduous journey to meet the Master of Life. The Master of Life showed him the path to heaven and how Europeans blocked it. He was instructed to relay a message to Native peoples that the lands the Creator made were for their use and that they should not suffer the presence of Europeans.

Neolin preached a militantly Nativistic stance toward Europeans beginning in the fall of 1761 and illustrated his message with the use of pictographs. The illustrations showed a straight path to heaven that Native people followed in pre-contact times, but sin, alcohol, and Europeans now blocked that route. The drawings also showed a grim alternative: a large fire where sinful Indians spent eternity.

Avoidance of Europeans and European goods were Neolin’s overriding themes. Native people should wear animal skins instead of trade cloth, eschew European foods, use bows and arrows instead of firearms, and abstain from using alcohol. Neolin also taught his followers that fires kindled using flint and steel were not “pure.” He also encouraged Native people to purify themselves by using an emetic potion known as black drink, which had long been used in the Southeast. One Shawnee community that followed Neolin engaged in the practice with such gusto that traders nicknamed their village Vomit Town. While Neolin’s followers accepted his rejection of all things European in theory, doing so in practice was another matter entirely. Over the previous century and a half, Native peoples of the American Northeast had become dependent on European goods such as metal tools and cloth.

In 1763, the global conflict between France and England—called the French and Indian War in America and the Seven Year’s War in Europe—came to an end. As part of the peace settlement, France surrendered all of its North American possessions, and the English garrisoned most of the former French posts in the Ohio country and the Great Lakes, including Detroit, Niagara, and Fort Pitt. Native peoples, many of whom had been allies of the French, waited to see how the British would treat them.

They did not have to wait long. Sir Jeffrey Amherst, the commander of his majesty’s forces in America, ignored the advice of Sir William Johnson, the superintendent of Indian affairs, and ceased the practice of presenting Native people with diplomatic gifts. Gifts were regarded as a show of good will, and some gifts, such as gunpowder, were vital necessities to Native people, who needed it to conduct their fall and winter hunts and for warfare against their enemies. Amherst’s prohibition on gifts and the high prices for British trade goods made more Native people receptive to Neolin’s message, especially after it had been altered slightly by the Ottawa leader Pontiac.

The Ottawa chieftain Pontiac used Neolin’s message, with its implicit and explicit hostility to Europeans, to argue for Native unity and for a war against the British. However, in his version of Neolin’s teachings, Pontiac transmuted the French into friends of Native peoples who would give them trade goods for cheap prices. In many respects, this was a contravention of Neolin’s (and the Master of Life’s) message.

Oakes, Richard

Richard Oakes (1942–1972), a Mohawk who was born on the St. Regis Reservation in New York, helped plan and implement the 1969 American Indian occupation of Alcatraz Island. His eloquence and commanding presence, his pivotal role in the takeover of Alcatraz, his development of a curriculum for the American Indian Studies Department at San Francisco State University, and his involvement in other protests in support of the Pit River and Pomo Indians make him an important figure in the

history of American Indian activism in the 1960s and 1970s.

Oakes spent time in New York City working on high steel structures before moving to California, where he married Anne Marufo. He studied under Louis Kemnitzer at San Francisco State College in the American Indian Studies Department. There, Richard was introduced to the White Roots of Peace and the Third World Liberation Strikes at Berkeley, both inspirations for his activism. While in school, Richard and other students in his program met with Belva Cottier who, through her own experiences with Alcatraz, helped lay the groundwork for the students' future takeover.

Oakes joined forces with Adam Nordwall, who was also working on plans for an occupation of Alcatraz. Their collaborative group, the Indians of All Tribes, drafted a proclamation to illustrate the grievances of American Indians in cities and on reservations and to list their demands for Alcatraz. Chief among these demands was title to the land and support to build an American Indian Museum, a Center for Native American Studies, a Spiritual Center, and a scientific center for the study of ecology and environmental protection.

November 9, 1969, saw the first attempt to take Alcatraz. Before setting sail, Richard read the Proclamation of the IAT to the gathered press, who singled him out as the leader of the movement.

As they approached Alcatraz, Oakes jumped overboard and swam to shore to claim the island by right of discovery. After being removed by the Coast Guard, Oakes and his fellow students made a second attempt to occupy Alcatraz by returning only hours later. That night, the small band of occupants on the island sang songs and danced in celebration. The next day, before the Coast Guard removed them again, Oakes once again stressed the demands of the Indians of All Tribes for title to the land. On November 20, 1969, on a third attempt, eighty-nine American Indians, including Oakes, successfully occupied Alcatraz for an extended period of time.

Oakes believed that the protest on Alcatraz had the power to prove to the federal government and to the American public that American Indians were a vibrant and powerful entity in the late twentieth century, capable of self-determination. He hoped through the media to be able to reveal the vast contributions of American Indians to society and history and to push the federal government to begin acknowledging its massive legal obligations to American Indians.

Opposition to Oakes's growing power in the media created a rift among some of the newer occupiers, who wished for a completely egalitarian society on Alcatraz and saw his influence as a threat. On January 5, 1970, Oakes's daughter Yvonne fell down a flight of stairs and was killed. In deep mourning, the Oakes family left Alcatraz and new leadership factions rose to take his place.

After leaving Alcatraz, Oakes and his family went on to support other activist movements. He took part in the protests against the occupation by the Pacific Gas and Electric Company of the Pit River lands in northern California. In Santa Rosa California, Oakes helped plan a takeover of a former Central Intelligence Agency (CIA) post, where title to the land was eventually transferred to the Pomo Indians and an American Indian Learning Center was established.

In a tragic end to a brilliant life, Richard Oakes was shot to death September 20, 1972, by a YMCA camp manager, Michael Oliver Morgan, in Santa Clara, California. Morgan asserted that Oakes had attacked him, while Oakes's defenders maintained that he had been assassinated because Morgan objected to Oakes's positions on Native-rights issues. Through his efforts on Alcatraz and elsewhere, Richard Oakes helped give an upcoming generation of American Indians a renewed sense of pride and self-respect. His accomplishments in the field of American Indian activism created a new awareness of the important place of American Indians in history and in our modern society.

Ortiz, Simon J.

One of the most accomplished Native American poets of the twentieth century, Simon J. Ortiz (Acoma Pueblo, b. 1941) often is credited as one of

the grandfathers of Native American literature. Ortiz is a widely published poet, short story writer, and oft-cited essayist. His incorporation of Native oral traditional stories and his insistence on the creative maintenance of indigenous American philosophical traditions are among his contributions to the intellectual and literary culture of indigenous Americans, as well as to American literature as a whole.

Ortiz was born in Albuquerque, New Mexico, and raised in Deetseyamah (McCartys) on the Acoma Pueblo Reservation. He received his early education at a Bureau of Indian Affairs school. After working in the uranium mines and processing plants of New Mexico, he briefly studied chemistry at Fort Lewis College before enlisting in the U.S. Army. After his service, Ortiz studied at the University of New Mexico, where he began to publish poems in small magazines. He received his master's of fine arts as an International Writing Fellow at the University of Iowa Writers' Workshop in 1969. The same year, Ortiz was given a Discovery Award by the National Endowment for the Arts. He has since taught and spoken at numerous universities and literary festivals worldwide.

Among his best-known works is *Fight Back: For the Sake of the People, for the Sake of the Land* (1980, reissued in *Woven Stone*, 1992), a collection of poetry and prose in which Ortiz draws on the Pueblo Revolt of 1680 to illuminate similar conditions existing in modern-day America, specifically in the Southwest. Ortiz examines the 1680 revolt, in which Native Pueblo peoples, Apaches, and Navajos, along with people of mixed ethnic heritage, were successful in overthrowing the colonial Spanish power and asserting sovereignty over their indigenous homelands. The poet uses this historical occurrence to emphasize the need for solidarity among marginalized peoples in present-day America to fight oppression, particularly with regard to the land.

Ortiz again recalled American history in his 1981 collection *from Sand Creek*, this time using the war in Vietnam to explore the 1864 Sand Creek Massacre, when over 130 Cheyenne and Arapahoe people were slaughtered by U.S. troops at Sand Creek, Colorado, as part of the American westward expansion. As Ortiz writes in his introduction to the 1999 edition, *from Sand Creek* represents his attempt to "deal with history," particularly the history of America that he maintains has excluded and marginalized Native American peoples (Ortiz, 1999, Preface). According to Ortiz, the genocidal aspects of American history are a facet of the American past

that is generally unacknowledged by the dominating Euro-American culture. As such, *from Sand Creek* represents not only Ortiz's attempt to "deal with history," but serves as a reminder to the wider American public of its historical treatment of Native peoples. Ortiz examines the ties between two wartime massacres—Sand Creek and My Lai—and the recurring themes involved in Euro-American imperialism: "splattered blood/along their mad progress; they claimed the earth" (Ortiz, 1999, 89).

Simon J. Ortiz is the author of two short story collections and has edited the acclaimed *Earth Power Coming* (1983), an anthology of indigenous short fiction from across the Americas. He has also written two books for children. One of them, *Speaking for the Generations*, which Ortiz edited in 1998, is a major collection of Native authors writing about their craft. Among his many achievements, Ortiz was an Honored Poet at the 1981 White House Salute to Poetry. Ortiz has three children, has served as lieutenant governor of Acoma Pueblo, and was the recipient of an honorary doctorate of letters degree from the University of New Mexico in 2002. Ortiz's work, including his most recent collection of poetry, *Out There Somewhere*, continues to be an integral indigenous literary response to the history of the Americas.

Osceola

A charismatic warrior, Osceola (1804–January 30, 1838) led the fight against the forced removal of the Seminoles to Indian Territory in the early nineteenth century. In the Second Seminole War, Osceola emerged as the most famous defender of the Semi-

nole Indians in Florida and an outspoken opponent of U.S. expansion. Despite his prominence, most of what we know about Osceola has been colored by a combination of romanticism and racism.

Born a Creek Indian in the village of Tallassee in what is now Alabama, Osceola was originally named Billy Powell. He was the son of a British trader (William Powell) and an upper Creek woman (Polly Copinger). By virtue of the Creeks' matrilineal clan system, he grew up a full member of Creek society. He would later earn his name Osceola, which is a corruption of the Muskogee words Asin ("black drink") and Yahola ("town crier"). At other times, he went by the title Tustenuggee Tallassee or the Tallassee warrior.

In 1813, when a civil war erupted among the Creek Indians, Osceola and his mother sided with the Red Sticks, who fought against Andrew Jackson and his Creek allies. Only a child at the time, Osceola did not fight in the war, but it created disruptions in his life and in Creek society. The Treaty of Fort Jackson at the war's conclusion ceded 23 million acres to the United States, including the territory where Tallassee was located. Rather than submit to the terms of the treaty or move westward, Osceola, his mother, and many other Creeks associated with his great-uncle Peter McQueen, moved south to Florida. He, along with hundreds of other Red Sticks, joined with the Seminole Indians already living in the area.

Among the Seminoles, Osceola emerged as a prominent warrior and influential leader. He married two Seminole women, which was common under the rules of polygyny, and he had at least one and maybe two children. One wife was a Creek woman named Che-cho-ter, or "Morning Dew." His other wife, whose name remains unknown, was probably an African American woman. Hundreds of black Seminoles, many of whom were fugitive slaves, found refuge and families in Florida's Indian villages, and their presence in Florida fueled the animosity between the United States and the Seminoles.

Osceola participated in the First Seminole War (1817–1818) as a young warrior. During this war, which was initiated by Andrew Jackson's invasion of Florida, Osceola had his first experience as a Creek warrior. American troops, while seeking to return fugitive African American slaves to their masters and to destroy their ability to find refuge in Florida, captured Osceola and several other Seminoles.

Upon his return to the Seminoles, Osceola emerged as a leading warrior in his Tallassee town. His opposition to American interests increased his

A Seminole leader born around 1803, Osceola achieved his status not as a hereditary chief but rather through his clearly demonstrated skills during the Second Seminole War of 1835–1842. (Library of Congress)

stature in the community, and many Seminoles looked to the bilingual Osceola to participate in intercultural affairs. For example, in 1823, Osceola tried to put an end to the controversial Treaty of Moultrie Creek. Some accounts, probably exaggerated, have Osceola putting his knife through the yet unsigned document. Considering that in subsequent years, many Seminoles complained that they were unaware about several elements of the treaty and thus tricked into signing the agreement, Osceola's opposition may have been augmented by his literacy.

After the treaty was signed, Osceola continued to oppose U.S. interests. When the Seminoles signed the Treaty of Payne's Landing (1832) and the Treaty of Fort Gibson (1833), Osceola reemerged as a voice of opposition. In June 1835, a frustrated Wiley Thompson, who was the Indian agent to the Seminoles, arranged to have Osceola arrested. Although we do not know the exact insult that resulted in Osceola's confinement, it is clear that Thompson incarcerated the Indian leader as a means to remove

the Seminoles. Thompson put Osceola in irons until he agreed to sign a document that declared the validity of the Treaty of Payne's Landing and to bring in a band of Indians who would agree to migrate westward. When seventy-nine Seminoles arrived at Fort King to proclaim their willingness to move westward, Thompson released Osceola.

Osceola urged Seminoles to oppose the 1832 and 1833 treaties and otherwise to use armed resistance to defy any attempts to force their removal. This resistance movement resulted in the Second Seminole War. On December 18, 1835, Osceola and his followers assassinated Seminole leader Charley Emathla for his signing of the treaty and his compliance with American demands for westward migration. In November 1835, Osceola and his warriors shot Emathla as he returned home from Fort King, where he had sold his cattle, a move made necessary by his decision to move. Osceola and his warriors, in a symbolic chastisement of Emathla for selling out his Seminole neighbors for personal profit, left the money from the sale on the ground by the dead leader.

In December, Osceola led another attack, this time on Thompson, just outside of Fort King, where the Indian agent was headquartered. With the assistance of approximately sixty warriors, Osceola led a brutal attack on the man most associated with the U.S. invasion of the Seminole lands. While Osceola led the assassination of Thompson, other Seminole warriors attacked the U.S. military forces who were under the command of Major Francis Dade. In light of Osceola's attack and the general discontent among Seminole villages, the United States had sent Dade and his men to serve as reinforcements at Fort King. Before they arrived, the Seminoles attacked and routed the forces. The attack killed nearly all of the 110 men on the march.

During the resulting Second Seminole War (1835–1842), Osceola emerged as one of the more successful leaders. Although he did not benefit from hereditary ties to authority among the Seminoles, his anti-American leadership and military prowess led to his rise to Tustunuggee Tallassee and then to Tustenuggee Thlucco (head warrior) for the entire Seminole nation. His "white" heritage furthered his reputation among non-Natives, many of whom were fascinated with his upbringing. Just before his death, George Catlin further sealed Osceola's fame by painting and then distributing his portrait. In the portrait, Osceola appears in an amalgam of the finest

European and Seminole clothes, armed with a rifle and adorned with gorgets around his neck and feathers in his hair.

On December 31, 1835, Osceola won a decisive victory over the United States at the Withlacoochee River. With about 250 warriors, Osceola repelled a U.S. force of nearly 800 men under General Duncan L. Clinch's command. During the fighting, Osceola was wounded but not seriously, and after he recovered, he returned to battle. Deaths were low on both sides (three Indians and four U.S. soldiers, but casualties were not. Five Indians and fifty-nine Americans were seriously wounded. Later in the war, Osceola is credited for rescuing a camp of mostly black Seminoles from the United States.

In the summer of 1837, Osceola contracted malaria. Exhausted from fighting and suffering from his illness, on October 27, 1837, Osceola sent word to General Thomas Sydney Jesup that he was desirous of a truce. Osceola and Coa Harjo traveled to Fort Peyton, where on the orders of Jesup, American soldiers captured the Indian men, who were carrying a white flag. The United States also took hostage the eighty-one Seminole men and women who accompanied Osceola to the meeting. The United States took Osceola to the Castillo San Marcos (also known as Fort Marion) in St. Augustine, where eventually 237 Seminoles were imprisoned. When it became clear that Osceola could not be convinced to support the Seminole's removal, Jesup ordered him relocated to Fort Moultrie in South Carolina.

Before his death, Osceola requested that his two wives and his children be allowed to visit him in South Carolina. With the approval of the United States, they visited the dying warrior in early 1838. Osceola died while a prisoner on January 30, 1838. Before he was buried, the medical examiner at Fort Moultrie had him decapitated. In 1843, Osceola's head, as well as some of his possessions, were put on display by Dr. Valentine Mott. After being donated to the Medical College of New York, his head disappeared during an 1865 fire.

Ouray

Ouray ("The Arrow," "Willy"), who was Ute and Apache, became a major presence during treaty negotiations in present-day Colorado during the late nineteenth century. He served as a spokesman for the seven Ute bands and as a peacemaker during the Ute War of 1879.

Born in Taos, New Mexico, about 1820, Ouray's father, Guera Murah, was a Jicarilla Apache who had been adopted by the Utes; his mother was a Tabeguache Ute. Throughout most of his youth, Ouray worked for Mexican shepherders and learned Spanish. As a young man, he became a noted warrior among the Tabeguache Utes (later called the Uncompahgres) during raids against the Sioux and Kiowas. Ouray also learned English and several Indian languages, thus making him a key figure in many negotiations in the American Southwest.

Ouray's son by his first wife was taken by the Sioux in a raid on a Ute hunting camp, and he was never able to recapture him. When his first wife died in 1859, Ouray married Chipeta, a Tabeguache woman. In 1860, after his father died, Ouray was appointed chief of his band and interpreter for the U.S. government. This appointment occurred in Washington, D.C., where he was awarded medals, titles, and a \$1,000 annuity.

In 1863, Ouray helped negotiate the Treaty of Conejos, in which the Utes ceded all lands east of the Continental Divide. In 1867, he helped Christopher "Kit" Carson quell a Ute uprising led by Chief Kaniatse. By 1872, however, Ouray was leading resistance to the U.S. government's seizure of lands that previously had been reserved for the Ute people. Although he was generally patient, Ouray did lose his temper during these negotiations when a U.S. government official accused the Utes of laziness. Incensed at such a characterization, Ouray replied, "We work as hard as you do. Did you ever try skinning a buffalo?" (Johansen and Grinde, 1997, 276).

Ouray served as a spokesman for the seven Ute bands, and as a peacemaker during the Ute War of 1879. (Library of Congress)

In 1873, Ouray and other Ute representatives met with a federal commission headed by Felix Brunot and were forced to compromise on the issue of land cessions. Pressured by the influx of miners and cattle owners, the Utes ceded an additional four million acres (the San Juan cession) for an annual payment of \$25,000.

In 1876, when Colorado became a state, mining companies attempted to oust three White River Ute bands from their lands. "The Utes must go" became a political slogan among non-Native immigrants, in spite of the Utes' service as scouts for the U.S. Army and in state militias fighting other Native peoples.

These tensions were compounded by the policies of a new Indian agent, Nathan Meeker, who arrived in 1878. In September 1879, Meeker directed the Utes to use parts of their land for farming. Canalla, brother-in-law of Ouray and a Ute shaman, protested the conversion of grazing lands to agriculture. Canalla challenged Meeker's decision and told him to leave the agency. Meeker proceeded to request a detachment of 150 troops under Major Thomas T. Thornburgh to "pacify" the rebellious Utes. Shortly afterward, the Utes killed Meeker and seven other whites. Following subsequent bloody altercations, Ouray was able to secure a peaceful settlement because both sides respected him.

On August 27, 1880, soon after his return from Washington, D.C., Ouray died of Bright's Disease, an affliction of the kidneys, near Ignacio, Colorado. In 1925, he was reburied at Montrose, Colorado.

Owens, Louis

Of Cherokee, Choctaw, and Irish descent, Louis Owens was an extremely prolific writer, having produced five novels, two books of personal and literary essays, five books of literary criticism (two on John Steinbeck's work, a major critical interest of Owens), and three on American Indian literature, over seventy-five critical essays and chapters, and over thirty essays.

Owens was born in Lompoc, California, in 1948 and grew up in rural Mississippi and California. He was one of nine children, the second member of his family to finish high school, and the only one to attend university. With an understanding of the working class and a love of the outdoors that permeate much of his written work, Owens worked as a field laborer as well as a firefighter and forest ranger before attending graduate school. He took his Ph.D. at the University of California Davis as a University of California Regents Fellow in 1981, becoming a full professor in that system eight years later. Owens was a Fulbright lecturer in American literature at the University of Pisa and taught for a time at the University of New Mexico. Owens also was awarded

Outstanding Teacher of the Year for 1985–1986 by the International Steinbeck Society and the Distinguished Teaching Award by the University of California Santa Cruz in 1992. He was awarded a New Mexico Humanities Grant in 1987 and a National Endowment for the Arts Creative Writing Fellowship in 1989, and he was named Wordcraft Circle Writer of the Year (Prose–Personal and Critical Essays) in 1998 for *Mixblood Messages*. *The Sharpest Sight* was the recipient of France's 1995 Roman Noir Award, and this novel, along with *Other Destinies*, was the cowinner of the Josephine Miles/PEN Oakland Award in 1993. *Bone Game* won the Julian J. Rothbaum Prize in 1994. *Nightland* won an American Book Award in 1997. Tragically, Owens committed suicide in July 2002 in Albuquerque, New Mexico.

Owens's novels are mysteries. *The Sharpest Sight*, the first book in Oklahoma's American Indian Literature and Critical Studies Series, is not merely a whodunnit in regard to the murder of Attis McCurtain, but also a study in mixed-blood identity and continuance in the characters of Mundo Morales, a Chicano deputy sheriff seeking the killer, and Cole and Hoey McCurtain, Attis's brother and father. In this novel, Owens introduces the characters of Uncle Luther and Old Lady (Onatima) Blue Wood, whose Mississippi Choctaw approach to the world provides grounding for the other characters as well as the resolution to the mystery.

Bone Game continues Cole's saga, at the same time confronting the results of colonialism from the cruelty of the early Spanish missionaries to the present. *Wolfsong*, the novel Owens wrote first during his years as a forest ranger but published third, is an interrogation of environmentalist ethics from a Native perspective. *Nightland* delves into the world of Billy Keene and Will Striker, half-blood Cherokees caught in a New Mexico mystery, and shows the effects of capitalism and greed on American Indian cultures as well as the effects of the Vietnam War on individual American lives. *Nightland* is the only one of Owens's novels to utilize Cherokee materials, with Will and Billy paralleling the twins born to Kana'ti and Selu, the first man and first woman in Cherokee oral tradition. *Dark River*, Owens's final novel, follows Mississippi Choctaw Jacob Nashoba, displaced and working as a tribal ranger on the fictional Black Mountain Apache Reservation in eastern Arizona, the home of his estranged wife.

The comic genius and humor that appear throughout his earlier work despite their overall serious tone is perhaps most fully expressed in this

work, though it is at the same time still a mystery and, as the title suggests, “dark.” It is also perhaps the most postmodern of Owens’s novels, with characters such as the more-Indian-than-the-Indians Jewish anthropologist Avrum Goldberg and Jessie, the young Apache man who at first sells fake “vision quests” to unsuspecting New Agers and then, being mistaken for a wolf and shot while impersonating one in his trade, becomes ironically a real spirit helper. The autobiographical *I Hear the Train: Inventions, Reflections, Refractions* was his last work.

Parker, Arthur C.

Arthur Caswell Parker (Gawasowaneh, 1881–1955) was an Indian intellectual who devoted over forty years of his life to New York museums. Most commentators tend to stress that he was only one-quarter Indian by blood, but he thought of himself as simply a modern assimilated Seneca Iroquois Indian of noble descent. He chose wholehearted assimilation into Euro-American culture as his life path and remained heartily resistant to the imposition of any Indian stereotype. Instead, he worked almost ceaselessly to claim, for himself and for the Iroquois, his version of an Indian ethos. At the heart of this quest lay his writing. A workaholic, he wrote 440 separate books, articles and addresses, thirty-two published newspaper articles, 114 radio scripts, and forty-five unpublished articles, speeches and plays, in addition to editing five periodicals.

Arthur C. Parker married Beulah Tahamont (Dark Cloud, Abenaki) on April 23, 1904, then married Anna Theresa Cooke on September 17, 1914, and is survived by his daughter Martha Anne Parker.

Parker began his professional life as an archaeologist in the Science Division of the New York State Museum. He was dedicated to the reconstruction of the American ethnographic past and showed few qualms about desecrating the graves of ancestors in and around his own childhood reservation to signifi-

cantly enhance the museum’s collections. At the State Museum he also developed his sensory, psychological, and entertainment-orientated approach to display and created the life-sized Indian dioramas that stayed there from 1908 to 1976. As he moved into his thirties, Parker produced a number of important anthropological texts, notably *Iroquois Uses of Maize and Other Food Plants* (1910), *The Code of Handsome Lake, the Seneca Prophet* (1913), and *The Constitution of the Five Nations* (1916). However, finding his anthropological approach criticized as too “Indian” and as focused on advancing Indian culture rather than on scientific objectivity, he increasingly turned his attention to pan-Indian concerns. He gave a huge chunk of his life and energy to the challenge of making the first twentieth-century Indian reform organization, the Society of American Indians (SAI, 1911–1920s) a force to be reckoned with. He ended his involvement with the SAI, sadly disillusioned about the cohesive power of the Indian “race” but convinced that he had helped lay the foundations for vital future reform.

Parker was able to maintain his commitment to social evolution in his best-known role, as Director of the Rochester Museum, New York, from 1924 to 1946. He transformed the institution from relative obscurity to national significance, largely by presenting versions of Indian history that affirmed the triumphant nationalism of the day. He published the influential *A Manual for History Museums* in 1935. In 1939, after attracting an enormous benefaction from the industrialist Dr. Edward Bausch, he was able to add a spectacular modern building to the museum. During the New Deal years, he promoted two relief programs on the reservations of his childhood, the Tonawanda Community House and the Seneca Arts & Crafts Project. Again, his approach attracted criticism, but his efforts were a practical success. For such practical achievements, as well as his personal kindness, Parker is still remembered today on New York reservations with warmth and appreciation.

Although most of Parker’s life was public indeed, he had a secret life in a host of fraternities. The group he gave his heart to was American Freemasonry, in which in 1924 he achieved the highest rank, the thirty-third degree and the title Sovereign Grand Inspector General. As a Mason, he used his Indian heritage and his writing ability to subvert the processes of exclusion that kept middle-class Indians and white Anglo-Saxon Protestants apart. A heart condition forced Parker into retirement at the age of sixty-five, whereupon he returned to writing

juvenile and children's books with Iroquois and Indian themes, part of his lifelong effort to connect the oral culture of his childhood with a positive vision of American nationalism. His children's books, especially *Skunny Wundy and Other Indian Tales* (1926), were successes, and all, in different ways, owed something to his first book-length study of tribal lore, *Seneca Myths and Folktales* (1923).

Parker was a fascinating and complex man, always deeply frustrated at, as he put it, having "to play Indian in order to be Indian" and determined to live beyond any imposed definition of what an Indian should be. Certainly, with his staunch Republican values, his eugenicist and racist views, his commitment to social evolution and to salvage ethnography, as well as his love of Freemasonry, he defies many of the usual Indian stereotypes. In sum, his illustrious family history, his remarkable life story, and the great wealth of written material he left to posterity all combine to make him one of the most fascinating Indian leaders of the postfrontier era.

Parker, Ely

Colonel Ely Parker (Donehogawa, Seneca, 1828–1905) was secretary to General Ulysses S. Grant; he wrote the surrender ending the Civil War that General Robert E. Lee signed at Appomattox. After the Civil War, Parker became the United States' first Native American Commissioner of Indian Affairs after Grant was elected president.

Parker had planned on a legal career, passed the necessary examinations, but was denied certification because he was Indian and therefore not a U.S. citizen. Parker then switched to civil engineering, but he also had a considerable background in ethnology. He helped to inspire Lewis Henry Morgan's pioneering studies of the Iroquois that founded academic anthropology in the United States. Parker became an early member of the Grand Order of the Iroquois, a fraternal society established by Morgan.

Parker's tenure in the Indian Bureau coincided with investigations by Congress under Senator James B. Doolittle regarding corruption on the fron-

Ely S. Parker (1828–1905), also known as Hasanoanda, was the United States' first Native American Commissioner of Indian Affairs. (National Archives and Records Administration)

tier. The Doolittle report received considerable publicity, finding that, in a large number of cases, Indian wars could be traced to the provocations of European-Americans who had seized Native lands illegally. Parker came into office under the aegis of a Peace Policy initiated by Congress after the publicity attending the Doolittle report, in an attempt to deal honestly with remaining Native American nations.

However, the Indian Rings, whose members had done so much to corrupt the system and profited so handsomely from government contracts for services paid but rarely delivered, made Parker's life miserable and his job impossible. During Parker's tenure as Indian Commissioner, however, he helped orchestrate considerable public outrage over the treatment of Indians nationwide, particularly those on the Plains who were being ruthlessly pursued as he served in the office. After Parker was hounded out of office, he expressed his disgust: "They made their onslaught on my poor, innocent head and made the air foul with their malicious and poisonous accusations. They were defeated, but it was no

longer a pleasure to discharge patriotic duties in the face of foul slander and abuse. I gave up a thankless position to enjoy my declining years in peace and quiet" (Johansen and Grinde, 1997, 281).

Parker had overseen a brief interlude in the destructive Indian policies of the nineteenth century, a time during which Red Cloud and his allies had forced the U.S. Army to dissemble its forts in the Powder River country and sign the Treaty of 1868, guaranteeing the Black Hills to the Lakota. In June 1870, Parker had hosted Red Cloud and a companion chief, Red Dog, as they visited Washington, D.C., and spoke at the Cooper Union.

This was Parker's evaluation of U.S. Indian policies:

The white man has been the chief obstacle in the way of Indian civilization. The benevolent measures attempted by the government for their advancement has been almost uniformly thwarted by the agencies employed to carry them out. The soldiers, sent for their protection, too often carried demoralization and disease into their midst. The agent appointed to be their friend and counselor, business manager, and the [manager] of government bounties, frequently went among them only to enrich himself in the shortest possible time, at the cost of the Indians, and spend the largest available sum of the government money with the least ostensible beneficial result (Johansen and Grinde, 1997, 281).

Long before the subject came to the attention of scholars, Parker noted the debt of the U.S. political system to the Iroquois. In an "Address to the New York Historical Society, May 28, 1847," Parker noted the fascination of the U.S. founders with the Iroquois League: "Glad were your forefathers to sit upon the thresholds of the Longhouse[;] rich did they hold themselves in getting the mere sweepings from its door" (Johansen 1999, 147).

During his later years, Parker made a large amount of money playing the stock market but was ruined when he was forced to pay the bond of another man who had defaulted. After retiring from service with the U.S. government, Parker was appointed New York City building superintendent in 1876. He held the post until he died in 1905. Parker is buried in Buffalo, New York, in a common plot with his grandfather, Red Jacket.

Parker, Quanah

Although Quanah ("Sweet Fragrance") Parker played a role of great historical significance to the Comanche people and in his role in spreading peyote religion in Oklahoma, controversy surrounds his life. He was born sometime between 1845 and 1863, to a mother, Cynthia Ann Parker, who had been captured from her white family as a nine-year-old and raised as Comanche. Though most of her family was killed during the raid, Cynthia began a new life as a Comanche girl and was given the name of Preloch. She married Pete Nocona in her teens and gave birth to Quanah near Cedar Lake, Texas. The couple also had a daughter who lived to adulthood and a son who died in childhood. Cynthia, along with the daughter, Topsannah, were recaptured by the Texas Rangers in 1861. Both suffered greatly from their removal; Topsannah died in the mid 1860s, and Cynthia in 1870. Pete Nocona passed away in 1866 or 1867.

Quanah was ridiculed by other Comanches for his mixed ancestry; although he was Comanche culturally, he stood out because of his height and thinness, as well as his relatively light skin and gray eyes. Depending on one's opinion on the year of his birth, his role in the tribe during the mid and late-nineteenth century is debatable. It is certain that he fought as a warrior in the Battle of Adobe Walls in 1875 in the Comanches' last great effort to protect the

Quanah Parker was a Comanche leader. (Library of Congress)

buffalo on their Texas lands from eradication by white opportunists. He is noted by a white man who counceled with the Comanches regarding their surrender as being "a young man of much influence with his people" (Hagan, 1996, 468). Whether he was too young, as some say, to be a war chief who led his people in resisting the reservation for two years following the battle is unknown.

After the onset of reservation life, however, Quanah's role becomes more clear. Although he resisted cutting his hair and giving up any of his eight wives (five of whom he married simultaneously and several of whom were young widows in need of financial support), Quanah was named a band chief by the Indian agent early on and was eventually named a judge in 1886 and principal chief

in 1890. When Anglo-American cattle owners encroached on reservation land, Quanah became one of the earliest advocates of leasing and took a position monitoring the land boundaries, for which the cattlepeople paid him. He was also given cattle from time to time and set up his own herd with these and a bull given to him by Charles Goodnight (b. 1836), one of the most prosperous Anglo-American cattle raisers of the time. With the money he earned, Quanah built his famed home, the ten-roomed, double-porched Star House.

During the early reservation era, Quanah traveled throughout Texas and Oklahoma as a popular celebrity who led many parades on horseback in full regalia. He was one of five chiefs who rode in Theodore Roosevelt's inaugural parade in 1900. Over the years, Quanah made twenty trips to Washington, D.C., working to improve allotment conditions for his people, though he was unable to delay it as long as he wished. Quanah and other Comanches suffered from the loss of lease lands and the use of communally held property, and his finances would continue to trouble him until the end of his life. Two of his wives also left him during this time. Late in his life, Quanah traveled actively as a roadman, leading and attending peyote meetings throughout Oklahoma and testifying on behalf of his religion before state committees. He died on February 23, 1911, and was buried next to his mother and his sister, whom he had moved from Texas and reburied in Cache County, Oklahoma. He was survived by two remaining wives, Tonarcy and Topay, as well as sixteen of the twenty-four children he is known to have fathered. Quanah, Preloch, and Topsannah were all removed to Fort Sill Military Cemetery outside Lawton, Oklahoma, in 1957.

Peltier, Leonard

Leonard Peltier (Lakota and Anishinabe, b. 1944) is an American Indian Movement (AIM) activist who has served three decades of two consecutive life sentences in the federal prison system following his conviction for killing Federal Bureau of Investigation Agents Jack Coler and Ronald Williams on the Pine Ridge Reservation during a shoot-out in June 1975. Many people believe that Peltier was wrongly convicted on falsified evidence, and he is widely considered a symbol of aboriginal peoples' political struggles worldwide, especially in the United States and Canada. Peltier also has become an artist and author while in prison.

Peltier is considered a political prisoner by Amnesty International and other human-rights advocates around the world. The United Nations High Commissioner on Human Rights, the Dalai Lama, and the European Parliament, among others, have all called for his release ("The Case of Leonard Peltier . . .," n.d.).

His struggles began early, growing up in poverty on the Turtle Mountain Reservation in North Dakota. He witnessed U.S. government policies that forced Native families off their reservations and into cities and that caused the withdrawal of essential services from those who chose to remain. In this climate, Peltier became active in organizing and protesting for the rights of his people. By the early 1970s, he was strongly involved with the American Indian Movement.

In 1972, Peltier took part in the Trail of Broken Treaties, a demonstration requesting the U.S. government to investigate treaty violations over the last 100 years. When met with a negative response from the Bureau of Indian Affairs, the demonstrators occupied the Bureau of Indian Affairs Washington, D.C., headquarters for a week. The result was the promise of a hearing on AIM-initiated grievances. Another result was intense FBI scrutiny of the occupation's leaders, including Russell Means, Dennis Banks, and Peltier.

Through AIM's activities, Peltier came to the Pine Ridge Indian Reservation in South Dakota, where the 1975 shoot-out occurred. By the time AIM activists arrived, circumstances on the Pine Ridge Reservation included extreme poverty, violence, and fear.

Richard Wilson had been elected tribal chairman on the Pine Ridge Reservation in 1972 and had

since been in conflict with the traditional Oglala people. Wilson represented big business, and he ignored demands and rights of traditional people on the reservation. Wilson's policies reduced the people to extreme poverty and fear. He enforced his regime and economic policies by misusing federal money to employ a personal police force, which he trained, armed, and deployed to control the residents of the Pine Ridge Reservation. This force called itself Guardians of the Oglala Nation, or the GOON squad. This squad committed violent acts of intimidation, violence, and outright murder against the traditional Indian people on the reservation. Despite the presence of FBI agents on the reservation at that time, the murders went largely uninvestigated. Appeals to the Bureau of Indian Affairs also were ignored. In fact, the U.S. federal government provided funding for the GOON squad.

In 1973, traditional people at Pine Ridge asked AIM for help, and approximately 300 traditionals, AIM members, and supporters occupied the village of Wounded Knee, South Dakota, in protest of Wilson and his GOON squad. The background to this occupation included the historical relevance of the site, where in 1890 the U.S. Cavalry massacred 300 people, including many women and children. Under siege by the FBI and BIA, the occupiers of Wounded Knee in 1973 lasted seventy-one days, until U.S. government officials agreed to investigate conditions on the Pine Ridge Reservation. The investigation never occurred, but many AIM members were charged with various legal offenses related to the occupation.

Between 1973 and 1976, at least sixty-six people died violently at Pine Ridge (other deaths may not have been documented). The FBI is charged with investigating major crimes on U.S. Indian reservations, but these deaths were only lightly investigated, if at all. The majority of victims were members or supporters of AIM and the traditional Oglala people. During this time, the murder rate on the Pine Ridge Reservation was the highest in the country (Johansen and Maestas, 1979, 97–120; Messerschmidt, 1983, 6).

In 1974, Means ran for tribal chairman against Wilson. In a climate of stress and fear, with allegations of rampant fraud, Wilson narrowly won the election. The BIA refused to oversee the election or to investigate it for irregularities and fraud.

In this context, the traditional council of chiefs asked AIM to provide protection, alleging a lack of legal protection from Wilson and the GOON squad.

Leonard Peltier, American Indian Movement leader, being extradited to the United States in 1976 to face trial for the murder of two FBI agents a year earlier. (Bettman/Corbis)

A small group of AIM members responded, including Peltier, who arrived in March 1975. The AIM activists and local traditionalists set up a spiritual camp on the property of Cecilia and Harry Jumping Bull, who had been constantly under threat from the GOONs (Clark, 1999, xvi).

A month before the shoot-out occurred at Jumping Bull's, the FBI, aware of AIM's presence, increased its own presence in and around the reservation. On June 26, 1975, FBI Agents Williams and Coler entered the Jumping Bull compound following a red pick-up truck, and gunfire erupted. During the firefight, the agents were killed. A Native American man, Joe Stuntz, also died that day; his murder was never investigated. By the end of the day, FBI and other law enforcement agencies had occupied the reservation and the AIM members involved, including Peltier, had fled the area.

Two months later, a car carrying Michael Anderson, Rob Robideau, Norman Charles, and others exploded. The FBI found a gun in the wreckage that it claimed was the murder weapon used against Coler and Williams. In November 1975, Dino Butler, Rob Robideau, Peltier, and a youth, Jimmy Eagle,

were indicted for the murders of Williams and Coler. At this time Peltier was in Canada fighting extradition. Butler and Robideau were tried together and acquitted. The jury concluded Butler and Robideau acted in self-defense against the paramilitary assault on Pine Ridge by the FBI. Charges against Jimmy Eagle were dropped, and the full force of governmental prosecution was then directed at Peltier, who was later extradited from Canada, to stand trial before an all-white jury in U.S. District Court, Fargo, North Dakota, in April of 1977.

Preparing its case against Peltier, the FBI coerced Myrtle Poor Bear into signing three false affidavits that directly implicated him in the killing of the two agents. Later, the FBI admitted that Poor Bear was not even on the scene the day of the killings (Clark, 1999, xviii).

Peltier was found guilty of two counts of murder and sentenced to two consecutive life sentences. The trial, presided over by Judge Paul Benson, was based on false evidence in the Poor Bear affidavits, on a bullet that was incorrectly connected to the alleged murder weapon, and on testimony given by other witnesses under coercion from the FBI.

At the trial, the prosecution presented fifteen days of evidence, and the defense was limited to six days. Peltier's defense team had the same evidence as was presented in the Bulter and Robideau trial indicating FBI misconduct but was not permitted to present most of it to the jury. Peltier also was not allowed to assert self-defense. Peltier's appeals to the Eighth Circuit Court and the U.S. Supreme Court were both denied. In 1993, even in the face of evidence of FBI misconduct and the admission of one of the prosecutors that the government does not know who killed the agents, the Eighth Circuit Court denied Peltier's appeal a second time.

With the assistance of Bobby Garcia, Dallas Thundershield, and Roque Dueñas, Peltier escaped from Lompoc federal prison in July of 1979. Thundershield was killed during the escape, and Garcia and Peltier were captured six days later. At his escape trial, Judge Lawrence Lydick prohibited Peltier from presenting evidence of his reasons for fleeing prison, and Peltier was sentenced for the maximum of seven years for escape and possession of a weapon. Garcia was sentenced to five years. Garcia was found dead in his cell a year later, and Roque Dueñas disappeared in a fishing accident (Messerschmidt, 1983, 139).

Many who have studied the Peltier case claim to this day that Peltier was wrongly convicted and is

thus a political prisoner. He is considered an important American Indian leader who fought to protect the rights of his people, as well as a symbol of the ongoing oppression of American Indian people at the hands of the U.S. federal government.

Penn, William, Quakers, and Native Americans

William Penn (1644–1718) was an important English Quaker and a voice for religious tolerance in Europe and North America. He founded the Pennsylvania colony (the state's name is Anglicized Latin for "Penn's forest"). The colony's original principles included scrupulous attention to nonviolence (which remains a central tenet of the Quaker creed) as well as fairness in relations with Native Americans, most notably the Leni Lenápes, whom Europeans called the Delawares.

Penn's memory has been a presence throughout Native American history, especially in the Northeast. Quaker influence is particularly notable in the religion of Handsome Lake (known today as the Longhouse Religion) among the Iroquois. Quakers often were invited as trustworthy observers at treaty councils and other crucial events by Native Americans in the Northeast who suspected the motives of other

European-Americans. As recently as 1990, Quakers were invited to act as observers in clashes between factions on the Akwesasne Mohawk reservation. The Society of Friends, which still maintains its headquarters in Philadelphia, devotes substantial resources to Native American history and relations.

Penn's "holy experiment" was designed to grant asylum to the persecuted under conditions of equality and freedom, at a time when a person could be punished severely in Puritan Boston merely for professing Quakerism and when Protestants persecuted Catholics, Catholics persecuted Protestants, and both persecuted Quakers and Jews. The French philosopher Voltaire, a champion of religious toleration, offered lavish praise: "William Penn might, with reason, boast of having brought down upon earth the Golden Age, which in all probability, never had any real existence but in his dominions" (Powell, n.d.).

Penn's vision for his colony could be compared in many ways to that of Roger Williams, who had founded Providence Plantations (later Rhode Island) a few decades earlier. Like Penn, Williams was a dissenter from theocracy who welcomed many faiths at a time of deadly religious conflict in England. Williams also practiced very cordial relations with neighboring Native Americans. Like Penn, Williams carried on his campaign for religious tolerance on both sides of the Atlantic.

The most specific description of Penn's mother, Margaret, comes from a neighbor, the acid-tongued diarist Samuel Pepys, who described her as a "fat, short, old Dutch woman, but one who hath been heretofore pretty handsome" (Powell, n.d.). She did the child rearing because her husband was seldom at home. His father, William Penn, Sr., was a much sought-after naval commander because he knew the waters around England and could handle a ship in bad weather and get the most from his crew.

William Penn, Jr. was born on October 14, 1644, in London. He developed an early interest in religion, having heard a speech by Thomas Loe, a missionary for the Society of Friends, known by the then-derisive name Quakers. Founded in 1647 by the English preacher George Fox, Quakers formed a mystical Protestant sect emphasizing a direct relationship with God. An individual's conscience, not the *Bible*, was believed by the Quakers to be the ultimate authority; their doctrine resembled that of the modern Unitarians. Quakers had no clergy and no churches. Rather, they held meetings at which participants meditated silently and spoke when moved to

William Penn makes a treaty with Native Americans in Pennsylvania in 1737. Penn, a Quaker, campaigned for peace and religious tolerance. (Library of Congress)

do so. They favored plain dress and a simple life (Powell, n.d.).

Penn studied Greek and Roman classics and became a religious rebel at Oxford University, where he defied Anglican church officials by visiting John Owen, a professor who had been dismissed for advocating tolerant humanism. Penn also protested compulsory chapel attendance, a position for which he was expelled from Oxford at age seventeen. Penn's parents then sent him to France, where he enrolled at l'Academie Protestante.

Returning to England by 1664, Penn studied at Lincoln's Inn, a prestigious London law school in London. Penn attended Quaker meetings (a criminal act) and was arrested several times. As an aristocrat, he was released, but he insisted that all Quakers be treated equally. Penn was imprisoned six times in England for speaking his mind on matters of religion. While incarcerated, he wrote several pam-

phlets that provided a theoretical basis for Quakerism, meanwhile attacking intolerance. Penn also devoted considerable time to challenging oppressive government policies in court; one of his cases helped protect the right to trial by jury. Penn used his diplomatic skills and family connections to get large numbers of Quakers out of jail. He also saved many from the gallows (Powell, n.d.).

As a result of these activities, the junior Penn's father disowned him. After his release from jail, Penn lived in several Quaker households. When Penn attacked the Catholic and Anglican doctrine of the trinity, the Anglican bishop had him imprisoned in the infamous Tower of London. Ordered to recant, Penn declared from his cold isolation cell: "My prison shall be my grave before I will budge a jot; for I owe my conscience to no mortal man" (Powell, n.d.). In the Tower, Penn wrote several pamphlets defining the principal elements of Quakerism, the best-known being *No Cross, No Crown*, which presented a pioneering historical case for religious toleration. During this time, the British Parliament passed the Conventicle Act, which aimed to suppress religious dissent as sedition. Having won his release from prison on legal grounds, Penn challenged the Act by preaching Quakerism at public meetings. Penn later used his legal training to prepare an historic defense of religious toleration in court. The jury acquitted all defendants, but the Lord Mayor of London refused to accept this verdict. He hit the jury members with fines and ordered them held in brutal Newgate prison (Powell, n.d.). They sued the mayor for false arrest and won, establishing a major precedent protecting their right of trial by jury.

Convinced that religious toleration was not possible in England, Penn requested a charter for an American colony. On March 4, 1681, realizing that he could rid England of the nettlesome Quakers, Charles II signed a charter for territory west of the Delaware River and north of Maryland. In 1681, from England, Penn sent William Markham as his deputy to establish a government at Uppland (later renamed Chester, now a suburb of Philadelphia) and instructed commissioners to plot Philadelphia (a name derived from ancient Greek meaning "city of brotherly love"), which was laid out a few miles north of the point where the Delaware and the Schuylkill rivers converge.

The First Frame of Government, which Penn and the initial land purchasers adopted on April 25, 1682, expressed ideals anticipating the Declaration of

Independence: "Men being born with a title to perfect freedom and uncontrolled enjoyment of all the rights and privileges of the law of nature . . . No one can be put out of his estate and subjected to the political view of another, without his consent" (Powell, n.d.). This document provided for secure private property, nearly unlimited free enterprise, a free press, and trial by jury, as well as religious toleration. In contrast to the English penal code, which commended the death penalty for roughly 200 offenses, Penn reserved it for two: murder and treason. Penn also encouraged women's education and participation in public debate (Powell, n.d.).

Pennsylvania's legal structure included a humane penal code that (in 1701) extended civil rights to criminals and encouraged the emancipation of slaves, although Penn himself owned human capital. Emancipation did not become official Quaker doctrine until 1758. Even under such a system, however, the representative assembly was left in an inferior position to the executive, which was controlled by the proprietors of the colony.

Penn realized that much of the land his supporters occupied was held by Native Americans, most notably the Delawares (Leni Lenápes), who had never been defeated militarily by the Swedes or the Dutch, who had earlier claimed the area. True to his nonviolent doctrines, Penn refused to fortify Philadelphia, making friendly relations with Native neighbors a practical necessity. Penn also inspired confidence among Native peoples by traveling among them unarmed and without bodyguards.

In 1682, Penn met with the chiefs of the Delaware nation and signed a Great Treaty at the village of Shackamaxon, near the present-day Kensington district of Philadelphia, that pledged long-lasting goodwill between the Native Americans and the immigrating Europeans. Philadelphia quickly grew into an urban area of almost 20,000 people, for a time the largest city in the British colonies. The city retained its reputation as a beacon of freedom for many decades, during which time Benjamin Franklin, for one, moved there from Puritan Boston.

The negotiation of a treaty with the Leni Lenápes also affirmed Penn's claim to the land for his investors, who would have been much less interested in a venture lacking clear title. The treaty also implied diplomatic relations with the powerful Haudenosaunee (Iroquois) Confederacy, with whom the Lenápe were subsidiary allies. Therefore, a chain of friendship (later called the Covenant Chain in frontier diplomacy) was engaged by Penn, although his

less scrupulous successors disregarded its provisions in their rush to acquire land. The treaty invoked the rights of both parties to share some areas that European-Americans subsequently took for themselves.

Throughout his tenure as chief executive of Pennsylvania, Penn maintained peaceful relations with the area's indigenous peoples, including the Susquehannocks and Shawnees, as well as the Leni Lenápe. His abilities as a sprinter—he could outrun many Natives—won him respect. He also learned local Native languages well enough to conduct negotiations without interpreters. From the very beginning, Penn acquired Native land through peaceful, voluntary exchange.

Penn was a shrewd businessman who competed with Lord Baltimore, founder of Maryland, for territorial rights. Using his friendly relations with Native peoples, Penn outmaneuvered Maryland agents, a fact that is evident today to anyone who compares the relative sizes of Pennsylvania and Maryland. Most notably, Penn bested Baltimore at acquiring trading rights with the Haudenosaunee Confederacy. Thus, when Benjamin Franklin began his diplomatic career in the early 1750s as Pennsylvania envoy to the Iroquois, he was filling a role first explored by Penn.

By 1701 Penn had returned to England for the rest of his life. He tried from a distance to administer his declining estate, until he experienced a debilitating stroke in 1712. Four months later, he suffered a second stroke. After that, Penn experienced difficulty speaking and writing until he died on July 30, 1718.

Plenty Coups

Plenty Coups (1848–1932), whose Crow name (Aleek-chea-ahoosh) meant “Many Achievements,” was the principal chief of the Crows during the late stages of the Plains wars. He spearheaded the Crow strategy to cooperate with the U.S. Army in its pursuit of the Cheyennes, Sioux, Arapahoes, and other “hostiles” following the Battle of the Little Bighorn (1876). Plenty Coups’ Crows provided scouts for George Armstrong Custer before his loss at the Little Bighorn and mourned his death.

Plenty Coups was groomed for chieftainship from an early age, and he was paid uncommon attention as a child by the Crows. When he was nine years of age, one of his brothers was killed by the Sioux, provoking a lifelong enmity. The Sioux had earlier pushed the Crows westward into the Little Bighorn country from the Black Hills area. Their new homeland was located in the midst of one of the last surviving large buffalo runs on the Plains, and it became a site of competition between the Crows and their traditional enemies.

At a young age, Plenty Coups was beset by harrowing dreams in which the buffalo disappeared from the Plains and white men’s cattle replaced them. He told the dreams to the Crows’ spiritual leaders, who concluded that the Crows would suffer less if they cooperated with the invaders. Plenty Coups had a healthy appetite for battle and joined the warriors of the Crow by taking his first scalp (and capturing two horses) at age fifteen. Nevertheless, he hearkened to the spiritual advisors’ words and determined to cooperate with the invaders.

Following Plenty Coups’ vision, 135 Crow warriors volunteered to serve as scouts for General George Crook during the 1876 campaign that resulted in the deaths of Custer and 225 of his troopers at the Little Bighorn. Plenty Coups worried that Crook was not prepared for Crazy Horse’s Lakotas when they met in battle June 16, 1876. He was correct; Crazy Horse routed Crook and his Indian allies in a battle that presaged Custer’s Last Stand nine days later.

After the Custer battle, the Crows under Plenty Coups continued to support the U.S. Army as it drove the Cheyennes and Sioux into subjugation. Crow warriors aided in the pursuit of Sitting Bull into Canada, the defeat of the northern Cheyennes, and the surrender of Crazy Horse. Plenty Coups urged his people to become farmers and ranchers, abandoning his own teepee for a log farmhouse.

Plenty Coups was an important Crow leader during the late nineteenth and early twentieth centuries. (Library of Congress)

Plenty Coups also opened a general store so that the Crows could buy trade goods at fair prices. Plenty Coups traveled to Washington, D.C., several times after 1880 to assure trade and aid for the Crows. He was noted for his sagacity in business dealings.

Not all of the Crows supported him, however; like other Native American tribes and nations, they suffered great losses due to disease and warfare. Many young warriors also resented being confined to a reservation. Nearly 300 Crow opponents of Plenty Coups joined forces in the fall of 1887 with the young firebrand Sword Bearer, who sought to prove his acumen as a warrior by leading a horse raid on the neighboring Blackfeet. Upon his return, Sword Bearer and his companions paraded through the Crow village with their captured horses and confronted the local Indian agent, H. E. Williamson, who sent to Fort Custer for troops. Sword Bearer’s group then galloped into the mountains and

spurred a rash of rumors of an alliance with the Cheyennes and Sioux that would destroy white settlements and Plenty Coups' "good Indians." Plenty Coups later persuaded Sword Bearer to lay down his arms.

While Plenty Coups was a longtime ally of the non-Natives, he was often critical of their character. He said that, while the Crows agreed to be friendly with them, they found that the non-Natives too often promised to do one thing and then, when they acted at all, did another: "They spoke very loudly when they said their laws were made for everybody; but we soon learned that although they expected the Crows to keep them, they thought nothing of breaking them themselves" (Johansen and Grinde, 1997, 293). During World War I, Plenty Coups encouraged young Crow men to leave the enforced idleness and alcoholism of the reservation and join the U.S. Army. After the war, in 1921, he was chosen to represent all American Indians at the dedication of the Tomb of the Unknown Soldier, in Arlington, Virginia. In 1928, his health failing, Plenty Coups willed his personal real estate, including about 200 acres of land, to the U.S. government for the future use of the Crow people. Plenty Coups died on March 3, 1932. The Crow council so revered him that its members refused to name another principal chief in his place.

Pocahontas

Pocahontas (Powhatan, ca. 1595–1617) was the favorite daughter of Powhatan (ca. 1547–1618), the paramount chief of the Powhatan Confederacy when the first English colonists arrived at Jamestown in 1607. In actuality, Pocahontas (also Pokahantes or Pokahantesu, meaning "the playful one" or "the spoiled child") was the nickname of a

girl named Matoaka. Later, she was baptized with the name of Rebecca.

Powhatan's name among his own people was Wahunsonacock. He was a remarkable figure who probably had assembled most of the Powhatan Confederacy during his tenure as leader of one of its bands. The tidewater confederacy included about 200 villages organized into several small nation-states when the English encountered it for the first time. Wahunsonacock was about sixty years of age when Jamestown was founded in 1607. He and other Native people in the area may have met with other Europeans before the Jamestown colonists. The Spanish had established a mission on the York River in 1570 that was destroyed by indigenous warriors. Gangs of pirates also occasionally sought shelter along the Carolina outer banks as they waited for the passage of Spanish galleons flush with booty from Mexico, Mesoamerica, and Peru.

In the beginning, as Wahunsonacock sought peace with the English, the colonists were in no demographic position to compete with the Natives. Within the first few years after Jamestown was founded, the peoples of the Powhatan Confederacy could have eradicated the English settlement with ease. Jamestown, in fact, would not have survived in its early years without their help. Of 900 colonists who landed during the first three years (1607–1610), only 150 were alive in 1610. Most of the colonists were not ready for the rugged life of founding a colony; many died of disease, exposure to unanticipated cold weather, and starvation. At one point within a year of their landfall in America, the Jamestown colonists became so hungry that some of them engaged in cannibalism. According to John Smith's journals, one colonist killed his wife, "powdered" (salted) her, "and had eaten part of her before it was known; for which he was executed, as he well deserved" (Page, 2003, 159).

As her prominent father's daughter, Pocahontas enjoyed considerable power, even as a young woman. For instance, although the incident is shrouded in ambiguity, Pocahontas allegedly saved the life of Jamestown's Captain John Smith in 1608, when she was thirteen years old. As the leader of the Jamestown settlement, Smith had been taken captive by Pocahontas's uncle, Opechancanough. Just before Chief Powhatan was to behead Smith (so the story goes), Pocahontas intervened on Smith's behalf. Smith, in an account of the incident published later, never mentioned Pocahontas's intervention, however, so the whole story may have been invented.

Young Pocahontas was said to have saved the life of Captain John Smith in the mythical version of an event that has many historical interpretations. (Library of Congress)

When Smith departed for England the next year, Indian–white relations deteriorated. Pocahontas was coaxed onto an English ship on the Potomac in 1612 and then taken as a hostage to Jamestown to bargain for the release of Virginia captives held by the Powhatans. During her detention at Jamestown, she became a convert to Christianity. At this time, John Rolfe also courted Pocahontas. With her father's consent, she married Rolfe in April of 1613. The union facilitated a period of peaceful relations between the Powhatans and the English immigrants.

In 1616, Pocahontas and Rolfe journeyed to Great Britain with Sir Thomas Dale and several Indians. In England, she was received as the daughter of an emperor. King James I and Queen Anne met Pocahontas at court, and her portrait was painted. While at Gravesend, England, en route for return to Vir-

ginia in 1617, Pocahontas died of a European disease (perhaps smallpox) while waiting to board a ship. She was buried in the yard of St. George's Parish Church at Gravesend; memorials were built to her there, as well as in Jamestown. Powhatan, her father, passed away the next year. In 1622, Opechancanough, her uncle, made war with the colonists, and Rolfe was killed in that conflict.

Pocahontas's son, Thomas Rolfe, Jr., was educated in London and then returned to North America in 1641, where he became a successful entrepreneur. As a result of tensions between the European immigrants and American Indians, the younger Rolfe had to plead with Virginia authorities to allow him to visit his Indian relatives. To this day, several Virginia families proudly trace their ancestry to the Rolfe family and thus to Pocahontas.

Pontiac

Frank Waters characterized Pontiac (Ponteach, Ottawa, ca. 1720–1769) as “a man of steel pounded between a British hammer and a French anvil” (Waters, 1992, 35). Pontiac, after whom General Motors named an automobile model, tried to erect a Native confederacy to block Euro-American immigration into the Old Northwest.

Pontiac was a man of medium build and dark complexion who highly valued personal fidelity. If Pontiac owed a debt, he would scratch a promissory note on birch bark with his sign, the otter. The notes were always redeemed. He was an early ally of the French in 1755 at Fort Duquesne, now the site of Pittsburgh, along with an alliance of Ottawas, Ojibwas, Hurons, and Delawares. Pontiac played a major role in the French defeat of English General Edward Braddock in 1755, during the opening battles of what came to be known as the French and Indian War in America.

Pontiac was probably born along the Maumee River in present-day northern Ohio of an Ottawa father and a Chippewa mother. He married Kantuckegan and had two sons, Otussa and Shegenaba. Pontiac held no hereditary chieftainship among the Ottawas, but by about 1760 his oratorical skills and

Ottawa chief Pontiac passes a pipe to Major Robert Rogers in 1760. Pontiac let Rogers and his forces pass through Indian territory unmolested during the French and Indian War. (Library of Congress)

reputed courage as a warrior had raised him to leadership. By 1763, Pontiac also had formed military alliances with eighteen other Native peoples from the Mississippi River to Lake Ontario.

After the British defeat of the French in 1763, Pontiac found himself faced on the southern shore of Lake Erie with an English force that included Robert Rogers' legendary Rangers, who were self-trained as forest warriors. Rogers told Pontiac that the land he occupied was now British, having been ceded by France, and that his force was talking possession of French forts. Pontiac said that, while the French might have surrendered, his people had not. After four days of negotiations, Rogers agreed with Pontiac's point of view. Rogers was allowed to continue to the former French fort on the present-day site of Detroit, and power was transferred as hundreds of Indians watched. Rogers and Pontiac became friends.

Pontiac now looked forward to peaceful trading with the British, but, when Rogers left the area, fur traders began swindling the Indians, getting them addicted to cheap liquor. Pontiac sent a belt of red wampum, signifying the taking up of arms, as far east as the Iroquois Confederacy, then southward along the Mississippi. He appealed for allies, telling the assembled chiefs of each nation he visited that if they did not unify and resist colonization, the English would flood them, like waves of an endless sea.

By the spring of 1763, a general uprising was being planned by combined forces of the Ottawas, Hurons, Delawares, Senecas, and Shawnees. On May 9, each group was to attack the nearest English fort. Pontiac's plan was betrayed to the commander of the British fort at Detroit by an Ojibwa woman, known as Catherine among the English, with whom he had made love. Pontiac laid siege to the fort at Detroit, and other members of the alliance carried out their respective roles, but an appeal for the support of the French fell on deaf ears. After a siege that lasted through the winter and into the spring of 1764, the fort received outside reinforcements, tipping the balance against Pontiac after fifteen months.

After the rebellion, European-American immigrants moved into the Ohio Valley in increasing numbers, and the prestige of the aging Pontiac leader began to decline among his former allies. Pontiac now counseled peace. The younger warriors were said to have "shamed" him and possibly beat him in their frustration. With a small band of family

and friends, Pontiac was forced to leave his home village and move to Illinois.

On April 20, 1769, Pontiac was murdered in Cahokia, Illinois. According to one account, he was stabbed by a Peoria Indian who may have been bribed with a barrel of whiskey by an English trader named Williamson.

Powhatan

Wahunsonacock, better known to the early Virginia colonists as Powhatan (ca. 1547–1618), was the principal chief of a federation usually called the Powhatan Confederacy. He also was the father of Pocahontas.

The name "Powhatan" (meaning "falling waters") was taken from one of his favorite dwelling places, the falls of the James River near present-day Richmond. Powhatan was probably born during the 1540s. He inherited control over six small tribes in Virginia (most likely from his mother) and systematically added other tribes to his dominion through warfare and intimidation until he was the chief of an estimated thirty tribal groups united in what has become known as the Powhatan Confederacy. In total, he was the leader of more than 14,000 people and oversaw an estimated 8,500 square miles of land.

In spite of Powhatan's control over the Tidewater Virginia region, other hostile Native American tribes frequently came into conflict with his people. A series of Indian wars in the sixteenth century compelled Powhatan to maintain a strong warrior class, composed of an estimated 3,000 men. The Native Americans in Virginia were therefore a warring soci-

Powhatan, also known as Wahunsonacock, was the principal chief of the Powhatan Confederacy in Virginia during the late sixteenth and early seventeenth centuries. (Library of Congress)

ety and constantly fighting to either defend or expand their hunting grounds against other tribes in the area.

By the late sixteenth century, Powhatan had heard about white men who occasionally appeared in North America. In fact, it is possible that a contingent of his warriors killed the last of the Roanoke settlers sometime in the early seventeenth century. Powhatan was wary of Europeans but viewed them as possible allies in his struggles against other Native American tribes in the region.

About sixty years of age when Jamestown was founded, Powhatan initially greeted the English colonists with a degree of cordiality. Captain John Smith described him as a man of dignified bearing. As relations between the two peoples deteriorated, Powhatan developed a harsher attitude toward the newcomers. Nevertheless, for the first few years of

the Jamestown settlement, colonists relied heavily on Powhatan and his people for food.

There were periodic outbreaks of violence between the two groups, but in general Powhatan managed to maintain peace, and no major wars between the Indians and the settlers erupted during his lifetime. Most devastating to the Powhatans, however, were the diseases that the immigrants brought with them from Europe, particularly smallpox, which nearly obliterated the Indian population. After Powhatan's death from smallpox in 1618, he was succeeded as chief of the Powhatan Confederacy by his half brother, Opechancanough, who was more aggressive when dealing with the Jamestown colonists.

Red Cloud

Red Cloud, whose Oglala name Makhpiya-luta literally means "Scarlet Cloud," was a major leader of the Oglala Lakota during the late phases of the Plains Indian wars. His name refers to an unusual formation of crimson clouds that hovered over the western horizon as he was born. At one point, during the 1860s, Red Cloud and his allies forced the United States to concede considerable territory in and around the Black Hills. The Sioux reservation at that time was defined in the Fort Laramie Treaty of 1868.

When he was born, about 1820, the world of Red Cloud's people was largely independent of non-Native immigrants. When he died, in 1909, his people had been pushed onto a tiny fraction of their former land and imprisoned in a concentration camp. Born into the heyday of the Plains horse culture, Red Cloud died in the era of the "vanishing race."

As a young man, Red Cloud learned like most other Sioux boys to fight and hunt. Very quickly, he proved himself adept at both. Red Cloud was especially known as a fierce warrior who was always

*Red Cloud, an Oglala Lakota leader, with William Blackmore.
(National Archives and Records Administration)*

ready to take an enemy's scalp. He had five children and possibly as many as six wives.

In 1865, Red Cloud and his allies refused to sign a treaty permitting the passage of immigrants across their lands from Fort Laramie, along the Powder River, to the gold fields of Montana. Red Cloud was angered by the rapid and ruthless encroachment of non-Natives on the lands of his people. In the first Fort Laramie Treaty (1851), the United States had promised to "protect the aforesaid Indian nations against the commission of all depredations by the people of the said United States." However, while non-Natives were swarming onto the northern Plains and committing depredations and treaty violations, the energies of the U.S. Army were being directed not toward protecting the Indians but toward fighting the Civil War.

Following the war, the Army turned its attention to protecting not the Indians, according to the treaty obligation, but the invading non-Natives. In

December 1866, Captain William J. Fetterman bragged that he could ride with eighty men across the whole of Sioux country. He set out with eighty-one men and high ambitions, only to be led into a deadly ambush by Crazy Horse and a dozen warriors, who killed all of them. Still, at this time the Sioux dominated the northern Plains. When U.S. Army troops built forts without the Indians' permission, war parties cut off food supplies to Fort Phil Kearney in northern Wyoming and laid siege to the outpost for two years. In 1868, with the wagon road still closed, the government signed a treaty at Fort Laramie that caused the forts to be dismantled. According to the 1868 Fort Laramie Treaty, the Powder River country and the Black Hills were reserved for the Lakotas forever.

Red Cloud advised trading with whites but otherwise avoiding them. His valor as a warrior was legendary. He had counted more than eighty coups (strikes against an enemy), and once returned from battle against a contingent of Crows with an arrow through his body. In the late 1860s, Red Cloud was about forty-five years old. Once a trader at Wolf Point asked him why he continued to pursue the diminishing herds of buffalo rather than settle on a reservation. "Because I am a red man," he said. "If the Great Spirit had desired me to be a white man, he would have made me so in the first place. He put in your heart certain wishes and plans, in my heart he put other and different desires. Each man is good in his sight. It is not necessary for eagles to be crows. Now we are poor but we are free. No white man controls our footsteps. If we must die, we die defending our rights" (Johansen and Grinde, 1997, 313).

Despite the best efforts of Red Cloud and other patriots, however, by the mid-1870s, most Plains Indians knew they could not persevere against the invaders. As the Plains wars ended, Red Cloud settled at Red Cloud Agency, Nebraska. He counseled peace and was even accused of "selling out" by some younger Oglalas. He later was moved to the Great Sioux Reservation where, in 1881, Indian Agent V. T. McGillicuddy stripped Red Cloud of his chieftainship.

During the 1870s and 1880s, Red Cloud fought the Army's regulations and opposed the reservation system, but at the same time he provided aid to Yale Professor Othniel C. March, who was searching the area for dinosaur bones. In exchange, March said he would take Sioux allegations of mistreatment "to the highest levels" of government (Milner, 1990, 387).

March investigated Red Cloud's complaints of rotten food and unmet promises. The Yale professor uncovered massive profiteering by Indian Rings in the Grant administration, sparking a congressional investigation and several newspaper exposés. At one point, March confronted Grant personally. March and Red Cloud became friends for the rest of their lives. Red Cloud said that he appreciated the fact that March did not forget his promise after he got what he wanted.

Red Cloud's biographer George E. Hyde characterized him in old age as "wrinkled, stooped, and almost blind" (Hyde, 1967, 336). Red Cloud was sometimes given to ironic bitterness over what had become of him and his people: "I, who used to control 5,000 warriors, must tell Washington when I am hungry. I must beg for that which I own" (Hyde, 1967, 336). Red Cloud spent his final years in retirement, having little to do with his people's affairs. He died on December 10, 1909.

Red Jacket

Red Jacket (ca. 1758–1830) considered himself, first and foremost, an orator. An avowed traditionalist, he is most famous for his speeches denouncing the presence of Christian missionaries on the reservations and for opposing the sale of Indian lands. Never actually appointed a sachem, he nonetheless became a very influential Seneca chief. Although he

was sometimes accused of cowardice, demagoguery, and alcoholism, Red Jacket's speeches are among the most compelling explanations of aboriginal sovereignty in U.S. history. In addition to his significance as a political figure in the early national period, Red Jacket became popular because he was an extraordinarily dynamic speaker. His speeches, of which dozens are extant, are notable for their sarcasm and disarming humor.

Red Jacket's birth name was Otetiani ("Always Ready"). According to Arthur C. Parker, he was born to a Seneca mother of the Wolf Clan named Ahweyneyonh ("Drooping Flower" or "Blue Flower"). His father was Thadahwahnyeh, a Cayuga of the Turtle Clan. There are a number of rival stories about the date and location of his birth, but Christopher Densmore argues that he was probably born in 1758 on the west side of Lake Cayuga, near either Geneva or Canoga. He was drawn to public speaking at a young age and was rumored to practice the art by himself in the woods, although this story seems fanciful.

Red Jacket served as a message runner for the British during the Revolutionary War. For this work, he was awarded a red jacket, from which his English name derived. Later in life, he was as well-known as Red Jacket as by his Seneca name, with his Christian children taking the last name of Jacket. Shortly after the war, Red Jacket was recognized by the Senecas for his verbal skills, appointed as a minor chief, and renamed Sagoywatha (roughly pronounced, Shay-go-ye-watha), which has been variously translated as "disturber of dreams," "keeper awake," or "he keeps them awake." In the early years of his political work among the Seneca, he served to convene councils with condolence speeches. He also served as speaker for the clan mothers, charged with conveying their deliberations to the councils of sachems and warriors.

Although distinguished for his verbal abilities during the Revolution, he also earned a reputation for cowardice that followed him for many years afterward. Cornplanter, an influential Seneca warrior, claimed that Red Jacket fled from the Battle of Newtown. Joseph Brant was fond of retelling a story that Red Jacket and a friend smeared themselves with the blood of a slaughtered cow to claim that they had been in battle. As a result, Brant called him Cowkiller, an unflattering name by which he was designated in most British council records of the 1790s and early 1800s. Fighting on the American side during the War of 1812, however, Red Jacket

Although Red Jacket fought against the United States during the American Revolution, he became a steadfast ally in the War of 1812. (Library of Congress)

redeemed his martial reputation by fighting with distinction at the Battle of Chippewa.

Several diplomatic triumphs in the 1790s significantly raised Red Jacket's stature. He was an active participant at the U.S.–Haudenosaunee (Six Nations, or Iroquois) councils of Tioga Point and Newtown in 1790 and 1791. He served as a leading spokesman for a Seneca deputation that met George Washington in Philadelphia in 1792. While in Philadelphia, Red Jacket (among other chiefs) was given a large chest medal by the president, which he wore proudly for the rest of his life. Most importantly, he was a principal negotiator at the 1794 Treaty of Canandaigua, where the Seneca secured nearly four million acres of land in perpetuity. The terms of this treaty have served as the basis for a series of successful Haudenosaunee land claims in New York State since the 1970s.

In 1797, Red Jacket attended the Treaty of Big Tree, where the Senecas sold much of the land guaranteed to them by the Treaty of Canandaigua. At this famous council, Red Jacket spoke on behalf of the sachems to oppose the sale, but, once the warriors and clan mothers overruled the sachems, Red Jacket successfully argued to double the proposed size of the Buffalo Creek Reservation. Because of this apparent change in position, the historian William Leete Stone charged him with duplicitous conduct. The allegation was supported by his Indian political rivals, such as Joseph Brant, but it has little substance to it.

Red Jacket's most famous speech, a reply to the Reverend Jacob Cram in 1805, was one of several speeches he gave in the early 1800s that explained why the Indians did not want Christian missionaries in their midst. The speech is noteworthy for his condensed history of white–Native relations and his objection to Cram's attempt to "force your religion upon us." Although the level of sarcasm is difficult to gauge, Red Jacket told Cram that the Senecas might ask him back only if they saw that Christianity could soften the habits of the white frontiersman living on their borders. The speech's authenticity has been a topic of debate, but Red Jacket gave many such speeches on the topic over the decade (Densmore, 1999; Robie, 1986). Furthermore, Red Jacket had become a minor celebrity on this issue. He often took pride in the publication of his speeches, and he saw to it that they were properly translated.

In addition to his reply to Cram, other famous performances include his May 1811 replies to the Ogden Land Company agent, John Richardson, and the missionary, John Alexander. These speeches contain very clear examples of Red Jacket's acerbic wit. After rejecting Alexander's overtures, Red Jacket concluded with the gentle request that the missionary forbear his generous offers, "lest our heads should be too much loaded, and by and by burst" (Stone, 1841, 204).

By the end of the War of 1812, the Senecas lived on ten reservations totaling about 200,000 acres. They were beset by land companies externally and Christianity internally.

By 1819, two leading Seneca chiefs, Young King and Captain Pollard, had become Christian. After the conversion of his grandson, Red Jacket allied with the so-called Pagan party, and he began to stridently condemn the encroachment of missionaries and land companies. Every year, he and other traditionalist chiefs lobbied the governor and legislature

to support Seneca self-determination. He succeeded in obliging the state to pass a law that prohibited missionaries living on Native lands from 1821 to 1824.

Red Jacket spent the 1820s denouncing the corrupt practices of the Ogden Land Company agents who succeeded in buying large portions of Seneca lands in August 1826. Red Jacket traveled to Washington to overturn the sale but he was unable to do so. At the same time, Secretary of Indian Affairs Thomas McKenney convinced the Christian chiefs to depose Red Jacket as a troublemaker, which they did in 1827. A year later, having proved corruption during the federal inquiry into the sale, Red Jacket was reinstated as a chief in July of 1828. Even though Red Jacket's protests were successful in preventing federal ratification of the Ogden sale of 1826, the lands were not returned. (Shortly afterward, the land sale of 1838 rendered it a moot issue.) Exhausted by his political efforts, pinched for money, and trying to make peace with his Christian wife, Red Jacket went on a commercial speaking tour the following year, traveling in museum shows from Boston to New York. He died of cholera on January 20, 1830.

There are four principal biographies of Red Jacket. The first, by William Leete Stone, was published in 1841. It contains a wealth of primary and anecdotal information because Stone was able to interview and correspond with many people who knew Red Jacket personally. More importantly, Stone reprinted as many of Red Jacket's speeches as he could obtain, thinking that future generations of historians would benefit more from the original documents than from historians' glosses of them. Stone's transcripts compare very accurately with extant manuscripts. Stone occasionally changes a preposition or inserts a period for clarity, but he did not dress up the vocabulary. The translations Stone used were principally those of Jasper Parrish, a federal Indian agent who was captured as a child by the Senecas and who spoke both Mohawk and Seneca fluently. The only major weakness of Stone's biography is that he accepted the opinions of Red Jacket's lifelong opponents, namely Thomas Morris, Joseph Brant, and Thomas McKenney, all of whom were invested in protecting their own reputations.

Niles Hubbard's 1886 biography largely reprints Stone's material without Stone's biases. Arthur C. Parker's 1952 biography is important for its sources in Seneca oral tradition, but it seems to have been intended as a children's book, not an academic history. The best recent biography is Christo-

pher Densmore's, which avoids the demonization and hagiography of the earlier works and which puts dates and places to many of the events Stone did not document.

Riel, Louis

More than a century after his execution, Louis Riel (Métis) remains perhaps the most controversial figure in Canadian history. Considered a traitor by some and a hero by others, Riel twice attempted to establish independent provinces in an effort to secure the rights of Native and Métis peoples in the Canadian west. Something of a mystic, Riel led two rebellions against the Canadian government, fifteen years apart, in 1869–1870 and again in 1885.

The son of a Fort Garry (present-day Winnipeg) miller, Riel's father, also named Louis, led the successful Courthouse Rebellion in 1849. The younger Riel attended college in Montreal and returned west

Louis Riel, Métis chieftain and leader of the Northwest Rebellion. (Corbis)

in 1869. Canada had become a confederation in 1867, and the newly established federal government wished to establish its control over the western territories as quickly as possible, beginning with present-day Manitoba. In 1869, the government began surveying lands along the Red River and dividing them into 800-acre square townships, ignoring Métis land-use patterns that were based on the older French system of dividing land into narrow strips, beginning at the waterfront, stretching back through individual fields, and terminating in a common pasture known as the “hay privilege.”

Many of the first government allotments were given to the Canada Firsters, Protestant Orangemen from Ontario who detested Catholicism, the French language, and Native peoples. Expecting resistance from the Métis, a party of Canada Firsters seized a small post near Fort Garry but surrendered when Riel arrived with a larger and better armed force. Riel formed a governing body for Manitoba, the *Comité National des Métis* and became its president.

Unwilling to launch an invasion of the western territories, the Canadian government chose to negotiate with the Métis. At this point Riel made his first miscalculation.

The Métis released most of their Canadian prisoners, but one of them, Thomas Scott, became embroiled in a confrontation with Riel. Tried by Riel and the *Comité National des Métis* for bearing arms against the state, Scott was executed in 1870, a move that turned public opinion against the Métis. In response, the Canadian government sent a force to Manitoba to arrest Riel, who fled for his life. Over the next few years, other members of the jury that had convicted Scott were murdered, while Louis Riel disappeared. However, the Métis elected him to three terms in the Canadian Parliament in absentia.

As Protestant Canadians began moving into Manitoba, Métis peoples moved farther west, settling along the Saskatchewan River. By the 1880s, the Métis, Cree, and other Native peoples recognized that the northern plains were undergoing a dramatic transformation. Violence increased as American whisky traders sold their goods. Bison herds shrank drastically due to overhunting by American and Canadian hide hunters. Canadian government surveyors appeared in Saskatchewan, and, just as they had done fifteen years earlier in Manitoba, they began laying out new square townships.

The most dramatic change, however, was the building of the Canadian Pacific Railroad (CPR), which increased the white presence on the Canadian plains. Worried about retaining their lands and way of life, the Métis decided to organize an opposition to the government under Louis Riel. There was just one problem: No one knew where Riel was. A small party of Métis were assigned the task of finding Louis Riel, and they found him quietly teaching Native children in Montana, where he had married and was raising a family. He agreed to return to Canada to organize a Métis government.

Riel quickly organized the Provisional Government of Saskatchewan, authored a Métis bill of rights, and put together a 400-man strong army. Riel's initial campaigns against the government attempted to avoid bloodshed. The Métis seized government stores, cut communications, and interfered with the building of the CPR. However, the Métis got into a shooting battle with a force of Mounties at Duck Lake, Saskatchewan. This encounter had two immediate results. First, it persuaded some Crees (but not most) to join Riel. It also prompted the Canadian government to organize a

large military expedition to crush the Métis. The troops were shipped west, traveling part of the way on the not yet completed CPR. The Métis were defeated at Batoche, and, after hiding in the woods for a few days, Riel surrendered to government troops.

Riel was tried in Regina, charged with the murder of Thomas Scott some fifteen years before. Despite questions concerning his fitness to stand trial and calls for mercy from French Catholics, he was hanged in November 1885.

Rogers, Will

Born in 1879 to a Cherokee ranching family in Oologah, Indian Territory (now Oklahoma), Will Rogers, an enrolled member of the Cherokee Nation, became an internationally known vaudevillian, actor, writer, orator, and humanitarian before his death in an airplane crash in 1935. He was extraordinarily well-known during the 1920s and 1930s—some suggest the most well-known celebrity of his day—because of his multifaceted career and keen wit.

During his youth, Rogers became an adept trick roper, a line of work that would affect his life's work. He left the Territory in 1897 to work as a cowboy but came across a better opportunity, especially considering the declining role of cowboys at the turn of the century: He joined Texas Jack's Wild West Show and later the Wirth Brothers Circus as a livestock handler and trick roper, taking the stage name the Cherokee Kid. Rogers moved to vaudeville in 1904, where he added humorous, usually political, commentary to his stage performances. Rogers' act eventually offered as much (if not more) personal commentary

Will Rogers on horseback with his children, ca. 1941. (Library of Congress)

as trick roping. In 1918, Rogers joined the Ziegfeld Follies, where he was one of its few male performers. He became such a popular performer that President Woodrow Wilson attended his performances. Other presidents maintained close ties to Rogers. Calvin Coolidge invited him to stay at 1600 Pennsylvania Avenue, and Franklin Roosevelt communicated with Rogers often.

In 1922, Rogers began writing a weekly column for McNaught Syndicate. These were the most widely read columns in the country in the late 1920s and early 1930s. Rogers' column, which discussed current politics in a palatable way, was published in 600 newspapers across the country, from the *New York Times* to the *Tulsa Daily World*, and read by 40 million people. Rogers consistently defined himself as an American Indian in his writings and occasionally offered biting commentary about the sordid ties between his tribe and the U.S. government. His fans became so enthusiastic that he was considered a possible Democratic candidate for president of the United States in 1924, 1928, and 1932.

In addition to his stage and journalistic careers, Rogers spent the late 1920s mastering two new technologies that ignited a technological revolution: radio and film. His film celebrity—he starred or appeared in seventy-one films—exceeded that of Clark Gable, Shirley Temple, and Mae West by 1934. And his radio shows were listened to by millions.

Rogers traveled extensively from the latter part of the 1920s until the end of his life. In 1926, he traveled Europe on an assignment to write a series of articles entitled "Letters of a Self-Made Diplomat to His President" for the *Saturday Evening Post*. In 1927 he visited Russia and Mexico; in 1931 he toured Central America for the benefit of Managua's earthquake victims (he donated \$5,000 of his own money to the relief effort); and in 1932 he explored Asia, dining with the emperor of Manchuria and sipping tea with Japan's minister of war. Finally, in 1934 Rogers and his family—comprised of his wife Betty and his three children, Bill, Mary, and Jim—toured the world.

These trips were all made with the assistance of emerging air technology, which Rogers supported wholeheartedly. Rogers befriended many early aviators, including Charles Lindbergh and Wiley Post. During 1935, Post and Rogers died in an airplane crash in Alaska. A tremendous outpouring of grief followed Rogers' death, and many memorials were erected in his honor, including the Shrine of the Sun in Colorado. A statue of Rogers stands in National

Statuary Hall in Washington, D.C., a testament to his influence on American politics, as well as on U.S. popular culture and humor.

Rose, Wendy

A noted poet and anthropologist with over twelve books to her credit, Wendy Rose, of Hopi, Miwok, and European ancestry, is also a visual artist. Rose was born Bronwen Elizabeth Edwards on May 7, 1948, in Oakland, California. She grew up with her mother, brother, and stepfather in the San Francisco Bay Area. A high school dropout, she became involved in San Francisco's bohemian culture in her teens and began writing.

Rose attended Cabrillo and Contra Costa Junior Colleges and the University of California at Berkeley from 1966 to 1980, taking a master's degree in cultural anthropology at Berkeley in 1978 and completing coursework for a Ph.D. in anthropology. From 1978 to 1983, Rose taught in the Native American studies and ethnic studies programs at Berkeley, then at Fresno State University in 1983–1984. Since that time, she has served as head of the American Indian studies program at Fresno City College. She was nominated for a Pulitzer Prize in poetry in 1980.

Ranging in themes from personal and cultural identity to activism to indictments of genocidal acts, her writing has been anthologized widely. Her first volume of poetry, *Hopi Roadrunner Dancing*, was published in 1973 and contains several poems that refer to the occupation of Alcatraz Island by an intertribal group of Indians in an attempt to raise public awareness of Native issues. *Long Division: A Tribal History* (1976) and *Academic Squaw: Reports to the World from the Ivory Tower* (1977) both include poems that chronicle Rose's ongoing issues with the conflict between anthropological methods and respect for the people and cultures studied. "Academic Squaw"

is written from the perspective of a Lakota woman murdered and dismembered along with her infant in the Wounded Knee Massacre of 1890. It is preceded by an epigraph from the *Plains Indian Art Auction Catalog*, chronicling prices for the items stolen from the men, women, and children slain there. This is a common technique of Rose, and this particular poem has been often reprinted. *Lost Copper* (1980), which contains the shorter "Builder Kachina: A Home-Going Cycle" and was originally printed as a twelve-page chapbook in 1979, further explores Rose's quest for a sense of connectedness to her people and asserts an association with the earth from a personal and cultural perspective.

What Happened When the Hopi Hit New York, published in 1982, focuses on landscapes and investigates the graffiti of contemporary culture using an anthropological method. *Going to War with All My Relations* (1993) and *The Halfbreed Chronicles & Other Poems* (1985) contain many strong poems protesting injustice on the behalf of oppressed people, who include such diverse figures as Truganinny, the last full-blooded Tasmanian, a woman whose body was put on display in museums for over eighty years despite her protest at seeing her husband's remains defiled in this way prior to her death, and Julia Pastana, a Mexican woman who was put on tour as a curiosity because of her facial deformities and a medical condition that caused excessive hair growth.

Rose's subsequent books of poetry include *Now Poof She Is Gone* (1994), *Bone Dance: New and Selected Poems, 1965–1992* (1994), and *Itch Like Crazy* (2002). Her poetry continues to explore her earlier themes as well as feminism from a Native perspective. Rose also authored a monograph entitled *Aboriginal Tattooing in California* in 1979. "Neon Scars," an autobiographical essay published in 1987 in Brian Swann and Arnold Krupat's collection, *I Tell You Now: Autobiographical Essays by Native American Writers*, recounts her personal experiences as a survivor of abuse and its impetus for her poetry. Rose has served as an editor for *American Indian Quarterly*, one of the most noted scholarly journals in the field of Native studies, and remains involved in community and academic projects.

Ross, John

John Ross (1790–1866) acted as principal chief of the Cherokee Nation from 1828 to 1866. While only one-eighth Cherokee according to blood quantum, he served his people as a dedicated and passionate public servant during a tumultuous time in Cherokee history. He led his nation through a remarkable revitalization after the majority of Cherokees were forced to move from their southeastern homeland to the Indian Territory along the devastating Trail of Tears (1838).

Ross was born in Turkey Town, Cherokee Nation, now located in Alabama. His father and grandfather were traders who married into the Cherokee Nation. He received private tutoring during his early years and became a successful young merchant and plantation owner. Like other well-off Cherokees of his day, Ross owned African slaves. By the 1830s, he was one of the Cherokee Nation's wealthiest men.

As evidenced by his early life, Ross advocated, as Cherokee leader, a particular form of assimilation—one that maintained Cherokee sovereignty and independence—as a means of preservation in the face of encroaching white pressure and influence, but he did so in the context of mainstream U.S. values, including those of Christianity. Despite the fact that he spoke little, if any, Cherokee, Ross was adamantly supported by Cherokee traditionalists because of his intense dedication to the preservation of a unified nation located in their southeastern homeland. These followers called him Tsan Usdi, or Little John, and later Cooweescoowee.

Beginning in 1816, Ross became increasingly involved and dedicated to Cherokee politics. In 1827, Ross was chosen to head the Cherokee's constitutional convention. Once ratified, this constitution became the first such written document among

Native North American tribes. The following year, Ross was elected chief of a government that challenged what remained of the Cherokees' traditional governing system.

Pressures on the Cherokees from the state of Georgia to relocate west of the Mississippi River mounted in the 1830s. Georgians began settling on Cherokee lands, and with Andrew Jackson, a well-known Indian fighter, elected to the U.S. presidency in 1828, the state had a strong sympathizer in Washington, D.C. Despite Supreme Court decisions that supported the Cherokees' right to their land, Jackson and later President Martin Van Buren would force the tribe to relocate.

Still, Ross had the support of the majority of Cherokee citizens and was fighting to keep his nation's homeland intact. However, a small group of dissenters, who considered removal to Indian Territory a promising solution to white encroachment, signed the Treaty of New Echota in 1835, ceding Cherokee land for new land to the west. Ross fought the sham treaty as best he could and then led his people along the Trail of Tears in 1838, a disastrous trip that would take the lives of at least one-quarter of the traveling population. Once these Cherokees reached those already settled in the West, they faced division and near civil war trying to create a unified government. It was not until 1846, after the revengeful executions of several treaty signers (not with Ross's direct knowledge), that the Cherokee Nation became unified once again.

From 1846 until the outbreak of the American Civil War in 1861, the Cherokees prospered under Ross's leadership. A newspaper, the *Cherokee Advocate*, was established, Cherokee education became a top priority, and the new settlers experienced general prosperity. With the outbreak of war, however, the Cherokees were once again divided, this time between Union and Confederate sympathies. This split, however, echoed that which occurred in the tribe thirty years before: New Echota Treaty signers sided with the Confederate cause. Ross and his supporters hoped the Cherokee people would remain neutral, but challengers such as Stand Watie, who raised a Cherokee regiment for service in the Confederate Army, dashed Ross's hopes of continued peace within the nation. After a victory at Wilson's Creek, Missouri, increased the Confederacy's strength in the region, Ross resigned himself and his people to an alliance with the South. Ross continued to serve as head of the Cherokee Nation and as emis-

sary to the United States. Ross returned to the Cherokee Nation before his death in 1866.

Sacagawea or Sakakawea

Sacagawea (also Sakakawea) was the American Indian woman who served as interpreter, guide, emissary, and counselor for the Lewis and Clark expedition of 1804–1806. She assisted the group as they surveyed the continent between Fort Mandan near Bismarck, North Dakota, and Fort Clatsop near Astoria, Oregon. She and her husband, Toussaint Charbonneau, joined the exploring party on April 7, 1805, and left it on August 17, 1806, spending a period of seventeen months with the American explorers. Sacagawea, was nicknamed Janey by William Clark, has become an historic icon symbolizing the ingenuity and endurance of Native American women. Among the most engaging figures in U.S. history, her own genealogical history is claimed by at least two major Indian communities, and there is some disagreement over the spelling, pronunciation, and meaning of her name. As a historical personage her young adult life was documented, but her ensuing years remain a mystery: She died either in South Dakota in her middle twenties or in Wyoming when nearly 100 years old. The contention over her history, coupled with the unique legacy of being the only woman to participate in the Corps of Discovery, has made her larger in death than she was in life. More than a century after her death, she is one of the most well-known, studied, revered, and celebrated American women.

Sacagawea, it is asserted, was born in the late 1780s in a northern Shoshone village located near present-day Tendoy, Idaho. The people to which she would have belonged were known as the Agaidikas, or the Salmoneaters, and were the ancestors of today's Lemhi Shoshone living at Fort Hall and near Salmon, Idaho. Around 1800, when Sacagawea was about twelve or fourteen years old, she and her band

were in winter camp near the Three Forks area of the Upper Missouri River in Montana, when a hunting or warring party of the Hidatsa tribe captured and took her to the Knife River village of Metaharta near Washburn, North Dakota. In that region, she met French Canadian fur trader Toussaint Charbonneau whom the Americans later hired as an interpreter. When Lewis and Clark arrived in late 1804 to stay among the Hidatsa and to build Fort Mandan, Sacagawea was one of Charbonneau's two wives. She was fluent in Hidatsa and Shoshone, and Charbonneau spoke Hidatsa, French, and Gros Ventre. Her knowledge of topography and her familiarity with Native custom inspired Lewis and Clark to ask that she, with her infant son Jean Baptiste, join the exploring party. The baby had been born only weeks earlier, on February 11, 1805, and was affectionately nicknamed Pomp or Pompy by Clark.

Sacagawea's contributions to the success of the Lewis and Clark expedition were substantial, if not undisputed. As a mother with baby in arms, she lent credibility to the peaceful intentions of the Corps of Discovery. She augmented the health and diet of the explorers, bringing to the attention of the captains a variety of berries as well as edible plants such as wild artichokes, onions, camas, and nuts, where they could be found, and how they could be prepared. She identified roots for medicinal purposes, provided information that Lewis used in writing scientific descriptions, translated languages, recognized geographical landmarks, and recommended the best routes to travel. On one occasion she rescued journals and instruments after a boat capsized, and in November 1805 she cast her vote in favor of the group's remaining on the Pacific Coast. At Fort Clatsop she traded the beads off her buckskin dress to help procure needed supplies.

In a fortuitous reunion with her estranged brother, the Shoshone Chief Cameahwait, she indirectly lent much needed assistance when he allowed the explorers to trade with his band for horses and he provided the Americans with a knowledgeable escort (Old Toby) for the journey west across the Bitterroot Mountains and on to the Columbia River. Modern historians have largely dismissed Sacagawea's services as a pilot and guide, but her assistance was truly remarkable when considered in the broader context of what her role encompassed.

Following the return of the expedition to the Hidatsa-Mandan villages in August 1806, Sacagawea faded into the mists of temporal obscurity. There are

Statue of Sacagawea, a Native American woman who accompanied the Lewis and Clark Expedition during its journey to the Pacific Ocean during 1804–1806. Sacagawea's presence made the expedition seem less threatening to the various tribes that the group encountered. The explorers also probably would have become lost without her knowledge of local peoples and the terrain. (Library of Congress)

two predominant theories concerning her origins and ultimate fate. The first one asserts that around 1810 William Clark invited Sacagawea (Hidatsa for "Bird Woman"), Charbonneau, and their son to St. Louis, so that Jean Baptiste could begin his education. The Charbonneaus would assume possession of 320 acres of land given by the U.S. government as partial compensation for Toussaint's services to the expedition. The Charbonneaus left Jean Baptiste in the care of Clark and by 1812 were reported to be at Fort Manuel, a fur trading post on the Missouri River. There, on December 20, Sacagawea died of what was called putrid fever.

The alternate version alleges that Sacajawea (Shoshone "Boat Pusher" or "Launcher") lived for many years and died on April 9, 1884, on the Wind

River Indian Reservation in west central Wyoming. According to this version, she traveled through a large part of the West, remarried perhaps several times, and eventually reunited with her tribe, becoming a respected and influential elder.

Today Sacagawea is one of the most venerated women in American history. She has been memorialized in movies, documentaries, and books and in countless magazine and newspaper stories. Her hypothetical likeness has been the subject of numerous artworks, paintings, and statues, and her face adorns both a postage stamp and a one dollar coin. In 2003, the state of North Dakota installed a bronze of her in National Statuary Hall, U.S. Capitol Building, Washington, D.C.

Scholder, Fritz

Born in Breckenridge, Minnesota, Fritz Scholder (1937–2005) was, along with Oscar Howe, Allan Houser, R. C. Gorman, Maria Martinez, and T. C. Cannon, among the first Native American artists to receive international acclaim. Although he maintained an ambivalent relationship to his indigenous identity throughout his lifetime, Scholder is best-known for his vivid, unconventional images of Native Americans. Juxtaposing figures in traditional dress with contemporary elements, Scholder's work reevaluated and reinterpreted stereotypical, romantic, and conventional representations of Native Americans. The series of Native American paintings Scholder produced are simultaneously brutal and beautiful, magical and humorous, reflecting the lived, quotidian experiences of late twentieth-century indigenous people.

For example, one of his most famous images, *Super Indian #2 (with ice-cream cone)*, features a buf-

falo dancer in traditional regalia taking a break to eat strawberry ice cream. As with most of his Native-themed paintings, the dancer appears in disembodied space with no familiar background to give the figure context. In the painting, the dancer seems to be sitting against a wall in a gymnasium or some other indoor public space. The ambiguity of the figure's location leads the viewer to question the ways in which Native Americans are often distilled in timeless space, outside the context of the various communities to which they belong.

Scholder's images of Native Americans aren't comfortable or comforting. His Indians smoke and drink alcohol, and they are often draped in the U.S. flag. They critique Euro-American colonization in paintings such as *Portrait of a Massacred Indian*, which portrays a Plains warrior whose head has been shattered, and illustrate the Indian Everyman in works such as *Indian with Beer Can*, a study of a grim, sunglasses-wearing man seated next to a Coors can who flashes his sharp, skeletal teeth at the viewer. As a result, his work has been controversial with non-Natives who prefer romantic visions of Indians, as well as with Native Americans who find his representations of the paradoxical and darker aspects of living as an indigenous person in the United States to be disrespectful.

Scholder's father, who was of Luiseño and German ancestry, worked for the Bureau of Indian Affairs. At various times during his career, Scholder alternately embraced and maintained a distance from his identity as a tribal person, an attitude that created distrust in the larger Native American community. In an interview, Scholder claimed that "I was mislabeled an Indian artist . . . I grew up in public schools and I'm not Indian" (Academy of Achievement, 1996, 3). Similarly, he wrote, "I am a non-Indian Indian" (Scholder, 1979).

Although he didn't grow up near his tribal relatives in San Diego County, California, Scholder did spend much of his childhood on or near reservations. As a high school student in Pierre, South Dakota, he took classes with Oscar Howe, the acclaimed Lakota artist. In addition to indigenous influences, Scholder's work was shaped by the San Francisco Bay area figurative style of Wayne Thiebaud, with whom he shared gallery space in the 1950s, as well as work by artists as far ranging as Picasso, Matisse, Bacon, and Rauschenberg. In addition to painting Native American images, Scholder has produced sculpture, photography, poetry, and multimedia work, touching on themes from his trav-

els to places as far-reaching as Romania and Egypt. Scholder's work has substantially influenced the American art scene and was the subject of two major retrospectives and a PBS documentary.

Scholder taught art history at the Institute of American Indian Arts in Santa Fe in 1964 but left to pursue his own artistic ambitions full-time. In 1967 he began his Indian series, possibly because of his experience working with Native American students at IAIA and becoming excited by the fresh, innovative, and contemporary works the young people were generating there. In 1972, the Smithsonian Institution and the U.S. Information Service organized an exhibition of Scholder's work and invited him to tour Europe with T. C. Cannon, a Caddo/Kiowa artist and former student, a trip that launched both of the artists' international careers. Scholder's work in the 1980s grew out of the Indian series but returned to broader and more abstract themes. In the 1990s, he painted a new Indian series, *Rot/Red*, and in 2002 his last major show, *Orchids and Other Flowers*, dealt with the artist's reaction to 9/11.

Seattle

Seattle (ca. 1786–1866) was a Duwamish Indian village leader, born on Blake Island in Elliott Bay, near the site where a town was founded in 1853 and today, as a great city, still honors his memory. Seattle's people were the Coast Salish, who spoke a form of Lushootseed. As the correct pronunciation of his name (Seath'tl, Duwamish-Suquamish Lushootseed) would be impossible to render exactly in English, its spelling has taken a number of forms, among them See-yat, Sealth, Seath'tl, and S'ia. He was descended from nobility through both maternal ancestors of the Duwamish and his father's Suquamish tribes, and he is still held in high esteem by the Coast Salish and other Native people.

Long before non-Native settlers began to arrive in the Puget Sound region, Seattle had established

Chief Seath'tl (anglicized as "Seattle") was a Duwamish and Suquamish leader whose people moved from the present-day site of the city that bears his name. (Library of Congress)

an impressive reputation as a warrior among local groups. With the arrival of the Americans and their lust for Indian land, Seattle refocused his energies on peacemaking, and, having proven his leadership capabilities in both war and peace, he was the logical choice for the American officials to appoint as chief prior to treaty negotiations with Washington Governor Isaac I. Stevens. Seattle and Patkanim,

representing the Duwamish and Snoqualmie bands, met in March 1854, when the newly appointed governor was called to mediate a dispute between whites and Indians near Whidbey Island.

Although Seattle was an exceptional orator in his own language, he rarely spoke the trade language, Chinook Jargon, and used little or no English. An American settler, Henry A. Smith, later claimed that he had been present when Seattle spoke to Governor Stevens and, supposedly hearing the chief speak through an interpreter, kept notes on the chief's oration. In 1887, the *Seattle Sunday Star* published an article in which Smith reconstructed and published a version of Chief Seattle's statement. Through translation, appropriation, modification, and embellishment by a series of non-Native writers over the ensuing century, the speech is still embraced and marketed as an eloquent prophecy and environmental plea from a wise Native American elder and leader. However, as the historian Clarence B. Bagley has observed, "Doubtless Chief Seattle and the other chiefs present expressed its thoughts and sentiments in their own language forming the thread of the speech, but to Doctor Smith belongs the credit for its beautiful wording and delightful imagery" (Bagley, 1931, 255).

The earliest documentation of Seattle's name and activities in Puget Sound were contained in the records of the Hudson's Bay Company at Fort Nisqually. The company built a trading post in 1833 and established the Puget Sound Agricultural Company on a large land claim located between the Nisqually River and Commencement Bay. Seattle was on several occasions mentioned in the fort's *Journal of Daily Occurrences*, sometimes as "Le Gros" in reference to his physical appearance. His early relationship with the British, known by the Indians as King George men, was not always positive. One of the chief traders, knowing that Seattle was a frequent visitor at the fort and that he often engaged in violent raids and vengeful attacks on other local Indians, asked him to sign a peace treaty.

In 1847, Seattle led a Suquamish war party against the Chemakums near Port Townsend, losing a son during the battle. According to some sources, that event affected him deeply and prompted his conversion to Christianity. Other historians have suggested that his motives were more pragmatic and that he reinforced his political and social status through expanded allegiances. In either circumstance, records indicate that Catholic priests baptized him sometime before 1850, christening him Noah.

Seattle's family name, Si'a, derived from the Duwamish matrilineal line through his mother, Sholitza, but Seattle predominantly represented the Suquamish tribe of his father, Shweabe. He also made his home among the Suquamish at Agate Pass where, under his jurisdiction, the plank longhouse known as Oleman House was extended to 1,000 feet in length to accommodate his followers. Two of his wives bore him several children and some of his sons and grandsons became tribal leaders. His daughter, Angeline, was a famous citizen of Seattle and together they were the subjects of Clarence Bagley's article "Chief Seattle and Angeline."

Around 1904, the American Benjamin F. Shaw wrote about an encounter with Seattle in 1850 when the Native chief supposedly expressed a desire for white settlement. Shaw was affiliated with Colonel M. T. Simmons, and both of them were assigned in 1853 to appoint leaders of the Puget Sound tribes for the purpose of negotiating treaties with Governor Stevens. Seattle was officially designated as the chief of the Duwamish and Suquamish by Simmons and Shaw, and on January 22, 1855, he signed the Treaty of Point Elliott. The two tribes had been traditional enemies for generations and a separate reservation was established at Port Madison for the Suquamish, but the Duwamish never received land of their own.

Chief Seattle died on June 7, 1866, when he was approximately eighty years old. He was buried at Suquamish, Washington.

Sequoyah

Sequoyah (ca. 1770–1843), the inventor of the Cherokee syllabary (a set of written symbols that represent spoken syllables), became the only individual

in world history to invent a written language by himself.

Sequoyah was born in Taskigi, now within the state of Tennessee. His father was an American trader and his mother a Cherokee. He spent his early life as a hunter and fur trader but was crippled in a hunting accident (he subsequently worked as a silversmith). In the Creek War of 1813 and 1814, Sequoyah served under General Andrew Jackson.

In 1809, Sequoyah initiated work on a Cherokee alphabet. He hoped to aid his tribe in becoming literate in their own tongue, a tool that not only would help the tribe communicate in new ways and over many miles, but also would ensure, he hoped, the survival of the Cherokee language and cultural identity. After much frustration—and after his workshop was burned down by skeptical tribespeople—Sequoyah realized that an alphabet based on the Cherokee language would be exceedingly difficult to master. A syllabary based on phonetics would be easier to learn, Sequoyah concluded, and worked to perfect his system. His syllabary consists of eighty-six characters.

Although Sequoyah's project was met with skepticism by some Cherokees, his project was embraced within a few years after the official recognition of the project by tribal leaders. Nearly twelve years after the commencement of his project, Sequoyah presented his syllabary to the Cherokee Council in 1821. In a short time—some suggest only a few months—children and adults were able to read and write using Sequoyah's system. Soon after, parts of the *Bible* were translated into Cherokee, showing how missionaries hoped to incorporate the language into their work. In addition, the Cherokee constitution (1828) and the *Cherokee Phoenix and Indian Advocate*, a weekly newspaper first published in 1828, were printed in both English and Cherokee. Today, the syllabary is still used by many Cherokees, both in Oklahoma and North Carolina, and it represents a strong tie to a heritage distinct from other American cultural groups.

The syllabary's completion and dissemination throughout the Cherokee Nation in 1821 occurred at an important time of change for the Cherokees and other tribes. Unlike the tribes that used a lack of literacy as a powerful form of resistance, the Cherokee used their syllabary as a form of defiance in the face of growing pressures from the United States, pressures that would eventually force the relocation of most of the Cherokees. The syllabary continues to

Born half-Cherokee Sequoyah originated the Cherokee alphabet in 1821, thereby helping thousands of Native Americans to become literate. He is probably the only person to have invented a written language single-handedly. (Library of Congress)

symbolize cultural independence among many Cherokees.

Sequoyah accompanied the Cherokees forcibly removed by the U.S. government on the Trail of Tears in 1838 to Indian Territory, which would later become Oklahoma. Once there, he became president of the western Cherokees and presented the Cherokee Act of Union, which united the eastern and western Cherokee peoples. Sequoyah's death is something of a mystery. In 1842 he joined an expedition to locate a lost band of Cherokees who migrated west during the American Revolution. He never returned and his remains were never found. Many believe that Sequoyah died in Mexico and is buried somewhere near San Fernando, Tamaulipas. Still, Sequoyah, who never learned English fluently, is honored in a variety of ways by his tribe, by the state of Oklahoma, and by the giant redwood trees along the northern California coast that bear his name.

Sitting Bull

The Siouan words “*Tatanka-Iyotanka*” describe a stubborn buffalo seated on his haunches. The name was given to a Hunkpapa Sioux who emerged as a resistance leader against U.S. colonialism in the northern Plains. He was called Sitting Bull.

Around 1831, Sitting Bull was born along the Grand River at a place known as Many Caches in present-day South Dakota. Originally, he received the name Jumping Badger from his father, who bore the name Sitting Bull. His mother, Her-Holy-Door, created a close bond with him during his formative years. His childhood behavior earned him the alias Slow. He entered combat at age fourteen, counting his first coup on the Crow and earning the honor of his father's name. With distinction, he entered the Strong Heart, the Kit Fox, and the Silent Eaters societies. He married his first wife in 1851, but she died during childbirth. After his father died in 1859, he married two additional wives. They gave birth to two daughters and a son. In addition, he adopted his nephew, One Bull, as a son.

Sitting Bull became known as a *blotaunka*, or war chief, in the Strong Hearts, a warrior society. Standing five feet ten inches in height, he possessed a muscular frame and dark braided hair. As he matured, Sitting Bull earned acclaim as a singer, an artist, and a dancer. The scars on his chest, back, and arms testified to his repeated sacrifices in Sun Dances. He embodied the cardinal virtues of his people, that is, bravery, fortitude, generosity, and wisdom. He traded furs with the Chouteau company at Fort Pierre and encountered U.S. soldiers at Fort Berthold. In 1864, he fought against blue-clad regulars at the Battle of Killdeer Mountain. Thereafter, he laid siege to the newly established Fort Rice as well as Fort Buford.

By the 1870s, Sitting Bull's reputation as a *wichasha wakan*, or holy man, elevated his power among the Lakota Sioux. He was anointed *wakiconza*, a supreme chief, seeking to unite the diverse bands

and contentious factions into a spirited resistance movement. In a ceremony, he was borne into a large circle on a buffalo robe and crowned with a magnificent headdress. He denounced the *wasichu*, or white people, who were invading Sioux country along the Powder and Yellowstone Rivers.

Sitting Bull tried to stop their invasion into the *Paha Sapa* (Black Hills), where gold was found by prospectors. Even though the Fort Laramie Treaty guaranteed the “unceded” territory near the Great Sioux reservation as a traditional hunting ground, officials in Washington, D.C., broke their promises. They announced that tribes not settled on the reservation by January 31, 1876, would be considered “hostile.” In fact, three columns of soldiers were deployed to drive them into confinement under the surveillance of government agents. One column, led by Brigadier General George Crook, moved north from Fort Fetterman. Under Colonel John Gibbon, another column headed east from western Montana. The third column, commanded by General Alfred Terry, marched westward from Fort Abraham Lincoln. Surrounded on all sides, the off-reservation Sioux had nowhere to escape.

Thus began the Great Sioux War. In the Spring of 1876, Sitting Bull communicated with Wakan-tanka, or the Great Mystery, at the top of a butte. He received a dream about a dust storm propelled by high winds from the east. He saw uniformed troops advancing, their weapons and horse trimmings glistening in the sunlight. When the approaching fury crashed into a rolling cloud, thunder pealed, lightning cracked, and rains poured. The tempest passed, leaving an open sky.

On June 6, 1876, roughly 3,000 Lakotas and Cheyennes joined Sitting Bull for a Sun Dance along the Rosebud Creek in Montana. Following purification in a sweat lodge, he entered the dance circle. After staring into the blazing orb overhead, he offered his flesh and slashed his arms 100 times. As blood flowed from his body, Sitting Bull received another vision. He foresaw the mounted bluecoats attacking—“as many as grasshoppers.” However, they descended upside down toward the ground as they rode. They possessed no ears and therefore could not heed the warnings to turn back.

Inspired by his visions, the Oglala war chief Crazy Horse organized a band of 500 warriors for action. On June 17, he surprised Crook's troops at the Battle of the Rosebud. Then the Sioux and their allies moved their camps to the valley of the Little Bighorn River at a place the Sioux called Greasy

A Hunkpapa Lakota Sioux, Sitting Bull is one of the most celebrated Indian leaders in American history. Sitting Bull participated in many famous battles, most notably the Battle of the Little Bighorn in 1876, and joined Buffalo Bill's Wild West Show in 1885. (Library of Congress)

Grass. In search of an elusive enemy, Colonel George Armstrong Custer of the Seventh Cavalry located their camps on June 25 with the help of Crow scouts. Outnumbered more than four to one, he ignored the warnings of his scouts and led the troops toward the camps. Along the Little Bighorn, 261 men of the Seventh Cavalry died that day.

After the stunning loss at the Little Bighorn, Lieutenant General Phil Sheridan deployed 2,500 additional troops to avenge the death of Custer. Congress took away the Black Hills in violation of the Fort Laramie Treaty and seized another 40 million acres of promised land. Sitting Bull, however, refused to accept defeat. He and his loyalists fled beyond the reach of the armed forces by crossing the border into Canada. General Terry traveled north to offer Sitting Bull a pardon in exchange for settling on the reservation, but he defiantly rejected the offer.

With the buffalo herds dwindling, Sitting Bull finally decided to end his exile. On July 19, 1881, he told his young son, Crow Foot, to hand his rifle to the commanding officer of Fort Buford in Montana. After the gesture, he spoke: "I wish to be remembered as the last man of my tribe to surrender my rifle." He donned a pair of sunglasses to protect his sensitive eyes and boarded a steamer for Bismarck. Dispatched to Fort Randall, he and his followers were prisoners of war for nearly two years.

Assigned to the Standing Rock Agency after 1883, Sitting Bull lived in a cabin. Devoted to his family, he retained his two wives. His two adult daughters were married and presented him with grandchildren. He continued to raise five children in his immediate household, including two pairs of twins and a daughter named Standing Holy. His mother, Her-Holy-Door, lived with the family until her death in 1884. He fathered two more children thereafter. Although he eschewed Christianity, he sent his children to a nearby Christian school to learn to read and to write.

The government agent, James McLaughlin, permitted Sitting Bull to participate in a traveling exhibition in 1884. In 1885, the legendary figure was allowed to join Buffalo Bill's Wild West show, earning \$50 a week for appearing on horseback in an arena. On tour, he profited from the sale of his autograph and pictures. He stayed with the show only four months, having the opportunity to shake hands with President Grover Cleveland while in Washington, D.C.

After returning home, Sitting Bull spoke against the unjust policies of the agency. He openly defied the land agreements of 1888 and 1889, which threw half the Great Sioux Reservation open to non-Indian settlement and divided the rest into six separate reservations. "I would rather die an Indian," he prophetically stated, "than live a white man." Indeed, he received a vision of a meadowlark telling him that he would die at the hands of the Sioux.

In the fall of 1890, a Miniconjou Sioux named Kicking Bear came to Sitting Bull with news of the Ghost Dance religion, which promised to restore the traditional way of life. Though skeptical of the religion at first, he planted a prayer tree at Standing Rock. He began dancing while wearing a shirt with a painted red cross. When attempting to arrest him at his cabin on December 15, 1890, a Lakota Sioux policeman shot him in the head, and his final vision came to pass. His killing led to the tragic events at Wounded Knee two weeks later.

Sitting Bull died a martyr in the last days of Sioux resistance to U.S. colonialism. He was originally buried at Fort Yates, North Dakota, but in 1953 according to some sources, his remains were relocated to Mobridge, South Dakota. Researchers continue to disagree about the actual location of his bones, and grave sites are maintained in both locations. On March 6, 1996, the Standing Rock Sioux Tribal Council voted to change the name of the tribal community college to Sitting Bull College (SBC). As a tribute to his spirit, the institution adopted its motto from his words: "Let us put our minds together to see what we can build for our children."

Smith, John

One of the best-known figures from the period of early American history, John Smith was briefly the leader of the first successful English colony at Jamestown and a lifelong promoter of English colonization efforts in North America. Born in England in 1580, Smith fought as a soldier against the Turks in Hungary. Upon returning to England, he joined the Virginia Company's colonization venture to the Chesapeake in 1607. As a soldier with worldly experience, and not a respecter of class, Smith made himself unpopular with some of the gentry during the trip, who, upon arriving in Virginia, opened the company's instructions for the colony and were

appalled to learn that Smith had been appointed their leader.

Fearful that the Spanish were attempting to find and destroy the colony, the English established Jamestown at a defensible site a few miles inland along the James River. However, the Jamestown colony was situated next to a swamp teeming with disease-carrying mosquitoes, and, taking their water from the sluggish, brackish, and salty James, many colonists soon became ill. Smith managed to alleviate the effects of disease somewhat by having the colony disperse to smaller settlements during the summer months.

Most of the colonists lacked useful skills and were unused to the hard labor needed for the colony to succeed. When a number of the colonists refused to work, Smith issued an order proclaiming that "He that doth not work shall not eat." Nevertheless, the colony ran short on food. Lacking the hunting skills to take advantage of the local game and fearful of the local Powhatan Indians, the colonists remained inside Jamestown's palisades and starved.

While much of Europe was aghast at tales of Spanish atrocities in the Americas, Smith admired the actions of Cortes, Pizzaro, and other conquistadores, and he thought it best for the English to emulate Spanish policies (or what he believed were Spanish policies) toward Native peoples. However, Smith found that he lacked the military wherewithal to coerce the local Powhatan Confederacy, and he may have also realized that the Powhatans were very different from the Natives of Central and South America. Smith managed to obtain food from the Powhatans through a combination of barter, bullying, and theft. At one point, he seized the half brother of Powhatan, Opechancanough, as a hostage in exchange for maize. This act earned the colonists Opechancanough's undying hostility, and he later led two destructive wars against Virginia.

Captured by the Powhatans during one of his explorations, Smith was apparently marked to die. Smith later described a scene in which he was restrained while an executioner prepared to cudgel him to death. At the last moment, Powhatan's favorite child, Pocahontas, threw herself between Smith and the executioner's club and persuaded her father to spare his life. Smith seemed to think that Pocahontas acted on her own initiative. However, it has been argued that Smith misunderstood what happened. Pocahontas's act of rescuing him and her father's granting him his life may have been part of a ritual that, in the eyes of Native peoples, made Smith

The English soldier and adventurer Captain John Smith helped found the Jamestown colony in 1607 and provided leadership during its crucial early years. (Library of Congress)

a tributary of Powhatan. There is also the possibility that the incident may have never occurred. Smith's narrative of his adventures in Virginia went through several editions, but not until 1625, long after the other principals in the drama (Pocahontas and Powhatan) were dead, did he mention this incident.

Smith's considerable leadership skills and his imposition of a military style of discipline helped the Jamestown colony to survive. However, his wariness of the Powhatans set the tone for an uneasy relationship for the next half century.

Smith remained a proponent of English colonization until his death in 1630. To his credit, Smith's writings about North America were realistic descriptions of the land and its commodities. But for the most part, Smith viewed Native peoples as savages and valuable only as trade partners. He believed that they must either become "civilized" or be pushed aside by the English.

Smohalla

Like Wovoka, the Paiute progenitor of the Ghost Dance, the Wanapam prophet *šmúxala* (generally rendered as Smohalla, meaning "dreamer") rose to prominence during the late nineteenth century as the symbolic head of a major religious revitalization movement. Like the Ghost Dance, Smohalla's creed, called *waasaní* (Washani, "dancers" or "worship") in the Sahaptin language, mingled indigenous beliefs with Christian concepts but explicitly renounced Euro-American culture. By urging the Indians of the Columbia Plateau to reject white ways and refuse land cessions, the so-called Dreamer Cult inspired strong resistance to federal policies designed to isolate and assimilate Native Americans.

Smohalla lived during a period of wrenching change for the indigenous peoples of the Plateau. Born around 1815 in present-day eastern Washington State, he may have witnessed the arrival of the first British and American fur traders to enter Wanapam territory along the Columbia River. The newcomers brought useful goods, but they also introduced alcohol and diseases that ravaged Native communities and undermined the status of traditional shamans. With the traders came Catholic Iroquois and Jesuit priests, from whom Smohalla probably learned the Christian theology and rituals that influenced Washani. Missionary activity intensified in the 1830s with the arrival of Protestant ministers, but Indian enthusiasm quickly waned as anger mounted over the growing stream of Euro-American emigrants arriving on the Oregon Trail. By 1850, Smohalla and other "dreamer prophets" had begun preaching that their people should shun white "civilization" and never sell any piece of their Earth Mother. Despite such spiritual objections, four treaties signed in 1855 ceded millions of acres to the United States and established reservations where Plateau Indians would presumably settle down as yeomen farmers. Many refused to obey, however, and among the "renegades" Washani became a powerful source of hope.

Smohalla built his reputation and his religion on a series of prophetic visions. Already deemed a potent *iyánca* ("one who trains or disciplines") by his own people, he attracted numerous followers from across the Plateau by promising them deliverance from the American onslaught. His methods and message closely resembled those of Indian prophets of earlier eras. Besides predicting eclipses and other natural phenomena, he periodically entered deep, death-like trances during which he claimed to visit the afterworld and receive instructions from the Creator. Above all, Smohalla declared, Indians must stop tilling the earth or face divine retribution. When a military officer attempted to convince him otherwise, he retorted:

You ask me to plow the ground! Shall I take a knife and tear my mother's bosom? Then when I die she will not take me to her bosom to rest.

You ask me to dig for stone! Shall I dig under her skin for her bones? Then when I die I can not enter her body to be born again.

You ask me to cut grass and make hay and sell it, and be rich like the white men, but how dare I cut off my mother's hair?

The Creator would reward obedience to his creed with world renewal. If Indians faithfully performed the *wáashat* (Washat, or Prophet Dance), the whites would die off or disappear, deceased relatives would return to life, and the land would revert to its pristine state. Until then, Indians must cast off white ways, seek wisdom in dreams, and reject the reservation system and allotment. Smohalla also preached pacifism, as did most of his disciples, but their teachings gave spiritual sanction to the defiance of federal authority.

By the late 1860s, Smohalla's growing influence had earned him the enmity of government officials and some tribal leaders. He clashed repeatedly with Chief Moses of the Columbia-Sinkiuuse, who considered him a rival, and a bitter quarrel with the Walla Walla dreamer Homily prompted Smohalla to move his base from Wallula to the winter village of P'na near Priest Rapids. His greatest enemies, however, were the Indian agents who accused him and his disciples of corrupting their reservation kin. Agency officials clamored continually for the removal and confinement of all renegade Dreamers, but Smohalla maintained amicable relations with the military authorities at Fort Walla Walla. Because the Wanapams remained peaceful and their lands were unde-

sirable to white settlers, the Army saw little reason to force the issue. Smohalla stayed off the reservation until his death in 1895, and his creed survived continuing efforts to suppress it. Although Washani's millenarian and Nativistic aspects soon faded, its forms of worship continue to influence tribal life through the Seven Drums Religion practiced across the interior Northwest.

Society of American Indians

The Society of American Indians (SAI, 1911–1920s) was a cross-tribal group created on the tide of progressive feeling that swept through American politics during the early decades of the twentieth century. It developed alongside the religious intertribalism of the peyote faith and the Native American Church and eventually was completely eclipsed by the city-based fraternal intertribalism that crystallized during the 1920s. It pushed for national Indian reform, sought to initiate and direct change in government policy, and presented itself as the modern, united Indian representative body of the era. Made up primarily of educated, middle-class Indians, it can be seen positively as an important fraternity that laid the foundations for the more effective Indian reform of the rest of the century. It built on a long tradition of intertribal unity and action, invoking the legacy of Joseph Brant (Thayendanege) and Tecumseh. Less positively, its disintegration can also be seen as indicative of the illusory nature of the inclusive dream at the core of American rhetoric at the beginning of the twentieth century. The SAI hoped to serve as a modern, proud, and unified Indian elite

and to spearhead the full integration of Indian people in American culture, but found instead that the general reevaluation of Indian capabilities they desired was not about to happen. The “race leadership” the SAI offered was neither wanted nor understood by the most Indians, nor was it desired by the dominant society.

The SAI’s agenda was comparable to that of the National Association for the Advancement of Colored People (NAACP), formed just a few years previously; both organizations campaigned for the legal and political recognition of their people and spread the word through their own journals. A specifically Indian identity made the SAI unique among the other bodies, such as the Indian Rights Association and the Lake Mohonk Conference of the Friends of the Indian, with a voice in Indian reform debates. Yet although it was “of Indians, by Indians, and for Indians,” the SAI shared the same basic agenda as other non-Indian reform organizations: final detribalization and the individual absorption of Indians into American society as patriotic citizens.

SAI core leadership was always small but it included men like Dr. Charles A. Eastman, the prominent physician, lecturer, and author; Dr. Carlos Montezuma, at the time one of the most recognized Indians in the country; the writer, museum man, and anthropologist Arthur C. Parker; the then most powerful Indian executive within the Bureau of Indian Affairs, Supervisor of Employment Charles E. Daganett; the community activist Gertrude Bonnin; the Reverends Sherman Coolidge and Henry Roe Cloud; and the Indian lawyers Thomas L. Sloan and Hiram Chase. SAI successes included its *Quarterly Journal* (renamed in 1916 *The American Indian Magazine*), a number of well-received conferences, a meeting with President Woodrow Wilson in 1914, the inauguration of an Indian Day and various other efforts designed to move perceptions of Indians away from the Wild West show stereotype and to foster Indian citizenship and self-help. Almost from the outset, however, the organization was plagued by internal conflict, by apathy on the part of the membership, and by a lack of funding. Especially bitter disputes arose over the appropriate role of the Bureau of Indian Affairs, both in Indian life and in the organization, over the role of peyote in Indian life, and over Indian citizenship.

What Indian people wanted most at this time was recognition of their claims and a resolution of their complaints, rather than rhetoric about self-help as a panacea for all social ills. The SAI was run by

Charles Eastman, a Sioux, championed Native American causes from the Wounded Knee Massacre in 1890 until he died in 1939. His writings interpreted Native American ways of life for white Americans during a time of considerable misunderstanding. (Library of Congress)

and for the emerging educated Indian middle class, and it failed to bring about any practical legislative change. It also failed to garner either the funds or the broad-based support needed to renegotiate the Indian position in American society. However, when the Committee of One Hundred met in 1923, it included much of the core membership of the SAI and its resolutions were generally similar to the SAI’s early overall agenda. In turn, that consensus fed into the Meriam Report of 1928, the document that revealed in a politically significant fashion the failures of previous government policy and that fueled the ensuing movement to revive tribalism and to use social science to ease Indian integration into American society.

Sohappy, Sr., David

The name David Sohappy, Sr. (Wanapam), has come to symbolize the struggle of Indian peoples of the Columbia River and its tributaries to preserve the salmon runs that have nourished and sustained their societies for thousands of years.

Sohappy's ancestors traded fish with the 1805 Lewis and Clark expedition. Kettle Falls in Washington and Celilo Falls near The Dalles in Oregon were two of the largest Indian fisheries in North America and gathering places for the Indian nations of the Plateau and beyond. The biggest part of the Native diet has always been fish. Catching salmon is a way of life, and religious beliefs and ceremonies are closely tied to preserving the fish runs. In 1855, treaties were signed with Northwest Indian nations pledging that "for as long as the sun shines, as long as the mountains stand, and as long as the river flows," the River People would be able to fish at their accustomed places. Yet by the end of the nineteenth century, environmental degradation caused by fish wheels (mechanized fish harvesters), canneries, logging, and agriculture had seriously endangered the fish and impacted the lives of the "River People."

Seventeen dams constructed on the Columbia and Snake River spawning grounds also had a deleterious effect. Nevertheless, since the late 1950s, the Indians of the Northwest have found themselves the official scapegoat for the salmon decline, accused of overfishing. "Can an Indian save a salmon" was one of the racist slogans gracing bumper stickers on non-Indian cars in the 1980s.

David Sohappy, Sr. was born in 1925. His name is derived from *souiehappie*, meaning "shoving something under a ledge" in the Wanapam Indian language. (*Wana* means "river," and *pam* means "people of.") The original Wanapam villages ranged from the mouth of the Little White Salmon River upstream to Priest Rapids. Sohappy's family was evicted from their ancestral home at Priest Rapids and White Bluff in the 1940s to make room for the Hanford nuclear facility. Eventually, David and his family moved to Cook's Landing at the mouth of the Little White Salmon River in Washington.

David Sohappy followed the old Wanapam religion his entire life, a religion that spurns violence and alcohol consumption. He is a lineal descendent of the Indian prophet Smohalla, who founded the Waashat (or dreamer) religion. He told his followers that "God commanded that the lands and fisheries should be common to all who lived upon them; that they were never to be marked off or divided, but that the people should enjoy the fruits that God planted in the land, and the animals that lived upon it, and the fishes in the water . . . This is the old law." The Wanapam refused to participate in the 1855 treaty negotiations with the United States and resisted government efforts to remove them to the Yakama Indian Reservation. Smohalla's teachings inspired resistance to federal assimilationist policies.

Sohappy grew up on his grandmother's allotted land on the Yakama Indian Reservation. He was taught to follow the seasonal food cycles of traditional Wanapam culture that consisted of wild game, fish, roots, and huckleberries. He fished for salmon without regard to season or limit, and he followed the traditional practices of salmon conservation handed down by his ancestors. He was taught that to fish is to give thanks to the Creator and to show respect for the Creator's gift of life, salmon. He believed that only the Creator—not the state, federal, or even Native governments—could control his traditional fishing practices.

Sohappy believed that he could live where he fished, at Cook's Landing on the Columbia River, especially since the government never kept its promise to provide new houses and fishing sites for those displaced by dam construction. Cook's Landing is one of five small fishing sites approved by the federal government "in lieu" of the thirty-seven Indian communities flooded out by the construction of Bonneville Dam in 1933. No matter what the need, he never accepted welfare, unemployment compensation, or surplus commodities. Instead, he and his family ate salmon at almost every meal, traded or sold fish for other food staples and their modest cash needs, gathered roots and berries, and hunted. Sohappy also provided salmon for tribal ceremonies and conducted religious ceremonies in the family longhouse.

In 1981, fish runs were at an all-time low, and federal enforcement agencies proclaimed the disappearance of 40,000 Chinook salmon between Bonneville and McNary dams on the Columbia River. This was District Six, an area designated by the courts exclusively for Indian fishing. Federal officials

then charged that the fish were taken by Indian poachers, chief among whom were David Sohappy and members of his extended family.

On June 17, 1982, David Sohappy, his wife, son, and seventy-five other Indian fishermen were arrested for fishing out of season. The Sohappys' front door was kicked down and the house ransacked by local, state, and federal agents. A sting operation, code-named *Salmonscam*, had been under way for fourteen months to entrap the Indian fisherfolk who openly took salmon in defiance of state regulations, asserting their treaty right to fish. David Sohappy and his son were convicted under the Lacey Amendment to the Black Bass Act, and each was sentenced to five years in federal prison. Other Indian fishers received lesser sentences. In contrast, two non-Indian poachers received only thirty days in prison and a suspended sentence, respectively.

During the trial, testimony about Sohappy's religion and traditional fish conservation practices was not allowed. It was later found that most of the "missing fish" Sohappy and his fellow River Indians were accused of poaching were not missing after all. Finding the dams difficult to navigate, the fish had simply spawned in tributaries along the Columbia before reaching McNary Dam. In addition, an aluminum plant located upriver from The Dalles Dam had spilled fluorides into the river, confusing the fish that were not killed by the effluent.

David, an elder and spiritual leader in the Feather Cult of the Waashat or Seven Drums Religion, spent twenty months in a federal prison before an international protest and the intervention by Senator Daniel Inouye, chairman of the Senate Select Committee on Indian Affairs, led to his release in June of 1988. A ruling by the Yakama tribal court had already found Sohappy and the other defendants not guilty of the poaching charges. Meanwhile, at Sohappy's home at Cook's Landing, federal officials issued an eviction notice. He took the eviction notice to court and won in what turned out to be his last battle before his untimely death three years later. Having suffered diabetic strokes in prison, Sohappy's health broke and he died in a nursing home on May 6, 1991.

This was not the first time that David Sohappy had tested the white man's unjust laws that violated Indian treaty rights. During the 1960s and 1970s the Northwest fishing struggle centered on the much publicized fish-ins in western Washington at Frank's Landing. Meanwhile, on the Columbia, Sohappy

fished according to his traditional religious beliefs, using fish traps he had built from driftwood until state game and fishing officials raided his camp and beat family members. In 1968 he and his cousin, Richard Sohappy, and a dozen others were jailed on the charge of illegal fishing.

The two Sohappys then became plaintiffs in the landmark federal case of *Sohappy v. Smith*. On July 8, 1969, U.S. District Court Judge Robert C. Belloni ruled that Indian fishers are allowed to harvest their fair share of the Columbia River salmon runs. A few years later in 1974, Judge George Boldt ruled that the "fair and equitable" in the earlier decision meant 50 percent of harvestable fish and that authority to regulate tribal fishing on and off the reservations was reserved for the Indian treaty nations. Yet despite these favorable legal decisions, the states of Washington and Oregon continued to interfere with Indian fishing, and federal authorities stepped up their harassment of the Sohappys.

When he died, David Sohappy was buried according to the old religion of his ancestors, with traditional songs and wrapped in a Pendleton blanket. His attorney, Tom Keefe, Jr. recalled that solemn occasion:

And while the sun chased a crescent moon across the Yakima Valley, I thanked David Sohappy for the time we had spent together, and I wondered how the salmon he had fought to protect would fare in his absence. Now he is gone, and natural runs of Chinook that fed his family since time immemorial are headed for the Endangered Species Act list. "Be glad for my dad," David Sohappy, Jr., told the mourners. "He is free now, he doesn't need any tears" (Grinde and Johansen, 1995, 166).

Spotted Tail

Spotted Tail (*Sinte Gleska*) was a *Sicangu* (upper Brûlé Lakota), born in 1823 in the Ring band (*tiyospe*), a community of bilaterally related extended families on the White River in south central South Dakota. He learned to hunt bison, to conduct raiding expeditions against the Pawnee, to protect his community's southern lands that lay beyond the Platte River in western Nebraska, and to take the proper path toward leadership under the guidance of Little Thunder, leader of the Ring band. By midcentury, he became a Shirt Wearer (*Wicasa*), the official band executive for the council (*Wiscas Itacans*), locating good hunting and campgrounds, deciding family disputes, and negotiating with foreign officials.

Traders were part of Spotted Tail's early life, but increased non-Native immigration to Oregon in 1843, to Utah in 1847, and to California in 1849 brought overland travelers through the Brûlés' Platte River territories, and soon the American military followed to protect the immigrants. These events forever changed Spotted Tail's life.

In 1854, a Mormon emigrant abandoned a lame cow and a Minniconju Lakota killed the animal. This "Mormon cow affair" convinced the brash recent West Point graduate Lieutenant John Lawrence Grattan to take a detachment and demand that Little Thunder's Brûlé band pay compensation and release the guilty Lakota to military control. After an unfruitful negotiation, Grattan's men fired their heavy artillery and the Lakota retaliated, killing the entire unit. After learning of Grattan's fate, Secretary of War Jefferson Davis ordered General William S. Harney to prepare a punitive campaign against the guilty tribespeople. The following year at Ash Hollow in western Nebraska, Harney's expedition attacked Little Thunder's band, killing eighty-six people and taking prisoners. Harney then demanded the surrender and imprisonment of the leading men. Spotted Tail (among others) surrendered at Fort Laramie in the fall of 1855. He was incarcerated at Fort Leavenworth and later Fort Kearny before returning to his people the following fall. Upon his return, he decided to stand with Little Thunder and avoid war with the whites but to continue to fight the traditional Pawnee foes.

In 1866, Spotted Tail succeeded Little Thunder as headman of the Ring Band and joined with Swift Bear of the Corn band for protection. Together they stood for peace, signing the Fort Laramie Treaty of 1868 and moving to the Whetstone Agency on the Missouri River. There Spotted Tail killed Big Mouth

Spotted Tail was a leader of the Brûlé Lakota who sought compromise with the invading whites. Spotted Tail disagreed with Red Cloud, wanting to negotiate to allow whites to pass through Indian lands on their way to the gold mines in Montana. Spotted Tail became a leader of the Oglala Sioux after Red Cloud was deposed in 1881, but he was assassinated shortly thereafter. (Mercaldo Archives)

during a leadership dispute in 1869. The agency was moved to northwest Nebraska shortly afterward, and then war began in the north when Sitting Bull and Crazy Horse's followers refused to stay inside the boundaries of the Great Sioux Reservation. At the same time, miners violated Lakota boundaries and invaded the Black Hills. The escalating frustration culminated on the banks of the Greasy Grass Creek when Lakota soldiers and their allies destroyed Brevet General George A. Custer's entire command.

While Crazy Horse and Sitting Bull fought, Spotted Tail's agency was known as a peace camp. As General Nelson Miles pursued the warring chiefs, General George Crook sought Spotted Tail's help and in the fall of 1876 unilaterally and illegally declared that the United States "recognized Spotted Tail as chief of all the Sioux." Spotted Tail, with U.S.

backing, maintained his status by signing the Black Hills Treaty (Agreement) in 1876 that enabled the United States to take control of that region. In early 1877, with Crook's urging, Spotted Tail went north on a peace mission seeking Crazy Horse's surrender. The two men met and Crazy Horse accepted the terms Spotted Tail presented. The war was nearly over when Crazy Horse surrendered in late spring and Sitting Bull and his people went to Canada in an effort to retain their independence.

After briefly moving their people to the old Ponca Agency on the Missouri River, Spotted Tail and other upper Brûlé leaders moved in the summer of 1878 to the Rosebud Agency in south central South Dakota. At Rosebud, old tribal conflicts merged into new battles. Spotted Tail tried to follow Lakota tradition but lacked credibility because he owed his position to U.S. intervention. As he attempted to maintain control over all the Brûlé bands, Spotted Tail encountered increasing tension between himself and Two Strike, White Thunder, Crow Dog, and Hollow Horn Bear. Rosebud leaders sent some children to the Carlisle boarding school in 1879, and Spotted Tail removed the children without Brûlé authority, violating tribal political protocol. These ill feelings erupted following a meeting in early August 1881, when Crow Dog shot Spotted Tail, killing him instantly.

Squanto

Best-known for serving as an interpreter for the Pilgrims and for showing them how to survive in New England, Squanto (died 1622) was a Patuxet Indian who, in a few short years, traveled (sometimes

unwillingly) from North America, to Spain and England, and back to New England.

Squanto (rendered as Tisquantum by William Bradford) stepped into history in 1614, when English sea captain Thomas Hunt abducted roughly twenty Native men from Cape Cod. Hoping to sell the Indians as slaves, Hunt took his human cargo to Spain, where he sold a few of the Indians before Spanish authorities seized the rest and sent them to live with Catholic friars so that they could be instructed in Christianity. Little is known about Squanto's time in Spain or how he left the country, but by 1617 he was living in the London home of the Newfoundland Company's treasurer, John Slany. Hoping to use Squanto as an interpreter and go-between, the English took him to Newfoundland in 1618. He returned to his native Patuxet while serving as a guide and interpreter for Thomas Dermer's 1619 expeditions to Cape Cod and Martha's Vineyard. As Dermer prepared to sail around Cape Cod, Squanto left to seek out his own people. In the few years since Squanto had been abducted, New England's Native populations had been devastated by European diseases, often carried by English fishermen who came ashore to dry their catch and to trade. Squanto returned to Patuxet and discovered that nearly all of his people had perished in an epidemic.

Without Squanto to act as an interpreter, Dermer had difficulty dealing with the Native peoples of the area, who had good reason to be suspicious of English intentions. The Indians rightly viewed the English as kidnappers, and they also rightly believed that the English had something to do with the diseases that ravaged their communities in coastal New England. When Dermer returned to the southern New England coast a year later, he was captured by a group of Native people and held until Squanto interceded. Squanto joined Dermer, but the expedition was attacked by Native people at Martha's Vineyard. The Pokanokets seized Squanto as a captive, while Dermer, wounded several times, made his way back to Virginia, where he died shortly thereafter.

In November 1620, the Pilgrims landed on Cape Cod. The Pokanokets were undoubtedly aware of the English presence, but, like other Native peoples, they maintained a cautious distance from the Plymouth settlement and its inhabitants. In the spring of 1621, Samoset, an Abenaki, made the initial contact with the English. A few days after this meeting, Samoset and Squanto translated the terms of the first treaty between the English and the Pokanoket

leader, Massasoit. For his part, Massasoit probably looked upon the English as potential allies against the more numerous and powerful Narragansetts, who had been relatively untouched by the recent epidemics of European disease.

Due to his extensive contact with the English, Squanto had far better command of their language than did Samoset, and the Pokanokets permitted him to remain in the Plymouth settlement. Squanto helped the Pilgrims obtain a quantity of maize, trained them in the planting and harvesting of the crop, and guided them on their excursions out of the Plymouth settlement. He also attempted to rebuild the Patuxets, scouring the region for survivors of the smallpox epidemic. This angered the Pokanokets, who saw this as a challenge, but the Plymouth colony protected Squanto. Squanto attempted to gain a measure of influence among other Native people in the area, claiming that, if they did not heed him, he could persuade his English friends to send a plague among them. While the Plymouth settlers did not approve of Squanto's actions, they realized that he was critical to their success, due to his abilities as a translator. At one point, the Pilgrims nearly went to war with nearby Native groups over the mere rumor that they had killed Squanto. When Squanto died in 1622, he asked the English to pray for him so that he could go to their heaven.

St. Clair, Arthur

Arthur St. Clair was born in England in 1737. In his youth, he entered the British Army with the rank of ensign. He came to America during the French and Indian War as an officer in the Sixtieth of Foot. At the end of hostilities, St. Clair retired from his commission, settling first in Boston and then moving to the Pennsylvania frontier, where he purchased some 4,000 acres in the Ligonier Valley, the title to which was disputed because it was west of the 1763 Royal Proclamation Line and controversial because only

the Haudenosaunees gave up claims to that area in the 1768 Treaty of Fort Stanwix. Other Native nations, such as the Delawares and the Shawnees, still considered the area to be Indian Country. Later, in the Ohio country, St. Clair continued his willingness to participate in the extension of disputed white settlements.

As the political situation between Great Britain and her North American colonies deteriorated in the early 1770s, St. Clair sided with the opposition to British rule. In July 1775 he was commissioned as a colonel in a regiment of Pennsylvania militia. Within a year, he joined the Continental Army and participated in the battles of Trenton (1776) and Princeton (1777).

In the course of his campaigning with the Continental Army, St. Clair earned the trust of George Washington. This trust led to St. Clair's appointment and brief service as an adjutant general of the Continental Army in 1777. Then Washington sent St. Clair to the northern department to help shore up the defenses. There he committed his most well-known act of the war when he abandoned Fort Ticonderoga between July 2 and 5, 1777, during General John Burgoyne's invasion of New York. While some assert that his military reasoning was sound, many contemporaries suspected St. Clair of disloyalty for abandoning the post. Many Patriots, including important figures in Congress feared that the campaign was lost and worried that they were henceforth risking their lives uselessly on other fronts in New York.

St. Clair's poor military planning at Ticonderoga would be evident again on the Ohio frontier. St. Clair could have delayed Burgoyne either by fortifying the heights across the lake from the fort (by failing to do this, he was careless at best and incompetent at worst) or by sustaining what would have been a long and admittedly bloody siege, which at least would have thrown Burgoyne even further off schedule. St. Clair held no important field commands for the remainder of the war. His last command was at West Point in October 1780. On November 3, 1783, Arthur St. Clair retired from the Continental Army, having attained the rank of Major General.

The retired officer next involved himself in national politics, serving in the Continental Congress from November 2, 1785, until November 28, 1787, eventually securing election to the post of president of the body. Next he was made first governor of the Northwest Territory, a post he held from 1789 until

1802. It was in his role as territorial governor that St. Clair had his most profound effects with respect to Native American history.

As governor, St. Clair speculated in Ohio land and ignored Indian rights as he oversaw the rapid, often tumultuous, and often illegal settlement of the Northwest Territory under the Ordinance of 1787. In January of 1789, as one his first acts in the new office, Arthur St. Clair presided over the Fort Harmar Conference, to speed European-American immigration to the area.

Shortly after the conference ended in a series of agreements known as the Fort Harmar Treaty, a force under Colonel Josiah Harmar was defeated in a concerted attack by a Native American alliance under Little Turtle. Harmer's defeat stunned the Army, whose commanders knew that the Old Northwest would remain closed to immigrants as long as Little Turtle's alliance held. Harmar's defeat pulled St. Clair back into military service.

St. Clair resumed his rank of major general, and gathered an army of 2,000 men during the summer of 1791, then marched into the Ohio country. About a quarter of the men deserted en route. To keep the others happy, St. Clair permitted about 200 soldiers' wives to travel with the army. Despite Harmar's defeat, they seemed to have little inkling of what lay in wait for them.

On November 4, 1791, the Miami/Mohican Little Turtle was one of the principal chiefs among a coalition of Shawnees, Miamis, Delawares, Potawatomis, Ottawas, Chippewas, and Wyandots in the Old Northwest (Ohio country), which defeated St. Clair's army of 1,400 soldiers. About 1,200 warriors, rallied by Little Turtle and aided by an element of surprise, lured St. Clair's forces into the same sort of trap as Colonel Harmar's force had fallen into, this time near St. Mary's Creek, a tributary of the Wabash River. Thirty-eight officers and 598 enlisted men died in the battle; 242 others were wounded, many of whom later died. Fifty-six wives also lost their lives, bringing the total death toll to about 950, a death toll higher than any inflicted on the United States by the British in any single battle of the American Revolution. The death toll was four times the number sustained by General George Armstrong Custer's unit at the Little Bighorn in 1876. After the battle, St. Clair resigned his commission in disgrace.

A Congressional Court of Inquiry later found St. Clair blameless in the defeat, instead placing the blame on Congress for not authorizing the campaign until late in the season, thus forcing it to

rely heavily on militia. The work of subjugating the Indian nations in the Northwest Territory next fell to Anthony Wayne. His campaign led eventually to the Battle of Fallen Timbers in 1794 and to the subsequent Treaty of Greeneville (also known as Greenville) in 1795. Arthur St. Clair died in poverty in 1818.

Standing Bear (Ponca); *Standing Bear v. Crook* (1879)

The *Standing Bear vs. Crook* court case began with the last request of a dying son and ended with a groundbreaking legal decision. For the first time, Native Americans were considered human beings under the law.

In 1877, the U.S. government told Chief Standing Bear ("Machunazha") and his Poncas that they must move from their Nebraska reservation to the Indian Territory (Oklahoma). The government sent several tribal leaders to examine their new land, promising the Ponca that they could return to Nebraska if they were dissatisfied. The chiefs rejected the land as being barren, full of rocks and unsuitable for farming. However, they were told they had no choice; the tribe was moving.

Many Poncas died en route. By the end of 1878, only 430 of the 710 Poncas who had been sent to the Indian Territory were still alive; the rest had been lost to starvation and disease. One of the last to die was Standing Bear's 16-year-old son. He asked that his body be buried with those of his ancestors. Standing Bear promised, and in January 1879, he

headed north with a small burial party. They traveled by hidden trails and reached the Omaha Indian reservation before soldiers caught up with them.

General George Crook was ordered to arrest and return the Poncas. When he saw them, Crook was saddened by their pitiable condition and impressed with their stoicism. He contacted the *Omaha Daily Herald's* assistant editor Thomas Henry Tibbles, and enlisted his help. Crook believed his removal order was cruel, but felt powerless to do anything about it himself. He encouraged Tibbles to use his newspaper to "... fight against those who are robbing these helpless people" (Brown, 1970, 340–341).

Tibbles was able to enlist the help of two prominent attorneys, A. J. Poppleton and J. L. Webster. Using the Fourteenth Amendment as the basis of their case, they persuaded Judge Elmer S. Dundy to grant an application for a writ of *habeas corpus*. Webster quoted from the amendment, which states that all *persons* born or naturalized in the United States are citizens of the United States and cannot be deprived of life, liberty, or property without due process of law. Webster inferred that the Indians must then be citizens since they were born "on our soil. "If they are not citizens," he said, "what are they? Are they wild animals, deer to be chased by every hound?" (*Omaha Herald*, May 3, 1879, 8).

The second day of the trial climaxed with Standing Bear's testimony: "... You see me standing here. Where do you think I come from? From the water, the woods or where? God made me and he put me on my land. But, I was ordered to stand up and leave my land. When I got down there it seemed as if I was in a big fire. One-hundred and fifty-eight of my people were burned up; now I stand before you. I came away to save my wife and children and friends. I never want to go back there again. I want to go back to my old reservation to live there and be buried in the land of my fathers . . ." (*Omaha Herald*, May 3, 1879, 8).

The trial ended with Judge Dundy declaring Standing Bear "a person under the law," and thus entitled to basic human rights. (*Omaha Republican*, May 12, 1879, 1). When the news reached the Ponca still in Oklahoma, Standing Bear's brother, Big Snake, decided to test the law and headed north with thirty of his followers. However, Dundy had written the law to apply only in the case of Standing Bear, so orders were sent to arrest Big Snake. He was bayoneted and killed while resisting arrest.

The first attempt by Indians to fulfill the high hopes created by Judge Dundy's decision had ended in the tragic death of an innocent man. Standing Bear, who had started the entire process by his simple desire to return his dead son to the land of his birth, now had a brother to bury as well. It had only been a few months since newspapers across the country had called for citizenship rights for peaceful Indians, but it was not until 1924, forty-five years later, that those citizenship rights, which had seemed so attainable in the spring of 1879, would finally be given to the First Americans.

Standing Bear, Luther

Remembered for his work as an author, school-teacher, rancher, store clerk, post office assistant, minister's aide, actor, lecturer, and chief of his *tiospaye* (extended family), Luther Standing Bear was one of the most widely known Lakota advocates for Indians in the early twentieth century.

Standing Bear was born between 1863 and 1868 at Ota Kte ("Breaking Up of Camp") at Fort Robinson, Nebraska. He was among the first class enrolled in 1879 at the U.S. Indian Industrial School in Carlisle, Pennsylvania, located in an abandoned U.S. Army military facility. He completed his final term in 1884 and returned to the Rosebud and Pine Ridge Reservations in South Dakota, where he lived off and on again for the next twenty-one years.

Standing Bear's experience at Carlisle taught him lessons that the non-Indian architects of government Indian education never intended. He became an advocate for using education as an instrument to defend Indian nations. In his third book, *Land of the Spotted Eagle* (1933), Standing Bear recognized that the subjects taught with the well-being of Indian peoples in mind would be different from those that non-Indians taught: "The Indian, by the very sense of duty, should become his own historian, giving his account of the race—fairer and fewer accounts of the wars and more of statecraft, legends, language, oratory, and philosophical conceptions" (Standing Bear, 1933, 254).

In 1891, Standing Bear was among the founders of the Oglala Society of the Pine Ridge Reservation, where gatherings in the Allen Issue Station District offered opportunities, in his words, "where we could discuss matters of importance to the tribe, and suggest ways and means to better our conditions" (Standing Bear, 1928, 235). In 1912 he joined the Society of American Indians, a critical forum at the headwaters of a century-long process among Indians to reclaim the authority to represent themselves in culture, policies, and politics. After 1916, in California, he was a member of the American Indian Progressive Association and the National League for Justice to the American Indian.

For one season, until the serious injuries he suffered in a train wreck almost ended his life in 1904, Standing Bear was an actor in the Wild West shows produced by William F. Cody. In 1905 he was chosen to replace his deceased father as chief of his *tiospaye*. After the government reclassified him as a U.S. citizen, Standing Bear worked in Iowa at a dry goods firm and at the 101 Ranch in Oklahoma. He moved to Los Angeles in 1916, where he became an actor in Hollywood Westerns. Standing Bear's early silent films included *White Oak* (1921). His later sound movies included *The Santa Fe Trail* (1930), *The Conquering Horde* (1931), *Circle of Death* (1935), and *Fighting Pioneers* (1935).

In addition to essays and articles, Standing Bear published four books between 1928 and 1934 with the help of his niece: *My People the Sioux* (1928), *My Indian Boyhood* (1931), *Land of the Spotted Eagle* (1933), and *Stories of the Sioux* (1934). Negotiating the problem of representing Indians in a second language was his most enduring accomplishment. Standing Bear wrote to correct injustices—to represent, in his words, "explanations [of things done by the Indian] that are more often than not

Luther Standing Bear was one of the most widely known Lakota advocates for Indians in the early twentieth century. (Library of Congress)

erroneous" (Standing Bear, 1933, 42). In the language of the destroyers of indigenous worlds, he fought back against predictions of Indian demise, destructive government policies, and the contagious diseases that slaughtered his and other extended families. He located the cause of these problems outside of Indian cultures. "The Lakotas were blessed with good health . . . [a]nd as far as I can remember there was no such thing as a contagious disease" (Standing Bear, 1933, 60). He located the cure inside Indian cultures: "It is the unquenchable spirit that has saved him—his clinging to Indian ways, Indian thought, and tradition, that has kept him and is keeping him today" (Standing Bear, 1933, 190).

Standing Bear died in Huntington, California, on February 19, 1939, during the filming of *Union Pacific*.

Sullivan, General John and the Haudenosaunee Holocaust of 1779

The term "holocaust" is wedded in the public mind to the experience of the Jews of Europe from 1933 to 1945. However, the Iroquois experienced a holocaust during the eighteenth century in upstate New York, western Pennsylvania, and Ohio during the American Revolution (Parker, 1926, 126). Ever since the 1779 scorched-earth attacks by General John Sullivan, General James Clinton, Colonel Goose Van Schaick, and Colonel Daniel Brodhead, the immigrants have been known to eastern Natives as the Town Destroyers (ASP, 1998, 1: 140).

Typically, American histories slim the coordinated assaults by these military operatives down to the Sullivan campaign, ignoring the full intent and extent of the orders of George Washington, their commander in chief. Washington ordered his lead general, Sullivan, to destroy the Iroquois utterly, not because of their alliance with the British, but very specifically because he considered "the Six Nations of Indians, with their associates and adherents" the enemy. He consequently announced his "immediate objects" to be "the total destruction and devastation of their settlements" (Sparks, 1855, 6: 264). The Revolutionary Army was "to lay waste all the settlements around, with instructions to do it in the most effectual manner, that the country may not be merely overrun, but destroyed" (Sparks, 1855, 6: 265). Washington even specified that terrorism was part of his order, for the Army was to make it a point "to rush on with the war-whoop and fixed bayonet" because "[n]othing w[ould] disconcert and terrify the Indians more than this" (Sparks, 1855, 6: 265).

Washington thus ordered total war, for the people being rushed upon with fixed bayonet were women, children, and old folks. The American battle cry of danger to settlers on the "frontiers"—i.e., Native lands as yet unseized—was a pretext and a rationale for whipping up armies to commit genocide, the preferred method for "clearing" the land of its original people in favor of European settlers (Mann, 2005, 51–54). Furthermore, Washington had what today would be viewed as a serious conflict of interest in ordering the attacks, for the ultimate prize was Ohio, and the Washington family basically owned the Ohio Company, which speculated heavily in real estate that was then in the fiercely protected possession of Native nations (Kutler, 2003, 6: 175). He had personally surveyed Ohio Company land for speculation during the French and Indian War (Clark, 1995, 22, 27–28; Fitzpatrick, 1925, 1: 43–46, 77, 416, 449).

Moreover, the Continental Congress paid its army recruits in land warrants, issued on property to be seized in Ohio. The only way to pay its debts was actually to break the Haudenosaunee (Iroquois) League and appropriate Ohio, a move that would enrich Washington. Should the new United States fail to take Ohio, to pay its debts, and to establish its financial and political credit, European nations would reclaim the states as their colonies. These complex interactions explain the absolute and driving need of Washington to break the League and seize Ohio, a feat that he finally managed in 1795 (Mann, 2004, 135–201).

Washington's plan called for a two-pronged attack by the major forces under Sullivan at Easton, New Jersey, and under Clinton at Canajoharie, New York, converging on upstate and western New York. Van Schaick was specifically to target the Onondagas (as the perceived seat of Iroquoian government). Meantime, Brodhead was to rush north from Fort Pitt to meet up with the combined forces of Sullivan, Clinton, and Van Schaick in western New York, thus cutting the New York Iroquois off from Pennsylvania and Ohio aid. If possible, the combined armies were, after devastating the Iroquois, to march on Niagara, the British headquarters, but that was always more of a desire than an actual goal.

In fact, due to Sullivan's petulant dawdling, Van Schaick's attack occurred in April 1779, well before the main force left (Egley, 1992, 60–65). Also ready in April, Brodhead was told to stand down, given the laggardly pace of the main army, but he went ahead with his original orders, setting up forts along the

Allegheny Mountains in the spring and summer and setting off on August 6, 1779, to meet Sullivan's main force (Cook, 1972, 307–308; Hammond, 1939, 3: 88; Sparks, 6: 206, 224–225). Finally, on August 9, 1779, Sullivan and Clinton simultaneously lumbered out of their separate headquarters, meeting up at Tioga (Cook, 1972, 84, 93, 201). Whereas Van Schaick marched with the main body, Brodhead never quite hooked up with it, attaining only Olean Point, forty miles distant from the main force (Edson, 1879, 663; Mann, 2005, 46; Stone, 1924, 95).

It is important to understand that the Iroquois did not want the war, avoided participating in it as long as they could, and, once coerced into it, chose removing women, children, and elders from harm's way over standing to fight the Revolutionary Army. At the outset of British–American hostilities, League speakers explicitly told both sides that they were neutral. This did not stop the Americans from attacking any and all “Indians,” including those allied with them, or the British from deliberately engineering an attack by the Americans on the neutral Senecas at the Battle of Oriskany to drag the League into the war on the crown's side. The resultant disagreement among League nations as to their stances led to the incident in which the fire at Onondaga was put out in 1777, but this simply meant that the issue was tabled, with each of the League's constituent nations free to form its own policy. The League itself was not dissolved, as many Western historians still erroneously assert (Mann, 2005, 10–15).

To ensure that the Iroquois would be wiped off the face of the earth, Congress authorized Washington to raise a total army of 5,163, to be shared among Van Schaick (558), Clinton (1,500), and Sullivan (2,500), with Brodhead to join the fray, bringing his 605 men from Fort Pitt (Egly, 1992, 61; Hammond, 1939, 3: 147; NYSHA 1933, 4: 202). By contrast, the Iroquois League, at its peak in 1777, had but a thousand soldiers (Cruikshank, 1893, 35). By 1779, those numbers had dwindled. By the time of the one “battle” of the Sullivan campaign, fought at Newtown (Elmira, New York) on August 29, 1779, the Confederate forces under Thayendenegea (Joseph Brant), the Mohawk war chief, and Colonel John Butler, the British commander, had seriously thinned.

According to Butler, the *combined* strength of the British and Native Confederates amounted to fewer than six hundred men the day of the Newtown battle (Flick, 1929, 282). In his formal report, Sullivan greatly exaggerated this number to 1,500, but even his own commanders falsified that count at the time,

John Sullivan became a brigadier general in the Continental Army. In 1779 he led a brutal, “scorched earth” expedition against elements of the Six Nations whom he defined as enemies. (Library of Congress)

and historians since then have pegged the Native numbers at those reported by Thayendanegea and Butler (Cook, Journals: 298, officers. Graymont, 1972, 208; Mann, 2005, 80, 82–84). Furthermore, whereas Sullivan's men had been feasting their way across Iroquois on crops they were destroying, the British and Native troops were literally starving, living on rations of seven ears of green corn per day each, with many suffering greatly from the “Ague” (Cruikshank, 1893, 71; Flick, 1929, 284, 293). The Battle of Newtown was therefore a complete rout of the Confederacy, but the Native purpose had never been to defeat the Sullivan army. The Iroquois were buying time to evacuate their people.

The American attacks of 1779 had the intended genocidal effect, destroying a total of at least sixty towns, a number that would, even today, knock out any state of the Union. Van Schaick racked up three towns (Cook, 1972, 17, 193; Egly, 1992, 62; Mann, 2005, 28–36); Brodhead, sixteen (Edson, 1879, 663; Flick, 1929, 285, 291; Mann, 2005, 39–48; Stone, 1924, 94, 95, 96); and Sullivan–Clinton, forty-one (Cook, 1972, 380–82). The destruction was complete, with all

housing within the sweep of the combined armies completely burned, all crops looted (to support the Americans) and/or burned, all household and farm implements destroyed or looted, and all of the once magnificent peach and apple orchards of the League cut down. In addition, all animals of the fields and forests were consumed by the Americans, along with the fishes of the waters. The American soldiers took numerous scalps for the lucrative bounties that the states and Congress offered on Native dead, with one soldier, Timothy Murphy, racking up thirty-three scalps by himself (Cook, 1972, 162). American soldiers also skinned Natives, making shoes and other items from their tanned "hides" (for skinning, see Cook, 1972, 8, 240, 244, 279; for a detailed description of the destruction, see Mann, 2005, 58–106).

Because the American attacks of 1778 had already induced famine in Iroquoia (Mann, 2005, 20–22), there was no buffer for the effects of the Sullivan campaign. In addition, the winter of 1779–1780 was the severest on record, with New York harbor freezing solid and snows drifting several feet high from New York through Ohio, precluding hunting (Edson, 1879, 667; Seaver, 1990, 60). As the Seneca adoptee Mary Jemison so wrenchingly documented the effect on Natives at the time, "but what were our feelings when we found that there was not a mouthful of any kind of sustenance left, not even enough to keep a child one day from perishing with hunger" (Seaver, 1990, 59). Thousands of Natives died as an immediate result of the dire starvation caused by the attacks. Many more died as refugees, 5,036 at Niagara (Graymont, 1972, 220; Mann, 2005, 106–108), and another 5,000 at British Detroit (Haldiman Papers, 10: 444–445, Mann, 2005, 111).

The Americans lost no time in seizing the land that had recently hosted Iroquoian farms; the settlers ploughed up corn charred in the Sullivan despoliation (Wright, 1943, 4: 3). In 1879, a massive centennial was mounted in New York to celebrate the Sullivan campaign as a great moment in U.S. history (Cook, 1972, 331–579), and it is still celebrated to this day by Euro-Americans who, hopefully, do not realize that they are exalting an act of genocide.

Tammany Society

Many colonial Americans viewed American society as a synthesis of Native American and European cultures. The Tammany Society, a classic example of the blending of the two cultures, was a broad-based popular movement that reinforced the founders' usage of symbols and ideological concepts indigenous to North America. The celebration of Tammany Day may have been an attempt to adapt May Day and other Old World holidays to the new American environment.

Subsequently, when it inherited the patriotic mantle of the Sons of Liberty in Philadelphia, the Tammany Society espoused a philosophy that America was a unique synthesis of the best and noblest aspects of Europe and America. Building on their own experiences with American Indians, founding fathers like James Madison and Thomas Jefferson used the Tammany Society and its membership to forge a new democratic party after the formation of the U.S. Constitution. Other founding fathers like Benjamin Franklin, John Dickinson, and Benjamin Rush became influential members of the Society.

To the Tammany Society, American Indians were more than a symbol of freedom. To members of the Revolutionary generation, American Indians represented a wellspring of new ideas that freed Europeans from the antiquated ideas of class and autocratic government that had so long existed in Europe. In the late eighteenth century, Tammany Society members from Georgia to Rhode Island to the Ohio River frequently consulted with American Indian leaders and sought to study American Indian languages and ideas. The Society's members emphasized concepts and values that founders such as Franklin and Jefferson found in Native societies, including a weak executive (except in war), popular participation in government, and charity for the poor. Even James Madison was compelled to seek out the Iroquois and their council when he became disillusioned with the Articles of Confederation in 1784.

Although the early history of the Tammany Society is ambiguous, it appears that King Tammany, a Delaware chief friendly to William Penn, became a popular figure in the folklore of early Pennsylvania. The Tammany Society became an avenue for the expression of a regional American identity by the mideighteenth century. The Society's ability to synthesize American and European values and to forge a new identity made it a potent force in creating a national identity as well. Its use of an amalgam of American Indian symbols and the figure of Christopher Columbus denotes that the American colonists were willing and able to change both American Indian and European values in their quest for a viable American identity before, during, and after the American Revolution.

The Tammany Society believed that Penn's friendship with the Delaware chief, Tammany, was a product of Penn's sincerity in dealing with the Delawares. Perhaps Penn's initial successes with the Delawares and also with the Iroquois were based on the common understanding of the amicable feelings of peace among all human beings that leads to an equitable and just society.

Initially, Penn dealt with the Unami (Turtle Totem) Leni Lenápe (Delaware) tribe when he came to Pennsylvania, and Delaware Chief Tammany played a prominent role in the early treaties negotiated with Penn. Although the real Tammany's mark appeared on only two treaties (June 23, 1683 and June 15, 1692), he was destined to become a legendary figure in U.S. and Pennsylvania history and folklore. Tradition has it that Tammany's name

meant “the affable” and that he was one of the Delaware Indians who welcomed William Penn on his arrival in America on October 27, 1682. By July 6, 1694, in a meeting between the Provincial Council of Pennsylvania and a delegation of Indians, Tammany had become a strong supporter of the whites and their policies. From these facts and folklore, a legendary Tammany was constructed in the early eighteenth century that was the white man’s friend and counselor.

Chief Tammany’s mythic importance among the people of Philadelphia crystallized when a group of Quakers established the Schuylkill Fishing Company in 1732. Claiming that their fishing rights in the Schuylkill River had been given to them by the Delaware chief and friend to William Penn, Tammany, the company adopted him as its patron saint. The saint’s day was designated as May 1, the traditional beginning of the fishing season. At this time, Chief Tammany was viewed by many Philadelphians as a nature spirit whose ritual day was celebrated to ensure a bountiful fishing season, but he seems also to have been associated with a resolve to protect the fishing rights (and, by proxy, the political rights) of its members.

Within a decade, the Schuylkill Fishing Company began to fictionalize Tammany by creating mottoes attributed to him. In 1747, the company gave a cannon to the Association Battery of Philadelphia, stamped *Kwanio Che Keeteru* [“This is my right, and I will defend it”], a phrase attributed to Tammany. The phrase was ripe with implications for the increasingly restless colonists. By the time of the Stamp Act crisis eighteen years later, images of the American Indian, often as Tammany, were being used widely as a symbol of resistance to British authority. The colonists were beginning to forge a new identity, calling themselves “Americans,” a word used in place of their former European nationalities. The colonists were surprisingly conscious of the composite European-American identity they were creating.

The influence of the Tammany Society extended to the end of the nineteenth century; its members often brought prominent Iroquois leaders, such as Cornplanter, to Philadelphia to meet with important political figures, including George Washington.

Tecumseh

The Shawnee Tecumseh (ca. 1768–1813), was a major military leader and alliance builder who sought to stop European-American expansion into the Ohio Valley area early in the nineteenth century, after alliances led by Pontiac and Little Turtle had failed. For a time, Tecumseh assembled an alliance that posed the last major obstacle to Anglo-American expansion across the Ohio Valley westward to the Mississippi River.

Tecumseh was born about 1768 near present-day Oldtown, Ohio. He fought as a young warrior at the Battle of Fallen Timbers. Tecumseh’s influence grew rapidly as he came of age, not only because of his acumen as a statesman and a warrior, but also because he forbade the torture of prisoners. Immigrants and Tecumseh’s Native American allies trusted Tecumseh implicitly.

Tecumseh was raised from birth to make war on the encroaching European-Americans by his mother, Methoataske, whose husband, the Shawnee Puckeshinwa, had been killed in cold blood by immigrants when Tecumseh was a boy. Tecumseh and his mother found him dying. As he watched his father die, Tecumseh vowed to become like “a fire spreading over the hill and valley, consuming the race of dark souls” (Johansen and Grinde, 1997, 383). A few years later, Tecumseh’s hatred for the immigrants was compounded by the murder of Cornstalk, a Shawnee chief who had been his mentor.

By the turn of the century, as the number of non-Indian immigrants grew, Tecumseh began to assemble the Shawnees, Delawares, Ottawas, Ojibwas, Kickapoos, and Wyandots into a confederation with the aim of establishing a permanent Native American confederation that would act as a buffer zone between the United States to the east and English Canada to the north. One observer recalled Tecumseh as a commanding speaker. His voice was

said to have “resounded over the multitude, his words like a succession of thunderbolts” (Johansen and Grinde, 1997, 384).

Rallying Native allies with an appeal for alliance about 1805, Tecumseh urged all Indians in the area to unite as brothers, as sons of one Mother Earth. He scoffed at the idea of selling the land. Why not sell the air? He asked. The sale of land, to Tecumseh, was contrary to the ways of nature. He tried to unite the southern tribes by appealing to history:

Where today are the Pequot? Where are the Narragansett, the Mohican, the Pocanet, and other powerful tribes of our people? They have vanished before the avarice and oppression of the white man, as snow before the summer sun. Will we let ourselves be destroyed in our turn, without an effort worthy of our race? Shall we, without a struggle, give up our homes, our lands, bequeathed to us by the Great Spirit? The graves of our dead and everything that is dear and sacred to us? I know you will say with me: never! Never!” (Armstrong, 1984, 45).

Tecumseh told representatives of southern Native nations that they faced extinction: Our broad domains are fast escaping from our grasp. Every year our white intruders become more greedy, exacting, oppressive, and overbearing. Before the palefaces came among us, we enjoyed the happiness of unbounded freedom, and were acquainted with neither riches, wants, nor oppression. How is it now? Wants and oppression are our lot. Dare we move without asking, by your leave. Are we not being stripped, day by day, of the little that remains of our ancient liberty? Do they not even kick and strike us as they do their black-faces? How long will it be before they will tie us to a post and whip us, and make us work for them? Shall we wait for that moment or shall we die fighting before submitting to such ignominy? (Johansen and Grinde, 1997, 384).

Territorial governor (and U.S. Army general) William Henry Harrison tried to undermine the growing strength of Tecumseh’s Native alliance by negotiating treaties with individual Native nations. Because only a portion of each nation’s warriors elected to follow Tecumseh, Harrison found it easy enough to find “treaty Indians” among those who

did not elect to fight. By 1811, Harrison had negotiated at least fifteen treaties, all of which Tecumseh repudiated.

Harrison’s wariness of Tecumseh’s power sprung from a deep respect for him. “The implicit obedience and respect which the followers of Tecumseh pay to him is really astonishing and more than any other circumstance bespeaks him [as] one of those uncommon geniuses, which spring up occasionally to produce revolutions and to overturn the established order of things,” said Harrison. He continued: “If it were not for the vicinity of the United States, he would, perhaps, be the founder of an Empire that would rival in glory Mexico or Peru. No difficulties deter him” (Hamilton, 1972, 159).

Tecumseh was particularly galled by Harrison’s choice as his territorial capital the village of Chilli-cothe, the same site (with the same name) as the Shawnees’ former principal settlement. The name itself is anglicized Shawnee for “principal town.” At one treaty council, Tecumseh found himself seated next to Harrison on a bench. Tecumseh slowly but aggressively pushed Harrison off the edge of the bench, then told him that this was what the immigrants were doing to his people. They were being slowly squeezed off their lands. During his last conference with Tecumseh, Harrison bid the chief to take a chair. “Your father requests you take a chair,” an interpreter told Tecumseh, to which he replied, defiantly: “My father! The sun is my father and the Earth is my mother. I will repose upon her bosom” (Gill, 1987, 14). Tecumseh then sat, cross-legged, on the ground.

Tecumseh also was angry over Harrison’s treaty of September 30, 1809, with the Delawares, Potawatomies, Miamis, Kickapoos, Wea, and Eel River peoples. For \$8,200 in cash and \$2,350 in annuities, Harrison had laid claim on behalf of the United States to roughly 3 million acres of rich hunting land along the Wabash River in the heart of the area in which Tecumseh wished to build his Native confederacy. When Tecumseh and his brother, also a Shawnee war chief, complained to Harrison that the treaty terms were unfair, Harrison at first rebuked Tecumseh by saying that the Shawnees had not even been part of the treaty. The implicit refusal to recognize Tecumseh’s alliance angered the Indians even more. Realizing that Tecumseh’s influence made it politic for him to do so, Harrison agreed to meet with him. At a meeting on August 12, 1810, each side drew up several hundred battle-ready warriors and

soldiers. Harrison agreed to relay Tecumseh's complaints to the president, and Tecumseh said that his warriors would join the Americans against the British if Harrison would annul the treaty.

Nothing came of Harrison's promises, and, the following year, bands of warriors allied with Tecumseh began ranging out of the settlement of Tippecanoe to terrorize nearby farmsteads and small backwoods settlements. Harrison said he would wipe out Tippecanoe if the raids did not stop; Tecumseh said they would stop when the land signed away under the 1810 treaty was returned. Tecumseh then journeyed southward to bring the Creeks, Chickasaws, and Choctaws into his alliance. Tecumseh carried the message that he had used to recruit other allies:

Brothers—When the white men first set foot on our grounds, they were hungry. They had no place on which to spread their blankets, or to kindle their fires. They were feeble; they could do nothing for themselves. Our fathers commiserated with their distress, and shared freely with them whatever the Great Spirit had given his red children. They gave them food when hungry, medicine when sick, spread skins for them to sleep on, and gave them ground so that they might hunt and raise corn. Brothers—the white people are like poisonous serpents: when chilled, they are feeble, and harmless, but invigorate them with warmth, and they sting their benefactors to death (Johansen and Grinde, 1997, 385–386).

Tecumseh failed, for the most part, to bring new allies into his alliance. While he was traveling, the command of the existing alliance fell to Tecumseh's brother, Tenskwatawa, who was called The Prophet. On September 26, 1811, Harrison decamped at Vincennes with more than 900 men, two-thirds of them Indian allies. He built a fort and named it after himself on the present-day site of Terre Haute, Indiana. Harrison then sent two Miamis to The Prophet to demand the return of property Harrison alleged had been stolen in the raids, along with the surrender of Indians he accused of murder. The Miamis did not return to Harrison's camp. The governor's army marched to within sight of Tippecanoe and met with Tenskwatawa, who invited them to make camp, relax, and negotiate. Harrison's forces did stop, but set up in battle configurations, as The Prophet's warriors readied an attack.

Within two hours of pitched battle, Harrison's forces routed the Indians, then burned the village of Tippecanoe as Tenskwatawa's forces scattered into the woods. Returning to the devastation from his travels, Tecumseh fled to British Canada, where, in the War of 1812, he was put in command of a force of whites and Indians as a British brigadier general. Harrison's forces met Tecumseh at the Battle of the Thames, in what is now Ontario, east of today's Windsor. Tecumseh was killed during that battle on October 5, 1813. After it, some of the Kentucky militia who had taken part in it found a body they thought was Tecumseh's and cut strips from it for souvenirs. His warriors, who had dispersed in panic when Tecumseh died, said later that they had taken his body with them. Having committed twenty thousand men and \$5 million to the cause, the United States had effectively terminated armed Indian resistance in the Ohio Valley and the surrounding areas.

Tekakwitha, Kateri

Kateri (Catherine) Tekakwitha, a seventeenth-century Mohawk, is the only Native American to have been beatified (acclaimed at one step from sainthood) by the Roman Catholic Church. Her life also reflects the tensions between Christians and the Mohawks who refused to be converted.

Tekakwitha, who became known as the Lily of the Mohawks, was born in 1656 in Ossernenon (also known as Auriesville), New York, to a Mohawk father and an Algonquian mother who had been Christianized, then taken captive by the Mohawks a few years before Kateri's birth. She was born into a world of deadly tension between Native peoples and immigrant Jesuit priests. During the 1640s, eight Jesuits were tortured and killed in Ossernenon, after which, in 1667, the French sent troops to avenge the murders. Kateri thus spent much of her youth in a village under French military and religious occupation; the Mohawks had been compelled to accept Jesuits in their midst under duress.

Some of the priests had done their best to convince Mohawks in Ossernenon and the vicinity that their God would punish Natives who did not adopt their faith. After a deadly smallpox epidemic swept the area during Tekakwitha's youth (killing her younger brother, mother, and father), the priests were marked men. Catherine contracted smallpox and her face was disfigured by it, but she didn't die. Orphaned at the age of four, an uncle took responsibility for her.

Despite the fact that the uncle detested the Jesuits, he was ordered to lodge three of them in his home following the occupation of the village in 1667. Kateri became their hostess at the age of eleven. In subsequent years, she continued to bond with the missionaries to the point of refusing to marry in order to maintain her virginity. In retaliation, some of Kateri's relatives withheld food and threatened her life. Resisting these pressures, however, Tekakwitha continued to befriend the priests as several of her neighbors were converted gradually to Catholicism. She was baptized with the name Catherine in 1676. After that, she was harassed as she walked to the village chapel; on one occasion, a warrior taunted Kateri with a wax axe. Others accused Tekakwitha of inviting her uncle into bed to compromise her purported Christian virginity.

Shortly after the sexual rumors, Kateri moved to the Saint Francis Xavier mission in Kahnawake, near Montreal. Her uncle is said to have followed her, threatening to kill Kateri and family members who had accompanied her to Kahnawake; He was not successful. At the mission, she studied Christian theology intensively. Kateri continued to resist pressure to marry, eventually becoming associated with the nuns at the Hotel Dieu hospital in Ville Marie (Mon-

tréal). In 1679, Tekakwitha took a formal vow of chastity under Catholic auspices, the first Iroquois to do so.

Controversy attended her vow, however. Kateri stopped participating in hunting expeditions after her half-sister alleged that her husband had been seduced by the purported virgin. Instead, Kateri remained at the mission, practicing penance to the point of self-punishment, saying the Rosary for long periods of time barefoot at the foot of a cross planted in snow, eating food laced with ashes, and sometimes sleeping on a bed of thorns. The mission's priests did not dissuade her. Instead, they acclaimed her reverence and dedication to God.

On April 17, 1680, at the end of a long winter of self-inflicted suffering, Kateri fell ill and died during Holy Week. Since that time, a body of myth has grown up around her life and premature death. It is said, for example, that as Kateri died her face radiated light and lost all the scars inflicted on her by smallpox. Some people who pray in her memory are said to have experienced miracle cures.

In 1884, the Jesuits petitioned the Vatican for her canonization as a saint. In 1943, she was venerated by the Vatican, and, in 1980, she was declared beatified, another step toward sainthood. At least 300 full or partial biographies of Kateri's life have been published, in twenty languages, the most recent in 2005 (Greer, 2005, xi). She also has been the subject of several plays, operas, and films; places where she was known to have lived have become pilgrimage sites for devout Catholics.

Despite all of her postmortem acclaim, at least one ethnohistorian, K. I. Koppedray, asserts, based on his examination of historical records, that the Jesuits invented Kateri Tekakwitha to provide an exemplary model for conversions of Native Americans to Catholicism. He points to a lack of independent oral history as an indication that she was an entirely fabricated figure.

Tenskwatawa

Tenskwatawa probably was born in 1775 at Old Piqua, Ohio; he died November 1836 at present-day Kansas City, Kansas. Tenskwatawa, also known as the Shawnee Prophet or simply The Prophet, was an important religious political leader in the early nineteenth century Great Lakes–Ohio Valley region.

Tenskwatawa was born as part of a set of triplets into a family of at least six older brothers and sisters. Prior to his birth, their Shawnee war chief father, Puckeshinwa, died in the 1775 Battle of Point Pleasant, Ohio. Their Creek mother, Methoataske, left the Ohio in 1779 and entrusted her children—Tenskwatawa, Tecumseh (who would grow up to be one of the most famous orators and military leaders of all time), and another child—to an older sister, Tecumapease. His childhood name was Lalawethika (“rattle” or “noisemaker”).

In 1804 Lalawethika assumed the role of community shaman when the renowned shaman Penagashea died. Lalawethika had been studying with him since 1795. After a series of visions in 1805, Lalawethika changed his name to Tenskwatawa, meaning “The Open Door.” In the visions Tenskwatawa met the Master of Life who showed him heaven and hell, as well as giving him instructions on how to avoid one while gaining admission to the other. Tenskwatawa preached that Indians must give up alcohol, reject Christianity, destroy their medicine bags, and respect all life. If the Master of Life’s teachings were followed, Tenskwatawa claimed that the dead and animals would be restored. Adherents were given “prayer sticks” inscribed with prayers for the Master of Life (Edmunds, 2004). He also claimed that Americans were products of the evil Great Serpent who, assisted by witches, spread death and destruction. Tenskwatawa nonetheless proposed that trade continue with the Anglo-Americans, but only on terms set by the Indians until it was no longer needed. Finally, the Nativist vision of Tenskwatawa and Tecumseh included a call for pan-Indian unity to resist encroachments on Indian lands by Europeans (Dowd, 1992, 382–383). Of the brothers, Tenskwatawa’s approach was more spiritual, while Tecumseh’s was more pragmatic, but both were very persuasive.

Immediately following his vision and explanations, Tenskwatawa and Tecumseh established a village near Greenville, Ohio, and called for all Indian people to settle there. This settlement was a direct challenge to the 1795 Treaty of Greenville. Tenskwatawa participated in witchcraft trials among the

A Shawnee mystic and the brother of Tecumseh, Tenskwatawa appointed himself prophet in 1805. Laulewasika was his given name, but he adopted the name Elkskwatawa, and later Tenskwatawa, The Prophet. (Hulton Archive/Getty Images)

Delawares and Wyandots in 1806. Those accused of witchcraft were individuals who appeared to be acculturated to the immigrants’ ways. As his prestige and popularity grew, the settlement of Greenville proved to be inadequate. This resulted in the establishment of Prophetstown in 1808 at the mouth of the Tippecanoe River.

Here the brothers’ influence was interpreted as a threat by governor of Indiana William Henry Harrison. In 1811, when Tecumseh was in the South building a pan-Indian coalition, Harrison and about 1,000 men attacked Prophetstown, defeating Tenskwatawa and his followers. This event was the nadir of Tenskwatawa’s power among the Great Lakes nations. Prophetstown was rebuilt shortly after Harrison left the area, and Tenskwatawa continued to participate in the major events of the War of 1812, although he did not participate in any of the

actual fighting. In 1813, at the Battle of the Thames, Tenskwatawa fled with the British, leaving Tecumseh and dozens of other warriors to die while protecting their retreat. The American victory in this battle effectively ended British and Indian power in the Old Northwest.

Denied admission to the United States in 1815, Tenskwatawa and a few Shawnee followers remained in Upper Canada until 1824. In 1826, two years after his return, Tenskwatawa and the Shawnees were removed from the Ohio Valley. They traveled to Kaskaskia and western Missouri, eventually reaching the Shawnee reservation in Kansas in 1828. Tenskwatawa sat for a portrait by American artist George Catlin in 1832 and died in 1836.

Thorpe, Jim

Hailed as the greatest athlete during the first half of the twentieth century, Jim Thorpe excelled in football, baseball, and track. Born James Francis Thorpe on May 28, 1888, in Indian Territory (now Okla-

homa), Thorpe and his twin brother Charles were the second and third children of six. His father, Hiram Thorpe, was of Irish and Sac-Fox Indian descent. His mother was one-quarter French and three-quarters Chippewa, being the granddaughter of the famous Sac-Fox leader, Black Hawk. Thorpe's Indian name was Wa-tho-huck, meaning Bright Path.

One year after Jim and Charles were born, the Thorpe family acquired a 160-acre farm in Oklahoma during the Oklahoma land rush of 1889. Thorpe was an extremely active child and learned how to ride, swim, and hunt at a young age. He was educated at the Sac-Fox reservation school, the Haskell Institute in Lawrence, Kansas, and finally the Carlisle Indian School in Pennsylvania beginning in 1904.

Thorpe wanted to study to become an electrician at Carlisle, but ended up learning to be a tailor. While at Carlisle, he became more active in organized sports, particularly football. His athletic ability brought him to the attention of Carlisle's athletic coach, "Pop" Warner, who decided to groom Thorpe for track, as well as football. Warner elevated Thorpe from the junior varsity to the varsity football team, where he spent most of the 1908 season on the bench.

During the summer of 1909, Thorpe traveled southward to work on a farm as part of his work commitment to the Carlisle School. He joined the Carolina League and played professional baseball for Winston-Salem, Fayetteville, and Rocky Mount, remaining for the 1910 season as well. In 1911, he returned to Carlisle for two years to complete his education and, at Warner's urging, set his sights on competing in the 1912 Olympics in track and field.

The Olympic Games of 1912 at Stockholm, Sweden, represented the pinnacle of Thorpe's athletic career. He competed in both the five-event pentathlon (running broad jump, javelin throw, 200-meter race, discus, and 1,500-meter race) and the ten-event decathlon (100-meter dash, running broad jump, shotput, running high jump, 400-meter race, discus throw, 110-meter high hurdles, pole vault, javelin throw, and 1,500-meter race). In the pentathlon, Thorpe placed first in four out of the five events. In the decathlon, he set a record that would not be broken for another fifteen years. His achievements earned him the gold medal in both events. King Gustav V of Sweden proclaimed him to be "the greatest athlete in the world," to which Thorpe famously replied, "Thanks, King."

Hailed as the greatest athlete of the first half of the twentieth century, Jim Thorpe excelled in football, baseball, track, and other sports. (National Archives and Records Administration)

In January 1913, however, a scandal erupted when Olympic officials realized that Thorpe had played professional baseball, thus making him ineligible for the Olympics because he had compromised his amateur standing. The Amateur Athletic Union stripped him of his Olympic medals and removed his accomplishments from the Olympic record.

When Thorpe returned to the United States, in 1913, he married Iva Miller in the first of his three marriages. The couple had four children, three daughters, and a son. Thorpe continued to play college football and was named to the all-American

team. Upon his graduation from Carlisle in 1913, Thorpe returned to professional baseball and joined the New York Giants as a right fielder. Thorpe continued playing baseball until 1919, at various times for the Giants, the Cincinnati Reds, and the Boston Braves. In 1920, Thorpe helped organize the American Professional Football Association (which became the National Football League in 1922) and served as the organization's first president. He also played for teams in Canton (Ohio), New York, and St. Petersburg (Florida).

Following his divorce from Iva in 1924, Thorpe married Freeda Kirkpatrick. The couple had four sons. He retired from football in 1929 and moved to Hollywood, where he tried to sell his life story. Although Metro-Goldwyn-Mayer (MGM) bought the rights, the picture was never made, and Thorpe turned instead to writing, publishing a book for the 1932 Olympics held in Los Angeles entitled *Jim Thorpe's History of the Olympics*. Ultimately, he ended up working construction and appearing in bit parts in films. His one significant role was as a supporting character in the 1937 Errol Flynn film, *The Green Light*.

He returned to Oklahoma in 1937 and became active in Native American affairs. In 1940, he embarked on a public lecture tour across the United States, speaking on current sports, his own career, the importance of sports in American life, and Native American culture. Too old for active military service during World War II, Thorpe briefly joined the merchant marines in June 1945. Divorced from Freeda in 1949, in June of the same year, he married for the third time, to Patricia Gladys Askew. After the war ended, he returned to California, where in late 1949 Warner Brothers acquired the rights to his life story and began production on *Jim Thorpe, All-American* (1951), with Burt Lancaster playing the title role. Thorpe was given a generous payment for his story and was retained as a technical advisor.

In 1950, a poll among nearly 400 Associated Press sports writers selected Thorpe as the greatest athlete and greatest football player of the first half of the twentieth century, choosing him over Babe Ruth, Ty Cobb, Red Grange, and Jack Dempsey, among others. At the same time, he was inducted into the college and pro football halls of fame. He died in 1953.

Efforts to have Thorpe's Olympic medals and records reinstated had begun in the late 1930s. Finally, in 1982, these efforts by his supporters paid off when the International Olympic Committee

returned Thorpe's name to their record books and restored his medals to his family.

Tribal Colleges

Tribal colleges are unique institutions of higher education that cater specifically to the needs of Native American students to facilitate their educational achievement. Tribal colleges have existed for more than thirty years and have grown in number to more than thirty individual institutions. They are governed by Native American nations and tribes, but they remain separate from the reservation governments. They stress Native values and service to Native communities, while providing the essentials of a typical educational experience beyond secondary level. A traditional liberal arts curriculum is taught from a Native perspective, with an emphasis on preparing students for success in either their tribal community or beyond.

Community

Since first contact with Europeans, American Indians have been stripped of large parts of their homelands, their means of subsistence, and, in some cases, almost every facet of their cultures, including language, religion, and even family ties. Wherever Native American peoples have managed to hold together the remaining fragments of their culture it has been a community effort. When these communities have had disagreements, they have generally resolved them by consensus, procedures still used today. Now, many of these communities have been able to reconstruct their fragmented cultures, as best they can, in a new venue: tribally controlled community colleges (TCCCs).

During the second half of the twentieth century, American Indians began to assert their entitlement to national sovereignty, legally, economically, and culturally. This assertiveness led to empowerment,

which in turn led to the acts signed into U.S. law allowing for Indian self-determination. One of these acts is the Tribally Controlled Community College Assistance Act of 1978.

Governance

During the 1960s, the civil rights movement was affecting change across the nation. Newly active minority groups were embroidering their specific ideas for justice into the social fabric of the United States, often by force. The Nixon administration responded to this outcry by acting on the ideals set in place during the Kennedy administration. The Indian Empowerment Assistance Program was manifested in signing into law several acts to encourage and assist Native American nations and tribes to create a new future for themselves (Boxberger, 1989, 130–132). A series of new federal laws resulted from this program, including the Indian Financing Act of 1974, the Indian Education Acts of 1972 and 1974, the Indian Self-Determination and Education Assistance Act of 1975, the Indian Child Welfare Act of 1978, and the American Indian Religious Freedom Act of 1978 (Boyer, 1989, 24).

Possibly the most important and most empowering act to have come out of this era is the Tribally Controlled Community College Assistance Act of 1978 (Boyer, 1989, 24). This act provides the basis for a system of institutions of higher education that would operate in accordance with a unique set of principles and guidelines based on Native values and traditions. The Act makes it possible to acquire an education that shares, rather than stifles, the worldview of its Native American students.

Each TCCC is chartered by a specific tribe or tribes. Most are governed by boards made up of tribal community members, which operate with autonomy from the tribal government (Boyer, 1989, 32).

Generally, the presidents of these colleges and their administrative staffs are Native Americans, and often the positions are held by women; roughly one-third of the presidents were women at the time of Boyer's study (Boyer, 1989, 32).

Curriculum

These centers of Native American education offer an opportunity to reconstruct the missing elements of tribal cultures and to reverse the economic decay that

afflicts Native peoples. These schools can provide a way of regaining self-esteem and a sense of autonomy, viable options for the control of common resources and local prosperity, without compromising traditional tribal values.

Tribal colleges seek not to transport students to a life in the past, but to understand the past as the origin of traditional Native values that can offer a sound coping mechanism for contemporary life and the basis for a future in which Native peoples can find self-realization and continued self-determination. At the same time, tribal colleges can prepare students to manage their own affairs and those of their communities, thus breaking the cycle of dependency (Boyer, 1989, 51–52).

Both individual students and communities in which they live can profit from the reconstruction and revitalization of tribal culture that occurs in the reservation community colleges. In an effort to reestablish the knowledge and pride in tribal heritage, the tribally controlled institutions create what can be described as a cultural renaissance in the communities they serve (Boyer, 1989, 52–53).

The important distinction to be made about the Native American experience in a tribal college, compared to that of a non-Indian institution, is that value is placed on tribal knowledge, beliefs, and lifeways; in other words, the tribal college builds self-esteem and pride in the Native heritage. In addition, students in Native community colleges are also provided a viable education in mainstream areas of study, so that they are prepared for careers in the world inside or outside the tribal realm (Boyer, 1989, 54).

When a core group of tribal college graduates achieves academic success and becomes educational and community leaders, their accomplishments serve entire communities. For example, a growing number of Indian graduates are entering the ranks of tribal teaching staffs. Graduates who remain on their reservations after graduation offer the seeds of social stability, economic growth, and future leadership (Boyer, 1989, 60).

An important aspect of Indians teaching Indians is the creation of an environment that emphasizes traditional cultures. An ability to transcend the shortcomings of European language, for example, is necessary to comprehend such ideas as the “numinous” aspects of Native American culture, such as the infusion of divinity into the natural world (Boxberger, 1989, 133).

Faculty

Many faculty positions at tribal colleges are filled by non-Indians. However, Native Americans fill most administrative positions and account for most of the student body. Tribal colleges are working to produce more Native American teachers. Due to failed policies of the past, however, Indian instructors are scarce. Fortunately, many of the available non-Indian instructors understand the individual and common needs and are aware of community values. Often they come to Native communities planning to stay for a short time. Still other non-Indian instructors make their homes in Native communities and are accepted by the members of tribes with whom they work (Boyer, 1989, 32–33).

Short-time faculty often keep programs going, only to be replaced. Such turnover changes the character of programs and upsets their continuity, affecting the perceptions of students. A high turnover rate of faculty and staff can be attributed to a combination of factors such as isolation, low pay, and heavy teaching loads compared to their colleagues’ at non-Indian community colleges (Boyer, 1989, 33).

However, many institutions forge strong, lasting administrations, and manage the frequent changes well. This relative lack of turmoil is one of the goals of the American Indian Higher Education Consortium: to promote the kind of professional relationships in the administration that will reduce pressure and create a stable environment and working relations for tribal and college administrators (Boyer, 1989, 33).

Students

At the heart of any discussion about education are the students. Without them, all other facets of education are irrelevant. No matter what their ethnicity or cultural background, all students enter education with some learned behaviors, outlooks on life, and patterns of learning and understanding, or lifeways, already in place. Many students share attributes of the dominant or mainstream society, and their lifeways are similar. Learning within the mainstream methodology is relatively easy for them. However, many members of minorities—American Indians among them—have their own unique lifeways. These lifeways may be fragmented, but they are still ingrained and still different from those of mainstream students. Thus, learning and understanding

in a mainstream environment may prove to be extremely difficult for them. This, coupled with many forms of ethnic bias, can cause an individual of any minority group—in this case, an American Indian—to have a negative self-image and low self-esteem. When one of the fundamental differences in lifeways is the method of learning or understanding, then persons in a minority may believe that they are intellectually incapable of academic success.

Jim Cummins has written that most Western indigenous groups “have been conquered, subjugated, segregated, and regarded as inherently inferior by the dominant group. Educational failure is regarded by the dominant group as the natural consequence of the minority group’s inherent inferiority” (Cummins, 1988, 3). This idea not only becomes a self-fulfilling prophecy, but part of the generational, stereotypical baggage that the members of this group have to bear.

Students at Native-controlled colleges are typically older than most college students (about twenty-nine to thirty-three years of age). Most are women, and most (as high as 68 percent in some colleges) have children. In the Native-controlled colleges that Boyer cited, more than half of the students were unemployed the year before attending school; up to 98 percent below Census Bureau poverty guidelines. Most students attending tribal colleges are residents of the reservation. Many Indian students see the tribal college as a place to transition from high school to a non-Indian college (Boyer, 1989, 31).

Uncas

For most Americans, the name “Uncas” conjures up the fictional character of James Fenimore Cooper’s *The Last of the Mohicans*. The historical Uncas (1588?–1683), however, was a Mohegan (not a Mohican) and far from being the last of his tribe. Uncas recognized, earlier than other Native leaders, that the arrival of English colonists permanently altered the balance of power in southern New England. He closely allied himself with the newcomers, and for more than four decades he presided over the rise of the Mohegans. Under his leadership, the Mohegans rendered valuable military assistance to both the Plymouth and Massachusetts Bay colonies during the Pequot War and King Philip’s War. Because of Uncas’s willingness to enter into alliances with the New England colonies against other Native peoples, as well as his part in slaying the Narragansett sachem Miantonomo, some scholars of Native America have cast him as a historical villain. However, his actions also strengthened the Mohegans, enabling them to retain a measure of independence in colonial New England, long after other Native peoples had been displaced or coerced into moving into one of the Praying Towns.

At the time of English and Dutch settlement, the Mohegans were a small southern New England tribe that occupied the lands between the Connecticut and Thames Rivers. Dominated by the more numerous and powerful Pequots, the Mohegans paid them tribute in the form of goods and wampum. On at least five occasions, Uncas attempted to undermine the authority—whether by a coup or other means is not documented—of the Pequot sachem, Sassacus. He always failed, and Sassacus forced him into exile among the Narragansetts. Each time, however, Sassacus permitted Uncas to return and retain leadership of the Mohegans, but only after ritually humiliating himself. Sassacus further punished Uncas each time by reducing the amount of Mohegan territory under his control. Uncas and the Mohegans were finally

able to throw off Pequot domination by siding with Massachusetts Bay and Plymouth Bay Colonies when the Pequot War erupted in 1637. The colonial military leaders were distrustful of Uncas and the Mohegans at first, but he demonstrated his loyalty by delivering to them four Pequot heads and a captive. He also participated in planning and leading the attack on the Pequot's stronghold at Mystic. As a reward for his services, Uncas received a large share of the Pequot prisoners. While the colonists sold most of their Pequot prisoners as slaves and shipped them to British sugar colonies in the Caribbean, the Mohegans adopted most of their prisoners and incorporated them into the tribe.

Seeking even closer ties to the English, Uncas enhanced his standing with them by occasionally feeding them rumors of Indian plots against their colonies. By presenting himself as an ally, Uncas and his people avoided displacement and received comparably favorable treatment from the English. The Mohegans were able to retain a good deal of autonomy.

Uncas proved useful yet again to the New England colonies when the Narragansett sachem Miantonomo, who had been an English ally during the Pequot War, began to speak out against them. Miantonomo approached other Native groups and argued that, just as the English thought of themselves as "English," Native people should unite in the face of the European invasion and stop thinking of themselves as Narragansetts, Nipmucks, or Pokonokets. At about this time, Miantonomo signed a treaty with Massachusetts that required him to notify the colony if he went to war against another Native American tribe. Miantonomo sought, and was granted, permission to attack the Mohegans, who had been waylaying Narragansett hunters. Captured by the Mohegans during the ensuing war, Miantonomo reportedly attempted to purchase his freedom. Despite receiving a ransom from the Narragansetts for Miantonomo's safe return, Uncas turned him over to the colony of Connecticut. Wanting to be rid of a troublesome Native leader but not wanting Miantonomo's blood on their hands, the Connecticut authorities gave him back to Uncas, with the implicit understanding he would have Miantonomo executed.

Uncas lent further assistance to the New England colonies during King Philip's War in 1675–1676. While he could no longer lead warriors in the field himself, his son, Oweneco, assisted the English. After the war, Uncas reaffirmed his alliance to

the colony and began selling Mohegan lands to them until his death in 1683.

Victorio

Considered by historians to be one of the greatest guerilla fighters and military strategists (Keenan, 1998, 16), Mimbres Apache Chief Victorio was born about 1825 in southwestern New Mexico (Thrapp, 1988, 1483–1485). Legends about his origins persist, most stating that he was a captured Mexican boy raised among the Apaches, but proof is lacking. Biduyé, as he was called by tribal members, was renamed by his enemies when he became a respected war leader, even though he tried very hard to find a course other than war. Victorio kept on the path of peace until the American government, in the form of the Indian Bureau and the military, demanded too much and war ensued. Through it all, he had an unyielding desire to live at Ojo Caliente, New Mexico, Victorio's ancestral home.

Mimbres Apaches actually lived near what is today known as Monticello, New Mexico. They called themselves the *Chihenne*, the Red Paint people. Their early leader was Mangas Coloradas, a notable chief. Following their customs, the boy Victorio undoubtedly participated in long established ceremonies beginning when he received his first moccasins and his first haircut. Later, he competed with other boys in footraces, took baths in ice-cold water all year to "harden" his body, imitated in play the elders' decision-making process, and learned the names and characteristics of animals, birds, plants, and the elements.

At about age sixteen, as an apprentice, Victorio rode along on the first of four raids, on which the older warriors acted as his teachers and tested his skills in the many aspects of warfare, a necessary exercise before a young man made the transition to a fighter for his people. By 1850 Victorio started to be

noticed by the American military as a skilled warrior; in 1853 he affixed an "X" as his signature to a formal agreement with the American government. Although the document was never ratified by the U.S. Senate and thus became invalid, Victorio's signature was a sign of his growing leadership status.

Victorio conducted a successful raid in 1855, taking his accomplices into the Mexican states of Sonora and Chihuahua to bring back large numbers of captives and livestock. In July 1862, he took part in the significant Apache Pass battle and continued to participate in numerous skirmishes and depredations with white settlers and the American military. In 1863, after the death of Mangas Coloradas, Victorio assumed leadership of the group. In September 1879 he and sixty warriors raided a cavalry unit camped near a small Hispanic settlement in southwestern New Mexico. The Apaches killed five soldiers and three civilians, galloping off with sixty-eight horses and mules. The attack signaled the start of the Victorio War.

By January of 1880, Victorio had led his people in battles across three states, leaving the pursuing U.S. Army baffled at every turn. He fought Mexicans, settlers, Texas Rangers, and the Ninth Cavalry in New Mexico, Texas, and Mexico, winning engagements at almost every contact. The Ninth Cavalry, known as Buffalo Soldiers, was one of six black regiments formed after the Civil War to help keep peace on the Western frontier. On April 6, 1880, seventy-one members of the Ninth Cavalry, led by Captain Henry Carroll, cautiously approached Victorio's camp in the Hembrillo Basin, a natural stronghold, in south central New Mexico. They were immediately surrounded by a larger force of about 150 Apaches under Victorio's leadership, firing volley after volley from behind stacked breastworks erected on the surrounding ridgetops. Despite all efforts, Victorio's warriors were ultimately driven from their positions (Laumbach, 2000, 248).

Victorio's son Washington was killed in a battle on June 5, 1880 (Thrapp, 1974, 282), after which the weary chief divided his forces and moved with about 200 followers toward Mexico. Victorio took his people to an unmistakable site on the plains, three rocky peaks called *Tres Castillos*, where they were eventually attacked by an irregular group of Mexicans and Tarahumara Indians. Fighting continued for hours until the dawn of October 15, 1880, when Victorio was dead, either by his own hand or from a bullet fired by one of the Indians, as were sixty warriors and eighteen women and children. Sixty-eight

women and children were taken captive, along with 180 animals. Prisoners were gathered, the adolescent boys were taken to a nearby arroyo and shot, while the remaining women and children were enslaved.

Warrior, Clyde

Indian nationalist, social critic, student activist, renowned fancy dancer, and youth leader, Clyde Warrior (Ponca, 1939–1968) was a major figure in the Native American student–youth movement of the 1960s. He helped found the National Indian Youth Council (NIYC). His ideas changed how Indian people thought about activism and nationalism. Thousands were inspired by his charisma, commitment, and clamor for change.

Warrior was born during the Great Depression near Ponca City, Oklahoma. His grandparents raised him traditionally. As a young man, he became instrumental in the revival of Ponca songs and dances. By 1957 the newspapers were already calling him a world champion dancer. In 1958 Warrior won an award in the design category at a state-level high school art competition. By early 1961 he was attending Cameron Junior College in Lawton, Oklahoma.

Early in the spring of 1961, Warrior traveled to the University of Oklahoma to attend a regional planning conference for the American Indian Chicago Conference. Before the semester was over,

he returned to the University of Oklahoma to join 300 Indian youth and students for the annual meeting of the Southwestern Regional Indian Youth Council. Although he was a newcomer to the youth council movement, which had emerged in the Southwest, Warrior became its president. The young people who elected him were amazed at his confidence and Indian pride.

In June 1961, Clyde Warrior attended the American Indian Chicago Conference with nearly thirty students from the Workshop on American Indian Affairs. They were frustrated that older Indian leaders expected them to run errands. The students did this, but they also took matters into their own hands. Several won election to leadership positions at the conference. For instance, Warrior served on the Drafting Committee and helped revise the Declaration of Indian Purpose. The students also formed a youth caucus. During the conference Warrior performed a ceremonial song and announced that he had prayed in behalf of the confused delegates. He also helped the youth caucus to seize the microphone and told the conference delegates to stop being so deferential toward white people.

When the conference concluded, Warrior and several of the students returned to Colorado for the remainder of their summer workshop. Many of the students had been radicalized by their experience in Chicago and grew impatient with the slow and steady approach to change advocated by their instructors. Some of the students stayed, others left early, and the most committed among them, including Warrior, assembled in August at Gallup, New Mexico. At this meeting the students discussed their goals, elected officers, and decided to call their organization the National Indian Youth Council. Warrior was elected to its board of directors.

Between late 1961 and 1964 Warrior cemented his reputation as a national Indian leader. He was nominated for a spot on his tribal council. He presided over a National Indian Youth Conference and was in demand on college campuses as a speaker. He returned to the Workshop on American Indian Affairs, served as coeditor of its student newsletter, and soon became coeditor of the University of Chicago periodical *Indian Voices*. He worked with Marlon Brando and publicists in New York City to help tribes in Washington State secure their fishing rights. At the March on Washington and Freedom Summer, he increased his knowledge of civil rights strategies. He was invited to speak in Washington, D.C., on how the War on Poverty could bene-

fit American Indians. In late 1964 he published his influential essay, "Which One Are You? Five Types of Indians."

During the last four years of his life, Warrior maintained a demanding schedule. He married and became a father. The NIYC elected him its president. Colleges called him for speaking engagements. His testimony before the president's National Advisory Commission on Rural Poverty was reprinted as "We Are Not Free." He represented the NIYC at Martin Luther King Jr.'s anti-Vietnam peace march in New York City. The John Hay Whitney Foundation awarded him an Opportunity Fellowship for graduate work in American Studies. These activities took a toll on Warrior. He put on weight and the excessive drinking harmed his liver. He died suddenly while working on an Oklahoma summer school project in July 1968. In his honor, the NIYC organized the Clyde Warrior Institute in American Indian Studies.

Washakie

Washakie's Shoshonis allied with Plenty Coups' Crows to assist the U.S. Army against the Cheyennes, Sioux, and others who were defined by the United States as "hostile" during the final phases of the Plains Wars, beginning in the 1870s. Washakie's accommodation helped him bargain for a sizable, fertile reservation in the Shoshonis' homeland, while "hostile" Cheyennes, Sioux, and their allies were assigned to arid reservations and treated miserably after their surrenders.

Various accounts place Washakie's birth at between 1798 and 1804. His father, Pasego, was of mixed blood; his mother was Shoshoni. Pasego was killed by Flatheads when Washakie was a child. As a young man, Washakie developed his skills as a warrior by riding for several years with a band of Bannocks. He stood six feet tall, married several women, and had twelve children. His reputation was mainly as a warrior (although he was rarely aggressive after

his youth), but he also was known among the Shoshoni as an excellent singer.

By the 1840s, large numbers of gold seekers on their way to California were passing through the Shoshonis' homeland in present-day Wyoming, but few settled in the area. A few years later, a large party of Mormons under Brigham Young settled on the southern edge of the Shoshone homeland at the Great Salt Lake. In 1851, Washakie rejected the terms of a proposed treaty that would have diminished Shoshoni lands, and allied for a time with the Mormons, before the federal government asserted authority over them as part of Utah's bid for statehood. In 1869, Washakie negotiated the Treaty of Fort Bridger, which set apart 3 million acres for the Shoshonis in their traditional homeland.

By the mid-1870s, the Plains Wars were drawing to a close. Washakie allied with the Crows and the U.S. Army at the Little Bighorn. Plenty Coups worried that General George Crook was not prepared for Crazy Horse's Lakotas when they met in battle, along with Washakie's Shoshones, June 16, 1876. He was correct; Crazy Horse routed Crook and his Indian allies in a battle that presaged Custer's Last Stand nine days later.

O. O. Howard, who is best-known as the commander who pursued Chief Joseph and other non-treaty Nez Percés on their Long March in 1877, recalled Washakie as "a tall, big man with fine eyes and a great deal of hair. He spoke broken English, but could make himself understood. He was a great eater. . . . He ate very politely, but was like a giant taking his food" (Johansen and Grinde, 1997, 410).

Howard said that Washakie was famous for his skill as a buffalo hunter. Despite his support for the immigrants, Washakie and his people had their share of troubles with broken treaties. In 1870, land that had been set aside for the Shoshonis and Bannocks by a treaty signed in 1864 was demanded for white settlement. Many young Shoshoni warriors called for war, but Washakie forbade it.

Washakie allied with the whites out of necessity, not choice. He chafed at being confined on a reservation. In 1878, at a meeting called by the governor of Wyoming, Washakie said:

The white man, who possesses this whole vast country from sea to sea, who roams over it at pleasure and lives where he likes, cannot know the cramp we feel in this little spot, with the undying remembrance of the fact, which you know as well as we, that every foot of what

Washakie was a Shoshoni chief and representative for both the Shoshoni and Bannock peoples. He negotiated the surrender of the Green River Valley in eastern Utah and southern Wyoming, which provided for the construction of the Union Pacific Railway. (National Archives and Records Administration)

you proudly call America, not very long ago belonged to the Red Man. The Great Spirit gave it to us, [and] there was room enough for all his tribes; all were happy in their freedom (Johansen and Grinde, 1997, 410).

The whites had superior tools and weapons, said Washakie, and "hordes of men" to use against the Indians. He continued: "We . . . sorry remnants of tribes once mighty, are cornered on little spots of the earth, all ours by right—cornered like guilty prisoners, and watched by men with guns who are more than anxious to kill us off" (Johansen and Grinde, 1997, 410).

When Washakie was an elderly man, his eldest son (also named Washakie) was killed in a drunken

brawl with a white man. The elder Washakie was grieved by the fact that his son had passed onto the Spirit World in disgrace, “like an Arapaho,” he said. (The Shoshonis and Arapahoe were bitter enemies, even in the face of overwhelming white encroachment.) Washakie also opposed the Ghost Dance, but he urged his people to continue the Sun Dance, which they had borrowed from the Sioux.

Despite such doubts, Washakie was such a source of support for the U.S. Army that in 1878 it named a frontier fort after him in the Wind River Valley. Washakie died in his sleep on February 20, 1900. He was buried with the honors accorded a captain in the post cemetery at Fort Washakie.

Two statues of Washakie memorialize him in the Salt Lake City area. The most notable is downtown, where he is part of the Brigham Young Monumental Group, along with other people (all American non-Natives) who gave great aid to initial Mormon settlement in the Salt Lake Valley.

Watie, Stand

Stand Watie (1806–1871) was the only American Indian to hold the Confederate rank of brigadier general during the U.S. Civil War. He was also the last Confederate general to surrender, laying down his arms in June of 1865, more than two months after the surrender of the South at Appomattox. In addition, Watie served as principal chief of the Confederate Cherokee Nation, part of a governmental fissure that occurred within the larger Cherokee Nation due not only to the Civil War, but also to past disagreements over Cherokee removal.

Born into the Cherokee Nation in 1806 in what is now Georgia, Stand Watie was raised by a full-blood Cherokee father and a mixed-blood mother.

His family is full of well-known Cherokee leaders. Elias Boudinot, Watie’s brother, was the founder of the *Cherokee Phoenix* and a signer of the 1835 Treaty of New Echota, which ignited the removal of the Cherokee from their lands in the southeastern United States. Similarly, Major Ridge, Watie’s uncle, was a factional chief in the Cherokee Nation. John Rollin Ridge, Watie’s cousin, became a well-known Cherokee poet and author in California during the second half of the nineteenth century. While Watie may not be as well-known as his kin, his role in nineteenth-century Cherokee politics is crucial to understanding the tribe’s rocky transition from their eastern homeland to their new land in the Territory.

Watie was among a small group of dissenters who considered removal to Indian Territory a promising solution to white encroachment on Cherokee land. He was thus one of the signers of the Treaty of New Echota in 1835, which ceded Cherokee land for new land out west. This treaty was considered fraudulent by the majority of the Cherokees living in the East and solidified a divide between pro- and antiremoval parties in the tribe.

Watie and his cosigners moved to the Territory (today Oklahoma) in 1837, before the devastating forced removal of most remaining tribal members along the Trail of Tears in 1838. At least one-quarter (approximately 4,000) of the traveling population died along the way. Once the remainder of the tribe, led by John Ross, arrived and settled in the Territory, the pro- and antiremoval parties clashed. In 1839, Watie’s relatives—Boudinot, Major Ridge, and his son John Ridge—were executed by the antiremoval party for betraying their tribe. As a member of this influential family, Watie was now considered the leader of the proremoval Cherokees.

Strife among the tribe’s factions continued until 1846, when peace was made by way of a new treaty with the U.S. government. Between 1846 and the outbreak of the Civil War, Watie had a family and began a legal practice. He also became a member of the Knights of the Golden Circle, a mainly white proslavery organization.

In 1861, with the secession of the South from the Union, Watie raised the Cherokee Regiment of Mounted Rifles. He used this regiment’s influence to pressure John Ross, the Cherokee’s principal chief (and longtime foe of Watie and the Confederate States), to side with the Confederacy. Watie’s tactics worked and, soon after the war’s beginning,

Stand Watie was a Cherokee leader and served as a Confederate general. (National Archives and Records Administration)

Ross briefly sided with the South. In 1862, however, as Ross fled the Territory for Philadelphia, Watie was elected principal chief of the Confederate Cherokees.

Watie participated in battles at Pea Ridge (1861), Wilson's Creek (1861), and the first Battle of Cabin Creek (1863), among others, and was promoted to brigadier general in 1864. The general was known for his guerilla war tactics.

After the Civil War, Watie left politics behind in large part and returned home, where he died a few years later in 1871.

Welch, James

James Welch (1940–2003), a novelist associated with the modern Native American literary renaissance, was born in Browning, Montana, of Blackfeet, Gros Ventre, and European heritage and spent his early childhood on the Blackfeet Reservation of Montana. His family lived in a number of western cities before turning to farming on the Fort Belknap Reservation following Welch's graduation from high school in Minneapolis, Minnesota. As a child he always wanted to be a writer. His literary career began in earnest as an undergraduate at the University of Montana (BA, 1965), where he was nurtured by the notable collection of writers who gathered around Richard Hugo and William Kittredge in Missoula, a city that remained the geographical center of Welch's life as a writer.

The five novels written by Welch present distinct episodes of American Indian experience that are unified by their portrayal of Indian culture's richness and the heartache of its dislocation. The reader can examine the novels in the order they were written or note that they can be reorganized into a historical chronology of Indian experience. *Fools Crow* (1986) is the story of the Blackfeet from the era of the American Civil War through the Marias River massacre of January 1870, which marked the end of independent life for the tribe.

Next in historical sequence is *The Heart Song of Charging Elk* (2000), the story of an Oglala Sioux who becomes separated from William F. "Buffalo Bill" Cody's Wild West Show while on tour in Europe and lives out his life in France. After a number of years he rejects the opportunity to rejoin the Cody show and return to South Dakota.

Two other works, *Winter in the Blood* (1974) and *The Death of Jim Loney* (1979), address isolated men negotiating indefinite time frames in the midst of twentieth-century reservation life. Their personal problems rise out of tenuous ties to their families and cultural traditions on the Fort Belknap reservation. *Winter in the Blood* suggests a recovery of cultural and family connections. Jim Loney pursues suicide at the hands of a law enforcement officer when he allows himself to be shot by his pursuers. The most recent historical setting occurs in *The Indian Lawyer* (1990), the story of a "successfully assimilated" Blackfeet Indian who used athletic prowess to advance his intellectual interests with college and legal degrees and a position in an

important Helena law firm. At the end of the book Sylvester Yellow Calf abandons his Helena legal practice and a campaign for Congress to return to the reservation and an unspecified future.

In addition to his novels, Welch began his writing career with a collection of poetry, *Riding the Earthboy* 40 (published in 1971, revised and expanded in 1976). He also has ventured into memoir and history with *Killing Custer* (1994), occasioned by his work as an advisor to a television program, "Last Stand at Little Big Horn."

Welch's work appears frequently in general literary anthologies and those devoted to Indian writers. Literary analysts have approached his work from a variety of angles, including his understanding of the importance of place and his status as an Indian writer. Welch's landscapes are not photographic images of the world of the Fort Belknap reservation and neighboring towns. Readers feel the importance of place even though it is not possible to locate the exact physical settings for the action in his books. His landscape details seep into his narratives in ways that present lives embedded in the land. Welch's mixed-blood ancestry includes ties to a white trader killed by Blackfeet warriors on the eve of the Marias River Massacre, the event that concludes *Fools Crow*. Critics concerned with blood quanta of Indian writers do not include Welch among those whose perspectives, visions, or ancestries are questionable.

Honors for Welch's work include the Native Writer's Circle's lifetime achievement award in 1997 and the French government's 1995 medal designating him a *Chevalier of the l'Ordre des Artes et des Lettres* (Knight of the Order of Arts and Letters) for *Fools Crow*. While speaking of the Blackfeet in *Fools Crow*, Welch revealed something of his overall goals as a writer: "They weren't particularly noble Indians. They weren't particularly bad Indians. They were human beings. That's really what I wanted to get across, the idea that historical Indians were human beings. They weren't clichés."

Whitman, Marcus and Narcissa

On November 29, 1847, a small group of Cayuse Indians entered the Waiilatpu mission in the eastern reaches of the Oregon Country and killed fourteen white men, women, and children. Among the dead were Marcus and Narcissa Whitman, the Presbyterian evangelists who had established the station eleven years earlier in a blush of religious zeal and optimism. The killings, forever since memorialized as the Whitman Massacre, have been the subject of extensive historical study and widely differing interpretations. To early commentators, the Whitmans represented martyrs for the national cause of Manifest Destiny, fallen Christian soldiers in the battle between civilization and savagery that gave Americans title to the West. More recently, scholars have applied ethnohistorical methods in an effort to better understand the motives of the Cayuse perpetrators and the context in which they acted. What emerges from such analysis is not a simple story of victims and villains but a complex drama involving frustrated ambitions, clashing expectations, and cultural misunderstandings.

The Whitman Massacre ended the first phase of missionary activity on the Columbia Plateau. Initially, the Indians of the region had expressed substantial interest in learning more about Christianity. In the late eighteenth century, a Native oracle called the Spokane Prophet had reputedly foretold the coming of the whites, who would "bring with them a book and will teach you everything, and after that the world will fall to pieces." The idea that whites were spiritually potent but potentially dangerous people gained credence in the early 1800s, when fur traders introduced both miraculous new goods and terrible new diseases such as smallpox. While traditional shamans struggled to cope with the recurring epidemics and their concomitant loss of status, the survivors sought explanations and solutions for

American missionary Marcus Whitman was murdered by a Cayuse in his home on November 29, 1847, near present-day Walla Walla, Washington. His wife, Narcissa and twelve associates were also killed in what became known as the Whitman Massacre. (Hulton Archive/Getty Images)

their misfortunes. Many concluded that the whites' immense "spirit powers" stemmed from their religion, and in 1832 a delegation of four Nez Percé and Flathead men journeyed to St. Louis seeking the Book of Heaven. Their visit stirred tremendous excitement in the Protestant evangelical community, which perceived the delegation as a heathen plea for salvation and a chance to counteract Catholic influence in the region. The American Board of Commissioners for Foreign Missions (ABCFM) quickly dispatched the Whitmans, among others, and in 1836 the Whitmans established their station at Waiilatpu to proselytize the Cayuses, Umatillas, and Walla Wallas.

After a promising start, the enthusiasm and idealism that had inspired the mission quickly dissolved into mutual disappointment and distrust. Profound cultural differences and communication problems hindered conversion efforts, while Christianity failed to deliver the tangible benefits many Indians had hoped to obtain. The Whitmans' deep ethnocentrism strained relations further, breeding resentment and suspicion on both sides. By the early 1840s, the Whitmans had begun limiting their con-

tact with Indians and catering primarily to the growing stream of immigrants on the nearby Oregon Trail. The ABCFM moved to close the station in 1842 after hearing critical reports from another missionary, but Marcus traveled back to Boston and convinced the board to rescind its order. The Indians were less favorably disposed when he returned a year later leading a train of a thousand new settlers. More arrived every year thereafter, and with them came fresh outbreaks of scarlet fever, whooping cough, and measles. A devastating measles epidemic in 1847 convinced some Cayuses of Whitman's evil intentions. A physician by training, Marcus had often treated their sick, but in the Plateau society a shaman with too much power could become a sorcerer who inflicted harm on others. The traditional sanction for sorcery was death.

On November 29, two Cayuse men named Tomahas and Tiloukaikt entered the Whitman house to request medicine. As Marcus argued with Tiloukaikt, Tomahas slipped behind the doctor and delivered the first of several tomahawk blows to his head. A party of Indians then killed Narcissa, ten other men, and two children before leaving with about fifty captives. As the news spread, most of the other Christian missions on the Plateau were abandoned. Although the Hudson's Bay Company ransomed the hostages a month later, war raged for two years until the Cayuses agreed to surrender five men to face American justice. They were hanged in Oregon City following a summary trial presided over by the mountain man Joe Meek. On the scaffold, Tiloukaikt declared, "Did not your missionaries tell us that Christ died to save his people? So die we, to save our people." The massacre and the war actually hastened the creation of the Oregon Territory, however, and in 1855 the remaining Cayuses signed a treaty ceding the bulk of their land to the United States.

Williams, Roger

One of America's earliest cultural pluralists and advocates of the separation of church and state, Roger Williams founded Providence, Rhode Island, as a safe haven for early European settlers who had suffered religious persecution. He also believed in forging good relations with the Native peoples of New England. Rather than fight for title to the land, Williams argued that colonists should negotiate and pay a fair price for it. His policy proved effective, as Rhode Island had the most peaceful Indian relations in all the colonies.

Williams was born in London, England, about 1603. His father was a hardworking shopkeeper who hoped to carve out a better life for his children. Young Roger eventually went off to college at Cambridge University, where he studied to become a minister. He later landed a job as the private chaplain of nobleman, Sir William Masham. While work-

ing for Masham, Williams became increasingly interested in the Massachusetts Bay Colony, of which he had heard rousing stories. In 1631, Williams decided to give up his life in England and set off for America, where he hoped to establish himself in what was already being viewed in some quarters as a land of opportunity.

Once in Massachusetts Bay, Williams found himself at odds with the colony's leadership. He criticized the king and believed that the colony should completely separate itself from the Church of England, rather than try to reform or purify it. Williams believed in religious freedom, arguing that governments were not divinely sanctioned and therefore they had no right to establish state religions. He also claimed that the colony's royal charter was null and void because the settlers had not purchased the land from the Native people. The colony's leaders considered such talk as tantamount to blasphemy, and Williams was eventually banished from Massachu-

Narragansett protect British colonist Roger Williams. Williams developed a good relationship with the Narragansetts, a situation that enabled him to negotiate an end to the Pequot War in 1637, thereby helping the Puritans who had exiled him. (Library of Congress)

setts Bay in 1636. Rather than head back to England, he decided to move south and establish the colony of Providence near Narragansett Bay. Williams invited all religious refugees to the new colony and set up a trading post at Cocumscussoc, where he met and befriended the local indigenous people.

Unlike his belligerent neighbors to the north at Massachusetts Bay, Williams made peace and forged positive relations with the Natives. He insisted on adequately compensating the Narragansett Indians for their lands. Only after he fairly purchased the territory around Providence did he apply to London for a colonial charter. But Williams did not stop there. He went on to further the Narragansetts' trust by learning their language and familiarizing himself with their culture. He saw in Indian society a degree of harmony, humanity, and hospitality that was decidedly lacking among his own people. Williams documented his observations and the Narragansett language in his book, *A Key into the Language of America: Or, An help to the Language of the Natives in that part of America, called New-England* [sic]. Considered the first ethnoanthropological study of American Indians, Williams' account records Narragansett culture, analyzing everything from their religious beliefs to their sleeping habits.

Though Williams was a staunch advocate of Indian land rights, he was also a pragmatist and a realist. Hence, when the Pequots went to war with Massachusetts Bay over that colony's encroachment on Native land, Williams convinced the Narragansetts to remain neutral. He believed that only death and destruction would come to the Indians if they fought the colonists. Williams' peace policy and dealings with the Native peoples were effective; relations between whites and the Narragansetts remained cordial for nearly forty years. But the burgeoning white population's continual expansion onto Indian lands inevitably led to further conflict.

In 1675, Wampanoag Chief Metacom took on Massachusetts Bay, resulting in what came to be known as King Philip's War—the bloodiest conflict to that time. Though the Narragansetts had not taken sides in the war, colonists preemptively attacked them, resulting in the Great Swamp Massacre. With 500 to 600 dead—most of which were women and children—the Narragansett leadership ignored Williams' pleas and decided to side with Metacom in his fight against the colonists. They launched an assault on Providence, burning the town to the ground. Williams, in turn, accepted a commission as captain in the local militia and fought

his former friends. In the end, the Narragansetts and Wampanoags could not match the firepower of the colonists, and they suffered a devastating loss in the war.

After King Philip's War, Williams' vision of a peaceful land where Indians and whites lived side by side, each learning from the other, came crashing down. With all of his former Narragansett friends gone, he lived out his last days a broken man among the rubble and ashes of Providence. Roger Williams died in the winter of 1683.

Wilson, Richard

Richard Wilson (Oglala Lakota, 1936–1990) was chairman of the Pine Ridge Indian Reservation tribal council during the 1973 Wounded Knee occupation, as well as during its violent aftermath. From the early 1970s until his defeat for the chairman's office by Al Trimble in 1976, Wilson outfitted a tribal police force that was often called the goon squad. This police force, which took "GOON" to mean Guardians of the Oglala Nation, was financed with tribal money from the federal government and cooperated closely with the Federal Bureau of Investigation (FBI).

One result of the escalating conflict between Oglala Lakota traditionalists allied with the American Indian Movement (AIM) and Wilson was the seventy-one-day occupation of Wounded Knee in 1973. The conflict between Wilson and AIM likely sprang from political differences: Wilson, a supporter of the Viet Nam war, saw dissent by AIM and by students as acts of ungrateful citizens who were dupes of the Communists. The local context of the occupation included an effort to publicly confront Wilson's policies, which often favored non-Indian ranchers, farmers, and corporations.

known for feeding anyone who came to his door, and he had a major role in beginning a Lakota community college on the reservation, as well as a number of other tribal enterprises.

Wilson died of a heart attack in 1990, as he was preparing to run for a third term as tribal chairman.

Winnemucca

A diplomatic, influential leader during a fraught time in northern Paiute (Numa) history, Winnemucca (died 1880) worked hard, yet ultimately unsuccessfully to ensure peaceful relations with non-Natives, and he earned the distinction (especially among non-Natives) of being first overall chief of the northern Paiute. The northern Paiute traditionally ranged in present-day central and eastern California, western Nevada, and eastern Oregon. Prior to assuming responsibility as chief, Winnemucca (also known as Po-i-to or Old Winnemucca) is remembered as a father, medicine man, and an antelope charmer (Hopkins, 1994, 55). Public knowledge of Winnemucca's life begins with his acquisition of political power. When Captain Truckee, Winnemucca's father-in-law, left on an expedition to California, probably when accompanying Captain John Fremont in the mid-1840s, he appointed Winnemucca the band leader. Winnemucca's status as "chief" was recognized internally among the northern Paiute, distinguishing him from leaders who were appointed and acknowledged only by non-Natives (Hopkins, 1994, 10, 194).

Winnemucca assumed leadership of the northern Paiute at a critical moment in Paiute history. Regular contact with non-Natives had begun only a few years earlier, under Truckee's leadership, and

changes to everyday life were imminent. Truckee had welcomed non-Natives with joy, because their arrival signaled the fulfillment of a Paiute prophecy (Hopkins, 1994, 6–7). In a dream, however, Winnemucca saw non-Natives bringing bloodshed and destruction among the northern Paiutes, and he did not celebrate the growing non-Native presence. He sought peaceful relations with non-Natives whenever possible but did not stand by to see his people abused.

In 1855 Winnemucca negotiated the Honey Lake Valley agreement with non-Native citizens of Honey Lake, California, to minimize conflict between the communities. According to the agreement, when a member of one party committed a crime against a member of the other, the communities would negotiate and turn over the perpetrator, thereby eliminating the need for continued conflict. By 1860, Winnemucca was accused of not abiding by the terms of his own agreement when he was unhelpful in the investigation of the murder of D. E. Demming, believed to be murdered by Paiutes. The agreement had collapsed on both

sides: Winnemucca would not turn over members of his community each time an Anglo accused a Paiute, and the Honey Lake community was rapidly filling with new citizens who had no regard for the 1855 agreement. At the same time, Winnemucca was outraged by the non-Natives' exploitation of another agreement in which non-Native cattle herders leased land from northern Paiutes. He traveled to Virginia City in hopes of gaining legal support but came away unsuccessful (Knack and Stewart, 1984, 65).

In the spring of 1860, tensions between Paiutes and non-Natives grew until they culminated in the Pyramid Lake War. Winnemucca participated in the conflict at Pyramid Lake, although by 1862 he was exchanging gifts with Governor James Nye on neutral ground in an effort to maintain peace. In 1865, thirty Paiutes were massacred at Pyramid Lake, including Winnemucca's wives, several daughters, and other family members (Knack and Stewart, 1984, 79). Nevertheless, in 1867 Winnemucca sent a letter to Carson City in hopes of negotiating peace for his people once again.

By this time, Winnemucca was widely recognized by the Mormons and other non-Natives, and some of his own people, as the first overall chief of the northern Paiutes. In 1870, the 5,000 northern Paiutes still operated in small, semiautonomous bands of fifty to 200 that acknowledged linguistic and cultural ties. Each had its own chief, yet many acknowledged Winnemucca as a form of chief over all (Stewart, 1939, 129). Notably, Winnemucca never organized all of his subchiefs but was known as the "traveling chief" (Stewart, 1939, 130). He negotiated with Indian agents and the military on behalf of his people as they lost land and freedom and became increasingly dependent on government rations for survival.

Following the Bannock Wars, Winnemucca and his daughter Sarah (who would become famous as an educator and writer) traveled to Washington, D.C., and met with Secretary of the Interior Carl Schurz and President Rutherford B. Hayes to inform them of the northern Paiutes' primary concerns: their lack of essential supplies, exploitation by Indian agents, and the government's unfulfilled promises to help them settle in a permanent, peaceful home. Winnemucca and his daughter worked to ensure peace for the northern Paiutes, but, as bearers of promises that the federal government never upheld, their favor fluctuated in the eyes of some

Paiutes. Nevertheless, Winnemucca continued caring for his people until his death in 1880.

Winnemucca, Sarah

Also known as Thocmetony ("Shell Flower"), Sonometa ("White Shell"), and the Princess, Sarah Winnemucca (or Hopkins, her married name) was one of the earliest Native American women writers to capture the flavor and characteristics of her Paiute culture. She also traveled extensively to give lectures describing the wrongs done to her fellow Native Americans.

Winnemucca was born about 1844 among the Paiute people (then spelled Piute) at Humboldt Sink in what is now Nevada. Her father, Winnemucca II, was chief of the tribe and was the son of Captain Truckee, a wise and knowing Paiute chief. Although she lived for a portion of her childhood in the San Joaquin Valley area of California, she returned to Nevada, where she moved into the home of a white family and was named Sarah Winnemucca. She had attended a convent school in California, and that seems to have been her only formal education.

Starting in 1868, Winnemucca served as an interpreter between her people on the Paiute reservation and the whites who surrounded it. In 1876, she taught at the Indian school on the Malheur Reservation in Oregon. She also served as the guide and interpreter to General Oliver O. Howard during the Bannock War in Oregon in 1878.

When the Paiute were forcibly removed to the Yakima Indian Reservation in what is now Washington State in 1879, Winnemucca and her father traveled to Washington, D.C., to try to reverse the decision, but to no avail. She then began lecturing in San

Francisco about the wrongs perpetrated against her people, and she became a leading spokesperson for those who saw the government's policy toward Native Americans as cruel and unjust. Although she met in 1880 with President Rutherford B. Hayes and Interior Secretary Carl Schurz, who promised to help return her people to their reservation, nothing was done for the Paiute.

In 1881, Winnemucca married Lieutenant L. H. Hopkins, a white army officer who sympathized with her plight. She then conducted an extensive lecture tour of the East Coast, and she was sponsored by woman suffrage advocates Elizabeth Peabody

and Mary Tyler Peabody Mann. In 1883, as a result of the lectures on behalf of her people, she published *Life Among the Piutes: Their Wrongs and Claims*, which Mann edited for her. A personal and tribal history, the work documented her people's moral character and achievements and examined Indian-white relations, a theme previously unexplored in earlier Native American writings.

Winnemucca lived only eight years after the publication of her famed work, and, in that time, she fought continuously to return the Paiute lands to her people. She died of tuberculosis on her sister's ranch near Monida, Montana, on October 16, 1891. The Paiute people remembered her as "Mother."

Women of All Red Nations

Women of All Red Nations (WARN) was formed in the middle 1970s "to address issues directly facing Indian women and their families" (Wittstock and Salinas, 2006). WARN has some notable alumnae. For example, Winona LaDuke, who ran for vice president of the United States on the Green party ticket with Ralph Nader in 1996 and 2000, was a WARN founding member.

When the American Indian Movement (AIM) began in the 1960s, women members found themselves playing supporting (and, some asserted, subservient) roles. In 1974, at Rapid City, South Dakota, Native women from more than thirty nations met and decided, among other things, that "truth and communication are among our most valuable tools in the liberation of our lands, people, and four-legged and winged creations" (Johansen, 1998, 44). The formation of WARN enabled politically active Native American women to speak with a collective voice on issues that affected them intensely. At the same time, WARN members, with chapters throughout the United States, worked to support a large number of Native American men in prisons.

Members of WARN also form liaisons with non-Native feminist groups, such as the National Organization of Women, to advocate policies of concern to minority women. The group's main priorities include the improvement of educational opportunities, health and medical care (including reproductive rights), resistance to violence against women, an end to stereotyping, support for treaties, and protection of the environment, including campaigns against uranium mining and milling, a long-time threat to Lakota and Navajo women as well as men.

One critical issue raised by WARN is the widespread sterilization of Native American women in government-run hospitals, an extension of a eugenics movement aimed at impeding the population increase of groups believed by some in government to be poor and/or mentally defective. These programs had ended for most of non-Indian groups after World War II (Germany's Nazis having given eugenics an extremely bad reputation), but they continued on Indian reservations through the 1970s. Wherever Indian activists gathered during the Red Power years of the 1970s, conversation inevitably turned to the number of women who had had their tubes tied or their ovaries removed by the Indian Health Service. Communication spurred by activism provoked a growing number of Native American women to piece together and name what amounted to a national eugenics policy carried out with copious federal funding.

WARN and other women's organizations publicized the sterilizations, which were performed after pro forma "consent" of the women being sterilized. The "consent" sometimes was not offered in the women's language, and often followed threats that they would die or lose their welfare benefits if they had more children. At least two fifteen-year-old girls were told they were having their tonsils out before their ovaries were removed. The enormity of government-funded sterilization, as well as its eugenics context, has been documented by Sally Torpy (1998) in her thesis, "Endangered Species: Native American Women's Struggle for Their Reproductive Rights and Racial Identity, 1970s–1990s," written at the University of Nebraska at Omaha.

No one even today knows exactly how many Native American women were sterilized during the 1970s. One basis for calculation is provided by the General Accounting Office, whose study covered only four of twelve IHS regions over four years (1973–1976). Within those limits, the study docu-

mented the sterilization of 3,406 Indian women. Another estimate was provided by Lehman Brightman (Lakota), who devoted much of his life to the issue. His educated guess (without exact calculations to back it up) is that 40 percent of Native women and 10 percent of Native men were sterilized during the decade. Brightman estimates that the total number of Indian women sterilized during the decade was between 60,000 and 70,000. The women of WARN played a central role in bringing involuntary sterilization of Native American women to an end.

Wovoka

Numu (northern Paiute) seer, holy man, and prophet of the 1890 Ghost Dance movement. After experiencing a vision, Wovoka (Jack Wilson, ca. 1858–1932) began preaching to the local Numu on the Walker River Reservation. Word of his teachings spread rapidly to reservations as far east as Oklahoma, and the Ghost Dance of 1890 became one of the most widespread and famous pan-Indian religious movements of the nineteenth century.

Wovoka (the [wood] cutter) was born sometime between 1856 and 1863 in either the Smith or Mason Valleys of western Nevada. His father was named Numu-tibo'o ("Northern Paiute White Man"), and Wovoka had at least two younger brothers. As a child of about eight, he began working on the Mason Valley ranch of David and Abigail Wilson. There he acquired the name by which he was more commonly known by local whites and Indians alike: Jack Wil-

son. The Wilsons were devout United Presbyterians, and it is reasonable to suspect that this early exposure to Christianity influenced the development of the Ghost Dance doctrine. Wovoka and his wife Mary (who by various accounts was Numu or Bannock) had a number of children but only three daughters survived to adulthood.

Wovoka grew up in a spiritual tradition based in shamanism and prophecy. Two decades before his vision, a previous version of the Ghost Dance had emerged from Walker River. James Mooney, the first to study the religion, believed that Wovoka's father was the 1870 Ghost Dance prophet, but subsequent scholarship has determined that the prophet was a Fish Lake Valley Paiute named Wodziwob. Wovoka's father may have had some involvement with the earlier Ghost Dance but the details remain obscure. Wovoka demonstrated his power to followers in ways common for Numu shamans—weather control and invulnerability. Although he was not practicing as a shaman when he experienced his visions, he later became a noted healer.

Wovoka experienced his first vision on New Year's Day 1889. He reported traveling to heaven and meeting God. He was instructed to return to Earth and tell the people to lead good and loving lives and to follow a ritual that, if faithfully observed, would reunite them with their deceased loved ones and friends in a world without "death or sickness or old age." The basic ceremony in 1890 was identical to that of 1870—the Great Basin Round Dance. Within the circle, men, women, and children alternated sexes, interlocked fingers, and shuffled slowly to the left, all the while singing the numerous songs revealed to individual dancers in visions. The first dances probably took place early in 1889, and by the time of the second dances later that spring Indians from across the Great Basin were already in attendance.

Wovoka's doctrine was similar to the 1870 movement but exhibited some very important differ-

ences. The only written version of Wovoka's doctrine recorded by a Native person was the Messiah Letter, written by the Caspar Edson (Arapaho) in August 1891. On one level the intent of the 1890 Ghost Dance was to bring a radical transformation of the existing order—a renewal of the earth and reunification of all people—but on another its effect was redemptive. Wovoka preached a gospel of peace, love, and accommodation that, by eliminating many of the causes of internal discord, served to strengthen Indian communities. Wovoka's message was flexible and allowed room for individual and cultural interpretation. He told his followers to live at peace with the whites: "Do not fight. Do always right." On the other hand his words could also be interpreted to suggest that whites would not survive the coming cataclysm. His doctrine also exhibited far greater Christian influence than the earlier movement. Wovoka reportedly claimed he was Jesus and allegedly showed the stigmata of crucifixion to a number of Native seekers, including the Cheyenne holy man Porcupine.

The massacre of Lakota Ghost Dancers at Wounded Knee in December of 1890 did not end the practice of the religion, as is popularly believed. Wovoka continued to be a renowned healer and spiritual leader into the twentieth century. Individual Indians and delegations corresponded with and visited him until his death in September 1932. He was buried beside his wife Mary in the Walker River Reservation cemetery.

Primary Source Documents

Iroquois Great Law of Peace

Probably dating back to the mid-twelfth century, the Iroquois Great Law of Peace is accredited to legendary Huron leader Deganawidah, who lived in what is now upstate New York. Deganawidah formed a Native American confederation of five Haudenosaunee (Iroquois) in the region. Sometimes referred to as the Five Nations, the Iroquois Confederacy had many allies over a large area. The confederacy emerged as the strongest Native American confederacy in North America when European immigration began and remained so until the American Revolution. The Confederacy split during that conflict, mostly siding with the British (the Oneidas siding with the Patriots and the Senecas split). Afterward, the Confederacy was forced to cede much of its land to the Americans.

The Iroquois Great Law is a remarkable statement of human rights, and some of its principles have influenced the evolution of democracy worldwide, including the U.S. Constitution of 1787. What follows are a few brief excerpts of a condensation of the oral history that was first written during the 1880s. A complete version of the Great Law takes about four eight-hour days to recite; the last person who could recite it from memory was Jake Thomas, a Cayuga (1922–1998). The oral history has been recited in several versions. One that has been published, in Onondaga and English, is Hanni Woodbury, comp. Concerning the League: The Iroquois League Tradition as Dictated in Onondaga by John Arthur Gibson (Winnipeg: University of Manitoba Press, 1992).

I am Dekanawidah and with the Five Nations' Confederate Lords I plant the Tree of Great Peace. I plant it in your territory, Adodarhoh, and the Onondaga Nation, in the territory of you who are Firekeepers.

I name the tree the Tree of the Great Long Leaves. Under the shade of this Tree of the Great Peace we spread the soft white feathery down of the globe thistle as seats for you, Adodarhoh, and your cousin Lords.

We place at the top of the Tree of the Long Leaves an Eagle who is able to see afar. If he sees in the distance any evil approaching or any danger

threatening he will at once warn the people of the Confederacy.

Whenever the Confederate Lords shall assemble for the purpose of holding a council, the Onondaga Lords shall open it by expressing their gratitude to their cousin Lords and greeting them, and they shall make an address and offer thanks to the earth where men dwell, to the streams of water, the pools, the springs and the lakes, to the maize and the fruits, to the medicinal herbs and trees, to the forest trees for their usefulness, to the animals that serve as food and give their pelts for clothing, to the great winds and the lesser winds, to the Thunderers, to the Sun, the mighty warrior, to the moon, to the messengers of the Creator who reveal his wishes and to the Great Creator who dwells in the heavens above, who gives all the things useful to men, and who is the source and the ruler of health and life.

Every Onondaga Lord (or his deputy) must be present at every Confederate Council and must agree with the majority without unwarrantable dissent, so that a unanimous decision may be rendered.

All the business of the Five Nations Confederate Council shall be conducted by the two combined bodies of Confederate Lords. First the question shall be passed upon by the Mohawk and Seneca Lords, then it shall be discussed and passed by the Oneida and Cayuga Lords. Their decisions shall then be referred to the Onondaga Lords, [Fire Keepers] for final judgment.

In all cases the procedure must be as follows: when the Mohawk and Seneca Lords have unanimously agreed upon a question, they shall report their decision to the Cayuga and Oneida Lords who shall deliberate upon the question and report a unanimous decision to the Mohawk Lords. The Mohawk Lords will then report the standing of the case to the Firekeepers, who shall render a decision as they see fit in case of a disagreement by the two bodies, or confirm the decisions of the two bodies if they are identical. The Fire Keepers shall then report their decision to the Mohawk Lords who shall announce it to the open council.

Rights, Duties and Qualifications of Lords

If at any time it shall be manifest that a Confederate Lord has not in mind the welfare of the people or disobeys the rules of this Great Law, the men or women of the Confederacy, or both jointly, shall

come to the Council and upbraid the erring Lord through his War Chief. If the complaint of the people through the War Chief is not heeded the first time it shall be uttered again and then if no attention is given a third complaint and warning shall be given. If the Lord is contemptuous the matter shall go to the council of War Chiefs. The War Chiefs shall then divest the erring Lord of his title by order of the women in whom the titleship is vested. When the Lord is deposed the women shall notify the Confederate Lords through their War Chief, and the Confederate Lords shall sanction the act. The women will then select another of their sons as a candidate and the Lords shall elect him. Then shall the chosen one be installed by the Installation Ceremony.

If a Lord of the Confederacy of the Five Nations should commit murder the other Lords of the Nation shall assemble at the place where the corpse lies and prepare to depose the criminal Lord. If it is impossible to meet at the scene of the crime the Lords shall discuss the matter at the next Council of their Nation and request their War Chief to depose the Lord guilty of crime, to "bury" his women relatives and to transfer the Lordship title to a sister family.

Certain physical defects in a Confederate Lord make him ineligible to sit in the Confederate Council. Such defects are infancy, idiocy, blindness, deafness, dumbness, and impotency. When a Confederate Lord is restricted by any of these conditions, a deputy shall be appointed by his sponsors to act for him, but in case of extreme necessity the restricted Lord may exercise his rights.

The Lords of the Confederacy of the Five Nations shall be mentors of the people for all time. The thickness of their skin shall be seven spans—which is to say that they shall be proof against anger, offensive actions, and criticism. Their hearts shall be full of peace and good will and their minds filled with a yearning for the welfare of the people of the Confederacy. With endless patience they shall carry out their duty and their firmness shall be tempered with a tenderness for their people. Neither anger nor fury shall find lodgment in their minds and all their words and actions shall be marked by calm deliberation.

All Lords of the Five Nations Confederacy must be honest in all things. They must not idle or gossip, but be men possessing those honorable qualities that make true Royaneh. It shall be a serious wrong for anyone to lead a Lord into trivial affairs, for the people must ever hold their Lords high in estimation out of respect to their honorable positions.

Should any man of the Nation assist with special ability or show great interest in the affairs of the Nation, if he proves himself wise, honest, and worthy of confidence, the Confederate Lords may elect him to a seat with them and he may sit in the Confederate Council. He shall be proclaimed a "Pine Tree sprung up for the Nation" and shall be installed as such at the next assembly for the installation of Lords. Should he ever do anything contrary to the rules of the Great Peace, he may not be deposed from office—"no one shall cut him down"—but thereafter everyone shall be deaf to his voice and his advice. Should he resign his seat and title no one shall prevent him. A Pine Tree chief has no authority to name a successor nor is his title hereditary.

People of the Five Nations members of a certain clan shall recognize every other member of that clan, irrespective of the Nation, as relatives. Men and women, therefore, members of the same clan are forbidden to marry.

The lineal descent of the people of the Five Nations shall run in the female line. Women shall be considered the progenitors of the Nation. They shall own the land and the soil. Men and women shall follow the status of the mother. The women heirs of the Confederated Lordship titles shall be called Royaneh [Noble] for all time to come. The women of the Forty Nine [Fifty, with an empty seat for the Peacemaker]. Royaneh families shall be the heirs of the Authorized Names for all time to come.

If the female heirs of a Confederate Lord's title become extinct, the title right shall be given by the Lords of the Confederacy to the sister family whom they shall elect and that family shall hold the name and transmit it to their (female) heirs, but they shall not appoint any of their sons as a candidate for a title until all the eligible men of the former family shall have died or otherwise have become ineligible.

Five arrows shall be bound together very strong and each arrow shall represent one nation. As the five arrows are strongly bound this shall symbolize the complete union of the nations. Thus are the Five Nations united completely and enfolded together, united into one head, one body, and one mind. Therefore they shall labor, legislate, and council together for the interest of future generations.

The Lords of the Confederacy shall eat together from one bowl the feast of cooked beaver's tail. While they are eating they are to use no sharp utensils for if they should they might accidentally cut one another and bloodshed would follow. All measures must be taken to prevent the spilling of blood in any way.

The people [are vested] with the right to correct their erring Lords. In case a part or all the Lords pursue a course not vouched for by the people and heed not the third warning of their women relatives, then the matter shall be taken to the General Council of the women of the Five Nations. If the Lords notified and warned three times fail to heed, then the case falls into the hands of the men of the Five Nations. The War Chiefs shall then, by right of such power and authority, enter the open council to warn the Lord or Lords to return from the wrong course. If the Lords heed the warning they shall say, "we will reply tomorrow." If then an answer is returned in favor of justice and in accord with this Great Law, then the Lords shall individually pledge themselves again by again furnishing the necessary shells for the pledge. Then shall the War Chief or Chiefs exhort the Lords urging them to be just and true.

When a member of an alien nation comes to the territory of the Five Nations and seeks refuge and permanent residence, the Lords of the Nation to which he comes shall extend hospitality and make him a member of the nation. Then shall he be accorded equal rights and privileges in all matters except as after mentioned.

No body of alien people [which have been] adopted temporarily shall have a vote in the council of the Lords of the Confederacy, for only they who have been invested with Lordship titles may vote in the Council. Aliens have nothing by blood to make claim to a vote and should they have it, not knowing all the traditions of the Confederacy, might go against its Great Peace. In this manner the Great Peace would be endangered and perhaps be destroyed.

When the men of the Five Nations, now called forth to become warriors, are ready for battle with an obstinate opposing nation that has refused to accept the Great Peace, then one of the five War Chiefs shall be chosen by the warriors of the Five Nations to lead the army into battle. It shall be the duty of the War Chief so chosen to come before his warriors and address them. His aim shall be to impress upon them the necessity of good behavior and strict obedience to all the commands of the War Chiefs. He shall deliver an oration exhorting them with great zeal to be brave and courageous and never to be guilty of cowardice. At the conclusion of his oration he shall march forward and commence the War Song . . .

The rites and festivals of each nation shall remain undisturbed and shall continue as before

because they were given by the people of old times as useful and necessary for the good of men.

A certain sign shall be known to all the people of the Five Nations which shall denote that the owner or occupant of a house is absent. A stick or pole in a slanting or leaning position shall indicate this and be the sign. Every person not entitled to enter the house by right of living within it upon seeing such a sign shall not approach the house either by day or by night but shall keep as far away as his business will permit.

Christopher Columbus: Journal

Christopher Columbus kept a detailed journal of his travels in America that is not only a rich source for descriptions of the peoples he met, but also reveals his assumptions about them.

IN THE NAME OF OUR LORD JESUS CHRIST

Whereas, Most Christian, High, Excellent, and Powerful Princes, King and Queen of Spain and of the Islands of the Sea, our Sovereigns, this present year 1492, after your Highnesses had terminated the war with the Moors reigning in Europe . . .

Friday, 3 August, 1492. Set sail from the bar of Saltes at 8 o'clock, and proceeded with a strong breeze till sunset, sixty miles or fifteen leagues south, afterwards southwest and south by west, which is the direction of the Canaries.

Tuesday, 25 September. . . . At sunset Martin Alonzo called out with great joy from his vessel that he saw land, and demanded of the Admiral a reward for his intelligence. The Admiral says, when he heard him declare this, he fell on his knees and returned thanks to God, and Martin Alonzo with his crew repeated Gloria in excelsis Deo, as did the crew of the Admiral. Those on board the Nina ascended the rigging, and all declared they saw land. The Admiral also thought it was land, and about twenty-five leagues distant.

Wednesday, 26 September. Continued their course west till the afternoon, then southwest and discovered that what they had taken for land was nothing but clouds.

Thursday, 11 October. Steered west-southwest; and encountered a heavier sea than they had met with before in the whole voyage. Saw pardelas and a green rush near the vessel. The crew of the *Pinta* saw a cane and a log; they also picked up a stick which appeared to have been carved with an iron tool, a

piece of cane, a plant which grows on land, and a board. The crew of the *Nina* saw other signs of land, and a stalk loaded with rose berries. These signs encouraged them, and they all grew cheerful. Sailed this day till sunset, twenty-seven leagues.

After sunset steered their original course west and sailed twelve miles an hour till two hours after midnight, going ninety miles, which are twenty-two leagues and a half; and as the *Pinta* was the swiftest sailer, and kept ahead of the Admiral, she discovered land and made the signals which had been ordered. The land was first seen by a sailor called Rodrigo de Triana, although the Admiral at ten o'clock that evening standing on the quarter-deck saw a light . . . near a small island, one of the Lucayos, called in the Indian language Guanahani. Presently they descried people, naked, and the Admiral landed in the boat, which was armed, along with Martin Alonzo Pinzon, and Vincent Yanez his brother, captain of the *Nina*. The Admiral bore the royal standard, and the two captains each a banner of the Green Cross. . . .

Numbers of the people of the island straightway collected together. Here follow the precise words of the Admiral: "As I saw that they were very friendly to us, and perceived that they could be much more easily converted to our holy faith by gentle means than by force, I presented them with some red caps, and strings of beads to wear upon the neck, and many other trifles of small value, where-with they were much delighted, and became wonderfully attached to us. Afterwards they came swimming to the boats, bringing parrots, balls of cotton thread, javelins, and many other things which they exchanged for articles we gave them, such as glass beads, and hawk's bells; which trade was carried on with the utmost good will. But they seemed on the whole to me, to be a very poor people. They all go completely naked, even the women, though I saw but one girl. All whom I saw were young, not above thirty years of age, well made, with fine shapes and faces; their hair short, and coarse like that of a horse's tail, combed toward the forehead, except a small portion which they suffer to hang down behind, and never cut.

Some paint themselves with black, which makes them appear like those of the Canaries, neither black nor white; others with white, others with red, and others with such colors as they can find. Some paint the face, and some the whole body; others only the eyes, and others the nose. Weapons they have none, nor are acquainted with them, for I showed them swords which they grasped by the blades, and cut

themselves through ignorance. They have no iron, their javelins being without it, and nothing more than sticks, though some have fish-bones or other things at the ends. They are all of a good size and stature, and handsomely formed.

Saturday, 13 October. At daybreak great multitudes of men came to the shore, all young and of fine shapes, very handsome; their hair not curled but straight and coarse like horse-hair, and all with foreheads and heads much broader than any people I had hitherto seen; their eyes were large and very beautiful; they were not black, but the color of the inhabitants of the Canaries, which is a very natural circumstance, they being in the same latitude with the island of Ferro in the Canaries. They were straight-limbed without exception, and not with prominent bellies but handsomely shaped. They came to the ship in canoes, made of a single trunk of a tree, wrought in a wonderful manner considering the country; some of them large enough to contain forty or forty-five men, others of different sizes down to those fitted to hold but a single person.

Powhatan: Remarks to Captain John Smith

One of the most powerful Indian leaders in North America during the early seventeenth century, Powhatan ruled over a large confederacy from his base in Virginia. He had an erratic relationship with the Jamestown colonists, as the two sides maintained a tenuous peace. Nevertheless, despite their mutual suspicion, Powhatan supplied the colonists with food during several crucial periods and thus saved the fledgling colony from total disaster. Powhatan was succeeded at his death in 1618, by his brother Opechancanough, who was far less tolerant of the colonists and organized the devastating Massacre of 1622, in which one-third of the white population died at Indian hands.

Captain Smith, some doubt I have of your coming hither . . . for many do inform me, your coming is not for trade, but to invade my people and possess my Country. . . . I am now grown old, and must soon die; and the succession must descend, in order, to my brothers, Opitchapan, Opekankanough, and Catataugh, and then to my two sisters, and their two daughters. I wish their experience was equal to mine; and that your love to us might not be less than ours to you. Why

should you take by force that from us which you can have by love? Why should you destroy us, who have provided you with food? What can you get by war? We can hide our provisions, and fly into the woods; and then you must consequently famish by wronging your friends. What is the cause of your jealousy? You see us unarmed, and willing to supply your wants, if you will come in a friendly manner, and not with swords and guns, as to invade an enemy. I am not so simple, as not to know it is better to eat good meat, lie well, and sleep quietly with my women and children; to laugh and be merry with the English; and, being their friend, to have copper, hatchets, and whatever else I want, than to fly from all, to lie cold in the woods, feed upon acorns, roots, and such trash, and to be so hunted, that I cannot rest, eat, or sleep. In such circumstances, my men must watch, and if a twig should break, all would cry out, "Here comes Capt. Smith": and so, in this miserable manner, to end my miserable life; and, Capt. Smith, this might be soon your fate too, through your rashness and unadvisedness. I, therefore, exhort you to peaceable councils; and, above all, I insist that the guns and swords, the cause of all our jealousy and uneasiness, be removed and sent away.

Massasoit Peace Treaty

The Wampanoag chief Massasoit was the first Indian leader to deal with the New England colonists shortly after the Pilgrims' arrival in Plymouth, Massachusetts, in late 1620. At the Pilgrims' request, Massasoit agreed to this treaty in March 1621. Both sides worked hard to maintain peace as long as Massasoit lived, despite bitter conflicts between Indians and colonists in other parts of New England. The chief died in 1662 and was succeeded by his son, Metacom, who led the Wampanoags in King Philip's War against the colonists from 1676 to 1677.

1. That neither he nor any of his should injure or do hurt to any of our people.
2. And if any of his did hurt to any of ours, he should send the offender, that we might punish him.
3. That if any of our tools were taken away when our people were at work, he should cause them to be restored; and if ours did any harm to any of his, we would do the like to them.

4. If any did unjustly war against him, we would aid him; if any did war against us, he should aid us.
5. He should send to his neighbor confederates, to certify them of this, that they might not wrong us, but might be likewise comprised in the conditions of peace.
6. That when their men came to us, they should leave their bows and arrows behind them, as we should do our pieces when we came to them.

Lastly, that doing thus, King James would esteem of him as his friend and ally.

John Mason: A Brief History of the Pequot War

The Pequot War of 1636 was the first and one of the most brutal of the American Indian wars. The result of fighting among the tribes and their shifting alliances with the American colonists, the war ended with the complete annihilation of the Pequot tribe, particularly after the gruesome Indian massacre at Fort Mystic. When the war ended in 1637, the few surviving Pequots were sold off into slavery. The Pequot War cleared the path for white expansion in southern New England and was generally regarded as a great triumph by the colonists.

Major John Mason served as commander of the Connecticut forces. He wrote this history of the war around 1670, although it did not appear in print until 1736, when Boston minister and historian Thomas Prince published it with his own introduction and explanatory notes.

In the Beginning of May 1637 there were sent out by Connecticut Colony Ninety Men under the Command of Capt. John Mason against the Pequots, with Onkos an Indian Sachem living at Mohegan [Note: Onkos, usually called Uncas, the Great Sachem of the Moheags] who was newly revolted from the Pequots; being Shipped in one Pink, one Pinnace, and one Shallop; who sailing down the River of Connecticut fell several times a ground, the Water being very low: The Indians not being wonted to such Things with their small Canoes, and also being impatient of Delays, desired they might be set on Shoar, promising that they would meet us at Saybrook; which we granted: They hastening to their Quarters, fell upon Thirty or forty of the Enemy near

Saybrook Fort, and killed seven of them outright; having only one of theirs wounded, who was sent back to Connecticut in a Skiff; Capt. John Underhill also coming with him, who informed us what was performed by Onkos and his Men; which we looked at as a special Providence; for before we were somewhat doubtful of his Fidelity: Capt. Underhill then offered his Service with nineteen Men to go with us, if Lieutenant Gardner would allow of it, who was Chief Commander at Saybrook Fort; which was readily approved of by Lieutenant Gardner and accepted by us; In lieu of them we sent back twenty of our Soldiers to Connecticut.

. . . Their Numbers far exceeded ours: having sixteen Guns with Powder and Shot, as we were informed by the two Captives forementioned (where we declared the Grounds of this War) who were taken by the Dutch and restored to us at Saybrook; which indeed was a very friendly Office and not to be forgotten. . . . They were on Land, and being swift on Foot, might much impede our Landing, and possibly dishearten our Men; we being expected only by Land, there being no other Place to go on Shoar but in that River, nearer than Narragansett.

. . . We Marched thence towards Pequot, with about five hundred Indians: But through the Heat of the Weather and want of Provisions some of our Men fainted: And having Marched about twelve Miles, we came to Pawcatuck River, at a Ford where our Indians told us the Pequots did usually Fish; there making an Alta, we stayed some small time: The Narragansett Indians manifesting great Fear, in so much that many of them returned, although they had frequently despised us, saying, That we durst not look upon a Pequot, but themselves would perform great Things; though we had often told them that we came on purpose and were resolved, God assisting, to see the Pequots, and to fight with them, before we returned, though we perished. I then enquired of Onkos, what he thought the Indians would do? Who said, The Narragansetts would all leave us, but as for Himself He would never leave us: and so it proved: For which Expressions and some other Speeches of his, I shall never forget him. Indeed he was a great Friend, and did great Service.

And after we had refreshed our selves with our mean Commons, we Marched about three Miles, and came to a Field which had lately been planted with Indian Corn: There we made another Alt, and called our Council, supposing we drew near to the Enemy: and being informed by the Indians that the Enemy had two Forts almost impregnable; but we were not

at all Discouraged, but rather Animated, in so much that we were resolved to Assault both their Forts at once. But understanding that one of them was so remote that we could not come up with it before Midnight, though we Marched hard; whereat we were much grieved, chiefly because the greatest and bloodiest Sachem there resided, whose name was Sassacous: We were then constrained, being exceedingly spent in our March with [extreme] Heat and want of Necessaries, to accept of the nearest.

We then Marching on in a silent Manner, the Indians that remained fell all into the Rear, who formerly kept the Van; (being possessed with great Fear) we continued our March till about one Hour in the Night: and coming to a little Swamp between two Hills, there we pitched our little Camp; much wearied with hard Travel, keeping great Silence, supposing we were very near the Fort; as our Indians informed us; which proved otherwise: The Rocks were our Pillows; yet Rest was pleasant: The Night proved Comfortable, being clear and Moon Light: We appointed our Guards and placed our Sentinels at some distance; who heard the Enemy Singing at the Fort, who continued that Strain until Midnight, with great Insulting and Rejoycing, as we were afterwards informed: They seeing our Pinnaces sail by them some Days before, concluded we were afraid of them and durst not come near them, the Burthen of their Song tending to that purpose.

In the Morning, we awaking and seeing it very light, supposing it had been day, and so we might have lost our Opportunity, having purposed to make our Assault before Day; rowsed the Men with all expedition, and briefly commended ourselves and Design to God, thinking immediately to go to the Assault; the Indians shewing us a Path, told us that it led directly to the Fort. We held on our March about two Miles, wondering that we came not to the Fort, and fearing we might be deluded: But seeing Corn newly planted at the Foot of a great Hill, supposing the Fort was not far off, a Champion Country being round about us; then making a stand, gave the Word for some of the Indians to come up: At length Onkos and one Wequash appeared; We demanded of them, Where was the Fort? They answered On the Top of that Hill: Then we demanded, Where were the Rest of the Indians? They answered, Behind, exceedingly afraid: We wished them to tell the rest of their Fellows, That they should by no means Fly, but stand at what distance they pleased, and see whether English Men would now Fight or not. Then Capt. Underhill came up, who Marched in the Rear; and commend-

ing ourselves to God, divided our Men: There being two Entrances into the Fort, intending to enter both at once: Captain Mason leading up to that on the North East Side; who approaching within one Rod, heard a Dog bark and an Indian crying Owanux! Owanux! which is Englishmen! Englishmen! We called up our Forces with all expedition, gave Fire upon them through the Pallizado; the Indians being in a dead indeed their last Sleep: Then we wheeling off fell upon the main Entrance, which was blocked up with Bushes about Breast high, over which the Captain passed, intending to make good the Entrance, encouraging the rest to follow. Lieutenant Seeley endeavoured to enter; but being somewhat cumbred, stepped back and pulled out the Bushes and so entred, and with him about sixteen Men: We had formerly concluded to destroy them by the Sword and save the Plunder.

Whereupon Captain Mason seeing no Indians, entred a Wigwam; where he was beset with many Indians, waiting all opportunities to lay Hands on him, but could not prevail. At length William Heydon. . . . Notwithstanding the statement by Trumbull and others, that Davis cut the bowstring and saved the life of Mason, there is reason, well supported by tradition, for believing that this service was performed by Heydon, and that the incident occurred at this very moment. It will be seen that Mason entered the fort on one side, that Davis entered on the opposite with Captain Underhill, and that he could therefore not have been near. The sword of Heydon that is said to have cut the bowstring is in the possession of the Connecticut Historical Society.] espying the Breach in the Wigwam, supposing some English might be there, entred; but in his Entrance fell over a dead Indian; but speedily recovering himself, the Indians some fled, others crept under their Beds: The Captain going out of the Wigwam saw many Indians in the Lane or Street; he making towards them, they fled, were pursued to the End of the Lane, where they were met by Edward Pattison, Thomas Barber, with some others; where seven of them were Slain, as they said. The Captain facing about, Marched a slow Pace up the Lane he came down, perceiving himself very much out of Breath; and coming to the other End near the Place where he first entred, saw two Soldiers standing close to the Pallizado with their Swords pointed to the Ground: the Captain told them that We should never kill them after that manner: The Captain also said, We must Burn them; and immediately stepping into the Wigwam where he had been before, brought

out a Firebrand, and putting it into the Matts with which they were covered, set the Wigwams on Fire. Lieutenant Thomas Bull and Nicholas Omsted beholding, came up; and when it was thoroughly kindled, the Indians ran as Men most dreadfully Amazed.

And indeed such a dreadful Terror did the Almighty let fall upon their Spirits, that they would fly from us and run into the very Flames, where many of them perished. And when the Fort was thoroughly Fired, Command was given, that all should fall off and surround the Fort; which was readily attended by all; only one Arthur Smith being so wounded that he could not move out of the Place, who was happily espied by Lieutenant Bull, and by him rescued.

The Fire was kindled on the North East Side to windward; which did swiftly over-run the Fort, to the extream Amazement of the Enemy, and great Rejoycing of our selves. Some of them climbing to the Top of the Pallizado; others of them running into the very Flames; many of them gathering to windward, lay pelting at us with their Arrows; and we repayed them with our small Shot: Others of the Stoutest issued forth, as we did guess, to the Number of Forty, who perished by the Sword.

What I have formerly said, is according to my own Knowledge, there being sufficient living Testimony to every Particular.

But in reference to Captain Underhill and his Parties acting in this Assault, I can only intimate as we were informed by some of themselves immediately after the Fight, Thus They Marching up to the Entrance on the South West Side, there made some Pause; a valiant, resolute Gentleman, one Mr. Hodge, stepping towards the Gate, saying; If we may not Enter, wherefore came we here; and immediately endeavoured to Enter; but was opposed by a sturdy Indian which did impede his Entrance; but the Indian being slain by himself and Sergeant Davis, Mr. Hedge Entred the Fort with some others; but the Fort being on Fire, the Smoak and Flames were so violent that they were constrained to desert the Fort.

Thus were they now at their Wits End, who not many Hours before exalted themselves in their great Pride, threatening and resolving the utter Ruin and Destruction of all the English, Exulting and Rejoycing with Songs and Dances: But God was above them, who laughed his Enemies and the Enemies of his People to Scorn, making them as a fiery Oven: Thus were the Stout Hearted spoiled, having slept

their last Sleep, and none of their Men could find their Hands: Thus did the Lord judge among the Heathen, filling the Place with dead Bodies!

And here we may see the just Judgment of God, in sending even the very Night before this Assault, One hundred and fifty Men from their other Fort, to join with them of that Place, who were designed as some of themselves reported to go forth against the English, at that very Instant when this heavy Stroak came upon them where they perished with their Fellows. So that the Mischief they intended to us, came upon their own Pate: They were taken in their own snare, and we through Mercy escaped. And thus in little more than one Hour's space was their impregnable Fort with themselves utterly Destroyed, to the Number of six or seven Hundred, as some of themselves confessed. There were only seven taken captive, and about seven escaped. (The place of the Fort being called Mistick), this Fight was called Mistick Fight: And Mr. Increase Mather, from a Manuscript he met with, tells us; It was on Friday, May 26. 1637, a memorable Day!

Of the English, there were two Slain outright, and about twenty Wounded: Some Fainted by reason of the sharpness of the Weather, it being a cool Morning, and the want of such Comforts and Necessaries as were needful in such a Case; especially our [Surgeon] [Note: This surgeon, whose name was Pell, had been attached to Saybrook Fort and was sent on the expedition by Gardener.] was much wanting, whom we left with our Barks in Narragansett Bay, who had Order there to remain until the Night before our intended Assault.

And thereupon grew many Difficulties: Our Provision and Munition near spent; we in the enemies Country, who did far exceed us in Number, being much enraged: all our Indians, except Onkos, deserting us; our Pinnaces at a great distance from us, and when they would come we were uncertain.

But as we were consulting what Course to take, it pleased God to discover our Vessels to us before a fair Gale of Wind, sailing into Pequot Harbour, to our great Rejoycing.

We had no sooner discovered our Vessels, but immediately came up the Enemy from the other Fort; Three Hundred or more as we conceived. The Captain lead out a file or two of Men to Skirmish with them, chiefly to try what temper they were of, who put them to a stand: we being much encouraged thereat, presently prepared to March towards our Vessels: Four or Five of our Men were so wounded that they must be carried with the Arms

of twenty more. We also being faint, were constrained to put four to one Man, with the Arms of the rest that were wounded to others; so that we had not above forty Men free: at length we hired several Indians, who eased us of that Burthen, in carrying of our wounded Men. And Marching about one quarter of a Mile; the Enemy coming up to the Place where the Fort was, and beholding what was done, stamped and tore the Hair from their Heads: And after a little space, came mounting down the Hill upon us, in a full career, as if they would over run us; But when they came within Shot, the Rear faced about, giving Fire upon them: Some of them being Shot, made the rest more wary: Yet they held on running to and fro, and shooting their Arrows at Random. There was at the Foot of the Hill a small Brook, where we rested and refreshed our selves, having by that time taught them a little more Manners than to disturb us.

We then Marched on towards Pequot Harbour; and falling upon several Wigwams, burnt them: The Enemy still following us in the Rear, which was to windward, though to little purpose; yet some of them lay in Ambush behind Rocks and Trees, often shooting at us, yet through Mercy touched not one of us; And as we came to any Swamp or Thicket, we made some Shot to clear the Passage. Some of them fell with our Shot; and probably more might, but for want of Munition; But when any of them fell, our Indians would give a great Shout, and then would they take so much Courage as to fetch their Heads. And thus we continued, until we came within two Miles of Pequot Harbour; where the Enemy gathered together and left us; we Marching on to the Top of an Hill adjoining to the Harbour, with our Colours flying; having left our Drum at the Place of our Rendezvous the Night before: We seeing our Vessels there Riding at Anchor, to our great Rejoycing, and came to the Water-Side, we there sat down in Quiet.

Captain Patrick being Arrived there with our Vessels, who as we were informed was sent with Forty Men by the Massachusetts Colony, upon some Service against the Block Islanders; Who coming to the Shore in our Shallop with all his Company, as he said to Rescue us, supposing we were pursued, though there did not appear any the least sign of Such a Thing.

Thus did the Lord scatter his Enemies with his strong Arm! The Pequots now became a Prey to all Indians. Happy were they that could bring in their Heads to the English: Of which there came almost daily to Winsor, or Hartford. But the Pequots grow-

ing weary hereof, sent some of the Chief that survived to mediate with the English; offering that If they might but enjoy their Lives, they would become the English Vassals, to dispose of them as they pleased. Which was granted them. Whereupon Onkos and Myantonimo were sent for; who with the Pequots met at Hartford. The Pequots being demanded, how many of them were then living? Answered, about One Hundred and Eighty, or two Hundred. There were then given to Onkos, Sachem of Monheag, Eighty; to Myantonimo, Sachem of Narragansett, Eighty; and to Nynigrett, (He was usually called Ninnicraft.) Twenty, when he should satisfy for a Mare of Edward Pomroye's killed by his Men. The Pequots were then bound by Covenant, That none should inhabit their native Country, nor should any of them be called Pequots any more, but Moheags and Narragansetts forever. Shortly after, about Forty of them went to Moheag; others went to Long Island; the rest settled at Pawcatuck, a Place in Pequot Country, contrary to their late Covenant and Agreement with the English.

William Johnson: Report Regarding the Iroquois Confederacy

Superintendent of Indian Affairs in British North America
Sir William Johnson possessed a keen awareness of the importance of Native Americans to British policy in fighting the French for control of North America. He sent this report to the Board of Trade in London in the fall of 1763, stressing the strength of the Iroquois Confederacy, which influenced alliances across wide areas in the present-day middle Atlantic, Northeast, and adjacent Ohio Valley. Johnson believed that, if the British would befriend the Iroquois and supply them with weapons, the Iroquois would stymie French aggression in North America.

As Original proprietors, this Confederacy claim the Country of their residence, South of Lake Ontario to the great Ridge of the Blew Mountains, with all the Western part of the province of New York towards Hudsons River, west of the Caats Kill, thence to Lake Champlain, and from Regioghne a Rock at the East side of said lake to Osswegatche on La Gattell on the River St. Lawrence (having long ceded their claim North of said line in favour of the Canada Indians as Hunting ground) thence up the River St. Lawrence and along the South side of Lake Ontario to Niagara.

In right of conquest, they claim all the Country (comprehending the Ohio) along the great Ridge of Blew Mountains at the back of Virginia, thence to the head of the Kentucke River, and down the same to the Ohio above the Rifts, thence Northerly to the South end of Lake Michigan, then along the eastern shore of said lake to Missillimackinac, thence easterly across the North end of Lake Huron to the great Ottawawa River (including the Chippawea or Mississagey Country) and down the said River to the Island of Montreal.—However, these more distant claims being possessed by many powerful Nations, the Inhabitants have long began to render themselves independent by the assistance of the French, and the great decrease of the Six Nations; but their claim to the Ohio, and thence to the Lakes is not in the least disputed by the Shawanese Delawares etc., who never transacted any Sales of Land or other matters without their consent, and who sent Deputys to the grand Council at Onondaga on all important occasions.

Pontiac: Reasons for Making War on the English Speech

An outgrowth of the French and Indian War, Pontiac's Rebellion of 1763 illustrated the complicated nature of Euro-Indian alliances in the seventeenth and eighteenth centuries. The uprising was a brief attempt of French-allied Native Americans to win back Canada for the French after the French had been utterly defeated in the French and Indian War. Pontiac, a Delaware, delivered this speech at a meeting of French and Native Americans on May 5, 1763.

My brothers, we have never had in view to do you any evil. We have never intended that any should be done you. But amongst my young men there are, as amongst you, some who, in spite of all precautions which we take, always do evil. Besides, it is not only for my revenge that I make war upon the English, it is for you, my brothers, as for us. When the English, in their councils, which we have held with them, have insulted us, they have also insulted you, without your knowing anything about it, and as I know, and all our brothers know, the English have taken from you all means of avenging yourselves, by disarming you and making you write on a paper, which they have sent to their country, which they could not make us do; therefore, I will avenge you

equally with us, and I swear annihilation as long as any of them shall remain on our land. Besides, you do not know all the reasons which oblige me to act as I do. I have told you only that which regards you. You will know the rest in time. I know well that I pass amongst many of my brothers for a fool, but you will see in the future if I am such as is said, and if I am wrong. I also know well that there are amongst you, my brothers, some who take the part of the English, to make war against us, and that only pains me on their account. I know them well, and when our father shall have come, I will name them and point them out to him, and they will see whether they or we shall be the most content in the future.

I doubt not, my brothers, that this war tries you, on account of the movements of our brothers, who all the time go and come to your houses. I am sorry for it but do not believe, my brothers, that I instigate the wrong which is done to you, and for proof that I do not wish it, remember the war of the Foxes, and the manner in which I have behaved in your interest. It is now seventeen years that the Sauteux and Ottawas of Michelimakinak and all the nations of the north have come with the Sacs and Foxes to annihilate you. Who has defended you? Was it not I and my people? When Mekinak, great chief of all the nations, said in his council that he would carry to his village the head of your commander, and eat his heart and drink his blood, have I not taken up your interest by going to his camp and telling him, if he wanted to kill the French, he must commence with me and my people? Have I not helped you to defeat them and drive them away? When or how came that? Would you, my brothers, believe that I to-day would turn my arms against you? No, my brothers, I am the same French Pondiak who lent you his hand seventeen years ago. I am a Frenchman, and I want to die a Frenchman! And I repeat to you they are both your interests and mine which I revenge. Let me go on. I don't ask your assistance, because I know you cannot give it. I only ask of you provisions for me and all my people. If, however, you would like to aid me, I would not refuse you. You would cause me pleasure, and you would sooner be out of trouble. For I warrant you, when the English shall be driven from here or killed, we shall all retire to our villages according to our custom, and await the arrival of our father, the Frenchman. These, you see, my brothers, are my sentiments. Rest assured, my brothers, I will watch that no more wrong shall be done to you by my people, nor by other Indians.

What I ask of you is that our women be allowed to plant our corn on the fallows of your lands. We shall obliged to you for that.

The Royal Proclamation of 7 October 1763

This Proclamation was an attempt that did not succeed to satisfy Native Americans for a dividing line that would halt encroachment on their lands.

1763, OCTOBER 7.

BY THE KING.

A Proclamation

George r.

Whereas We have taken into Our Royal Consideration the extensive and valuable Acquisitions in America, secured to Our Crown by the late Definitive Treaty of Peace, concluded at Paris the Tenth Day of February last, and being desirous, that all Our loving Subjects, as well of Our Kingdoms as of Our Colonies in America, may avail themselves, with all convenient Speed, of the great Benefits and Advantages which must accrue therefrom to their Commerce, Manufactures, and Navigation; We have thought fit, with the Advice of Our Privy Council, to issue this Our Royal Proclamation, hereby to publish and declare to all Our loving Subjects, that We have, with the Advice of Our said Privy Council, granted Our Letters Patent under Our Great Seal of Great Britain, to erect within the Countries and Islands ceded and confirmed to Us by the said Treaty, Four distinct and separate Governments, stiled and called by the Names of Quebec, East Florida, West Florida, and Grenada, and limited and bounded as follows; viz.

First. The Government of Quebec, bounded on the Labrador Coast by the River St. John, and from thence by a Line drawn from the Head of that River through the Lake St. John to the South End of the Lake nigh Pissin; from whence the said Line crossing the River St. Lawrence and the Lake Champlain in Forty five Degrees of North Latitude, passes along the High Lands which divide the Rivers that empty themselves into the said River St. Lawrence, from those which fall into the Sea; and also along the North Coast of the Baye des Chaleurs, and the Coast of the Gulph of St. Lawrence to Cape Rosieres, and from thence crossing the Mouth of the River St. Lawrence by the West End of the Island

of Antiocosti, terminates at the aforesaid River of St. John.

Secondly. The Government of East Florida, bounded to the Westward by the Gulph of Mexico, and the Apalachicola River; to the Northward, by a Line drawn from that Part of the said River where the Chatahouchee and Flint Rivers meet, to the Source of St. Mary's River, and by the Course of the said River to the Atlantick Ocean; and to the Eastward and Southward, by the Atlantick Ocean, and the Gulph of Florida, including all Islands within Six Leagues of the Sea Coast.

Thirdly. The Government of West Florida, bounded to the Southward by the Gulph of Mexico, including all Islands within Six Leagues of the Coast from the River Apalachicola to Lake Pentchartain; to the Westward, by the said Lake, the Lake Mauripas, and the River Mississippi; to the Northward, by a Line drawn due East from that Part of the River Mississippi which lies in Thirty one Degrees North Latitude, to the River Apalachicola or Chatahouchee; and to the Eastward by the said River.

. . . And whereas We are desirous, upon all Occasions, to testify Our Royal Sense and Approbation of the Conduct and Bravery of the Officers and Soldiers of Our Armies, and to reward the same, We do hereby command and empower Our Governors of Our said Three New Colonies, and all other Our Governors of Our several Provinces on the Continent of North America, to grant, without Fee or Reward, to such Reduced Officers as have served in North America during the late War, and to such Private Soldiers as have been or shall be disbanded in America, and are actually residing there, and shall personally apply for the same, the following Quantities of Lands, subject at the Expiration of Ten Years to the same Quit-Rents as other Lands are subject to in the Province within which they are granted, as also subject to the same Conditions of Cultivation and Improvement; viz.

To every Person having the Rank of a Field Officer, Five thousand Acres.—To every Captain, Three thousand Acres.—To every Subaltern or Staff Officer, Two thousand Acres.—To every Non-Commission Officer, Two hundred Acres.—To every Private Man, Fifty Acres.

We do likewise authorize and require the Governors and Commanders in Chief of all Our said Colonies upon the Continent of North America, to grant the like Quantities of Land, and upon the same Conditions, to such Reduced Officers of Our Navy, of like Rank, as served on Board Our Ships of War in

North America at the Times of the Reduction of Louisbourg and Quebec in the late War, and who shall personally apply to Our respective Governors for such Grants.

And whereas it is just and reasonable, and essential to Our Interest and the Security of Our Colonies, that the several Nations or Tribes of Indians, with whom We are connected, and who live under Our Protection, should not be molested or disturbed in the Possession of such Parts of Our Dominions and Territories as, not having been ceded to, or purchased by Us, are reserved to them, or any of them, as their Hunting Grounds; We do therefore, with the Advice of Our Privy Council, declare it to be Our Royal Will and Pleasure, that no Governor or Commander in Chief in any of Our Colonies of Quebec, East Florida, or West Florida, do presume, upon any Pretence whatever, to grant Warrants of Survey, or pass any Patents for Lands beyond the Bounds of their respective Governments, as described in their Commissions; as also, that no Governor or Commander in Chief in any of Our other Colonies or Plantations in America, do presume, for the present, and until Our further Pleasure be known, to grant Warrants of Survey, or pass Patents for any Lands beyond the Heads or Sources of any of the Rivers which fall into the Atlantick Ocean from the West and North-West, or upon any Lands whatever, which, not having been ceded to, or purchased by Us as aforesaid, are reserved to the said Indians, or any of them.

And We do further declare it to be Our Royal Will and Pleasure, for the present as aforesaid, to reserve under Our Sovereignty, Protection, and Dominion, for the Use of the said Indians, all the Lands and Territories not included within the Limits of Our said Three New Governments, or within the Limits of the Territory granted to the Hudson's Bay Company, as also all the Lands and Territories lying to the Westward of the Sources of the Rivers which fall into the Sea from the West and North West, as aforesaid; and We do hereby strictly forbid, on Pain of Our Displeasure, all Our loving Subjects from making any Purchases or Settlements whatever, or taking Possession of any of the Lands above reserved, without Our especial Leave and Licence for that Purpose first obtained.

And We do further strictly enjoin and require all Persons whatever, who have either wilfully or inadvertently seated themselves upon any Lands within the Countries above described, or upon any other

Lands, which, not having been ceded to, or purchased by Us, are still reserved to the said Indians as aforesaid, forthwith to remove themselves from such Settlements.

And whereas great Frauds and Abuses have been committed in the purchasing Lands of the Indians, to the great Prejudice of Our Interests, and to the great Dissatisfaction of the said Indians; in order therefore to prevent such Irregularities for the future, and to the End that the Indians may be convinced of Our Justice, and determined Resolution to remove all reasonable Cause of Discontent, We do, with the Advice of Our Privy Council, strictly enjoin and require, that no private Person do presume to make any Purchase from the said Indians of any Lands reserved to the said Indians, within those Parts of Our Colonies where We have thought proper to allow Settlement; but that if, at any Time, any of the said Indians should be inclined to dispose of the said Lands, that same shall be purchased only for Us, in Our Name, at some publick Meeting or Assembly of the said Indians to be held for that Purpose by the Governor or Commander in Chief of Our Colonies respectively, within which they shall lie . . .

Fort Stanwix Treaty

The Fort Stanwix Treaty, signed on October 22, 1784, near Rome, New York, brought fighting between the United States and the Iroquois Confederacy to an end following the American Revolution, in which the Iroquois had served as allies of the British.

Articles concluded at Fort Stanwix, on the twenty-second day of October one thousand seven hundred and eighty-four, between Oliver Wolcott, Richard Butler, and Arthur Zee, Commissioners Plenipotentiary from the United States, in Congress assembled, on the one Part, and the Sachems and Warriors of the Six Nations, on the other.

The United States of America give peace to the Senecas, Mohawks, Onondagas and Cayugas, and receive them into their protection upon the following conditions:

**ARTICLE 1**

Six hostages shall be immediately delivered to the commissioners by the said nations, to remain in possession of the United States, till all prisoners, white and black, which were taken by the said Senecas, Mohawks, Onondagas and Cayugas, or by any of them, in the late war, from among the people of the United States, shall be delivered up.

ARTICLE 2

The Oneida and Tuscarora nations shall be secured in the possession of the lands on which there are settled.

ARTICLE 3

A line shall be drawn, beginning at the mouth of a creek about four miles east of Niagara, called Oyonwayea, or Johnston's Landing-Place, upon the lake named by the Indians Oswego, and by us Ontario; from thence southerly in a direction always four miles east of the carrying-path, between Lake Erie and Ontario, to the mouth of Tehoseroron or Buffalo Creek on Lake Erie; then south to the north boundary of the state of Pennsylvania; thence west to the end of the said north boundary; then south along the west boundary of the said state, to the river Ohio; the said land from the mouth of the Oyonwayea to the Ohio, shall be the western boundary of the lands of the Six Nations, so that the Six Nations shall and do yield to the United States, all claims to the country west of the said boundary, and then they shall be secured in the peaceful possession of the lands they inhabit east and north of the same, reserving only six miles square round the fort of Oswego, to the United States, for the support of the same.

ARTICLE 4

The Commissioners of the United States, in consideration of the present circumstances of the Six Nations, and in executing of the humane and liberal views of the United States upon the signing of the above articles, will order goods to be delivered to the said Six Nations for their use and comfort.

Northwest Ordinance

Chiefly written by Rufus King and Nathan Dane of Massachusetts and adopted by the Confederation Congress on July 13, 1787, the Northwest Ordinance provided for the governance of the territories, but it also made a provision for the eventual admission of between three and five states from those territories. Since the new states would have the same rights as the original thirteen, the law ensured that the United States would not become a colonial power on the North American continent. A number of provisions within the Northwest Ordinance would later be emulated in the U.S. Constitution and the Bill of Rights. The states eventually carved from the Northwest Ordinance are Ohio, Indiana, Illinois, Michigan, and Wisconsin.

An Ordinance for the government of the Territory of the United States northwest of the River Ohio.

So soon as there shall be five thousand free male inhabitants of full age in the district, upon giving proof thereof to the governor, they shall receive

authority, with time and place, to elect a representative from their counties or townships to represent them in the general assembly: Provided, That, for every five hundred free male inhabitants, there shall be one representative, and so on progressively with the number of free male inhabitants shall the right of representation increase, until the number of representatives shall amount to twenty five; after which, the number and proportion of representatives shall be regulated by the legislature: Provided, That no person be eligible or qualified to act as a representative unless he shall have been a citizen of one of the United States three years, and be a resident in the district, or unless he shall have resided in the district three years; and, in either case, shall likewise hold in his own right, in fee simple, two hundred acres of land within the same; Provided, also, That a freehold in fifty acres of land in the district, having been a citizen of one of the states, and being resident in the district, or the like freehold and two years residence in the district, shall be necessary to qualify a man as an elector of a representative.

The representatives thus elected, shall serve for the term of two years; and, in case of the death of a representative, or removal from office, the governor shall issue a writ to the county or township for which he was a member, to elect another in his stead, to serve for the residue of the term.

The general assembly or legislature shall consist of the governor, legislative council, and a house of representatives. The Legislative Council shall consist of five members, to continue in office five years, unless sooner removed by Congress; any three of whom to be a quorum . . .

The governor, judges, legislative council, secretary, and such other officers as Congress shall appoint in the district, shall take an oath or affirmation of fidelity and of office; the governor before the president of congress, and all other officers before the Governor. As soon as a legislature shall be formed in the district, the council and house assembled in one room, shall have authority, by joint ballot, to elect a delegate to Congress, who shall have a seat in Congress, with a right of debating but not voting during this temporary government.

And, for extending the fundamental principles of civil and religious liberty, which form the basis whereon these republics, their laws and constitutions are erected; to fix and establish those principles as the basis of all laws, constitutions, and governments, which forever hereafter shall be formed in the

said territory: to provide also for the establishment of States, and permanent government therein, and for their admission to a share in the federal councils on an equal footing with the original States, at as early periods as may be consistent with the general interest:

. . . Inhabitants of the said territory shall always be entitled to the benefits of the writ of habeas corpus, and of the trial by jury; of a proportionate representation of the people in the legislature; and of judicial proceedings according to the course of the common law. All persons shall be bailable, unless for capital offenses, where the proof shall be evident or the presumption great. All fines shall be moderate; and no cruel or unusual punishments shall be inflicted. No man shall be deprived of his liberty or property, but by the judgment of his peers or the law of the land; and, should the public exigencies make it necessary, for the common preservation, to take any person's property, or to demand his particular services, full compensation shall be made for the same. And, in the just preservation of rights and property, it is understood and declared, that no law ought ever to be made, or have force in the said territory, that shall, in any manner whatever, interfere with or affect private contracts or engagements, bona fide, and without fraud, previously formed.

Religion, morality, and knowledge, being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged. The utmost good faith shall always be observed towards the Indians; their lands and property shall never be taken from them without their consent; and, in their property, rights, and liberty, they shall never be invaded or disturbed, unless in just and lawful wars authorized by Congress; but laws founded in justice and humanity, shall from time to time be made for preventing wrongs being done to them, and for preserving peace and friendship with them.

The said territory, and the States which may be formed therein, shall forever remain a part of this Confederacy of the United States of America, subject to the Articles of Confederation, and to such alterations therein as shall be constitutionally made; and to all the acts and ordinances of the United States in Congress assembled, conformable thereto.

. . . There shall be neither slavery nor involuntary servitude in the said territory, otherwise than in

the punishment of crimes whereof the party shall have been duly convicted: Provided, always, That any person escaping into the same, from whom labor or service is lawfully claimed in any one of the original States, such fugitive may be lawfully reclaimed and conveyed to the person claiming his or her labor or service as aforesaid.

Lewis and Clark Expedition: Journals

In 1804, Meriwether Lewis and William Clark set out from St. Louis, Missouri, with fifty men to explore the vast new lands the United States had acquired from France with the Louisiana Purchase of 1803. President Thomas Jefferson had commissioned the two former soldiers to investigate the new U.S. territory with an eye toward expansion and eventual settlement. Aided by a Native American woman named Sacajawea, the Lewis and Clark Expedition traveled all the way to the coast of Oregon before returning to Washington, D.C., with their maps and notes in 1806. Below is an excerpt of their journals from the expedition.

April 07, 1805
[Meriwether Lewis]
Fort Mandan

Our vessels consisted of six small canoes, and two large perogues. This little fleet altho' not quite so respectable as those of Columbus or Capt. Cook, were still viewed by us with as much pleasure as those deservedly famed adventurers ever beheld theirs; and I dare say with quite as much anxiety for their safety and preservation. [W]e were now about to penetrate a country at least two thousand miles in width, on which the foot of civilized man had never trodden; the good or evil it had in store for us was for experiment yet to determine, and these little vessells contained every article by which we were to expect to subsist or defend ourselves . . . enterta[in]ing as I do, the most confident hope of succeeding in a voyage which had formed a da[r]ling project of mine for the last ten years, I could but esteem this moment of my departure as among the most happy of my life. The party are in excellent health and sperits, zealously attached to the enterprise, and anxious to proceed; not a whisper of murmur or discontent to be heard among them, but all act in unison, and with the most perfect harmony.

April 07, 1805
[Patrick Gass]

About 5 o'clock in the afternoon we left fort Mandan in good spirits. Thirty one men and a woman [Sacagawea] went up the river and thirteen returned down it in the boat. We had two periogues and six canoes, and proceeded about four miles, and encamped opposite the first Mandan village, on the North side.

April 07, 1805
[John Ordway]

. . . our Intrepter and them that went with him returned brought with them 4 of the RickaRee Savages. . . they Informed us that only 10 of their nation had come up to the Mandanes villages to treat & Smoak a peace pipe with them . . . they brought a letter from Mr Tabbo who lives with [the] R.Ree . . . with news that 3 of the Souix [sic] chiefs was going down on the Big barge to see their Great father and that Some of the Rick a Ree chiefs was going also.

About 5 oClock we all went on board fired the Swivel and Set off on our journey. [A]t the Same time the barge Set off for St Louis 2 frenchmen in a perogue in company with them. they took down the letters and all the writings which was necessary to go back to the States also Some curious animals such as Goat Skins & horns, a barking Squerrell Some Mountain Rams horns a prarie hen & badgers Some birds cauled magpies & a number of other curious things too tedious to mention &C.

The returning party, in charge of Corporal Warfington, consisted, in addition to the leader, of six private soldiers, Gravelines, who had been engaged as pilot, and two other Frenchmen. Temporarily accompanying it, also, were the two engages, Rivet and Degie, and a lame Arikara who had been granted the privilege of transportation in the boat to his tribal home. The party was to be joined at the Arikara vilage by Tabeau, the trader, and four hands, making a party of fifteen to descend the river. None of them had originally intended to become permanent members of the exploring expedition with the exception of Newman and Reed, the two men who had been discharged for misconduct.]

April 08, 1805
[Patrick Gass]

The woman that is with us is a squaw of the Snake nation of Indians, and wife to our interpreter.

We expect she will be of service to us, when passing through that nation.

Tenskwataya (The Prophet): System of Religion Speech (1808)

Tenskwataya, a Shawnee popularly known as The Prophet, forged a Native American alliance in the Midwest with the help of his brother Tecumseh in the early 1800s. The Prophet was the spiritual leader behind the movement and preached a gospel of a pan-Indian religion intended to unite all the tribes into a single, powerful unit, capable of bargaining with the Americans. The Prophet delivered this speech to the governor of Indiana Territory, William Henry Harrison, in August 1808.

Father, It is three years since I first began with that system of religion which I now practice. The white people and some of the Indians were against me; but I had no other intention but to introduce among the Indians, those good principles of religion which the white people profess. I was spoken badly of by the white people, who reproached me with misleading the Indians; but I defy them to say that I did anything amiss.

Father, I was told that you intended to hang me. When I heard this, I intended to remember it, and tell my father, when I went to see him, and relate to him the truth.

I heard, when I settled on the Wabash, that my father, the governor, had declared that all the land between Vincennes and fort Wayne, was the property of the Seventeen Fires. I also heard that you wanted to know, my father, whether I was God or man; and that you said if I was the former, I should not steal horses. I heard this from Mr. Wells, but I believed it originated with himself.

The Great Spirit told me to tell the Indians that he had made them, and made the world [and] that he had placed them on it to do good, not evil.

I told all the red skins, that the way they were in was not good, and that they ought to abandon it.

That we ought to consider ourselves as one man; but we ought to live agreeably to our several customs, the red people after their mode, and the white people after theirs; particularly, that they should not drink whiskey; that it was not made for them, but the white people, who alone knew how to use it; and that it is the cause of all the mischief

which the Indians suffer; and that they must always follow the directions of the Great Spirit, and we must listen to him, as it was he that made us: determine to listen to nothing that is bad: do not take up the tomahawk, should it be offered by the British, or by the long knives: do not meddle with any thing that does not belong to you, but mind your own business, and cultivate the ground, that your women and your children may have enough to live on.

I now inform you, that it is our intention to live in peace with our father and his people forever.

My father, I have informed you what we mean to do, and I call the Great Spirit to witness the truth of my declaration. The religion which I have established for the last three years, has been attended to by the different tribes of Indians in this part of the world. Those Indians were once different people; they are now but one: they are all determined to practice what I have communicated to them, that has come immediately from the Great Spirit through me.

Brother, I speak to you as a warrior. You are one. But let us lay aside this character, and attend to the care of our children, that they may live in comfort and peace. We desire that you will join us for the preservation of both red and white people. Formerly, when we lived in ignorance, we were foolish; but now, since we listen to the voice of the Great Spirit, we are happy.

I have listened to what you have said to us. You have promised to assist us: I now request you, in behalf of all the red people, to use your exertions to prevent the sale of liquor to us. We are all well pleased to hear you say that you will endeavor to promote our happiness. We give you every assurance that we will follow the dictates of the Great Spirit.

We are all well pleased with the attention that you have showed us; also with the good intentions of our father, the President. If you give us a few articles, such as needles, flints, hoes, powder, &c., we will take the animals that afford us meat, with powder and ball.

Tecumseh: Speech to Governor William Henry Harrison

In the early 1800s, the most powerful Native American of his day, Tecumseh forged a pan-Indian alliance

among Midwestern tribes with the help of his brother, Tenskwataya (The Prophet). They hoped to prevent American expansion by claiming that Native Americans held collective rights to land that could not be sold or bartered without the consent of all. On August 12, 1810, Tecumseh delivered this speech to Governor William Henry Harrison of the Indiana Territory. Harrison would later be his chief adversary during the War of 1812.

It is true I am a Shawanee [sic]. My forefathers were warriors. Their son is a warrior. From them I only take my existence; from my tribe I take nothing. I am the maker of my own fortune; and oh! that I could make that of my red people, and of my country, as great as the conceptions of my mind, when I think of the Spirit that rules the universe. I would not then come to Governor Harrison, to ask him to tear the treaty, and to obliterate the landmark; but I would say to him, Sir, you have liberty to return to your own country.

The being within, communing with past ages, tells me, that once, nor until lately, there was no white man on this continent. That it then all belonged to red men, children of the same parents, placed on it by the Great Spirit that made them, to keep it, to traverse it, to enjoy its productions, and to fill it with the same race. Once a happy race.

Since made miserable by the white people, who are never contented, but always encroaching. The way, and the only way to check and stop this evil, is, for all the red men to unite in claiming a common and equal right in the land, as it was at first, and should be yet; for it never was divided, but belongs to all, for the use of each. That no part has a right to sell, even to each other, much less to strangers; those who want all, and will not do with less. The white people have no right to take the land from the Indians, because they had it first; it is theirs. They may sell, but all must join. Any sale not made by all is not valid. The late sale is bad. It was made by a part only. Part do not know how to sell. It requires all to make a bargain for all.

All red men have equal rights to the unoccupied land. The right of occupancy is as good in one place as in another. There cannot be two occupations in the same place. The first excludes all others. It is not so in hunting or travelling; for there the same ground will serve many, as they may follow each other all day; but the camp is stationary, and that is occupancy. It belongs to the first who sits down on his blanket or skins, which he has

thrown upon the ground, and till he leaves it no other has a right.

Johnson v. M'Intosh

This decision was one of several adjudicated by U.S. Supreme Court Justice John Marshall during the 1820s and 1830s that define the relationship of Native Americans with the U.S. government to this day. It was the first of the "Marshall Trilogy," with Cherokee Nation v. Georgia (1831) and Worcester v. Georgia (1832) that underlie most of the government's presumptive powers vis à vis American Indians.

21 U.S. 543, 5 L.Ed. 681, 8 Wheat. 543 (1823)
March 10, 1823

"ERROR to the District Court of Illinois. This was an action of ejectment for lands in the State and District of Illinois, claimed by the plaintiffs under a purchase and conveyance from the Piankeshaw Indians, and by the defendant, under a grant from the United States. It came up on a case stated, upon which there was a judgment below for the defendant.

. . . Mr. Chief Justice MARSHALL delivered the opinion of the Court.

The plaintiffs in this cause claim the land, in their declaration mentioned, under two grants, purporting to be made, the first in 1773, and the last in 1775, by the chiefs of certain Indian tribes, constituting the Illinois and the Piankeshaw nations; and the question is, whether this title can be recognised in the Courts of the United States?

The facts, as stated in the case agreed, show the authority of the chiefs who executed this conveyance, so far as it could be given by their own people; and likewise show, that the particular tribes for whom these chiefs acted were in rightful possession of the land they sold. The inquiry, therefore, is, in a great measure, confined to the power of Indians to give, and of private individuals to receive, a title which can be sustained in the Courts of this country. . . .

. . . The United States, then, have unequivocally acceded to that great and broad rule by which its civilized inhabitants now hold this country. They hold, and assert in themselves, the title by which it was acquired. They maintain, as all others have maintained, that discovery gave an exclusive

right to extinguish the Indian title of occupancy, either by purchase or by conquest; and gave also a right to such a degree of sovereignty, as the circumstances of the people would allow them to exercise.

The power now possessed by the government of the United States to grant lands, resided, while we were colonies, in the crown, or its grantees. The validity of the titles given by either has never been questioned in our Courts. It has been exercised uniformly over territory in possession of the Indians. The existence of this power must negative the existence of any right which may conflict with, and control it. An absolute title to lands cannot exist, at the same time, in different persons, or in different governments. An absolute, must be an exclusive title, or at least a title which excludes all others not compatible with it. All our institutions recognise the absolute title of the crown, subject only to the Indian right of occupancy, and recognise the absolute title of the crown to extinguish that right. This is incompatible with an absolute and complete title in the Indians.

We will not enter into the controversy, whether agriculturists, merchants, and manufacturers, have a right, on abstract principles, to expel hunters from the territory they possess, or to contract their limits. Conquest gives a title which the Courts of the conqueror cannot deny, whatever the private and speculative opinions of individuals may be, respecting the original justice of the claim which has been successfully asserted. The British government, which was then our government, and whose rights have passed to the United States, asserted title to all the lands occupied by Indians, within the chartered limits of the British colonies. It asserted also a limited sovereignty over them, and the exclusive right of extinguishing the title which occupancy gave to them. These claims have been maintained and established as far west as the river Mississippi, by the sword. The title to a vast portion of the lands we now hold, originates in them. It is not for the Courts of this country to question the validity of this title, or to sustain one which is incompatible with it.

Although we do not mean to engage in the defence of those principles which Europeans have applied to Indian title, they may, we think, find some excuse, if not justification, in the character and habits of the people whose rights have been wrested from them.

The title by conquest is acquired and maintained by force. The conqueror prescribes its limits. Humanity, however, acting on public opinion, has

established, as a general rule, that the conquered shall not be wantonly oppressed, and that their condition shall remain as eligible as is compatible with the objects of the conquest. Most usually, they are incorporated with the victorious nation, and become subjects or citizens of the government with which they are connected. The new and old members of the society mingle with each other; the distinction between them is grandually [sic] lost, and they make one people. Where this incorporation is practicable, humanity demands, and a wise policy requires, that the rights of the conquered to property should remain unimpaired; that the new subjects should be governed as equitably as the old, and that confidence in their security should gradually banish the painful sense of being separated from their ancient connexions, and united by force to strangers.

When the conquest is complete, and the conquered inhabitants can be blended with the conquerors, or safely governed as a distinct people, public opinion, which not even the conqueror can disregard, imposes these restraints upon him; and he cannot neglect them without injury to his fame, and hazard to his power.

But the tribes of Indians inhabiting this country were fierce savages, whose occupation was war, and whose subsistence was drawn chiefly from the forest. To leave them in possession of their country, was to leave the country a wilderness; to govern them as a distinct people, was impossible, because they were as brave and as high spirited as they were fierce, and were ready to repel by arms every attempt on their independence.

What was the inevitable consequence of this state of things? The Europeans were under the necessity either of abandoning the country, and relinquishing their pompous claims to it, or of enforcing those claims by the sword, and by the adoption of principles adapted to the condition of a people with whom it was impossible to mix, and who could not be governed as a distinct society, or of remaining in their neighbourhood, and exposing themselves and their families to the perpetual hazard of being massacred.

Frequent and bloody wars, in which the whites were not always the aggressors, unavoidably ensued. European policy, numbers, and skill, prevailed. As the white population advanced, that of the Indians necessarily receded. The country in the immediate neighbourhood of agriculturists became unfit for them. The game fled into thicker and more unbroken forests, and the Indians followed. The soil,

to which the crown originally claimed title, being no longer occupied by its ancient inhabitants, was parcelled out according to the will of the sovereign power, and taken possession of by persons who claimed immediately from the crown, or mediately, through its grantees or deputies.

That law which regulates, and ought to regulate in general, the relations between the conqueror and conquered, was incapable of application to a people under such circumstances. The resort to some new and different rule, better adapted to the actual state of things, was unavoidable. Every rule which can be suggested will be found to be attended with great difficulty.

However extravagant the pretension of converting the discovery of an inhabited country into conquest may appear; if the principle has been asserted in the first instance, and afterwards sustained; if a country has been acquired and held under it; if the property of the great mass of the community originates in it, it becomes the law of the land, and cannot be questioned. So, too, with respect to the concomitant principle, that the Indian inhabitants are to be considered merely as occupants, to be protected, indeed, while in peace, in the possession of their lands, but to be deemed incapable of transferring the absolute title to others. However this restriction may be opposed to natural right, and to the usages of civilized nations, yet, if it be indispensable to that system under which the country has been settled, and be adapted to the actual condition of the two people, it may, perhaps, be supported by reason, and certainly cannot be rejected by Courts of justice. . . .

. . . It has never been contended, that the Indian title amounted to nothing. Their right of possession has never been questioned. The claim of government extends to the complete ultimate title, charged with this right of possession, and to the exclusive power of acquiring that right. The object of the crown was to settle the seacoast of America; and when a portion of it was settled, without violating the rights of others, by persons professing their loyalty, and soliciting the royal sanction of an act, the consequences of which were ascertained to be beneficial, it would have been as unwise as ungracious to expel them from their habitations, because they had obtained the Indian title otherwise than through the agency of government. The very grant of a charter is an assertion of the title of the crown, and its words convey the same idea. The country granted, is said to be 'our island called Rhode-Island;' and the charter contains

an actual grant of the soil, as well as of the powers of government.

. . . The letter was written a few months before the charter was issued, apparently at the request of the agents of the intended colony, for the sole purpose of preventing the trespasses of neighbours, who were disposed to claim some authority over them. The king, being willing himself to ratify and confirm their title, was, of course, inclined to quiet them in their possession.

This charter, and this letter, certainly sanction a previous unauthorized purchase from Indians, under the circumstances attending that particular purchase, but are far from supporting the general proposition, that a title acquired from the Indians would be valid against a title acquired from the crown, or without the confirmation of the crown.

The acts of the several colonial assemblies, prohibiting purchases from the Indians, have also been relied on, as proving, that, independent of such prohibitions, Indian deeds would be valid. But, we think this fact, at most, equivocal. While the existence of such purchases would justify their prohibition, even by colonies which considered Indian deeds as previously invalid, the fact that such acts have been generally passed, is strong evidence of the general opinion, that such purchases are opposed by the soundest principles of wisdom and national policy.

After bestowing on this subject a degree of attention which was more required by the magnitude of the interest in litigation, and the able and elaborate arguments of the bar, than by its intrinsic difficulty, the Court is decidedly of opinion, that the plaintiffs do not exhibit a title which can be sustained in the Courts of the United States; and that there is no error in the judgment which was rendered against them in the District Court of Illinois.

Cherokee Nation v. Georgia

Resisting removal, the Cherokees sued in federal court under a clause in the Constitution (Article III, Section 2) that allows foreign citizens or states to seek legal redress against states in the union. In this case, the Cherokees were

suing as an independent nation seeking redress because the state of Georgia had extended its power over Cherokee territory, extinguished the authority of the Cherokee government, and executed one of its citizens. U.S. Supreme Court Chief Justice John Marshall skirted the issue by deciding that the Cherokees were not an independent country, but instead a "domestic dependent nation." Marshall thus threw the case out of court, deciding that the Cherokees had no grounds on which to sue under the Constitution.

Writing for the majority in Cherokee Nation v. Georgia, Marshall said that the Cherokees possessed a limited sovereignty: "They may, more correctly, perhaps be denominated domestic dependent nations. . . . Their relation to the United States resembles that of a ward to his guardian." These phrases, interpreted by the Bureau of Indian Affairs, became the legal justification for the colonial system that was being imposed on Indians as Anglo-American settlement exploded across North America in the nineteenth century.

Cherokee Nation v. Georgia (1831)

30 U.S. 1

Mr Chief Justice MARSHALL delivered the opinion of the Court.

This bill is brought by the Cherokee Nation, praying an injunction to restrain the State of Georgia from the execution of certain laws of that State which, as is alleged, go directly to annihilate the Cherokees as a political society and to seize, for the use of Georgia, the lands of the Nation which have been assured to them by the United States in solemn treaties repeatedly made and still in force.

If Courts were permitted to indulge their sympathies, a case better calculated to excite them can scarcely be imagined. A people once numerous, powerful, and truly independent, found by our ancestors in the quiet and uncontrolled possession of an ample domain, gradually sinking beneath our superior policy, our arts and our arms, have yielded their lands by successive treaties, each of which contains a solemn guarantee of the residue, until they retain no more of their formerly extensive territory than is deemed necessary to their comfortable subsistence. To preserve this remnant, the present application is made.

Before we can look into the merits of the case, a preliminary inquiry presents itself. Has this Court jurisdiction of the cause?

The third article of the Constitution describes the extent of the judicial power. The second section

closes an enumeration of the cases to which it is extended, with "controversies" "between a State or the citizens thereof, and foreign states, citizens, or subjects." A subsequent clause of the same section gives the supreme Court original jurisdiction in all cases in which a State shall be a party. The party defendant may then unquestionably be sued in this Court. May the plaintiff sue in it? Is the Cherokee Nation a foreign state in the sense in which that term is used in the Constitution?

The counsel for the plaintiffs have maintained the affirmative of this proposition with great earnestness and ability. So much of the argument as was intended to prove the character of the Cherokees as a State as a distinct political society, separated from others, capable of managing its own affairs and governing itself, has, in the opinion of a majority of the judges, been completely successful. They have been uniformly treated as a State from the settlement of our country. The numerous treaties made with them by the United States recognize them as a people capable of maintaining the relations of peace and war, of being responsible in their political character for any violation of their engagements, or for any aggression committed on the citizens of the United States by any individual of their community. Laws have been enacted in the spirit of these treaties. The acts of our Government plainly recognize the Cherokee Nation as a State, and the Courts are bound by those acts.

A question of much more difficulty remains. Do the Cherokees constitute a foreign state in the sense of the Constitution?

The counsel have shown conclusively that they are not a State of the union, and have insisted that, individually, they are aliens, not owing allegiance to the United States. An aggregate of aliens composing a State must, they say, be a foreign state. Each individual being foreign, the whole must be foreign.

This argument is imposing, but we must examine it more closely before we yield to it. The condition of the Indians in relation to the United States is perhaps unlike that of any other two people in existence. In the general, nations not owing a common allegiance are foreign to each other. The term foreign nation is, with strict propriety, applicable by either to the other. But the relation of the Indians to the United States is marked by peculiar and cardinal distinctions which exist nowhere else.

The Indian Territory is admitted to compose a part of the United States. In all our maps, geographical treatises, histories, and laws, it is so considered.

In all our intercourse with foreign nations, in our commercial regulations, in any attempt at intercourse between Indians and foreign nations, they are considered as within the jurisdictional limits of the United States, subject to many of those restraints which are imposed upon our own citizens. They acknowledge themselves in their treaties to be under the protection of the United States; they admit that the United States shall have the sole and exclusive right of regulating the trade with them, and managing all their affairs as they think proper; and the Cherokees, in particular, were allowed by the treaty of Hopewell, which preceded the Constitution, "to send a deputy of their choice, whenever they think fit, to Congress." Treaties were made with some tribes by the State of New York, under a then unsettled construction of the confederation by which they ceded all their lands to that State, taking back a limited grant to themselves in which they admit their dependence.

Though the Indians are acknowledged to have an unquestionable, and heretofore unquestioned right to the lands they occupy, until that right shall be extinguished by a voluntary cession to our government, yet it may well be doubted whether those tribes which reside within the acknowledged boundaries of the United States can, with strict accuracy, be denominated foreign nations. They may, more correctly, perhaps, be denominated domestic dependent nations. They occupy a territory to which we assert a title independent of their will, which must take effect in point of possession when their right of possession ceases. Meanwhile they are in a state of pupilage. Their relation to the United States resembles that of a ward to his guardian.

They look to our government for protection; rely upon its kindness and its power; appeal to it for relief to their wants; and address the President as their Great Father. They and their country are considered by foreign nations, as well as by ourselves, as being so completely under the sovereignty and dominion of the United States that any attempt to acquire their lands, or to form a political connexion with them, would be considered by all as an invasion of our territory and an act of hostility.

These considerations go far to support the opinion that the framers of our Constitution had not the Indian tribes in view when they opened the courts of the union to controversies between a State or the citizens thereof, and foreign states.

In considering this subject, the habits and usages of the Indians in their intercourse with their

white neighbours ought not to be entirely disregarded. At the time the Constitution was framed, the idea of appealing to an American court of justice for an assertion of right or a redress of wrong had perhaps never entered the mind of an Indian or of his tribe. Their appeal was to the tomahawk, or to the Government. This was well understood by the Statesmen who framed the Constitution of the United States, and might furnish some reason for omitting to enumerate them among the parties who might sue in the courts of the union. Be this as it may, the peculiar relations between the United States and the Indians occupying our territory are such that we should feel much difficulty in considering them as designated by the term foreign state were there no other part of the Constitution which might shed light on the meaning of these words. But we think that, in construing them, considerable aid is furnished by that clause in the eighth section of the third article which empowers Congress to "regulate commerce with foreign nations, and among the several States, and with the Indian tribes."

In this clause, they are as clearly contradistinguished by a name appropriate to themselves from foreign nations as from the several States composing the union. They are designated by a distinct appellation, and as this appellation can be applied to neither of the others, neither can the appellation distinguishing either of the others be in fair construction applied to them. The objects to which the power of regulating commerce might be directed are divided into three distinct classes—foreign nations, the several States, and Indian tribes. When forming this article, the convention considered them as entirely distinct. We cannot assume that the distinction was lost in framing a subsequent article unless there be something in its language to authorize the assumption.

The counsel for the plaintiffs contend that the words "Indian tribes" were introduced into the article empowering Congress to regulate commerce for the purpose of removing those doubts in which the management of Indian affairs was involved by the language of the ninth article of the confederation. Intending to give the whole power of managing those affairs to the government about to be instituted, the convention conferred it explicitly, and omitted those qualifications which embarrassed the exercise of it as granted in the confederation. This may be admitted without weakening the construction which has been intimated. Had the Indian tribes been foreign nations in the view of the convention,

this exclusive power of regulating intercourse with them might have been, and most probably would have been, specifically given in language indicating that idea, not in language contradistinguishing them from foreign nations. Congress might have been empowered “to regulate commerce with foreign nations, including the Indian tribes, and among the several States.” This language would have suggested itself to statesmen who considered the Indian tribes as foreign nations, and were yet desirous of mentioning them particularly.

It has been also said that the same words have not necessarily the same meaning attached to them when found in different parts of the same instrument—their meaning is controlled by the context. This is undoubtedly true. In common language, the same word has various meanings, and the peculiar sense in which it is used in any sentence is to be determined by the context. This may not be equally true with respect to proper names. “Foreign nations” is a general term, the application of which to Indian tribes, when used in the American Constitution, is at best extremely questionable. In one article in which a power is given to be exercised in regard to foreign nations generally, and to the Indian tribes particularly, they are mentioned as separate in terms clearly contradistinguishing them from each other. We perceive plainly that the Constitution in this article does not comprehend Indian tribes in the general term “foreign nations,” not, we presume, because a tribe may not be a nation, but because it is not foreign to the United States. When, afterwards, the term “foreign state” is introduced, we cannot impute to the convention the intention to desert its former meaning and to comprehend Indian tribes within it unless the context force that construction on us. We find nothing in the context, and nothing in the subject of the article, which leads to it.

The Court has bestowed its best attention on this question, and, after mature deliberation, the majority is of opinion that an Indian tribe or Nation within the United States is not a foreign state in the sense of the Constitution, and cannot maintain an action in the Courts of the United States.

A serious additional objection exists to the jurisdiction of the Court. Is the matter of the bill the proper subject for judicial inquiry and decision? It seeks to restrain a State from the forcible exercise of legislative power over a neighbouring people, asserting their independence, their right to which the State denies. On several of the matters alleged in

the bill, for example, on the laws making it criminal to exercise the usual powers of self-government in their own country by the Cherokee Nation, this Court cannot interpose, at least in the form in which those matters are presented.

That part of the bill which respects the land occupied by the Indians, and prays the aid of the Court to protect their possession may be more doubtful. The mere question of right might perhaps be decided by this Court in a proper case with proper parties. But the Court is asked to do more than decide on the title. The bill requires us to control the Legislature of Georgia, and to restrain the exertion of its physical force. The propriety of such an interposition by the Court may be well questioned. It savours too much of the exercise of political power to be within the proper province of the judicial department. But the opinion on the point respecting parties makes it unnecessary to decide this question.

If it be true that the Cherokee Nation have rights, this is not the tribunal in which those rights are to be asserted. If it be true that wrongs have been inflicted, and that still greater are to be apprehended, this is not the tribunal which can redress the past or prevent the future.

The motion for an injunction is denied.

Worcester v. Georgia

This decision was one of several adjudicated by U.S. Supreme Court Justice John Marshall during the 1820s and 1830s that define the relationship of Native Americans with the U.S. government to this day. It was the third of the “Marshall Trilogy,” with Johnson v. M’Intosh (1823) and Cherokee Nation v. Georgia (1831) that underlie most of the government’s presumptive powers vis à vis American Indians.

Worcester v. Georgia upheld limited sovereignty for the Cherokee Nation in 1832 against President Andrew Jackson’s demands for removal. Jackson’s actions ultimately comprised contempt of the Supreme Court (an impeachable offense under the Constitution). In the incendiary years before the Civil War, however, the political cost

of following the Supreme Court's rulings upholding Cherokee sovereignty proved too great for Jackson's sense of political expediency or for Congress.

The specific issue that spurred the lawsuit was the refusal by Samuel Worcester, a missionary among the Cherokees, to sign an oath acknowledging Georgia's sovereignty while on Cherokee land. The case thus became a test of the Cherokees' right to a homeland within the bounds of Georgia. The state's officials argued that the Constitution prohibited the establishment of one state within the boundaries of another.

Justice Marshall wrote that Native nations had always been considered distinct, independent political communities, retaining original natural rights. Georgia's law, according to Marshall, interfered forcibly with the relations between the United States and the Cherokee Nation, the regulation of which, according to the settled principles of the U.S. Constitution, is committed exclusively to the federal government.

31 U.S. 515 . . .

A writ of error was issued to "The Judges of the Superior Court for the County of Gwinnett in the State of Georgia" commanding them to send to the Supreme Court of the United States the record and proceedings in the said Superior Court of the County of Gwinnett, between the State of Georgia, plaintiff, and Samuel A. Worcester, defendant, on an indictment in that Court. The record of the Court of Gwinnett was returned, certified by the clerk of the Court, and was also authenticated by the seal of the Court. It was returned with, and annexed to, a writ of error issued in regular form, the citation being signed by one of the Associate Justices of the Supreme Court and served on the Governor and Attorney General of the State more than thirty days before the commencement of the term to which the writ of error was returnable.

By the Court: The Judicial Act, so far as it prescribes the mode of proceeding, appears to have been literally pursued. In February, 1779, a rule was made on this subject in the following words:

It is ordered by the Court that the clerk of the Court to which any writ of error shall be directed may make return of the same by transmitting a true copy of the record, and of all proceedings in the same, under his hand and the seal of the Court.

This has been done. But the signature of the judge has not been added to that of the

clerk. The law does not require it. The rule does not require it.

The plaintiff in error was indicted in the Supreme Court for the County of Gwinnett in the State of Georgia, . . . The indictment and plea in this case draw in question the validity of the treaties made by the United States with the Cherokee Indians; if not so, their construction is certainly drawn in question, and the decision has been, if not against their validity, "against the right, privilege, or exemption specifically set up and claimed under them." They also draw into question the validity of a statute of the State of Georgia

On the ground of its being repugnant to the Constitution, treaties, and laws of the United States, and the decision is in favour of its validity. . . . The relation between the Europeans and the natives was determined in each case by the particular government which asserted and could maintain this preemptive privilege in the particular place. The United States succeeded to all the claims of Great Britain, both territorial and political, but no attempt, so far as it is known, has been made to enlarge them. So far as they existed merely in theory, or were in their nature only exclusive of the claims of other European nations, they still retain their original character, and remain dormant. So far as they have been practically exerted, they exist in fact, are understood by both parties, are asserted by the one, and admitted by the other.

. . . Certain it is that our history furnishes no example, from the first settlement of our country, of any attempt, on the part of the Crown, to interfere with the internal affairs of the Indians farther than to keep out the agents of foreign powers who, as traders or otherwise, might seduct them into foreign alliances. The King purchased their lands when they were willing to sell, at a price they were willing to take, but never coerced a surrender of them. He also purchased their alliance and dependence by subsidies, but never intruded into the interior of their affairs or interfered with their self-government so far as respected themselves only.

The third article of the treaty of Hopewell acknowledges the Cherokees to be under the protection of the United States of America, and of no other power.

This stipulation is found in Indian treaties generally. It was introduced into their treaties with Great Britain, and may probably be found in those with other European powers. Its origin may be traced to the nature of their connexion with those powers, and its true meaning is discerned in their relative situation.

The general law of European sovereigns respecting their claims in America limited the intercourse of Indians, in a great degree, to the particular potentate whose ultimate right of domain was acknowledged by the others. This was the general state of things in time of peace. It was sometimes changed in war. The consequence was that their supplies were derived chiefly from that nation, and their trade confined to it. Goods, indispensable to their comfort, in the shape of presents, were received from the same hand. What was of still more importance, the strong hand of government was interposed to restrain the disorderly and licentious from intrusion into their country, from encroachments on their lands, and from the acts of violence which were often attended by reciprocal murder. The Indians perceived in this protection only what was beneficial to themselves—an engagement to punish aggressions on them. It involved practically no claim to their lands, no dominion over their persons. It merely bound the Nation to the British Crown as a dependent ally, claiming the protection of a powerful friend and neighbour and receiving the advantages of that protection without involving a surrender of their national character.

This is the true meaning of the stipulation, and is undoubtedly the sense in which it was made. Neither the British Government nor the Cherokees ever understood it otherwise.

The same stipulation entered [into] with the United States is undoubtedly to be construed in the same manner they receive the Cherokee Nation into their favour and protection. The Cherokees acknowledge themselves to be under the protection of the United States, and of no other power. Protection does not imply the destruction of the protected. The manner in which this stipulation was understood by the American Government is explained by the language and acts of our first President.

So with respect to the words “hunting grounds.” Hunting was, at that time, the principal occupation of the Indians, and their land was more used for that purpose than for any other. It could not, however, be supposed that any intention existed of restricting the full use of the lands they reserved.

To the United States, it could be a matter of no concern whether their whole territory was devoted to hunting grounds or whether an occasional village and an occasional cornfield interrupted, and gave some variety, to the scene.

These terms had been used in their treaties with Great Britain, and had never been misunderstood. They had never been supposed to imply a right in the British Government to take their lands or to interfere with their internal government.

The sixth and seventh articles stipulate for the punishment of the citizens of either country who may commit offences on or against the citizens of the other. The only inference to be drawn from them is that the United States considered the Cherokees as a nation.

The ninth article is in these words:

For the benefit and comfort of the Indians, and for the prevention of injuries or oppressions on the part of the citizens or Indians, the United States, in Congress assembled, shall have the sole and exclusive right of regulating the trade with the Indians and managing all their affairs as they think proper.

To construe the expression “managing all their affairs” into a surrender of self-government would be a perversion of their necessary meaning, and a departure from the construction which has been uniformly put on them. The great subject of the article is the Indian trade. The influence it gave made it desirable that Congress should possess it. The commissioners brought forward the claim with the profession that their motive was “the benefit and comfort of the Indians and the prevention of injuries or oppressions.” This may be true as respects the regulation of their trade and as respects the regulation of all affairs connected with their trade, but cannot be true as respects the management of their affairs. The most important of these is the cession of their lands and security against intruders on them. Is it credible that they could have considered themselves as surrendering to the United States the right to dictate their future cessions and the terms on which they should be made, or to compel their submission to the violence of disorderly and licentious intruders? It is equally inconceivable that they could have supposed themselves, by a phrase thus slipped into an article on another and more interesting subject, to have divested themselves of the right of self-government

on subjects not connected with trade. Such a measure could not be “for their benefit and comfort,” or for “the prevention of injuries and oppression.” Such a construction would be inconsistent with the spirit of this and of all subsequent treaties, especially of those articles which recognise the right of the Cherokees to declare hostilities and to make war. It would convert a treaty of peace covertly into an act annihilating the political existence of one of the parties. Had such a result been intended, it would have been openly avowed.

The Treaty of Holston, negotiated with the Cherokees in July, 1791, explicitly recognising the national character of the Cherokees and their right of self-government, thus guarantying their lands, assuming the duty of protection, and of course pledging the faith of the United States for that protection, has been frequently renewed, and is now in full force.

... The Indian nations had always been considered as distinct, independent political communities retaining their original natural rights as undisputed possessors of the soil, from time immemorial, with the single exception of that imposed by irresistible power, which excluded them from intercourse with any other European potentate than the first discoverer of the coast of the particular region claimed, and this was a restriction which those European potentates imposed on themselves, as well as on the Indians. The very term “nation,” so generally applied to them, means “a people distinct from others.” The Constitution, by declaring treaties already made, as well as those to be made, to be the supreme law of the land, has adopted and sanctioned the previous treaties with the Indian nations, and consequently admits their rank among the powers who are capable of making treaties. The words “treaty” and “nation” are words of our own language, selected in our diplomatic and legislative proceedings by ourselves, having each a definite and well understood meaning. We have applied them to Indians as we have applied them to the other nations of the earth. They are applied to all in the same sense.

... The act of the State of Georgia under which the plaintiff in error was prosecuted is consequently void, and the judgment a nullity.

The acts of the Legislature of Georgia interfere forcibly with the relations established between the United States and the Cherokee Nation, the regulation of which, according to the settled principles of our Constitution, is committed exclusively to the Government of the Union.

They are in direct hostility with treaties, repeated in a succession of years, which mark out the boundary that separates the Cherokee country from Georgia; guaranty to them all the land within their boundary; solemnly pledge the faith of the United States to restrain their citizens from trespassing on it; and recognise the preexisting power of the Nation to govern itself.

They are in equal hostility with the acts of Congress for regulating this intercourse and giving effect to the treaties.

The forcible seizure and abduction of the plaintiff in error, who was residing in the Nation with its permission and by authority of the President of the United States, is also a violation of the acts which authorize the Chief Magistrate to exercise his authority. . . .

Andrew Jackson: Indian Removal Message to Congress

President Andrew Jackson's message on the removal of Southern Indians, part of his first annual message to the U.S. Congress in December 1829, advocated policies that called for the expulsion of Native Americans from their lands in the eastern United States and exiled them to reservations in the West. Despite some public sympathy for the Native Americans, especially the Cherokee in Georgia, Jackson argued that, if the Indians remained in existing states, they would constitute a foreign people, contradicting the prohibition of states within other states found in Article IV, Section 3 of the Constitution. Congress subsequently adopted the Indian Removal Act of 1830, approving Jackson's proposed policy. The Supreme Court decisions in Cherokee Nation v. Georgia (1831) and Worcester v. Georgia (1832) proved inadequate to protect Native American interests in the face of state, presidential, and congressional momentum, and they were ultimately forced off their land, culminating in the devastating and dramatic removal of the Cherokees in 1838 on the Trail of Tears.

It gives me pleasure to announce to Congress that the benevolent policy of the government, steadily pursued for nearly thirty years, in relation to the

removal of the Indians beyond the white settlements is approaching to a happy consummation. Two important tribes have accepted the provision made for their removal at the last session of Congress, and it is believed that their example will induce the remaining tribes also to seek the same obvious advantages.

The consequences of a speedy removal will be important to the United States, to individual states, and to the Indians themselves. The pecuniary advantages which it promises to the government are the least of its recommendations. It puts an end to all possible danger of collision between the authorities of the general and state governments on account of the Indians. It will place a dense and civilized population in large tracts of country now occupied by a few savage hunters. By opening the whole territory between Tennessee on the north and Louisiana on the south to the settlement of the whites it will incalculably strengthen the southwestern frontier and render the adjacent states strong enough to repel future invasions without remote aid. It will relieve the whole state of Mississippi and the western part of Alabama of Indian occupancy, and enable those states to advance rapidly in population, wealth, and power.

It will separate the Indians from immediate contact with settlements of whites; free them from the power of the states; enable them to pursue happiness in their own way and under their own rude institutions; will retard the progress of decay, which is lessening their numbers, and perhaps cause them gradually, under the protection of the government and through the influence of good counsels, to cast off their savage habits and become an interesting, civilized, and Christian community. These consequences, some of them so certain and the rest so probable, make the complete execution of the plan sanctioned by Congress at their last session an object of much solicitude.

Toward the aborigines of the country no one can indulge a more friendly feeling than myself, or would go further in attempting to reclaim them from their wandering habits and make them a happy, prosperous people. I have endeavored to impress upon them my own solemn convictions of the duties and powers of the general government in relation to the state authorities. For the justice of the laws passed by the states within the scope of their reserved powers they are not responsible to this government. As individuals we may entertain and express our opinions of their acts, but as a govern-

ment we have as little right to control them as we have to prescribe laws for other nations.

With a full understanding of the subject, the Choctaw and the Chickasaw tribes have with great unanimity determined to avail themselves of the liberal offers presented by the act of Congress, and have agreed to remove beyond the Mississippi River. Treaties have been made with them, which in due season will be submitted for consideration. In negotiating these treaties, they were made to understand their true condition, and they have preferred maintaining their independence in the Western forests to submitting to the laws of the states in which they now reside. These treaties, being probably the last which will ever be made with them, are characterized by great liberality on the part of the government. They give the Indians a liberal sum in consideration of their removal, and comfortable subsistence on their arrival at their new homes. If it be their real interest to maintain a separate existence, they will there be at liberty to do so without the inconveniences and vexations to which they would unavoidably have been subject in Alabama and Mississippi.

Humanity has often wept over the fate of the aborigines of this country, and philanthropy has been long busily employed in devising means to avert it, but its progress has never for a moment been arrested, and one by one have many powerful tribes disappeared from the earth. To follow to the tomb the last of his race and to tread on the graves of extinct nations excite melancholy reflections. But true philanthropy reconciles the mind to these vicissitudes as it does to the extinction of one generation to make room for another. In the monuments and fortresses of an unknown people, spread over the extensive regions of the West, we behold the memorials of a once powerful race, which was exterminated or has disappeared to make room for the existing savage tribes. Nor is there anything in this which, upon a comprehensive view of the general interests of the human race, is to be regretted. Philanthropy could not wish to see this continent restored to the condition in which it was found by our forefathers. What good man would prefer a country covered with forests and ranged by a few thousand savages to our extensive republic, studded with cities, towns, and prosperous farms, embellished with all the improvements which art can devise or industry execute, occupied by more than 12 million happy people, and filled with all the blessings of liberty, civilization, and religion?

The present policy of the government is but a continuation of the same progressive change by a milder process. The tribes which occupied the countries now constituting the Eastern states were annihilated or have melted away to make room for the whites. The waves of population and civilization are rolling to the westward, and we now propose to acquire the countries occupied by the red men of the South and West by a fair exchange, and, at the expense of the United States, to send them to a land where their existence may be prolonged and perhaps made perpetual.

Doubtless it will be painful to leave the graves of their fathers; but what do they more than our ancestors did or than our children are now doing? To better their condition in an unknown land our forefathers left all that was dear in earthly objects. Our children by thousands yearly leave the land of their birth to seek new homes in distant regions. Does humanity weep at these painful separations from everything, animate and inanimate, with which the young heart has become entwined? Far from it. It is rather a source of joy that our country affords scope where our young population may range unconstrained in body or in mind, developing the power and faculties of man in their highest perfection. These remove hundreds and almost thousands of miles at their own expense, purchase the lands they occupy, and support themselves at their new homes from the moment of their arrival. Can it be cruel in this government when, by events which it cannot control, the Indian is made discontented in his ancient home to purchase his lands, to give him a new and extensive territory, to pay the expense of his removal, and support him a year in his new abode? How many thousands of our own people would gladly embrace the opportunity of removing to the West on such conditions? If the offers made to the Indians were extended to them, they would be hailed with gratitude and joy.

And is it supposed that the wandering savage has a stronger attachment to his home than the settled, civilized Christian? Is it more afflicting to him to leave the graves of his fathers than it is to our brothers and children? Rightly considered, the policy of the general government toward the red man is not only liberal but generous. He is unwilling to submit to the laws of the states and mingle with their population. To save him from this alternative, or perhaps utter annihilation, the general government kindly offers him a new home, and pro-

poses to pay the whole expense of his removal and settlement.

In the consummation of a policy originating at an early period, and steadily pursued by every administration within the present century—so just to the states and so generous to the Indians—the executive feels it has a right to expect the cooperation of Congress and of all good and disinterested men. The states, moreover, have a right to demand it. It was substantially a part of the compact which made them members of our Confederacy. With Georgia there is an express contract; with the new states an implied one of equal obligation. Why, in authorizing Ohio, Indiana, Illinois, Missouri, Mississippi, and Alabama to form constitutions and become separate states, did Congress include within their limits extensive tracts of Indian lands, and, in some instances, powerful Indian tribes? Was it not understood by both parties that the power of the states was to be coextensive with their limits, and that, with all convenient dispatch, the general government should extinguish the Indian title and remove every obstruction to the complete jurisdiction of the state governments over the soil? Probably not one of those states would have accepted a separate existence—certainly it would never have been granted by Congress—had it been understood that they were to be confined forever to those small portions of their nominal territory the Indian title to which had at the time been extinguished.

It is, therefore, a duty which this government owes to the new states to extinguish as soon as possible the Indian title to all lands which Congress themselves have included within their limits. When this is done the duties of the general government in relation to the states and the Indians within their limits are at an end. The Indians may leave the state or not, as they choose. The purchase of their lands does not alter in the least their personal relations with the state government. No act of the general government has ever been deemed necessary to give the states jurisdiction over the persons of the Indians. That they possess by virtue of their sovereign power within their own limits in as full a manner before as after the purchase of the Indian lands; nor can this government add to or diminish it.

May we not hope, therefore, that all good citizens, and none more zealously than those who think the Indians oppressed by subjection to the laws of the states, will unite in attempting to open the eyes of those children of the forest to their true condition, and by a speedy removal to relieve them from all the

evils, real or imaginary, present or prospective, with which they may be supposed to be threatened.

Cherokee Nation Memorial

In this excerpt of the Cherokee Nation Memorial, the Cherokees present a plea to the American people not to force them from their ancestral lands in the face of the Indian Removal Act of 1830. Their plea went unheard, and President Andrew Jackson ordered them off their lands in Georgia in 1833. Although the Cherokees contested the order in the U.S. courts, they were compelled to leave Georgia in 1838 and make an arduous journey to the newly established Indian Country in present-day Oklahoma on a trip so fraught with disease, disaster, and death that it came to be known as the Trail of Tears.

We are aware that some persons suppose it will be for our advantage to remove beyond the Mississippi. We think otherwise. Our people universally think otherwise. Thinking that it would be fatal to their interests, they have almost to a man sent their memorial to Congress, deprecating the necessity of a removal. . . . It is incredible that Georgia should ever have enacted the oppressive laws to which reference is here made, unless she had supposed that something extremely terrific in its character was necessary in order to make the Cherokees willing to remove. We are not willing to remove; and if we could be brought to this extremity, it would be not by argument, nor because our judgment was satisfied, not because our condition will be improved; but only because we cannot endure to be deprived of our national and individual rights and subjected to a process of intolerable oppression.

We wish to remain on the land of our fathers. We have a perfect and original right to remain without interruption or molestation. The treaties with us, and laws of the United States made in pursuance of treaties, guaranty our residence and our privileges, and secure us against intruders. Our only request is, that these treaties may be fulfilled, and these laws executed.

But if we are compelled to leave our country, we see nothing but ruin before us. The country west of the Arkansas territory is unknown to us. From what we can learn of it, we have no prepossessions in its favor. All the inviting parts of it, as we believe, are preoccupied by various Indian nations, to which it has been assigned. They would regard us as intruders. . . . The far greater part of that region is, beyond

all controversy, badly supplied with wood and water; and no Indian tribe can live as agriculturists without these articles. All our neighbors . . . would speak a language totally different from ours, and practice different customs. The original possessors of that region are now wandering savages lurking for prey in the neighborhood. . . . Were the country to which we are urged much better than it is represented to be, . . . still it is not the land of our birth, nor of our affections. It contains neither the scenes of our childhood, nor the graves of our fathers.

. . . We have been called a poor, ignorant, and degraded people. We certainly are not rich; nor have we ever boasted of our knowledge, or our moral or intellectual elevation. But there is not a man within our limits so ignorant as not to know that he has a right to live on the land of his fathers, in the possession of his immemorial privileges, and that this right has been acknowledged by the United States; nor is there a man so degraded as not to feel a keen sense of injury, on being deprived of his right and driven into exile. . . .

Indian Removal Act

President Andrew Jackson was a strong supporter of legislation to remove American Indians from across the United States to "Indian Territory," now Oklahoma, a measure bitterly opposed by most Native Americans. The measure was politically popular with immigrants seeking the rich lands occupied for thousands of years by the Cherokees and others.

May 28, 1830

Chapter CXLVIII

An Act to provide for an exchange of lands with the Indians residing in any of the states or territories, and for their removal west of the river Mississippi. Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That it shall and may be lawful for the President of the United States to cause so much of any territory belonging to the United States, west of the river Mississippi, not included in any state or organized territory, and to which the Indian title has been extinguished, as he may judge necessary, to be divided into a suitable number of districts, for the reception of such tribes or nations of Indians as may choose to exchange the lands where they now reside, and remove there; and to cause each of said districts to be so described by natural or artificial marks, as to be easily distinguished from every other.

Sec. 2 *And be it further enacted*, That it shall and may be lawful for the President to exchange any or all of such districts, so to be laid off and described, with any tribe or nation of Indians now residing within the limits of any of the states or territories, and with which the United States have existing treaties, for the whole or any part or portion of the territory claimed and occupied by such tribe or nation, within the bounds of any one or more of the states or territories, where the land claimed and occupied by the Indians, is owned by the United States, or the United States are bound to the state within which it lies to extinguish the Indian claim thereto.

Sec. 3 *And be it further enacted*, That in the making of any such exchange or exchanges, it shall and may be lawful for the President solemnly to assure the tribe or nation with which the exchange is made, that the United States will forever secure and guarantee to them, and their heirs or successors, the country so exchanged with them; and if they prefer it, that the United States will cause a patent or grant to be made and executed to them for the same: *Provided always*, That such lands shall revert to the United States, if the Indians become extinct, or abandon the same.

Sec. 4 *And be it further enacted*, That if, upon any of the lands now occupied by the Indians, and to be exchanged for, there should be such improvements as add value to the land claimed by any individual or individuals of such tribes or nations, it shall and may be lawful for the President to cause such value to be ascertained by appraisement or otherwise, and to cause such ascertained value to be paid to the person or persons rightfully claiming such improvements. And upon the payment of such valuation, the improvements so valued and paid for, shall pass to the United States, and possession shall not afterwards be permitted to any of the same tribe.

Sec. 5 *And be it further enacted*, That upon the making of any such exchange as is contemplated by this act, it shall and may be lawful for the President to cause such aid and assistance to be furnished to the emigrants as may be necessary and proper to enable them to remove to, and settle in, the country for which they may have exchanged; and also, to give them such aid and assistance as may be necessary for their support and subsistence for the first year after their removal.

Sec. 6 *And be it further enacted*, That it shall and may be lawful for the President to cause such tribe

or nation to be protected, at their new residence, against all interruption or disturbance from any other tribe or nation of Indians, or from any other person or persons whatever.

Sec. 7 *And be it further enacted*, That it shall and may be lawful for the President to have the same superintendence and care over any tribe or nation in the country to which they may remove, as contemplated by this act, that he is now authorized to have over them at their present places of residence: *Provided*, That nothing in this act contained shall be construed as authorizing or directing the violation of any existing treaty between the United States and any of the Indian tribes.

Sec. 8 *And be it further enacted*, That for the purpose of giving effect to the provisions of this act, the sum of five hundred thousand dollars is hereby appropriated, to be paid out of any money in the treasury, not otherwise appropriated.

Black Hawk: Surrender Speech

The Black Hawk War of 1832 lasted only fifteen weeks but marked the demise of both the Sauk and Fox tribes as political and military forces in the Midwest. The leader and guiding spirit behind the conflict, Chief Black Hawk, delivered this address at the time of his surrender to U.S. Army troops in August 1832. Spending a year in prison after his capture, upon his release Black Hawk traveled around the country as something of a public attraction, subsequently publishing his autobiography.

Black-hawk is an Indian. He has done nothing for which an Indian ought to be ashamed. He has fought for his countrymen, the squaws and papooses, against white men, who came, year after year, to cheat them and take away their lands. You know the cause of our making war. It is known to all white men. They ought to be ashamed of it. The white men despise the Indians, and drive them from their homes. But the Indians are not deceitful. The white men speak bad of the Indian, and look at him spitefully. But the Indian does not tell lies; Indians do not steal.

An Indian, who is as bad as the white men, could not live in our nation; he would be put to

death, and eaten up by the wolves. The white men are bad schoolmasters; they carry false looks, and deal in false actions; they smile in the face of the poor Indian to cheat him; they shake them by the hand to gain their confidence, to make them drunk, to deceive them, and ruin our wives. We told them to let us alone, and keep away from us; but they followed on, and beset our paths, and they coiled themselves among us, like the snake. They poisoned us by their touch. We were not safe. We lived in danger. We were becoming like them, hypocrites and liars, adulterers, lazy drones, all talkers, and no workers.

We looked up to the Great Spirit. We went to our great father. We were encouraged. His great council gave us fair words and big promises; but we got no satisfaction. Things were growing worse. There were no deer in the forest. The opossum and beaver were fled; the springs were drying up, and our squaws and papooses without victuals to keep them from starving; we called a great council, and built a large fire. The spirit of our fathers arose and spoke to us to avenge our wrongs or die. We all spoke before the council fire. It was warm and pleasant. We set up the war-whoop, and dug up the tomahawk; our knives were ready, and the heart of Blackhawk swelled high in his bosom, when he led his warriors to battle. He is satisfied. He will go to the world of spirits contented. He has done his duty. His father will meet him there, and commend him.

Treaty of Guadalupe Hidalgo

This treaty was negotiated at the conclusion of the Mexican-American War (1846–1848), and provided for the transfer of land from Mexico to the United States that now comprises Arizona, New Mexico, Utah, Colorado, Nevada, and California. The following clause was meant to protect the liberty and property of the Mexican citizens who were absorbed into the United States. Their lands often were seized by immigrants in violation of the treaty.

ARTICLE IX. Mexicans who, in the territories aforesaid, shall not preserve the character of citizens of the Mexican Republic, conformably with what is stipulated in the preceding article, shall be incorporated into the Union of the United States, and be admitted at the proper time (to be judged of by the Congress of the United States) to the enjoyment of all the rights of citizens of the United States, according to the principles of the Constitution; and in the

meantime shall be maintained and protected in the free enjoyment of their liberty and property, and secured in the free exercise of their religion without restriction.

Treaty of Fort Laramie

This treaty, as signed, was ratified by the Senate with an amendment changing the annuity in Article 7 from fifty to ten years, subject to acceptance by the tribes. Assent of all the tribes except the Crows was procured and in subsequent agreements this treaty has been recognized as in force.

Articles of a treaty made and concluded at Fort Laramie, in the Indian Territory, between D. D. Mitchell, superintendent of Indian affairs, and Thomas Fitzpatrick, Indian agent, commissioners specially appointed and authorized by the President of the United States, of the first part, and the chiefs, headmen, and braves of the following Indian nations, residing south of the Missouri River, east of the Rocky Mountains, and north of the lines of Texas and New Mexico, viz, the Sioux or Dahcotahs, Cheyennes, Arrapahoes, Crows. Assinaboines, Gros-Ventre Mandans, and Arrickaras, parties of the second part, on the seventeenth day of September, A. D. one thousand eight hundred and fifty-one.

ARTICLE 1.

The aforesaid nations, parties to this treaty, having assembled for the purpose of establishing and confirming peaceful relations amongst themselves, do hereby covenant and agree to abstain in future from all hostilities whatever against each other, to maintain good faith and friendship in all their mutual intercourse, and to make an effective and lasting peace.

ARTICLE 2.

The aforesaid nations do hereby recognize the right of the United States Government to establish roads, military and other posts, within their respective territories.

ARTICLE 3.

In consideration of the rights and privileges acknowledged in the preceding article, the United States bind themselves to protect the aforesaid Indian nations against the commission of all depredations by the people of the said United States, after the ratification of this treaty.

ARTICLE 4.

The aforesaid Indian nations do hereby agree and bind themselves to make restitution or satisfaction for any wrongs committed, after the ratification of this treaty, by any band or individual of their people, on the people of the United States, whilst lawfully residing in or passing through their respective territories.

ARTICLE 5.

The aforesaid Indian nations do hereby recognize and acknowledge the following tracts of country, included within the metes and boundaries hereinafter designated, as their respective territories, viz:

The territory of the Sioux or Dahcotah Nation, commencing the mouth of the White Earth River, on the Missouri River: thence in a southwesterly direction to the forks of the Platte River: thence up the north fork of the Platte River to a point known as the Red Butte, or where the road leaves the river; thence along the range of mountains known as the Black Hills, to the head-waters of Heart River; thence down Heart River to its mouth; and thence down the Missouri River to the place of beginning.

The territory of the Gros Ventre, Mandans, and Arrickaras Nations, commencing at the mouth of Heart River; thence up the Missouri River to the mouth of the Yellowstone River; thence up the Yellowstone River to the mouth of Powder River in a southeasterly direction, to the head-waters of the Little Missouri River; thence along the Black Hills to the head of Heart River, and thence down Heart River to the place of beginning.

The territory of the Assinaboin Nation, commencing at the mouth of Yellowstone River; thence up the Missouri River to the mouth of the Muscle-shell River; thence from the mouth of the Muscle-shell River in a southeasterly direction until it strikes the head-waters of Big Dry Creek; thence down that creek to where it empties into the Yellowstone River, nearly opposite the mouth of Powder River, and thence down the Yellowstone River to the place of beginning.

The territory of the Blackfoot Nation, commencing at the mouth of Muscle-shell River; thence up the Missouri River to its source; thence along the main range of the Rocky Mountains, in a southerly direction, to the head-waters of the northern source of the Yellowstone River; thence down the Yellowstone River to the mouth of Twenty-five Yard Creek; thence across to the head-waters of the Muscle-shell

River, and thence down the Muscle-shell River to the place of beginning.

The territory of the Crow Nation, commencing at the mouth of Powder River on the Yellowstone; thence up Powder River to its source; thence along the main range of the Black Hills and Wind River Mountains to the head-waters of the Yellowstone River; thence down the Yellowstone River to the mouth of Twenty-five Yard Creek; thence to the head waters of the Muscle-shell River; thence down the Muscle-shell River to its mouth; thence to the head-waters of Big Dry Creek, and thence to its mouth.

The territory of the Cheyennes and Arrapahoes, commencing at the Red Butte, or the place where the road leaves the north fork of the Platte River; thence up the north fork of the Platte River to its source; thence along the main range of the Rocky Mountains to the head-waters of the Arkansas River; thence down the Arkansas River to the crossing of the Santa Fé road; thence in a northwesterly direction to the forks of the Platte River, and thence up the Platte River to the place of beginning.

It is, however, understood that, in making this recognition and acknowledgement, the aforesaid Indian nations do not hereby abandon or prejudice any rights or claims they may have to other lands; and further, that they do not surrender the privilege of hunting, fishing, or passing over any of the tracts of country heretofore described.

ARTICLE 6.

The parties to the second part of this treaty having selected principals or head-chiefs for their respective nations, through whom all national business will hereafter be conducted, do hereby bind themselves to sustain said chiefs and their successors during good behavior.

ARTICLE 7.

In consideration of the treaty stipulations, and for the damages which have or may occur by reason thereof to the Indian nations, parties hereto, and for their maintenance and the improvement of their moral and social customs, the United States bind themselves to deliver to the said Indian nations the sum of fifty thousand dollars per annum for the term of ten years, with the right to continue the same at the discretion of the President of the United States for a period not exceeding five years thereafter, in provisions, merchandise, domestic animals, and agricultural implements, in such proportions as may be deemed best adapted to their condition by the Presi-

dent of the United States, to be distributed in proportion to the population of the aforesaid Indian nations. ARTICLE 8.

It is understood and agreed that should any of the Indian nations, parties to this treaty, violate any of the provisions thereof, the United States may withhold the whole or a portion of the annuities mentioned in the preceding article from the nation so offending, until, in the opinion of the President of the United States, proper satisfaction shall have been made.

In testimony whereof the said D. D. Mitchell and Thomas Fitzpatrick commissioners as aforesaid, and the chiefs, headmen, and braves, parties hereto, have set their hands and affixed their marks, on the day and at the place first above written.

D. D. Mitchell

Thomas Fitzpatrick

Chief Sea'th'l's Farewell Speech

An important leader of the Coast Salish in the Puget Sound region of Washington State, the Duwamish-Suquamish Chief Sea'th'l' delivered the following speech in 1854 at a reception for Washington's Territorial Governor Isaac Stevens, who was attempting to buy significant tracts of land from the local Indians. The elderly chief spoke no English, so his speech was translated into Chinook, a trade jargon, and then into English. Henry Smith, a prominent citizen of the new city of Seattle, the name anglicized from the chief's, took notes but did not publish the following version until 1887. Many years after that, the speech was frequently edited and paraphrased in an attempt to make it more amenable to assertions that Sea'th'l' spoke in environmental metaphors. These versions have been quoted so often that many people do not know them from a translation that itself was removed from the original speech by more than thirty years and by an intervening conversion to a trade jargon. In whatever version they appear, however, Sea'th'l's words have become symbolic of a love for the earth as well as the struggles Native Americans faced in opposing European-American expansion settlement.

Yonder sky that has wept tears of compassion upon my people for centuries untold, and which to us appears changeless and eternal, may change. Today is fair. Tomorrow it may be overcast with clouds. My words are like the stars that never change. Whatever Seattle says, the great chief at Washington can rely upon with as much certainty as he can upon the return of the sun or the seasons. The white chief says that Big Chief at Washington sends us

greetings of friendship and goodwill. This is kind of him for we know he has little need of our friendship in return. His people are many. They are like the grass that covers vast prairies. My people are few. They resemble the scattering trees of a storm-swept plain. The great, and I presume good, White Chief sends us word that he wishes to buy our land but is willing to allow us enough to live comfortably. This indeed appears just, even generous, for the Red Man no longer has rights that he need respect, and the offer may be wise, also, as we are no longer in need of an extensive country.

There was a time when our people covered the land as the waves of a wind-ruffled sea cover its shell-paved floor, but that time long since passed away with the greatness of tribes that are now but a mournful memory. I will not dwell on, nor mourn over, our untimely decay, nor reproach my paleface brothers with hastening it, as we too may have been somewhat to blame.

Youth is impulsive. When our young men grow angry at some real or imaginary wrong, and disfigure their faces with black paint, it denotes that their hearts are black, and that they are often cruel and relentless, and our old men and old women are unable to restrain them. Thus it has ever been. Thus it was when the white man began to push our forefathers ever westward. But let us hope that the hostilities between us may never return. We would have everything to lose and nothing to gain. Revenge by young men is considered gain, even at the cost of their own lives, but old men who stay at home in times of war, and mothers who have sons to lose, know better.

Our good father in Washington. . . . I presume he is now our father as well as yours, since King George has moved his boundaries . . . our great and good father, I say, sends us word that if we do as he desires he will protect us. His brave warriors will be to us a bristling wall of strength, and his wonderful ships of war will fill our harbors, so that our ancient enemies far to the northward, the Haidas and Tsimshians will cease to frighten our women, children, and old men. Then in reality he will be our father and we his children. But can that ever be? Your God is not our God! Your God loves your people and hates mine! He folds his strong protecting arms lovingly about the paleface and leads him by the hand as a father leads an infant son. But, He has forsaken His Red children, if they really are His. Our God, the Great Spirit, seems also to have forsaken us. Your God makes your people wax

stronger every day. Soon they will fill all the land. Our people are ebbing away like a rapidly receding tide that will never return. The white man's God cannot love our people or He would protect them. They seem to be orphans who can look nowhere for help. How then can we be brothers? How can your God become our God and renew our prosperity and awaken in us dreams of returning greatness? If we have a common Heavenly Father He must be partial, for He came to His paleface children. We never saw Him. He gave you laws but had no word for His red children whose teeming multitudes once filled this vast continent as stars fill the firmament. No; we are two distinct races with separate origins and separate destinies. There is little in common between us.

To us the ashes of our ancestors are sacred and their resting place is hallowed ground. You wander far from the graves of your ancestors and seemingly without regret. Your religion was written upon tablets of stone by the iron finger of your God so that you could not forget. The Red Man could never comprehend nor remember it. Our religion is the traditions of our ancestors, the dreams of our old men, given them in solemn hours of the night by the Great Spirit; and the visions of our sachems, and is written in the hearts of our people.

Your dead cease to love you and the land of their nativity as soon as they pass the portals of the tomb and wander away beyond the stars. They are soon forgotten and never return. Our dead never forget this beautiful world that gave them being. They still love its verdant valleys, its murmuring rivers, its magnificent mountains, sequestered vales and verdant lined lakes and bays, and ever yearn in tender fond affection over the lonely hearted living, and often return from the happy hunting ground to visit, guide, console, and comfort them.

Day and night cannot dwell together. The Red Man has ever fled the approach of the White Man, as the morning mist flees before the morning sun. However, your proposition seems fair and I think that my people will accept it and will retire to the reservation you offer them. Then we will dwell apart in peace, for the words of the Great White Chief seem to be the words of nature speaking to my people out of dense darkness.

It matters little where we pass the remnant of our days. They will not be many. The Indian's night promises to be dark. Not a single star of hope hovers above his horizon. Sad-voiced winds moan in the distance. Grim fate seems to be on the Red Man's

trail, and wherever he will hear the approaching footsteps of his fell destroyer and prepare stolidly to meet his doom, as does the wounded doe that hears the approaching footsteps of the hunter.

A few more moons, a few more winters, and not one of the descendants of the mighty hosts that once moved over this broad land or lived in happy homes, protected by the Great Spirit, will remain to mourn over the graves of a people once more powerful and hopeful than yours. But why should I mourn at the untimely fate of my people? Tribe follows tribe, and nation follows nation, like the waves of the sea. It is the order of nature, and regret is useless. Your time of decay may be distant, but it will surely come, for even the White Man whose God walked and talked with him as friend to friend, cannot be exempt from the common destiny. We may be brothers after all. We will see.

We will ponder your proposition and when we decide we will let you know. But should we accept it, I here and now make this condition that we will not be denied the privilege without molestation of visiting at any time the tombs of our ancestors, friends, and children. Every part of this soil is sacred in the estimation of my people. Every hillside, every valley, every plain and grove, has been hallowed by some sad or happy event in days long vanished. Even the rocks, which seem to be dumb and dead as the swelter in the sun along the silent shore, thrill with memories of stirring events connected with the lives of my people, and the very dust upon which you now stand responds more lovingly to their footsteps than yours, because it is rich with the blood of our ancestors, and our bare feet are conscious of the sympathetic touch. Our departed braves, fond mothers, glad, happy hearted maidens, and even the little children who lived here and rejoiced here for a brief season, will love these somber solitudes and at eventide they greet shadowy returning spirits. And when the last Red Man shall have perished, and the memory of my tribe shall have become a myth among the White Men, these shores will swarm with the invisible dead of my tribe, and when your children's children think themselves alone in the field, the store, the shop, upon the highway, or in the silence of the pathless woods, they will not be alone. In all the earth there is no place dedicated to solitude. At night when the streets of your cities and villages are silent and you think them deserted, they will throng with the returning hosts that once filled them and still love this beautiful land. The White Man will never be alone.

Let him be just and deal kindly with my people, for the dead are not powerless. Dead, did I say? There is no death, only a change of worlds.

Sand Creek Massacre: Report of the Joint Committee on the Conduct of the War

The brutal Sand Creek massacre of November 29, 1865, resulted in the murder of more than two hundred Cheyennes, many of them women and children. The attack was led by U.S. Army Colonel John M. Chivington, whose sanity many historians now question. Chivington ordered his troops to slaughter every Indian in the Sand Creek village and to take no prisoners. Chivington's order was even more diabolical because the Indians had previously surrendered to the U.S. government and were ostensibly under U.S. protection at the time. The massacre compelled the Cheyenne to break off peace talks with the Americans and led to a vicious war during 1867–1869.

In the summer of 1864, Governor [John] Evans, of Colorado Territory, as acting superintendent of Indian Affairs, sent notice to the various bands and tribes of Indians within his jurisdiction that such as desired to be considered friendly to the whites should at once repair to the nearest military post in order to be protected from the soldiers who were to take the field against the hostile Indians.

About the close of the summer, some Cheyenne Indians, in the neighborhood of the Smoke Hills, sent word to Major [Edward W.] Wynkoop, the commandant of the post of Fort Lyon, that they had in their possession, and were willing to deliver up, some white captives they had purchased of other Indians. Major Wynkoop, with a force of over 100 men, visited these Indians and received the white captives. On his return he was accompanied by a number of the chiefs and leading men of the Indians, whom he had invited to visit Denver for the purpose of conferring with the authorities there in regard to keeping peace. Among them were Black Kettle and White Antelope of the Cheyennes, and some chiefs of the Arapahoes. The council was held and these chiefs stated that they were very friendly to the whites, and always had been, and that they desired peace. Governor Evans and Colonel Chivington, the commander of that military district, advised them to

repair to Fort Lyon and submit to whatever terms the military commander there should impose. This was done by the Indians, who were treated somewhat as prisoners of war, receiving rations, and being obliged to remain within certain bounds.

A northern band of the Cheyennes, known as the Dog Soldiers, had been guilty of acts of hostility; but all the testimony goes to prove that they had no connexion with Black Kettle's band, but acted in spite of his authority and influence. Black Kettle and his band denied all connexion with or responsibility for the Dog Soldiers, and Left Hand and his band of Arapahoes were equally friendly.

These Indians, at the suggestion of Governor Evans and Colonel Chivington, repaired to Fort Lyon and placed themselves under the protection of Major Wynkoop. They were led to believe that they were regarded in the light of friendly Indians, and would be treated as such so long as they conducted themselves quietly.

The treatment extended to those Indians by Major Wynkoop does not seem to have satisfied those in authority there, and for some cause, which does not appear, he was removed, and Major Scott J. Anthony was assigned to the command of Fort Lyon; but even Major Anthony seems to have found it difficult at first to pursue any different course toward the Indians he found there. They were entirely within the power of the military. Major Anthony, having demanded their arms, which they surrendered to him, they conducted themselves quietly, and in every way manifested a disposition to remain at peace with the whites. For a time even he continued issuing rations to them as Major Wynkoop had done; but it was determined by Major Anthony, (whether upon his own motion or as the suggestion of others does not appear) to pursue a different course towards these friendly Indians. They were called together and told that rations could no longer be issued to them, and they had better go where they could obtain subsistence by hunting. At the suggestion of Major Anthony (and from one in his position a suggestion was the equivalent to a command) these Indians went to place on Sand Creek, about thirty-five miles from Fort Lyon, and there established their camp, their arms being restored to them. He told them that he then had no authority to make peace with them; but in case he received such authority he would inform them of it. In his testimony he says:

"I told them they might go back on Sand Creek, or between there and the headwaters of the Smoky

Hill, and remain there until I received instructions from the department headquarters, from General [Samuel R.] Curtis; and that in case I did receive any authority to make peace with them I would go right over and let them know it. I did not state to them that I would give them notice in case we intended to attack them. They went away with that understanding, and in case I received instructions from department headquarters I was to let them know it."

To render the Indians less apprehensive of any danger, One Eye, a Cheyenne chief, was allowed to remain with them to obtain information for the use of the military authorities. He was employed at \$125 a month, and several times brought to Major Anthony, at Fort Lyon, information of proposed movements of other, hostile bands. Jack Smith, a half-breed son of John S. Smith, an Indian interpreter, employed by the government, was also there for the same purpose. A U.S. soldier was allowed to remain there, and two days before the massacre Mr. Smith, the interpreter, was permitted to go there with goods to trade with the Indians. Everything practicable seems to have been done to remove from the minds of the Indians any fear of approaching danger; and when Colonel Chivington commenced his movement he took all of the precautions in his power to prevent these Indians learning of his approach. For some days all travel on that route was forcibly stopped by him, not even the mail being allowed to pass. On the morning of 28 November he appeared at Fort Lyon with over 700 mounted men and two pieces of artillery. One of his first acts was throw a guard around the post to prevent any one from leaving it. At this place Major Anthony joined him with 125 men and two pieces of artillery.

That night, the entire party started from Fort Lyon, and, by a forced march, arrived at the Indian camp, on Sand creek, shortly after daybreak. The Indian camp consisted of about 100 lodges of Cheyennes, under Black Kettle, and from 8 to 10 lodges of Arapahoes under Left Hand. It is estimated that each lodge contained five or more persons, and that more than one-half were women and children.

Upon observing the approach of the soldiers, Black Kettle, the head chief, ran up to the top of his lodge an American flag, which had been presented to him some years before by Commissioner [of Indian Affairs Alfred B.] Greenwood, with a small white flag under it, as he had been advised to do in case he met with any troops on the prairies. Mr. Smith, the interpreter, supposing that they might be strange troops, unaware of the character of the Indi-

ans encamped there, advanced from his lodge to meet them, but was fired upon, and returned to his lodge.

And then the scene of murder and barbarity began. Men, women, and children were indiscriminately slaughtered. In a few minutes all the Indians were flying over the plain in terror and confusion. A few who endeavored to hide themselves under the bank of the creek were surrounded and shot down in cold blood, offering but feeble resistance. From the sucking babe to the old warrior, all who were overtaken were deliberately murdered. Not content with killing women and children, who were incapable of offering any resistance, the soldiers indulged in acts of barbarity of the most revolting character; such, it is to be hoped, as never before disgraced the acts of men claiming to be civilized. No attempt was made by the officers to restrain the savage cruelty of the men under their command, but they stood by and witnessed these acts without one word of reproof, if they did not incite their commission. For more than two hours the work of murder and barbarity was continued, until more than one hundred dead bodies, three fourths of them women and children, lay on the plain as evidences of the fiendish malignity and cruelty of the officers who had sedulously and carefully plotted the massacre, and of the soldiers who had so faithfully acted out the spirit of their officers.

It is difficult to believe that beings in the form of men, and disgracing the uniform of United States soldiers and officers, could commit or countenance the commission of such acts of cruelty and barbarity as are detailed in the testimony, but which your committee will not specify in the report. It is true that there seems to have existed among the people inhabiting the region of country a hostile feeling towards the Indians. Some of the Indians had committed acts of hostility towards the whites; but no effort seems to have been made by the authorities there to prevent these hostilities, other than by the commission of even worse acts. The hatred of the whites to the Indians would seem to have been inflamed and excited to the utmost; the bodies of persons killed at a great distance, whether by Indians or not, . . . were brought to the capital of the Territory and exposed to the public gaze for the purpose of inflaming still more the already excited feeling of the people. Their cupidity was appealed to, for the governor in a proclamation calls upon all, "either individually or in such parties as they may organize," "to kill and destroy as enemies of the

country, whatever they may be found, all such hostile Indians," authorizing them to "hold to their own private use and benefit all the property of said hostile Indians that they may capture." What Indians he would ever term friendly it is impossible to tell. His testimony before your committee was characterized by such prevarication and shuffling as has been shown by no witness they have examined during the four years they have been engaged in their investigations; and for the evident purpose of avoiding admission that he was fully aware that the Indians massacred so brutally at Sand Creek, were then, and had been, actuated by the most friendly feelings towards the whites, and had done all in their power to restrain those less friendly disposed.

The testimony of Major Anthony, who succeeded an officer disposed to treat these Indians with justice and humanity, is sufficient of itself to show how unprovoked and unwarranted was this massacre. He testifies that he found these Indians in the neighborhood of Fort Lyon when he assumed command of that post; that they professed their friendliness to the whites, and their willingness to do whatever he demanded of them; that they delivered their arms up to him; and they went to and encamped upon the place designated by him; that they gave him information from time to time of acts of hostility which were meditated by other and hostile bands, and in every way conducted themselves properly and peaceably, and yet he says it was fear and not principle which prevented his killing them while they were completely in his power. And when Colonel Chivington appeared at Fort Lyon, on his mission of murder and barbarity, Major Anthony made haste to accompany him with men and artillery, although Colonel Chivington had no authority whatever over him.
